NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 6TH, 1900.

SUMMARY OF NEWS.

IT is announced that Abbas Pasha, the Khedive of Egypt, will shortly visit England.

A GERMAN steamer has gone down in the British channel, fortunately without loss of life.

ANOTHER foreign missionary has been murdered in the interior of China. He was a British subject.

THE Boer forces besieging Kimberley wear a khaki uniform somewhat similar to that of the British forces.

UGLY rumours are current in Capetown of disaffection in the Victoria West and Clanwilliam Districts.

EIGHTEEN guns consigned from Krupp's factory to the Transvaal Government have been detained at Hamburg.

AN ex-employe at the Yokohama Railway Office named Okuno has been sentenced by the Chiho Saibansho to nine years' imprisonment on a charge of having stolen *yen* 88 belonging to the authorities through destroying an official document.

ACCORDING to news from London, the British Cabinet has determined to ask for 5,000,000 sterling wherewith to equip the Artillery with new guns.

THE most important fighting during the week has taken place near Colesberg, where General French has driven the Boers back somewhat.

SIX hundred emigrants collected by the Morioka and Hiroshima Emigration Companies, left Yokohama for Honolulu on Saturday by the steamer *China*.

IT has been resolved by the British War Office to sanction the employment of certain officers on the reserve under the rank of Major to fill vacancies.

A BRITISH quartermaster belonging to the steamer *Cowrie*, was drowned in Yokohama harbour on Wednesday night, while under the influence of liquor.

SEVERAL severe engagements have taken place since Christmas week in Cape Colony and Natal. General Buller has a stupendous task before him, it would seem.

A STRIKE at the Yokohama Laundry Company's works on Tuesday has led to the discharge of the whole of the Japanese employes and the substitution of Chinese.

THE New Year holidays have come and gone, everything passing off peacefully and happily in the capital and in Yokohama. Bright, though frosty, weather prevailed throughout.

THE French Government is to introduce Bills in Parliament assigning 120 million francs for the defence of the coasts and colonies, and 400 millions for the increase of the fleet.

THE Japanese Minister in Berlin has had an audience with the Emperor William and presented the Order of the Chrysanthemum which the Emperor of Japan has conferred on the Crown Prince.

THROUGH the carelessness of a gardener, the greenhouses attached to the Bluff residence of Mr. David Jackson, of the Hongkong and Shanghai Bank, were destroyed by fire on Wednesday night.

AN English cruiser has captured in Delagoa Bay a German steamer called the *Bundesruth* on suspicion of carrying contraband of war. The affair has been submitted to the Prize Court in Durban.

TANABE KANAKICHI, a coolie working in the Customs Compound, was on Saturday detected in the act of extracting from a case some furs which he concealed in his *kimono*. He was arrested and handed over to the Water Police.

ACCORDING to an officially sanctioned statement the Government regards the formation and despatch of Yeomanry to South Africa as one of the most pressing needs of the situation. The *Daily Telegraph* says that the Government is now prepared to accept the services of some eight to ten thousand Yeomanry.

IT is stated in Washington that the result of Mr. Secretary Hay's negotiations for securing the open door in China is most gratifying. Great Britain, Germany, France, Russia and Japan have responded favourably.

The Times' correspondent at Lorenzo Marques telegraphs that the suspicions are confirmed of close relations existing between the Boers and a foreign consulate in Pretoria. There are persistent rumours in Lorenzo Marques and in Durban of guns and ammunition for the Boers being smuggled through at Delagoa Bay.

THE choir-boys of Christ Church were entertained to a sumptuous repast in the vestibule of the Public Hall on Thursday evening, when the prizes won during the year were distributed. The vicar, the Rev. E. C. Irwine, presided, and made a most interesting and encouraging speech.

THERE was a serious fracas among coolies in Suyeyoshicho, Yokohama, on the 23rd ult. Two coolies named Seki Yoshi and Kencho Bunkichi were seriously cut about the body with a sword, the assailant or assailants escaping On Saturday a carpenter named Kimura was arrested by the Isezakicho Police, when he confessed to having cut the men.

THE French Navy Estimates for 1900 provide for the construction of two battleships with a displacement of 14,865 tons each. Such a displacement has been hitherto unknown in the French Navy, the largest previously designed French ironclad being the *Suffren*, now in course of construction at Brest, with a contemplated displacement of 12,728 tons.

A LONDON telegram states that the committee of the Marylebone Cricket Club recommends that there be six balls to an over in first class matches. It is further recommended that a side may be permitted to declare its innings closed after luncheon on the second day of the match, and also that the side leading by 150 runs may have the option of going in or making its opponents follow on.

THE *Chuo* remarks that the method hitherto adopted in Yokohama in silk transactions has been extremely disadvantages to the Japanese. Foreign firms were in the habit of taking under the name of *kankanryo* or inspection fees, about 0.5 per cent. on every English pound of silk delivered by Japanese. The Japanese recently determined to show a firm front on the subject, and it was finally decided that English scales should be abolished, and weights substituted determined exclusively by Japanese balance, one for 500 *kin*, and the other for 250 *kin*, the former to be employed for raw silk and the latter for waste silk. The new arrangement was to be enforced from the 2nd January.

SOUTH AFRICA.

Wednesday, Jan. 3.

It is very disappointing to learn that the Sixth Division did not sail until the 25th of December. According to a statement publicly made by Lord Wolseley and telegraphed by Reuter, the Division should have left England by the 7th of December at latest. Had that programme been carried out, the troops would be already at the Cape or very near it. But sailing on the 25th December, it is probable that the whole of them will not land at Capetown before January 18th, and the Seventh Division, which commences its embarkation on the 4th of January, will not reach the Cape until the end of the month. The Fifth Division had landed on the 29th, and will be ready to move to the front when Lord Roberts arrives, probably about Tuesday next. But not until the early part of February will an additional force of thirty-five thousand regulars be available for service in the fighting line. We hear nothing now of the Eighth Division, and it would seem that the Government considers it sufficient to send the fifth, sixth, and seventh; in other words, to strengthen the forces already in Africa by some thirty-five thousand regulars. Of course there are also the volunteers to be taken into account. But the telegraphic news about them has been confusing. So far as we can see, the idea is, in the first place, to take one company of men from every infantry battalion and organize them into a force of mounted infantry. If that were done for the whole of the seven Divisions, the force would consist of 64 companies, taking into account the battalions engaged in guarding the lines of communication. But we must deduct 10 battalions on account of the troops shut up in Ladysmith, Kimberley, and Mafeking, so that the number of mounted infantry companies becomes 54, and the total strength of the corps, about 5,500. The companies taken from the battalions for that purpose are to be replaced by volunteers from England. Further, there is to be a force of Imperial Yeomanry, from eight to ten thousand strong. We do not understand by any means that this last force is to consist of recruits from the Yeomanry of England. It is to be organized with volunteers of every kind, provided they can ride and shoot. Probably it will attract a very fine class of men. If our rendering of the Government's intentions be correct, the gist of the matter is that the forces in Natal will be augmented by from fourteen to fifteen thousand mounted men. That is very much to be desired. The Boers are all mounted, and have thus an immense advantage not only for rapid evolutions in the open, but also for escaping the worst effects of a defeat. How long will it take, however, to complete these arrangements? Two or three weeks at least. Meanwhile it is evident that there has been a great deal of volunteering at the Cape. Recent telegrams spoke of ten thousand men having been enrolled there. It seems probable that from that source sufficient men can be taken to guard the communications as far as the Modder River, and if so, there will be seven or eight thousand regulars immediately available for service at the front in addition to the troops (fifth Division) which landed at the Cape a few days ago. It may be possible, then, for Lord Roberts to bring a corps of seventeen or eighteen thousand regulars into action on the Modder River by the 20th of this month,—to say nothing of the Naval Division or local troops and Volunteers — without waiting for the Sixth Division, though it also will have landed by the 20th. If he chooses to take the Sixth Division, he can not strike before the end of January or the beginning of February, but, on the other hand, he could probably push forward something like thirty thousand men at that time, and on forming a junction with Methuen, would find himself at the head of an army of about forty thousand, which, after driving the Boers from the Modder, could advance at once upon Bloemfontein. The Seventh Division would still remain. It will reach the Cape at the end of January, as we have seen, and perhaps the idea is to send it on at once to Natal, unless Robert's advance upon Bloemfontein had, in the meantime, relieved the pressure at Ladysmith and Colenso and enabled Buller to effect a junction with White.

It does not often happen that a General, immediately on taking command, has to make such a momentous decision as that awaiting Roberts. To strike at once in Natal would be not only to choose the line of greatest resistance, but also to largely enhance the difficulties of subsequent offensive operations. It is evident that the Boers deliberately selected Natal as a battle-field, first because they thought they could see their way to occupying a splendid line of defences on the Tugela, and secondly because, in the event of being driven back, they would still have the barrier of the Drakenburgs to place between their homes and the invader. Had not White been shut up in Ladysmith, it would be extremely fatuous to accept the Boers' challenge even in part. Their vulnerable points are on the Western borders, where nature offers them comparatively little aid, and to attempt to force them over the eastern borders merely because they invite us to do so, would be silly. The obvious course for Roberts, then, would be to join Methuen, sweep the Maggersfontein Boers out of his path, and leave Natal to itself. But then there is Ladysmith. If only Ladysmith were wiped off the slate, Roberts could make his preparations at leisure, and begin his final advance in the middle of February with four Divisions and at least fifteen thousand additional troops of sorts, or an army of fifty-five thousand. We do not believe that Ladysmith will draw him to the Tugela, but we do believe that his anxiety to draw the Boers from Natal will induce him to strike a blow at the Modder with twenty-five thousand men about the 20th of this month, instead of striking with fifty-five thousand on the 20th of February. In all these calculations we have taken minimum figures.

Meanwhile, Buller's programme appears to be artillery fighting. It is a singular turn of events that having been compelled by the loss of eleven field-guns to desist from his attempt to force the passage of the Tugela, he should now be relying on artillery to render the Boers' positions untenable. He probably has a fine park of guns at his command by this time; not only 5-inch howitzers, but also heavy Naval guns, for recent intelligence shows that the naval men have been mounting 55-pounders (5-inch guns) for land service, and have been handling them almost as easily as field artillery. The Boers can scarcely bring any weapons of corresponding efficiency to oppose Buller. But long-range artillery practice against entrenchments which an enemy can easily evacuate so long as the shells are flying, is not a very satisfactory kind of business. We nevertheless believe that Buller will relieve Ladysmith before many days have passed.

The Times correspondent gives the following account of the only attempt made by the Boers to carry Ladysmith by assault, an affair which has hitherto attracted little attention, though it probably cost the Boers as many casualties as the battle of Colenso cost Buller's force:—

Ladysmith, Nov. 15.

On Thursday, the 9th, the enemy made a most determined attack on the town. Their artillery opened fire shortly after 4 in the morning, pouring a heavy shell fire on the position held by our men.

Under cover of their guns the Boers advanced along the ridges and kopjes adjacent to those occupied by us. Our troops lined the hills round the town. The enemy advanced, taking advantage of every bit of cover, but our infantry fire was very warm and the plucky attack was repulsed.

The enemy made a combined attack on all sides of the town. The main attack was between the Free State and Newcastle lines. This position was defended by the King's Royal Rifles and the Rifle Brigade, who beat the enemy back twice.

The Boers had dug a trench in open ground. From this they retired to bring up their horses, and the Rifle Brigade promptly doubled to the trench and occupied it. The Boers on their return were allowed to advance almost right up to the trench; then volley after volley was delivered, while the enemy, retreating, were shelled. The Boers lost heavily

Our guns put a mortar, from which the enemy threw large shells, out of action. When the enemy returned to put the mortar right, two shells were fired, scattering a large force of them.

Most of the fighting was over at 11 o'clock. At noon a salute of 21 guns was fired in honour of the Prince of Wales's birthday the troops cheering wildly.

The Manchesters occupied Cæsar's camp on the south-west, and found several hundred Boers hiding from our shell-fire in a ditch. The enemy were within a few hundred yards, and deadly volleys were poured in on the dense mass of the enemy, who must have sustained very severe loss, a moderate estimate being 700 to 800 killed and wounded. This seems to have settled the Boers as there has since been only an intermittent shell fire.

On Tuesday, the 14th, a reconnaissance in force, chiefly of cavalry and artillery, attacked the enemy to the right of the new Colenso road, driving the enemy back on their main position. Our shell fire was very effective and must have inflicted considerable damage. On our side only one man wounded was reported.

Our Lyddite shells have had a most terrifying effect on the Boers who have to be driven up to work their guns with loaded revolvers at their head. Ladysmith can hold out for months.

Dysentery is reported to be working dreadful havoc among the enemy, and they are said to be rather disheartened.

Thursday, Jan. 4.

The railway from Naauwpoort into the Orange Free State crosses the Orange River at Norvals Bridge, which is some 100 miles distant from Bloemfontein. Early in January it was reported that the Boers had destroyed all the bridges over the Orange River on the southern border of the Free State. That was probably an exaggeration, for their troops have since occupied and maintained positions on the South of the River, and it is scarcely credible that they should have destroyed the bridges behind them, for though they might be able themselves to cross without much difficulty, they could not hope to get their guns over without a bridge. It is possible that General French, after

Digitized by Google Original from CORNELL UNIVERSITY

capturing Colesberg, was able to push on quickly to the point where the railway crosses the River, and it is also possible that he found the bridge intact. If so, the fact will probably determine Lord Roberts' movements. It has never seemed to us doubtful that Lord Roberts' would make the Free State the objective point of his first campaign. The only question was, what route would he choose. From Norvals Port to Bloemfontein the distance by rail is 122 miles. The country is fairly level and there are no rivers of any consequence to cross. Plainly the Colesberg-Bloemfontein route is the line of least resistance for striking at the Free State. The Boers massed in front of Methuen near Kimberley are about 100 miles from Bloemfontein. It would be necessary for them to lose no time in falling back upon their capital if they intend to defend it, and in retreating they would be hotly pressed by Methuen, so that no interval would be available for entrenching themselves strongly. To remain in front of Kimberley while Roberts marched upon Bloemfontein would be to court crushing disaster, for their communications would be cut and they would ultimately have to support powerful attacks from front and rear. We believe and trust, therefore, that Roberts will adopt that line of strategy, and that he will be able to cross the Orange River at Norvals Port. As to his leaving Natal to its fate, the question to be answered is, would not a move upon Bloemfontein be the best way to reduce the pressure in Natal. It would certainly relieve Kimberley, and it *would take* advantage of the weak point which has been developed in the Boers' strategy. The weak point is that the Boers have allowed themselves to be tied up at Ladysmith and at Kimberley. They never expected to meet with any really serious resistance in their attacks upon those places. They had not foreseen the immense strength that modern weapons confer on the defence. It may fairly be assumed that they expected to take everything in their stride before the arrival of English reinforcements, and that they looked thereafter to receive from their fellow-nationals in Cape Colony such overwhelming assistance as would enable them to defy all Great Britain's efforts. They have been disappointed, and the result is that the present situation offers one great disadvantage for them—their home territories are left virtually at the mercy of the enemy. Lord Roberts' aim will be to compel them to return to the defence of their own lands, and, if possible, he will endeavour to deliver a crushing defeat to the Boers now massed on the Kimberley frontier before they can receive assistance from the other side.

We are again disappointed as to the starting of the Seventh Division. A few days ago the telegraph said that it was to commence its embarkation on the 4th instant. Now the 11th is indicated; a delay of a week. Probably, however, the telegrapher means that the embarkation will be completed by the 11th. Sailing on the 11th, the Division can not reach the Cape before the first week in February. Lord Roberts will scarcely wait for it. He will have the Sixth Division in a fortnight from the present time, and he can therefore advance with fully twenty thousand men about the 20th of this month, Methuen, with eight thousand more, cöoperating on his left flank.

The news about disaffection in Victoria West and Clanwilliam is disquieting. Clanwilliam is far distant from the field of immediate operations, but Victoria West lies quite close to the railway, 75 miles south of De Aar, and disaffection there would add to the difficulty of keeping the lines of communication open. One is disposed to think, however, that if any formidable disaffection was to be anticipated, it would have taken place before now.

Since the above was in type the Reuter's message telling of General French's successful cutting off of the Boers' retreat, has arrived and seems to confirm our surmise as to a bridge being still intact.

In Reuter's telegrams of the 2nd inst. it was stated that the Boers still hold "Hlanglvane," and we expressed the opinion that Inhlawe Mount was meant. Inlawe Mount is on the south side of the Tugela, but lies nevertheless on the north-east of Colenso, for the Tugela at Colenso takes a turn northward almost at right angles to its original course, then runs nearly due east, and then turns southward again before resuming its generally eastward course, thus forming a large angle within which Inlawe lies. From Chieveley to Inlawe the distance is 13 miles, and it would be a natural piece of strategy for the Boers to hold Inlawe with the object of preventing any attempt on the part of the British to cross the Tugela at a point on the east of the Colenso position. The river being now in flood, the Boers at Inlawe, if that is really where they are, must be completely cut off from the main body on the north of the Tugela, and it seems probable that Buller will not leave them unmolested. We suspect that these are the Boers to whom Reuter referred in his telegram of the 1st, which said that several hundreds of Boers had been cut off by the sudden rising of the river. It would look as though the Tugela, in ordinary times, were fordable in the neighbourhood of Inlawe, for the Boers would not be likely to rely on boats for purposes of retreat.

Friday, Jan. 5.

Very varying opinions are expressed with regard to the numerical strength of the forces that the British Government has now decided to allot for the purposes of the South-African campaign. Perhaps a few words on the subject may be interesting. We must premise, however, that all statements on paper have margins of possible error. The figures taken for such purposes are the nominal war strength of the tactical units considered, whereas the actual strength may be more or may be less.

The forces actually despatched from Great Britain are two Army Corps, consisting of six Divisions, each Division being organized with two Brigades, and each Brigade with four Battalions of infantry; in addition to artillery, cavalry, engineers, and supply columns, bearer columns, and field hospital corps. Thus a Division contains eight battalions of infantry, 3 batteries (18 guns) of artillery, a squadron of cavalry, and a company of engineers, besides the non-combatant troops. The total strength of the Division is 10,515 of all ranks, and the Army Corps, consisting of three Divisions, consequently aggregates 31,545. But in addition to these components there are also Army-Corps Troops under the direct command of the Army Corps. They consist of one battalion of infantry, two squadrons of cavalry, eight batteries (30 guns and 18 howitzers) of artillery, pontoon troops, telegraph divisions, balloon sections, etc., and the total strength is 5,380 of all ranks. Hence the Corps d'Armée aggregates in all 36,925 men, and the two Corps represent 73,850 men. There has farther been sent from England a Cavalry Division (under Lieut. General French), which numbers 5,816, and has 12 guns. Hence we arrive at the following result:—

Regular Troops actually sent from England (assuming that the 7th Division is on the point of embarking).

Two Army Corps	73,850
Cavalry Division.....	5,816
	79,666

The artillery numbers 180 field-guns and 36 howitzers. There has also been sent a park of 30 5-inch howitzers with a thousand men (approximately), so that the forces despatched from England up to January 11th will total 79,666 men, and have with them 180 field guns, 36 field howitzers, and 30 5-inch howitzers.

To these we must add the Division sent from India and the troops which were in South Africa when the war broke out. Taking the former at ten thousand and the latter at the same strength,—figures which must be tolerably accurate approximations—we obtain a grand total of 99,666 men of all ranks.

We have assumed in this estimate that two Army Corps have been actually organized; or, in other words, that the six Divisions sent from England are organized as Army Corps. We know that the first three Divisions were so organized, but we are not equally well informed about the second three Divisions. If only one Army Corps has been organized, then there is only one body of Corps Troops, and we must deduct from the above total 5,380 men, 30 field guns, and 18 field howitzers. On the other hand, we have not included the troops for the lines of communication, which represent an additional force of 9,387 men. Finally, we have assumed that there is only one Cavalry Division—that under Lieut.-General French. But in the middle of November, the War Office organized another brigade of Horse Artillery, namely, three batteries (18 guns). Horse artillery can not work without cavalry. These three batteries, then, must be the nucleus of a force of at least two thousand cavalry. What seems most probable is that there is only one body of corps troops, and that the Cavalry Division has been strengthened by some two thousand men with 18 guns. On these hypotheses, the estimate for the regular troops becomes:—

Total as above given	99,660
Deduct one body of Corps Troops=5,380. Add troops on lines of communication =9,387	6,007
Add a brigade of cavalry and artillery =2,000	
Total	105,673

With regard to the number of guns, we have the following figures, proceeding on the second of the above hypotheses:—

Divisional Artillery (7×18)=126 field guns.	
Artillery of Garrison troops...	18 do do
Corps Artillery	30 do do 18 field howitzers.
Cavalry Division	30 field guns.
Howitzers (5 inch)	30
Totals.....	204 field guns. 18 field howitzers. 30 5-inch howitzers.

Digitized by Google Original from CORNELL UNIVERSITY

Our readers will perceive that the factor of uncertainty is the Corps Troops. If there are two bodies of these—in other words, if the 6 Divisions sent from England are organized as two full Army Corps—then the total number of regulars becomes 111,053, with 234 field guns, 36 field howitzers, and 30 5-inch howitzers. If there is only one body of corps troops, then the total is 105,673, with 204 field guns, 18 field howitzers, and 30 5-inch howitzers.

We come now to the irregular troops sent, or to be sent, from England. Here there is again some uncertainty. According to our reading of the telegrams, the programme devised by the Government immediately after receiving news of the Colenso and Maggersfontein reverses, was this:—To take from each infantry battalion of the South-African army one company, and organize the whole into a mounted infantry corps. To replace these companies by adding to each battalion an equal number (113) of volunteers from England. Further, to raise a volunteer force of from eight to ten thousand mounted men. Let us see what increase that programme would give. There are (or soon will be) 73 battalions of regulars in South Africa (including the troops for the lines of communication and the original garrison). Seventy-three companies of 113 each make 8,249 men. To these add, say, 9,000 Imperial Yeomanry, and we have 17,249 men.

Next, there are the Colonial troops, which we may put at about 2,500, and there is the City of London Corps, 1,000 strong.

Finally, there are the local forces and volunteers in South Africa. These we may put at 18,000—a low estimate, for the telegraph says that there are 10,000 in the Cape Colony alone.

Thus we get this result:—

Regular Troops	105,673
Volunteers from England drafted into the Divisions	8,249
Imperial Yeomanry	9,000
London Corps	1,000
Colonial Troops	2,500
Local Troops and Volunteers	18,000
Grand Total	144,422

The casualties up to date number some 6,500. Deducting there, we have a remainder of 137,922 of all ranks, which ought to be available by the middle of February at latest.

It will be observed that we make no deductions on account of the beleaguered garrisons. In point of fact, these are at least as useful as any other troops in the field, for they are holding a large force of the Boers. It will be found before the war is over, we confidently believe, that the Boers, by setting for themselves the task of besieging remote places which they can not reduce, have greatly weakened their capacities for defence, and offered to their enemy opportunities which he will utilize to their destruction.

Perhaps it is right to remind our non-military readers that an army of 137,000 men does not by any means signify that number of combatants. There are many belonging to the non-combatant branches, and many more who must be employed locally or to guard lines of communications. We must deduct about 35,000 on these accounts, leaving 102,000 for the fighting line.

Our telegram of this morning speaks of 7 battalions of militia being sent to South Africa. We have not included them in the above calculation.

Concerning the success gained by a column of Australians and Canadians near (not at) Belmont, had Reuter been good enough to mention the point of the compass we should be greatly enlightened. If the affair occured on the east of Belmont, the British force must been entered the Orange Free State to find the enemy, for we are told of a forced march of 22 miles, and Belmont, according to the maps, is not 10 miles west of the Free State's border. On that hypothesis it would seem that the Boers had pushed southward of the Modder, and were threatening Methuen's communications.

The *Jiji Shimpo* draws a lesson as to the value of sea-power from the story of the South African war. No country in the world, it says, except England could possibly undertake the feat of sending a hundred thousand men to fight in a land six thousand miles distant. The States of Continental Europe have immense military forces, but for the purposes of attacking an over-sea enemy they are practically helpless. And it is not merely the possession of a vast number of steam transports that enables England to accomplish this. People speak of no other country's interfering with her, as though such abstention on their part were due to good will or to the existence of an understanding. But the fact is that England is strong enough at sea to defy interference. She owes her immunity to her own capacity. The war teaches two things: the immense difficulty of conducting a campaign against a strong enemy at a great distance, and the impossibility of attempting the task without command of the sea.

MARQUIS ITO ON THE TRANSVAAL WAR.

Sunday, Dec. 31.

The *Japan Times* discusses in a very sarcastic strain a note recently published by us with reference to views attributed to Marquis Ito. Our contemporary is so kind as to read us a lesson about the duties of a journal "with the least sense of responsibility," a lesson by which we hope to profit since it comes from such an eminently qualified source. The matter in question is that Marquis Ito, in a speech delivered at a meeting of the Doki Club on the 16th instant, was represented as having pointed out that if even a little State like the Transvaal is strong enough to grant to foreigners the privileges of owning land and engaging in mining enterprises, Japan, which has received recognition as a great Power, can well afford to be equally magnanimous. The *Japan Times* represents us as having "propounded this amusingly novel view" and is good enough to "envy our possession of special sources of intelligence" "mysterious and exclusive sources of information," "spirit rapping," etc., which are denied to ordinary journalists. Altogether our sedate contemporary shows much excitement, and flutters through a whole column of purturbed protest. The plain fact, however, is that we did not "propound" anything, or make any assertion whatever on our own account. We carefully observed the precaution usually taken by journalists with even a small "sense of responsibility," namely that of distinguishing reports and original utterances by prefacing the former with "it is said," "it is stated," and so on, and we were further careful to note that in the published reports of Marquis Ito's speech, we could not find any such emphatic utterances. As to mysterious and exclusive sources of information, if our contemporary will be so good as to examine the *Hochi Shimbun* of the 28th of December, it will discover exactly whence we obtained our news. A few days ago, the *Japan Times* declared that statements confidently attributed to Marquis Ito by the *Asahi Shimbun* were entirely incorrect. It now subjects the *Hochi Shimbun* to similar condemnation. We imagined that some measure of reliance might be placed upon journals like the *Asahi* and the *Hochi*. Apparently not. Apparently Japanese journals are altogether untrustworthy even when they recount such important matters as the gist of speeches delivered or statements made by their country's greatest statesman. Will not the *Japan Times* extend its function of mentor so as to impress upon its own vernacular contemporaries a small "sense of journalistic responsibility." Our fault in venturing to trust such sources of information seems venial compared with their enterprise in the matter of fabrication and invention.

Thursday, Jan. 4.

We really are perplexed to determine what cause for excitement the *Japan Times* finds in the utterances recently attributed to Marquis Ito by the *Hochi Shimbun* and taken by us as the basis of a note. Our contemporary's present object, apparently, is to prove that we credited the *Hochi's* report. There is no occasion for proof. We frankly admit that we credited it. Had the views attributed to Marquis Ito been, in any sense, inconsistent with the large-minded attitude he has always maintained towards foreigners and questions of foreign policy, we should certainly have hesitated to believe them. But they were in no sense inconsistent. The *Hochi* reported him as having drawn attention to the liberalism of the Transvaal in granting mining and land-owning privileges to foreigners, whereas Japan, comparatively a great Power, can not reconcile herself to such a course. That is just the kind of criticism we should have expected from Marquis Ito, and therefore when we read an emphatic declaration in a Tokyo newspaper not only that His Excellency had made such a statement, but also that his hearers had been induced by it to form an association for the purpose of giving practical effect to the Marquis' views, we did not detect any cause to suspect the correctness of the *Hochi's* report. The *Japan Times* says that the *Hochi Shimbun* is "a third-rate illustrated paper." The description seems somewhat severe, but, even granting its correctness, we have only to observe that, according to the ordinary code of journalistic morality, the inferior status of a newspaper does not confer on it a right to publish falsehoods. It is quite true, as we noted at the time, that "no such emphatic utterances were to be found in the published reports of Marquis Ito's speech." But it did not at all follow that he might not have made the statements attributed to him by the *Hochi*, for, in the first place, Japanese journals seldom give exact verbatim reports

Digitized by Google Original from CORNELL UNIVERSITY

of speeches, and, in the second, Marquis Ito's published speech certainly did not comprise everything that he said during his presence at the *réunion* of the Doki Club. We gather that the *Japan Times* is authorized to contradict the *Hochi Shimbun's* report. Very well. Why not say so simply and directly, instead of addressing to us courteous homilies about a sense of journalistic responsibility, and endeavouring to demonstrate that we "adopted the story and presented it in such a manner as to produce an impression that it was worthy of credence"? Here again there is no occasion for demonstration. We did adopt the story, because we believed it: we did present it in such a manner as to invite credence because we thought that it deserved credence; but we remain entirely unconvinced of either our carelessness or our crime in so doing. It is a matter of regret to learn that the *Hochi* was wrong, and that we ought not to have suspected it of telling the truth about a matter of fact. But what then? There is a tea-pot storm blowing, and we seem to be somewhere on the outer margin of it.

COUNT OKUMA.

Count Okuma has expressed himself with his usual frankness to a representative of the *Fiji Shimpo* on the subject of Japan's foreign policy. The Count adheres firmly to his original idea that the partition of China need not be anticipated, and that, so far as she is concerned, the Far-Eastern question will be settled on *the lines* of the "open-door" policy. But he thinks that Japan ought to exert herself more resolutely to bring about that end. Japan does not form a true estimate of her own capacities. Many of her people advocate the doctrine of supporting China on the ground that the safety of this country depends upon the maintenance of its neighbour's integrity —the *shinshi hosha* (lips and teeth) doctrine. But Japan's safety is a thing apart. It is guaranteed by the patriotism and courage of her people, and no Power in the world could subdue her. The motives of her conduct towards China should be, first, consideration for the relations that existed from time immemorial between the two countries, and secondly, tradal interests. China's mood towards Japan at present is trustful and friendly. Advantage should be taken of the fact to develop tradal facilities and to apply every possible lever for pushing the ancient empire into the path of progress. Count Okuma evidently has much faith in the prospects of a China-Japan bank. He thinks that the Chinese would readily deposit their money in such an institution, and that it might be made a means of obtaining capital for the development of many enterprises now inviting attention. He condemns the present Cabinet's want of activity and uniformity of policy. Arguing from the fact that nearly all the successful enterprises in Japan were originally fostered by official protection, he contends that the Government should do something towards laying out the newly acquired settlements in China, towards promoting the Söul-Fusan Railway, and generally towards encouraging the Japanese to look abroad, instead of confining the range of their vision to domestic affairs.

THE "TAMBA MARU" CASE.

Sunday, Dec. 31.

Two legal experts have been at some pains to set forth the facts of the *Tamba Maru* case in the columns of the *Fiji Shimpo* and the *Kokumin Shimbun*. They are evidently anxious that there should be no misunderstanding, and we appreciate the trouble they have taken. We ourselves have kept silence, pending the hearing of the appeal, but it is obvious that no restraint of that kind exists in Japan, and we therefore feel at liberty to speak. Let us say at the outset that, so far as we are concerned, and probably so far as foreigners generally are concerned, there is no suspicion that racial prejudice influenced the judgment of the Court. The judges doubtless endeavoured to discharge their duties fairly and conscientiously, without respect of person or regard to nationality.

Certain points have now been satisfactorily cleared up. First, the question of delay. There must always be some delay in such cases in Japan. The summary jurisdiction of the police tribunals is so limited that charges which in England or America would be disposed of in 24 hours, have to be carried here from the magistrate to the district court, at the expense of considerable time. But, for the rest, the delay in the *Tamba Maru* trial was due to two applications for postponement on the part of the defendant, and to an outbreak of contagious disease in the family of one of the judges. Nothing more need be said about that.

Secondly, as to the nature of the sentence. An assault which incapacitates a man for duty for a period of 20 days is punishable, according to Japanese law, by imprisonment for from 1 to 3 years. The Judge has no discretion outside those limits. Now the medical evidence showed that Toyomatsu, the quartermaster whom Kent struck, was incapacitated for 20 days. Hence, the lightest sentence the Court could inflict, apart from extenuating circumstances, was one year. But in consideration of the fact that Toyomatsu had behaved insolently, the sentence was reduced by two degrees. It thus became six months. The Court had no competence to further reduce it. That such a law is bad in some respects, there can be very little question. One of the Japanese experts himself denounces it. By fixing the inferior limit of punishment, grave injustice may often be done. There are objections to the complete removal of the inferior limit, as is the English custom, but they do not, we think, outweigh the considerations on the other side. Further, the notion that a black eye should incapacitate a man for 20 days sounds extravagant to Englishmen. But there, again, the medical testimony was clear, and the judges had to be guided by it. There are black eyes and black eyes. Such a question is for physicians alone to determine. Thus we may condemn the law, and we may query the doctors' diagnosis, but the court's decision does not seem open to objection on those scores.

So much is cleared up. We now come, however, to the fundamental question, which of the two men struck the first blow. Everything turns upon that. That the quartermaster invaded the cabin of the third officer and addressed him insolently did not justify the third officer in violently assaulting the quartermaster. It is no use talking about ship's discipline in such a context. Ship's discipline can be preserved, and must be preserved, without recourse to fists. But if the quartermaster struck the third officer, then the whole blame rested with the quartermaster. What evidence had the Court with reference to that point? It had, on the one side, the statement of the quartermaster that the third officer struck him first. It had, on the other side, the statements of the third officer, Kent, and of two other foreigners, Hill and De la Hyde, that the quartermaster struck the third officer first. Under ordinary circumstances there could not be the smallest doubt as to which version the Court should accept—three witnesses for the accused, one witness for the defence. But the Court set aside the evidence of the three foreigners and accepted that of the one Japanese. What were the reasons for that extraordinary discrimination? Let us write them down, together with the Court's reasons as formulated by itself:—

THE THIRD OFFICER'S EVIDENCE.

STATEMENTS.	THE COURT'S DECISION.
The quartermaster commenced the assault by striking me twice on the right ear.	Unworthy of credence because Kent can not remember whether he was struck with the right hand or with the left.
The quartermaster seized my legs and twice threw me.	Unworthy of credence because the quartermaster says that he was knocked down in the first instance, and that, when he attempted to rise, the third officer seized him and both fell together. N.B.—In this matter the quartermaster's statement is preferred without any assigned reason whatever.

HILL'S EVIDENCE.

The quartermaster struck Kent with his ringed right hand on the right ear.	Unworthy of credence, first, because the quartermaster alleged that he wore the ring on his left hand, and it is usual to wear a ring on the left hand; secondly, because it is impossible to strike the right ear of a person facing one with the right hand.
The quartermaster twice threw Kent by seizing his legs.	Unworthy of credence, because, although it exactly corroborated the statement of Kent himself, Hill admitted that, it being dark, he could not see well.

DE LA HYDE'S EVIDENCE.

Saw the quartermaster strike Kent first.	Evidently untrue, because De la Hyde could not tell what part of the third officer's body had been struck.

These reasons for the Court's incredulity fall mainly into two classes; first theories entertained by the Court itself; secondly want of accurate recollection on the part of the witnesses. The theories are that it is usual to wear a ring on the left hand, and that it is impossible to use one's right hand in striking the right ear of a person facing one. Both theories are absolutely valueless. A ring may be worn on either hand, and nothing in the world is easier than to deliver a back-handed buffet with the right hand on the right ear of a man facing one. Now, as to the want of recollection on the part of the witnesses, Kent did not remember which hand the quartermaster had used in striking him; De la Hyde did not remember what part of Kent's body had been struck. Therefore their evidence was discredited. But what about the recollection of the quartermaster whose

Digitized by Google Original from CORNELL UNIVERSITY

evidence was accepted from point to point? He bit Kent eight times during the course of the struggle. The Court admitted the biting. Yet the quartermaster first denied that he had bitten Kent at all, and then, being cautioned by the Public Procurator, said that he could not remember having bitten him. He could not remember having bitten him! He bit him in eight places. He must have devoted nearly his whole time to biting him. His main object throughout the struggle must have been to fix his teeth somewhere in Kent's body. Yet he could not remember any biting, and that miraculous lapse of memory was not allowed to invalidate his evidence, whereas the foreigners' evidence was ruled out of Court because their recollection did not extend to secondary points which might easily have escaped their observation. We have carefully read the explanations of the Japanese experts. They do not help us in any way. The judgment of the Court remains one of the strangest examples of judicial analysis we have ever perused. The motives of the judges may have been excellent, but their reasoning is of the most unfortunate character.

Thursday, Jan. 3.

Judge Sato, who presided at the trial of Miller, publishes a statement in the *Kokumin Shimbun* with regard to the *Tamba Maru* case. A considerable part of his remarks consists of a dignified protest against the attempt made by certain foreign treaty-port journals to pervert this affair into a racial question. He frankly admits that a tendency of that kind is almost inevitable and that his countrymen themselves sometimes show it. Thus, when the master of the *Normanton* was brought to trial for unseamanlike action which caused the death of 24 Japanese passengers in the vessel commanded by him, and when his trial ended in a sentence of three months' imprisonment, there were many Japanese who alleged that the sentence was out of proportion to the crime, and that racial feeling had influenced the Court. Yet, as a matter of fact, had the master of the *Normanton* been arraigned on a similar charge before a Japanese tribunal, a fine would have been the limit of the punishment provided by the Code. On that occasion several prominent Japanese barristers, including Mr. Masujima, stood forward as defenders of the English Court, claiming that it had shown remarkable impartiality and a high sense of justice. Racial prejudice may show itself in many lamentable ways, but it does not invade the precincts of the Japanese law courts, where the judges are disposed to treat the foreigner with even more consideration than they show to their own nationals. Judges Fujisei and Morii, who tried the *Tamba Maru* case, were both educated in the school of English law, and, like the majority of Japanese judicial officers, they are imbued with the principles of English and American jurisprudence. It is not to be supposed for a moment that they allowed their judgment to be warped by international feeling. Judge Sato rightly remarks that all thoughtful persons should endeavour to banish this unfortunate suspicion of racial prejudice from the intercourse between Japanese and foreigners.

We suspend our *résumé* of Judge Sato's remarks for the purpose of expressing our entire accord with them up to this point. Foreign local journals are responsible for the introduction of the racial question in this particular case. It is they who have dragged it upon the scene, and by their intemperate writing have succeeded in creating a situation which can not now terminate satisfactorily, whatever be the verdict of the Appeal Court. For such comments have had the effect of arousing Japanese sentiment also, and of greatly enhancing the difficulties that face the Court of Appeal. We ourselves go a great deal further than Judge Sato goes. We affirm, with absolute conviction, that the articles and notes appearing, almost without cessation, in the columns of certain foreign local journals, are responsible for much of the racial feeling remaining in Japan. For the sake of catering to a spurious patriotism, and thus winning for themselves a little ephemeral popularity, these journals do not hesitate to appeal to passion and prejudice in case after case. They create, or, at any rate, strengthen the feeling by which they accuse the Japanese of being swayed, and they are themselves the most flagrant victims of the bias which they read into all the acts of others. Happily they do not represent the real mood of the foreign community, and the mischievous part they have acted will be appreciated sooner or later.

Judge Sato then passes to criticise certain points in the verdict of the Court, and here again we are in entire agreement with him, as, we venture to think, all carefully reflecting persons must be. In the first place, he traverses the Court's view that special credence attached to the evidence of the quartermaster Toyomatsu, because of the entire concordance between his original depositions, his statements before the preliminary court, and his testimony in the District Court. Such concordance, Judge Sato says, is commonly observable in the assertions of a complainant, and no importance should attach to it as a proof of veracity. In the second place, the supposed difficulty which the Court found in imagining that, when two men stand facing each other, one can strike the other with his right hand on the right ear, is quite imaginary. Such a feat presents no real difficulty. In the third place, the Court drew a particular inference from the severe nature of the injury received by Toyomatsu. It inferred that a blow of such weight could not have been delivered with the fist had not its recipient been off his guard and at the mercy of his assailant. In other words, on the severity of the blow the Court based a deduction that it must have been struck before the struggle began: that is to say, that Kent was the first to resort to violence. In all these points Judge Sato dissents from the verdict. He observes that Judge Fujisei would not have been the presiding judge had not Judge Watanabe happened to be absent, and he thinks that the great domestic affliction and anxiety from which the assistant-judge, Mr. Morii, was suffering, may have interfered with his perspicacity. Whatever the explanation may be, the plain fact is that Judge Sato dissents from the finding.

We thank Judge Sato for his courageous outspokenness and we sincerely trust that it may not prove injurious to himself. But there is no denying that the course he has adopted is very unusual, and that it will certainly be condemned by sticklers for official etiquette.

BUDDHISM.

The lamp of public observation has been turned strongly on Buddhism in consequence of the agitation caused by the Religions Bill, and it seems as though one result would be to bring the ancient faith into considerable discredit. The great Shin Sect, which has its headquarters in the splendid Hongwan temples of Kyoto, comes worst out of the scrutiny. Shinran, the founder of the Sect, took for the fundamental principle of his teaching the impossibility of securing a title to future happiness by self-help. Salvation by faith, not by works, was his motto, and he reduced his doctrine to the pithy formula *ichinen Mida-Butsu soku-metsu sraku*, which implies that a single fervent thought suffices to save the soul. A logical consequence of such a belief was that the flesh need not be mortified: a preacher of the *sutras* need not practise celibacy or abstain from meat. Shinran's teachings show that in framing this rule of liberty he looked far beyond the mere question of self-indulgence. He saw the truth equally appreciated by the founders of Protestantism—that compulsory ostracism from the joys of conjugality and parentage shuts a man's heart against the access of many sympathies without which his moral nature is necessarily defective. But there was something wanting in Shinran's system. It lacked some sanctions or vetoes which would have secured its liberty against degenerating into licence. The same principles of freedom have been practised by Christian ministers consistently with absolute purity of life and rectitude of morals, whereas the prelates of the Shin Sect often lead an existence flagrantly disgraceful. The highest office in the Sect, the office of *Hossu*, is hereditary in the Otani family. Only an Otani can fill it. That fact alone is sufficient to condemn the system. But if even a small fraction of the rumours constantly circulated be true, there are many other facts, unconnected with the abuse of hereditary succession, which render it almost a burlesque that a great body of so-called religionists should be pastored by men such as those that control the spiritual affairs of the Shin Sect. One is reminded of the Chinese official method of collecting funds when one reads of the Shin organization. The yearly allowance of the *Hossu* resembles the grant for the Privy Purse. Its amount can not be questioned nor can the manner of its expenditure be queried when the budget goes before the council for debate. Then, when the budget has been passed, its incidence is determined. Each of the main temples has to provide so much, and they in turn distribute the task among the chief branches, which subdivide it again among the smallest parishes, the amount growing with each process of division, for the priests of every temple engaged in the business of raising funds from the parishioners seize the opportunity to replenish their own coffers. There is this to be said, however, in favour of the Shin priests. No month is allowed to pass without some three or four sermons being delivered at each temple, and the eloquence shown by the preachers does not fail to attract large audiences. Undoubtedly great good is done by these homilies, though even here abuses creep in. In Echigo, for example, the sermons are employed as a means of raising money, and the seats in the temples have labels

Digitized by Google Original from CORNELL UNIVERSITY

distinguishing them according to the amounts paid by their occupants. One of the worst features of all is that the position of *Renji kaku* is procurable by money. The holder of this title is regarded as a brother of the *Hossu*, and many of the privileges and prerogatives of the latter are duplicated in his case. He presides over one of the principal temples, enjoys a splendid income, and wields great power. Of course the position is not reached without regular passage through many minor grades, but people say that it can not be reached at all without the payment of a large sum to the *Hossu*. The *Shin* Sect may be misrepresented by rumour, but it certainly does not enjoy an enviable reputation, and it is the chief Buddhist Sect in Japan.

NEW-YEAR ISSUES OF LEADING JOURNALS.

The leading Tokyo journals now compete very keenly in the matter of New Year issues. Here is a list of the number of pages contained in the New Year's issue of each of the great newspapers, as well as the number of pages devoted to advertisements:—

	Total Pages.	Advertisement Pages.
Jiji Shimpo	64	25½
Kokumin Shimbun ..	56	18
Nichi Nichi Shimbun	48	14
Nippon	24	11½
Shogyo Shimpo	20	13
Asahi Shimbun	20	10
Yamato Shimbun.....	16	10
Chuo Shimbun.....	16	10½

All these journals distribute pictures of more or less artistic merit—reproductions of celebrated masterpieces, *genre* paintings or comic sketches,—and it must be confessed that the energy and enterprise displayed in compiling and publishing these big illustrated numbers speak volumes for the progress of Japanese journalism.

The *Kokumin Shimbun* has a special reason for the great effort it makes: it has reached its ten thousandth number. The fact is reflected in the English page of its publication as well as in the Japanese section. In the former we find congratulatory letters from Their Excellencies Sir E. Satow and Mr. A. E. Buck, from Captain Brinkley, the Rev. D. C. Greene, and Mr. Zumoto, and special articles from Mr. Stillman, Professor Foxwell, Dr. Clay MacCauley, Professor E. F. Fennellosa, the Rev. A. E. Webb, and Mr. E. W. Clement. The *Kokumin* says that "to reach the highest standard of newspaper ethics and to become a strong moral force in Japan is indeed what we aspire to attain to the best of our ability," and we wish to congratulate our contemporary on the success that has attended its efforts.

A "FIN DE SIÈCLE" NEW YEAR'S CARD.

This is genuine:—

SIR,—It is to be, time is an allow, already had gone nineteen century, and come twenty century. I think so that will you welcome happy new a year. Excuse me; for past of communication, and entreating acquaintance better than before year.

Yours truly, ———.

LAND TENURE.

We observe that the Mascarenhas case is again adduced by the *Kobe Chronicle* in support of its repeated assertion that no form of land tenure, short of actual ownership, can be secure in Japan for more than a very brief term. A strong disposition is now observable on our contemporary's part to evade the real issue by wandering off into collateral considerations. But nothing can change the original fact. What the *Kobe Chronicle* maintained persistently in article after article was that a superficies could not be obtained for such a term as would meet the requirements of persons desiring to build factories or use land for general business purposes. But now come the troublesome incidents that one superficies has been obtained for 500 years and another for 999 years, and that both have been duly registered. Under these circumstances, surely the straightforward course for a journal desiring to enlighten the public, and not confuse it, would be to confess frankly that its former contention was an error, and to acknowledge the undeniable evidence of accomplished facts. Instead of taking that course, the *Kobe Chronicle* falls back upon the Masarenhas case. The Mascarenhas case was based upon a *lease for an indefinite period*, whereas the point now under discussion is a *superficies for a fixed period*. According to law, a lease for an indefinite period, or a superficies for an indefinite period, can be dealt with by the Law Courts in the sense of imposing restrictions. According to law, a lease for a definite period, or a superficies for a definite period, can not be touched by the Law Courts until the expiration of that period. The proposition affirmed by the *Kobe Chronicle* and others was uniquely this, that the period of a superficies could not be fixed for more than a very brief term of years. They are now confronted by the fact that it can be fixed, and has been fixed, for 500 years or 999 years. Yet, rather than confess that it was mistaken and that it grieviously misled its readers, the *Kobe Chronicle* tries to escape under a mist of verbiage about a lease for an indefinite period! It would even have its readers interpret it as merely contending that "a superficies in Japan can not be regarded as equivalent to land ownership." No sane person has ever pretended that it could be so regarded.

We desire to add here a strong protest against disingenuous attempts to misrepresent the attitude of persons who, like ourselves, desire to interpret the law correctly. Our opponents seek to thrust us into the position of pleading that a superficies is an entirely satisfactory substitute for ownership, and that the law is already liberal enough. That is most unjust. Long before any of these gentlemen penned a sentence on the subject, we had published articles strongly condemning the illiberality and unwisdom of withholding from foreigners the privilege of land-ownership. Superficies is very good so far as it goes, but it is by no means as good as ownership, and we have never asserted any such claim on its behalf. Apparently the *Kobe Chronicle* thinks that if the public understood the value of superficies they would rest content with what they have got, and refrain from seeking to get any more. But it ought also to occur to our contemporary that if what the Japanese have already conceded is seen to be wilfully underrated, they may hesitate to make further concessions. The wisest plan, it seems to us, is to avoid misunderstanding and misinterpretation of every kind. Our confidence is absolute that the Japanese will soon discover the mistake of withholding land-owning and mining privileges from foreigners, but we know enough about the people of this country to be quite sure that to persistently under-estimate what they have already done is not the way to lead them to do more.

JAPANESE POLITICS.

The day is past when great interest attached to changes of Cabinet in Japan. So long as the struggle between imperialism and party seemed not unlikely to be attended by complications more or less grave, the foreign public watched it with much curiosity. But the grounds for uneasiness have disappeared. Evidently there is to be nothing violent or radical about the transition. Officialdom will quietly absorb such party elements as are needed to establish its own stability and to satisfy the nation's ideas of political progress. It is possible that we may now be on the eve of a change of ministry but if so, the work of re-organization will be directed by influences which have established their right to be trusted. We do not speak of a change because we have any direct knowledge that anything of the kind is imminent, but merely because we find repeated allusions to it in the columns of our Tokyo contemporaries, allusions so persistent that they indicate, at all events, a tolerably wide spread feeling in favour of change. Even the *Jiji Shimpo* echoes the note. It hints that Marquis Yamagata has grown weary of governing, that, in proportion as he values his post less highly, his disposition to placate the Liberals grows colder, so that they, on their side, are beginning to show symptoms of discontent. We had hoped that the present Ministry would last long enough to break the very ephemeral record of Cabinets in Japan, and we still entertain the hope. But rumour points in a different direction.

Some of the purveyors of news for the public insist that there is a difference of opinion between the parliamentary and the non-parliamentary members of the Liberal Party with reference to the advisability of insisting on an immediate share in the administrative power. The parliamentary members advocate delay, the other side insist on taking steps at once. It is thought, however, that the friction on this account will not become serious until after the Diet has passed the Religious Bill and the Bill for the State purchase of private railways.

Our readers are probably quite weary of these rumours. They seem to be manufactured, as a rule, out of the flimsiest materials—the gossip of a house of assignation or the imagination of an ambitious reporter.

One of the most remarkable statements we have recently seen in print—remarkable from the point of view of courageous invention—appears in the columns of the *Nippon*. We need scarcely say that foreign policy is the basis of the story. It represents Marquis Ito as strongly condemning the policy of Viscount Aoki

Digitized by Google Original from CORNELL UNIVERSITY

in Korea; as declaring that such a policy is eminently calculated to antagonize Russia; as opposing even the grant of a subsidy to the projectors of the Soul-Fusan Railway; and as saying that if there is no one to conduct the foreign affairs of the country more intelligently than the present Minister, he, the Marquis may have to step into the breach. This tale is supplemented by an account about strained relations between the Minister of the Navy and the Russian Legation, and about repeated failures on the part of the Russian Legation's Secretary to obtain access to Admiral Yamamoto although even the dignity of diplomatic costume was enlisted in the cause. We apprehend that even the credulity of a street *gamin* would be overtaxed by such a "yarn" as the above. Has the *Nippon* proposed to itself the task of writing down to a rabble audience?

JUDICIAL PROCEDURE IN JAPAN.

We learn from Tokyo journals that on the 15th of December the persons in the Kaji-bashi House of Detention—that is to say, the persons awaiting trial—were as follows:—

PERSONS AWAITING TRIAL AND PERIODS OF WAITING.

Court of First Instance.

	Persons.
Waiting for over 6 months.....	28
Waiting for over 3 months.....	55

Appeal Courts.

Waiting for 2 years or upwards	2
Waiting for 1 year or upwards	23
Waiting for 6 months or upwards ...	49
Waiting for 3 months or upwards.....	89

Court of Cassation.

Waiting for 1 year or upwards	3
Waiting for 6 months or upwards.....	18
Waiting for 3 months or upwards.....	25

This is said to be a very marked improvement on the state of affairs at the corresponding period in 1888.

RICE CAKE AND BIRD LIME.

There was once an ardent student of Chinese in Her Britannic Majesty's Legation in Peking. He wanted to get some coal, a cartload, and he gave to his servant an order in that sense, as he supposed. The commission remaining, unexecuted, was repeated impatiently after an interval of days. The servant excused the delay on the ground "b'long no makee easy pidgin," and finally produced a mule's load of eels! We are reminded of the incident by an amusing story that two students of Japanese tell in the columns of a local contemporary. They went seeking for rice dumplings and they obtained bird-lime. Both words take the form of *mochi* in *romaji*, but there is a marked difference in sound, bird-lime being pronounced *motchi*, and rice-cake *mochi*.

THE PEST.

The Pest has attacked two physicians in Osaka, and has killed one of them. It has also attacked the wife of the latter. Both of these medical men attended Adachi Rihei, who was among the early victims of the malady.

The Tokyo City Assembly has passed the proposal that five *sen* each should be paid for rats delivered at the police stations throughout the capital. It is expected that a week will be required to complete the organization for carrying out this measure, so that the police will not be ready to discharge their new function before the 7th or 8th instant. Rats dead or alive, large or small, is the extensive order of the day, and it is conjectured that the rustics in the vicinity of the city will find it very profitable to engage in a crusade of extermination. Even the breeding of rats will be undertaken, some folks predict. A baby rat may be bought at present in Tokyo for 7 *rin*, so that there is a margin of six hundred per cent. profit; but doubtless the market will soon adjust itself to the new conditions.

NOTES ON CURRENT EVENTS.

Yokohama is to have a clearing house at last, it seems. Foreign and Japanese bankers are said to have held a meeting and arranged the preliminaries. Tokyo and Osaka have had clearing houses for some years, and Yokohama is quite sufficiently important to be similarly equipped.

The Korean Government is manfully clearing off its indebtedness to Japan. The sum originally borrowed was three million *yen*. Of that amount 2¾ millions have been returned. The last quarter of a million, however, seems to be causing some difficulty. A Tokyo contemporary says that application has been made by the Söul Authorities for a period of grace until June next.

On the 30th ultimo the Bank of Japan had issued notes to the extent of 14 million *yen* above the legal limit, and the figure was expected to reach 16 millions on the 31st. In that amount was included 4 millions which had been held in deposit for the Government, but which was withdrawn at the close of the year to meet various calls. It does not appear to us that, considering the Japanese custom of settling all accounts and discharging all liabilities at the end of the year, there is anything startling in these figures.

There is talk of a large company being organized by French capitalists and Japanese for the purpose of providing a better supply of electric light for Tokyo. The capital is stated to be five million *yen*. If the project is realized, the Tokyo Electric Light Company will have to face severe competition. The service of light in Tokyo has considerably improved of late. People are no longer exposed to the once frequent accident of finding their houses plunged in darkness at a critical moment. But the quality of the light leaves much to be desired. We presume that the idea of the new company is to utilize water-power.

Some of the Tokyo journals are quite determined to convince themselves and their readers that serious complications threaten between Japan and Russia in Korea. The *Hochi* double leads an announcement that Mr. Hayashi has brought home from Söul a problem of the greatest gravity; that Marquis Ito has been consulted about it, and that it demands and is receiving very careful consideration. The *Jiji Shimpo*, without descending to particulars, writes very strongly about the necessity of having a fixed policy in the peninsular Empire, and one can easily read between the lines of its article that it is not at all content with the present state of affairs. It may be presumed that these journals detect some smouldering embers of fire since they observe so much smoke, but their extreme vagueness does not encourage credence.

A French gentleman, whose name we can not identify in its transliterated form, writes to the *Hochi Shimbun* in the sense that England is trying to egg on Japan to fight with Russia, believing that the former is strong enough to make head against the latter and hoping to derive profit for herself from the results of the struggle without expending any blood or treasure on her own account, and without suffering Japan to pick up any plums. That view is very hackneyed. We observe that the *Hochi* attaches very little importance to it. Neither does the Frenchman who propounds it, we imagine, but the thoroughly undiscerning section of the public constitutes an audience worth addressing under some circumstances.

There is material for a journalistic squabble in Tokyo. The *Mainichi Shimbun* supplies it. The Judicial Department has decided, it would seem, to advertise the names of registering Japanese firms in three journals only, the *Jiji Shimpo*, the *Kokumin Shimbun*, and the *Shogyo Shimpo*. Nothing is paid for these advertisements, as we understand, but the papers publishing them are naturally selected by banks and business institutions generally for the insertion of advertisements and notices. The *Mainichi Shimbun* writes in strong terms, and hints that improper means have been employed by the favoured journals. We must say that our contemporary's article strikes us as rather an unworthy production. It seems to be informed with a spirit of jealousy which warps the writer's vision and betrays him into some unwarrantable assertions.

COUNT INOUYE ON ECONOMIC QUESTIONS.

Count Inouye recently delivered a speech at the Mitsui Club with reference to the present financial condition of Japan. The gist of his remarks we condense:—Among other things I should like to make a few remarks on the foreign trade of this country. The excess in imports for last year alone amounted, as you may be aware, to over 110 millions of *yen*, the result being a corresponding exodus of specie to foreign countries. The number of years in which Japan would be able to restore the specie so absorbed, is difficult to predict. Some of you may probably entertain the idea that owing to the operation of the Revised Treaties the exports will exceed imports. But any such notion is erroneous. Commercial statistics up to November show that while imports aggregated 194 760,000 *yen*, against exports totalling 196,950,000 *yen*; the aggregate totals up to the first half of December stand at 203,460,000 and 206 800 000 respectively, a balance of 3 340,000 in favour of imports. Even supposing that perfect equality of trade had been attained this year, it would still be my conviction that domestic commodities for export had in no way increased. In fact, the present advantage experienced in trade is simply due to the export of silk a little earlier than usual and a certain appreciation in its value. Whether that staple will maintain recent quotations next year is very doubtful. Looking at the imports for the 31st year, I find that the figure for food stuffs, which form the most important articles of consumption, is steadily and considerably increasing, having now reached 4,800 000 *yen*. Of this amount eggs accounted for 490 000 *yen*, and salted fish for 600 000 *yen*, whereas in the 26th year of *Meiji* the figures did not exceed 40,000 *yen* approximately. This class of imports continues to increase yearly. As to flour the imports have

Digitized by Google Original from CORNELL UNIVERSITY

already reached 2 million *yen*, while cheese, butter, and condensed milk are also among commodities the import of which is rapidly increasing. Flour, in the 26th year of Meiji, totalled only 300,000 *yen*, but by the 31st year the figure had increased to no less than 2 millions. of *yen*; the figure for salt for the former period stood at 3,000 *yen*, but by the latter period had swollen to 133,000. The native salt industry can scarcely be expected to survive for any length of time if unprotected, but the prevention of the import of foreign salt is a question beset with difficulties. As to printing paper the amount of import is also steadily increasing. In 1898 the figure stood at 2,280,000 *yen*. Various paper manufactories have been established in Japan, the total output for the year I have just mentioned being 5,700,000 *yen* in value, but they were not able to meet the demand to any considerable extent. It is apparent that if things are left to themselves the import of even articles of daily consumption will steadily increase, with the result of a corresponding outflow of gold. Now, there are no good gold mines in Japan, and, the condition of the country being such as I have indicated in ordinary years, then, if a failure of crop occurs once in five or seven years, what sort of measures can be adopted to meet the contingency? You know of course that owing to the failure of crops in 1897, the import of yarns and rice for that year and the next increased to 69 million *yen* in value. Since the lower classes have suddenly raised their standard of living it is quite reasonable to suppose that the failure of crops in future will have the effect of augmenting the amount of imports to a very serious extent.

Domestic Industry.

Industry must be promoted, and any step for that development is worthy of hearty encouragement. But one thing is necessary, and that is that it must be developed systematically. With regard to railways I may say that according to my own investigations of late years even the lines presenting the fewest difficulties in construction have necessitated the use of imported materials to the extent of 20 per cent. Taking an average of lines, 35 to 40 per cent. would be nearer the mark. Taking, then, the average at 35 per cent., it follows that no railway can be completed in Japan without much specie being taken abroad. How many years will suffice to bring it back to the country? Ten or twenty years will hardly be long enough. In the case of spinning companies, from 70 to 80 per cent. of the materials are brought from abroad. The ratio, at first sight, appears extraordinary, but the money thus spent returns to Japan much more quickly than in the other case. It was on that account that I endeavoured last year to save the spinning establishments from ruin—because the future interests of the economic community were largely bound up in their success. These establishments have led to a great reduction in the import of yarns. In 1889, the import of yarns aggregated 120 to 130 millions of *yen*, but the figure had decreased in 1893 to 7,200,000 *yen*, and by 1898 to 8½ millions. We first obtained coarse yarns from India and fine from England. At present the former are not imported at all, the latter alone being brought into the market, and as factories are now in existence in Osaka and Tokyo for the manufacture of the so-called *gasu-ito* a decrease in that item is to be contemplated. In short, the development of the spinning industry has stopped the exodus of gold to a certain extent, and has indeed helped to bring specie into the country from China. Some of the manufacturers in Osaka informed me, three months ago, that the export of cotton yarns from that city up to September last did not fall short of 21 million *yen* in value, and that the chief market for them was China. I have not yet ascertained the balance that may be left after subtracting the cost of raw cotton, freight, and charges for marine insurance. I want to draw your notice to the gradual increase in the number of blanket and cloth manufactories, which have tended to decrease the imports in these lines and so to reduce the outflow of specie. The encouragement of manufactures which supply substitutes for imported articles is absolutely indispensable.

A Scheme to Prevent the Exodus of Specie.

Japan must devise some scheme that will make her industrially and economically self-supporting. Unless that is done the outflow of gold will remain permanent The Bank of Japan or the Specie Bank, or the Legislature itself, may take steps to palliate the present evil, but the effect of such steps will be only temporary. Investigations I have made lead me to the conclusion that the manufactures which may be profitably undertaken by Japanese amount in value to 51 million *yen* approximately. But how are they to be organised? The rates of interest are high, and there is a difficulty in obtaining capital. Some industries can hardly be carried on at a profit except on a small scale, or by the amalgamation of capital, and others, established on a great scale, suffer from undue foreign competition. According to the present arrangements the Government, in the case of purchases of blankets, cloth, and other commodities advertises for competitive tenders as prescribed by the Law of Accounts. So-called competitive tenders outwardly look fair and just, but are really full of abuses. When domestic manufactures are concerned things may be arranged smoothly, but when articles that require special processes of manufacture are wanted, it may be advisable that contractors should be able to obtain from Government special terms to prolong contracts for a period, say, of five or ten years. Such a concession would indirectly be the means of promoting industry. Without a boon of this kind no industry can possibly make progress. Again, the Law of Accounts to which I have alluded may have been suitable to the time at which it was framed, but subsequent changes have necessitated some alterations. Considered as a whole, in its present form, it has a tendency to encourage the importation of supplies from abroad. Fifty millions of *yen* a year can be secured to native enterprise. Even half the amount will do for the present to retard the exodus of gold. This consideration induces me to urge the necessity of a systematic development of industry. It is advisable to suspend all railway enterprises for two or three years hence, inasmuch as the Government, having established an Iron Foundry in Wakamatsu with an outlay of 14 million *yen* in specie (in addition to expenses incurred in harbour-building) will probably be in a position to supply rails by the end of the year. The inconvenience resulting from delaying certain railway enterprises for a few years, will not, I am confident, be so great as to counterbalance the advantage of using the Iron Foundry's rails. It is necessary to stop the spirit of speculation in railways and such enterprises, and nothing will achieve this but an attitude of moderation on the part of capitalists and enterprising men; even laws and ordinances would be comparatively ineffectual. I therefore earnestly entreat you, gentlemen, to pursue the course I have just laid down. The aggregate total of exports and imports from the 1st to the 31st year of *Meiji* shows an excess of 225,960,000 *yen* in favour of the latter. To that amount therefore specie must have gone abroad. Against this remark some may point to the indemnity of over 350 millions from China and to other sums making a total of 365,000,000 *yen* approximately. Out of this amount appropriations were made for the extension of the Navy and Army, and for the establishment of an Iron Foundry, while considerable amounts were included in Special Accounts, and also in general accounts for the 30th year of *Meiji* as well as in the grants to the Imperial Household. A portion was also set apart as a capital fund for education, a natural calamities reserve, and a fund for war vessels and torpedoes, while again other sums were carried to the general account for the 31st year of *Meiji*, the remainder being reserved for liquidation of industrial liabilities.

(To be continued.)

MR. KANEKO ON SERICULTURE.

The development of commerce and industry in America is indeed remarkable, says Mr. Kaneko. That country is destined to be the emporium of the world. The steady organization of Trusts has stimulated the railway, mining, and other enterprises to such an extent as to paralyse competition on the part of other nations. Japan indeed had an excess of 4 million *yen* in exports to America last year, but subsequently the balance of trade was reversed, imports being in excess. The demand, though increasing, for Japanese commodities in the United States can hardly lead to a great increase in the exports from this country, except in the case of silk, which alone gives hope for the future. Having made investigations on the subject, I think it deplorable that mulberry plantations have been turned into wheat farms through the mere apprehension of bad trade. Some are inclined to believe that the failure of sericultural industry in Japan is due to the bad quality of silkworm eggs, and that therefore the importation of French or Italian eggs is desirable. Others are of opinion that the mulberries ought to be stunted instead of being suffered to grow naturally, that eggs should be restricted to two classes only, and that Government should be urged to undertake a monopoly of eggs. I entertained all these views before I proceeded to America last summer, and at one time caused experts, as well as the Silk Institute at Nishigahara, to investigate the advantages and disadvantages resulting from the importation of foreign eggs. I also called their attention to the improvement of fertilizers. Unfortunately, however, I had to retire from the Cabinet before the results of their investigation were known to me. When I went to America in the summer I had the opportunity of visiting Butterson's factory, where I inspected all the different processes for the manufacture of silk and for dyeing and weaving. This entirely changed my opinion. In the first place I may mention that the French or Italian silk, when subjected to the process of refinement, is of an uniform quality of 13 to 15 deniers, while Japanese silk varies from 11 to 17 deniers and presents a serious lack of uniformity. This is an evidence of bad quality. When such silk is used in weaving it makes the surface of the stuff rough. The inferiority of Japanese silk may lie to some extent in the bad quality of eggs from which it is produced, but it must be admitted that imperfection in the process of manufacture is also a chief factor. The native silk is in every respect inferior to French or Italian products. But it is curious to observe that while the products of these countries show an average loss of 25 per cent. in weight after refinement, the reduction in the case of Japanese silk does not exceed 17 per cent. In other words, the loss in the former case is 25 catties per picul, while in the latter it is only 17 catties, the Japanese therefore having an advantage of 8 catties as compared with the French or Italian article. Such being the case, if the Japanese silk can be made so as to secure a uniformity of from 12 to 16 deniers it will find a ready market in Butterson's factory at all times. The advantage of 8 catties can not be ignored by foreign manufacturers. The defect of Japanese silk is chiefly, as I have remarked, its irregularity, which entails no small trouble in refinement or weaving. When it is in the loom uneven parts are always encountered, necessitating cutting in several portions. Such trouble is never met with in the case of French and Italian silk. Even *hakutae* or *kai* silk, when wound, requires similar labour, and two or three females are always employed in removing circular knots in the stuff. Nevertheless, despite the trouble thus entailed by Japanese silk, foreign manufacturers are still in a position to secure a margin of profit, and if marked improvements were made at home so as to guarantee its uniformity the silk might be exported with greater facility and at a larger profit.

IN WHITE MAN'S ASIA.

(WRITTEN BY R. B. PEERY, PH.D., FOR THE "JAPAN MAIL.")

The Far Eastern Question is an all-important one in international politics. A large part of that ever narrowing portion of the world not yet appropriated by the stronger Powers seems at the point of dismemberment, and the greedy nations are watching each other with jealous eye, fearful lest some one should get more than his share. Russia is the most prominent figure in this scramble for aggrandisement; she has taken time by the forelock, and secured very signal advantages ere the other Powers have realized her purpose. By natural position and fixed resolve she is destined to play a paramount part in the settlement of this vexed Eastern Question, and, perhaps, ultimately to dominate this corner of the earth. This fact lends great interest to the position and polity of Russia in the East just now, and all eyes are turned towards her. Sharing this general interest in things Russian, and desiring to study the subject on the ground, I was led to make a vi it to the seat of Russian power in Eastern Asia in the summer of 1898.

Arming myself with a general passport, properly endorsed by the Russian consul at Nagasaki, I embarked with some friends on one of the Yusen Kaisha's steamers, and after calling at the Korean ports of Fusan and Gensan, reached Eastern Russia in five days.

We had our first view of Vladivostock early on a foggy morning in July. The harbour presented a picturesque appearance, surrounded by beautiful green hills which were dotted with the white tents of camping soldiers. The good steamer glided gently up the bay of Peter the Great and stopped in the outer harbour, where a physician came aboard to inspect the passengers, and a policeman to examine their passports. These little formalities over, we entered the inner harbour—the entrance to which is very narrow; but, once inside, the harbour is large, deep, and well protected. A good view of the town could be had from the steamer's deck. It lay stretched out along the whole length of the bay, a distance of three or four miles, and extended back almost to the top of the low hills behind. Most of the buildings being large, substantial ones, in Western style, the general appearance was unlike that of any other town I have seen in the East.

Our party, consisting of two men and two women, went ashore at once, in Chinese boats not nearly so clean and nice as the Japanese *sampan*. A motley crowd of Koreans and Chinese was standing on the shore to receive us; and a lively scramble was immediately begun for our baggage, which ended by two Koreans forcibly taking possession of it and starting off ahead of us. We followed after, seeing nothing of custom house or officer, and soon we were in the middle of the town. Here the language difficulty began, and it was with us every hour of our stay in Siberia. Wishing to go to the Pacific Hotel, I enquired the way of several parties in English, French, and German, but they could not understand one word. How glad I was to see a Japanese gentleman coming down the street; and when I asked him the way in his own tongue he very kindly pointed it out to me. When we arrived at the hotel the difficulty began again. It seemed impossible to make the landlord understand that we wanted rooms: all the clerks were called out and the whole house was in an uproar, but none of them could understand our signs or guess at what we wanted. Finally I spied a little Japanese chambermaid far down a corridor, and calling her to our assistance the difficulty soon resolved itself, and we were settled in tolerable rooms.

This hotel is perhaps the best in this part of Russia, but it is poor enough. To get to our rooms we had to pass through a long dark corridor, by the kitchen and in full sight of the cooking; and then down a muddy flight of stone steps. The rooms were small and scantily furnished. The beds were narrow and hard; there were no carpets, but one bright red rug that should have been on the floor, was tacked to the wall behind each cot. There were electric bells, but no electric lights. They did not even use oil to any extent; the whole establishment was lighted by candles, and we had to buy those used in our rooms at fifteen *sen* each. It is customary in Russia to eat only two meals per day, and at our hotel breakfast was served from 10 a m. to 2 p.m., and dinner from 2 to 8 p.m. Most people take a cup of hot coffee or tea early in the morning in place of breakfast, and I noticed that it was always served in glasses. The cooking was very bad. Everything was swimming in grease, and no one but a born Russian could digest it. Although it is commonly reported that prices are very high in these parts, we found them just about as they are in the hotels of America. One can live in good style for three dollars per day. Everything is on the "European Plan," and expenses can be regulated to suit the purse.

In the afternoon I got into a carriage and took a drive over the city. These carriages resemble the *droska* of St. Petersburg, and are called by the outlandish name of *isvaschick*. They are low cabs, with seating capacity for two or three persons, drawn by two, and sometimes three, big strong horses. The central horse is in shafts, and has a high wooden bow over his collar; the others are attached to the outside, and made to turn their heads outward as they run, thus covering as much of the street as possible. The drivers are coarse looking men with bushy beards, long blouses, and large red sleeves. I was informed that many of them are ex convicts. Driving at a rapid rate, they carry one quickly all around the city; and it is a pleasure to ride in these vehicles after having known nothing but *jinrikishas* for years. The streets are broad and bad. Not being paved, they are muddy in wet weather, and dusty in dry. The sidewalks are made of heavy boards.

I was agreeably surprised both as to the extent of the town and quality of the buildings. Vladivostock is a large place, including its environs containing perhaps fifty thousand people. The general appearance is that of a prosperous young city in the Western part of the United States. Most of the buildings are of brick and stone, and many of them are quite handsome. The railway station, Admiralty buildings, public offices, and all Government buildings are heavy and massive; and some of the business houses would not look bad in New York. This is not a temporary place; the buildings are being put up to stay. A great many houses are under construction now, and I did not see one small one being built. Vladivostock is building as though secure of its future; for, although the turning aside of some traffic through Manchuria to Port Arthur will doubtless be felt, the bulk of the trade will come here, and besides, there is a magnificent territory behind quite sufficient to support a large city. The harbour is also larger and better than that at Port Arthur, and it seems certain that Vladivostock will continue to be, to the Russians at least, what its name signifies—the port of the East.

Although the residences are proportionally smaller and less assuming than the business, there are some very pretty homes. Even the small, humble ones show a great deal of taste; there are lace curtains in front of the windows, and lovely geraniums and fuchsias blooming behind them. Occasionally one sees an old log hut, a reminder of pioneer days. There is a beautiful pavilion marking the spot where the present Czar landed when he visited the port, and there is also a very pretty statue to the discover of the harbour. A large Greek Church is one of the handsomest buildings in the town, and there is a prominent Lutheran Church also. It was surprising to learn that the latter is supported by the Government, just as the national church is. Is Russia more liberal in religious matters in the Far East than in Europe?

One of the things that have impressed me most strongly here is the fact that I am again in the white man's country. Having lived among the Japanese and Chinese for some years, and being accustomed to seeing them in authority everywhere I had almost come to think that the whole East belongs to the yellow man, but here the white man is again in evidence. The power and authority are entirely in his hands, and his is the predominant race. This is a white man's city; the streets, the stores, the residences, the conveyances, show the hand of the white man. Even the carriage drivers, the waiters in the hotels, the mail boys, and the beggars have white faces. One feels more comfortable and at home among such people—even if their language and customs are different.

Most of the Russians here are officials; large, manly men in uniform and great gray overcoats, although it is mid-summer. Many Germans and Danes are here too, but Englishmen and Americans are scarce. The ladies surprised me more than anything else. They were almost as pretty and well dressed as the ladies of New York or London. There were many neat gowns and smart costumes that must have come all the way from Paris on a late steamer. I was glad to note that the ladies are held in high esteem, and the bearing of the men towards them is as chivalrous and gallant as we find in Anglo-Saxon lands.

I have found all these white people exceedingly kind and courteous, and apparently glad to help a stranger when they can. Not only are their bodies large; they have big hearts, too. They are a very social people, warm and cordial in their treatment of each other. I never saw so much hand-shaking anywhere else. When the clerks come to the stores and offices in the morning each one goes around and shakes hands with all the others; in the hotels and on the steamers every man went around in the morning and shook hands with all his acquaintances; and even the city governor, when he came down to his office, shook hands with all his subordinates. It looked strange to see big bearded men kiss each other good-bye, but to these Russians it is the conventional thing. The men are kissed on the lips or cheek, but the ladies only on the hand.

Although the whites are much in evidence here, the yellow races are not wanting. There are thousands of Chinese, a good many Koreans, and some Japanese. The Koreans are the coolies; the Chinese the builders, contractors, and shopmen; and the Japanese are merchants and tailors. Nearly all important work is done by the Chinese, and they already have a monopoly in many kinds of trade. They are the most thrifty people in the world. A Chinaman comes here, spreads a piece of matting over some poles for a shelter, and opens a fruit stand on the street corner. You come back in two or three years, and he will have a flourishing store there. Not only in the city, but throughout the whole country north all the work is being done by the Chinese. This end of the great Siberian Railway was built by them, and the section gangs who keep it in order to-day are Chinamen.

The climate of Vladivostock was delightful when I was there, but is very cold in winter; For almost six months the harbour is frozen over, and the country is deeply covered with snow. There is an ice crusher there that cuts a narrow passage for steamers, but traffic is much hindered by ice in spite of this. Even at this season the men wear their overcoats and the ladies cloaks; and one can't help wondering what they put on when winter comes. The houses are all built to protect against extreme cold; the walls are very thick and the windows are double. There is a large hermetical oven in each room, which reaches almost to the ceiling; flues are arranged through all the inner walls to keep the passageways warm. I believe damp rainy weather is expected at this season; but during my sojourn there it was delightful.

Vladivostock is preeminently a military town There are more soldiers in this city than there were in the whole United States before the outbreak of the American-Spanish war. Nearly every man one meets is either a private or an officer of the army. Some of the most

Digitized by Google Original from CORNELL UNIVERSITY

prominent buildings to be seen are barracks, located just on the outskirts of the city. At this season the soldiers leave the barracks and go into camp, and all the hills and plains in the suburbs are covered with their white tents. The army largely supports the town. The private soldiers are strong and active, but do not appear very intelligent. Their food and clothing they receive from Government; but their pay in money is small.

The harbour and surrounding hills are well fortified, and the place can doubtless be made impregnable to an attacking army. Even the hills in the midst of the city have fortifications on them, and one is not permitted to climb them. I started up one of the smaller ones, but soon came to a large sign-board saying "Entrance is Prohibited," in Russian, French, German, and English. The Russians are nothing if not military. They are dreaming of world-wide empire. A state without a large standing army that lords it over the people seems an anachronism to them. I was speaking yesterday with a very intelligent Russian officer, who spoke English, French and German with great fluency, and in the course of the conversation he said:—

"There is one clause in the Constitution of the United States which always makes we laugh."

"What is it?" I asked.

"The statement that it is natural for all men to seek happiness, and that it is the business of government to attain it."

"But do you not consider government to be for the sake of the governed, and the welfare and happiness of the people a worthy end?"

"Certainly government is not for the sake of the people; and I do not consider happiness an end at all. We must make the people happy, else they will rebel, but this is only a means for furthering the interests of the state, while the true end of government is a great *nation*—Empire."

My view was evidently just as strange and ludicrous to him as his was immoral to me.

Although the military aspect gives an air of sternness and dignity to life here, there is a lighter social side as well. Various entertainments, operas, and theatricals are held daily and are well patronized. The most popular time for these entertainments is Sunday after noon, the people going to the church in the morning and to the theatre in the afternoon. There is also a very pretty park in the city where military band performs twice per week. I went there on Sunday afternoon, and saw a gay scene. Large, well-dressed men were escorting their wives and sweethearts, in silks and satins, along the beautiful shady avenues; and bright, happy children were playing under the trees, just as they do at home—a familiar sight in the West, but one that is rare in this corner of the world. The music was good. Some of the yellow races are permitted to enter this park.

After spending some days in Vladivostock, I set out on a journey to the Amoor River, by the great Siberian Railway. This road, of which the town is the eastern terminus, is far and away the greatest railway enterprise the world has yet seen. To build a road from St. Petersburg through Moscow, and then all the way across the forests and unexplored wilds of Siberia to the North Pacific might well have appalled any nation. But this big empire is not daunted by great undertakings. She began the work with unbounded courage, has prosecuted it with energy, and will bring it to successful completion in three years. More than two thousand miles have already been completed eastward from Moscow, and five hundred miles have been built westward from Vladivostock, About two thousand miles yet remain to be built, besides the southern branch to Port Arthur. The complete line will be 5,500 miles long, and the authorities say that the through journey to St. Petershurg will be made in twelve days. The time to Europe will not only be lessened by one half, but the cost will be proportionally decreased as well—so it is likely that there will be much travel over this road.

The road, like everthing else up here, seems strong and substantial, laid out and built for a foreseen future. The grade is good, but the road bed is not yet all that might be desired. The bridges are strong structures, built of stone and the road is broad gauge, and the carriages are the broadest and heaviest I have seen anywhere. Wood is used exclusively for fuel. Although new yet, travel by this road is fairly comfortable. There are three classes, and sleeping—and dining—cars attached to all through trains. But the facilities for observing the country are very poor, the windows being small and high up. The fare is just about what it is in America.

Our train left Vladivostock at four o'clock in the afternoon. For several miles we ran around the edge of the bay, past little farm houses and vegetable gardens, and then entered a beautiful green wood. After passing the first station we came to a broad level plain of many miles extent, and the large herds of fat cattle and horses roaming over it took me back in memory to my boyhood days, in a well-known grazing region of Virginia. There were several farm houses near the road; small, but clean and home-like, and there was an air of thrift and prosperity about everything. This plain is capable of supporting an immense colony, and I doubt not it will be peopled before many years have passed.

Just at sunset we ran into a pretty country station at the farther side of the plain, and the train stopped a few minutes while we bought fresh bread and milk from the barefoot peasant girls who were in waiting. Two young ladies passed by on horseback, going for their evening ride; a large drove of cows was coming in from the common pasture; goats and pigs were playing around in the yards; while an old grandmother sat knitting in an easy chair before her cottage door, and I thought, what a peaceful evening scene to be found in "the wilds of bleak Siberia"!

There was one unpleasant feature about this ride. A nice-looking Russian lady and a young man, evidently her son, came into the car and took a seat just opposite us; and in a little while they both began smoking cigarettes. That woman must have smoked a dozen before we reached our destination. Smoking cigarettes is a very common practice with Russian women, and I saw many of them after that puffing away with as much satisfaction as their husbands and brothers. Although we found the smoke disagreeable, the smokers were exceedingly kind. We could not talk with words, but we made them understand by signs where we were going, and the young man indicated that he was going there too, and would assist us to a hotel. This he not only did, but he came back the next day to see if we were getting along all right, and went with us to the train to see us safely off for Habarofsk.

The railway being new, it frequently gets out of order, and we passed hundreds of Chinamen along the way engaged in repairing it. Their dirty white tents can be seen all along the line. Russia has brought these men here to do her hard work because they are better workmen than Russian peasants, and cheaper; but she will find in a few years that these same men will have settled here and secured nearly all the trade of the country. Russia suspects this and has wisely provided that no land can be taken up along the railway by other than her own subjects; and they cannot transfer it to aliens.

At nine in the evening we reached Nikolskoe, where we had planned to spend a day. The town is one mile from the station, and there was a rough scramble for carriages. After twenty minutes rapid driving across a level plain we entered the town, and were put down at a small hotel kept by a German; but, the rooms there being all taken, we went to a Russian inn. In this place we secured one tolerable room for the ladies, and a corner of the billiard room for the men to sleep in. The whole of the next day was spent seeing the town and vicinity.

Nikolskoe is a very important town, having a population of about ten thousand. By the number of waggons that come in from the surrounding country I would infer that there is a considerable rural population. The town is spread out over a broad level, plain, with ample room between the houses, and the streets are very broad. There are a few good buildings, but the majority of them are small and shabby. Russian officers and soldiers are to be seen everywhere, and a good many peasants are strolling about the streets. I found one man who spoke English, but he himself wass a German. The vegetable and meat trade is exclusively in the hands of the Chinese, who are here in large numbers. In general, this town is very little different from a small town on the Western prairies, and if the Chinese were away, and the people spoke English, one could easily imagine one was not in Asia at all. This being a grazing section, we have had the best beef I have found anywhere on this line of railway. But the bread—the black bread of Siberia—exceeds anything of the kind I ever saw. It is black, and hard, and sour; and is made in great big loaves and kept for months. A Western lady who came here last year took a big loaf of it back with her as a curiosity, and I doubt not it will ornament her parlour and amuse her visitors for many years. It is not so amusing when one has to eat it.

The Manchurian railway leaves the Siberian line at Nikolskoe, and runs directly across Northern Manchuria to Lake Baikal. This road takes the place of the one originally contemplated through Russian territory along the Amoor River, as the latter was found very difficult and expensive to build. The southern route is in every way preferable, now that Manchuria has become to all intents and purposes a Russian province. The road from Port Arthur will connect with this at Hulan-chen, in Central Manchuria. Large construction corps are busily engaged on this road at present, and it will be completed soon.

After spending a pleasant day in this frontier town we took the evening train for Habarofsk, on the Amoor. This part of the line has just recently been opened to traffic, and has been little written about as yet. We ran through a pretty section of country, across level plains, and over rolling prairies. The land lies low, and at certain seasons much of it is covered with water. The level nature of the country was a great surprise to me. I expected it to be exceedingly rough and mountainous, but there are hardly any hills or mountains along the line. One sees nothing but rolling prairies and meadow land, with an occasional mountain in the distance.

I did not see much valuable timber along the road. There are plenty of woods, but the trees are mostly small and burnt. The ties for this part of the road were secured along the way, but most of the heavy timbers for bridges were brought from the Pacific Coast. These burnt forests furnish great quantities of firewood, and millions of cords of it are piled up along the way awaiting shipment. As it is so cold in winter, and little coal is used here, this wood brings a good price. There is plenty of coal in the hills, but very little mining has been done as yet. Farther back from the railway there appears to be some better timber, but I was disappointed in the country in this regard.

The railway stations are very pretty. Most of them are frame buildings, painted yellow or brown, and wearing an appearance of extreme newness. Many of them are picturesquely situated in the midst of forest trees.

The country is very sparsely settled as yet, and not many homes were visible. Russia is trying to induce immigration to this section, and gives free passage, some supplies, and a grant of land to every Russian subject who will come here; but, the country being comparatively unknown, and so far away, few settlers have come in yet. There are only about 200,000 colonists in the whole province, a mere drop in the bucket. Most of the land is fertile and lies well, but it takes some time to bring it under cultivation. Very good wheat, oats, buckwheat, and corn are grown; but the land appears better adapted for grazing than anything else. The

Digitized by Google Original from CORNELL UNIVERSITY

vast plains are covered with rank grass, and the large herds of cattle and horses grazing on it seem to thrive well. Much hay is made along the lines. The further back we went from Vladivostock the better settled the country seemed to be, but even there the houses were few and far between.

There are good sleeping cars attached to the trains, and we spent the nights very comfortably. The sleepers are different from those in America; the passageway runs along the side of the car, and the berths are arranged crosswise. In the daytime they are folded up, making comfortable seats. Even the third class cars had rough sleeping accommodation.

The dining cars are far inferior to those in America. There is one long table in the centre of the car, and the people all sit around it in family style. The furnishings are poor, but there is an abundance of food.

Early the next day we ran into Iman, which is one of the most important stations on the line. It stands in a pretty prairie, on the Ussuri River. Good river steamers run from this point down to Habarofsk, and the wharves present a busy scene. With a large water and land traffic, Iman will doubtless have a considerable growth. From this point we followed the Ussuri banks for several hours, and the scenery was good. Broad fertile meadows spread themselves out along the river, and extended back to the blue mountains in the distance, while large herds of fat cattle and fine horses found splendid pasturage on them. Now and then we passed peasants in the large meadows making hay. In one field I counted 115 big haystacks. Good fields of oats and wheat were visible along this part of the journey, and the grain was heavy. Mother earth is ready here to fill full the hands of every farmer who will hold them out to her.

After riding slowly all day and all night, we arrived in Habarofsk at eight o'clock next morning. Here too we found the town some distance from the station, and had to drive across in carriages. Habarofsk is the northern terminus of the railway, 500 miles from Vladivostock. Originally it was intended to extend the line clear across Siberia from this point; but, as was said above, since Russia has obtained control of Manchuria the through line turns east at Nikolskoe. But this line will retain its importance, connecting as it does all the lower section of the country with the great Amoor River. Habarofsk, like Jerusalem of old, is beautiful for situation. It is built on three parallel hills, on the south bank of the Amoor, and is a town of perhaps 15,000 people. It is pre-eminently a white's man town. The buildings are not at all like the shabby little things of China and Japan, but are good substantial Western houses. No jinrikisha or kago are to be seen, and one goes where he wants to in a carriage drawn by good big horses, and driven by a white man. Well dressed officers in full uniform, and sweet, pretty ladies, swarm the streets everywhere. Life seems gay on the Amoor, and there is abundant society.

The Amoor, on which the town is situated, is one of the great rivers of the world. It drains a large part of northern Asia, and discharges into the sea a volume of water not very much less than the Mississippi. It is navigable for almost three thousand miles, and will afford cheap river transportation for the produce of the province when all its fertile valleys shall be populated. Habarofsk is 1,000 miles from the mouth of the river, and fine steamers go another thousand further up from this place. Then light-draft steamers go about a thousand miles further. There were several steamers lying at the wharf and I went aboard one of them. It was large and airy, and had very comfortable cabins and decks. I noticed that the engines and machinery were made in England; but an axe lying on the deck was made in Massachusetts. To get on one of these river boats and go one thousand miles back into this wildest and newest part of Asia would be an ideal excursion, and I regretted much that my time did not permit me to make it. But I did have a canoe ride of one hour on the Amoor, getting about half way across it in that time. This waterway is entirely shut up by ice for six months of the year, and in the winter season it is used as a road for sleighing.

The most prominent building in Habarofsk, as in all Siberian towns, is the Greek Church, built and supported by government. It stands on the summit of a hill, and is surmounted with the large balls usually found on Greek temples.

Standing on a high bank overlooking the Amoor is a pretty life-size statue in bronze of a Russian nobleman connected with the founding of this town. The eyes of the figure are gazing far over the broad river, trying, as it seems, to peer clear through northern Asia to the borders of European Russia. He sees Empire here.

The museum at Habarofsk is very interesting. It is beautifully housed in a brick building of three stories. Here I saw the rare animals of Asiatic Russia, preserved with all the skill of the taxidermist's art. Among them were two magnificent tigers, and one large bear from which the figure of the "Russian Bear" is taken. Then, there were the various costumes, made of furs and fish skins, of all the aborigine tribes; and samples of their sledges and snow shoes. It was, on the whole, one of the most interesting museums it has been my good fortune to visit.

In the streets of this town, and at other places, I saw gangs of convicts, wearing light chains under the escort of armed soldiers. Convict labour is still practised here, but is unpopular with the people, and efforts are being made to abolish it in the near future. This is not because the system as now practised is too cruel and inhuman, but simply because convict labour is more costly than free labour, and is detrimental to the development of the country. As for the hardships of the Siberian exile I believe they are greatly exaggerated. Certainly nothing that I saw would indicate that they are treated with unnecessary cruelty; and the fact that most of the exiles prefer to remain in Siberia after their term of banishment is completed is sufficient proof that their lives here are not so very hard. Peasants and other low orders of convicts are much better off in their Siberian exile than in European Russia; and the opportunities to retrieve their character and fortunes are incomparably superior. It is on the political exile of high class that the burden rests heavily—not because of any inhuman treatment visited upon him, but simply because he is an exile.

I spent a short time very pleasantly in this new town of Habarofsk, on the banks of the great Amoor; and then took the through train back to Vladivostock, the journey consuming twe nights and one day.

The next day being Sunday, we attended service at the Greek Cathedral. The service began promptly at nine o'clock, and a beautiful chime of bells announced the hour. There were few worshippers when the priests began chanting their liturgies, but soon the people filed in in crowds, and the great church was filled to overflowing. As there were no seats, we had to stand throughout the long service. But not all the people remain to the end; indeed, there are some coming and going all the time. The service is very spectacular. Thousands of candles keep the vast room brilliantly lighted; and golden images and pictures give a very gorgeous effect. There is a counter at one side where a man sells candles, and everyone who came in bought one or more candles, which he lighted and set up in front of a picture, before crossing himself and saying his prayers to it. The music was grand, and it was hard to believe it was unaccompanied—but there are no organs in Russian churches. The choir was concealed, and it was difficult to decide where the music came from. The service consisted simply in chanting liturgies and singing responses. There was no preaching, or instruction of any kind. Some of the people seemed very devout, and to have a real spirit of worship; but most of them went through the performance in a perfunctory manner, without appearing to attach any meaning to it whatever. These people seem to look upon religion as but part of the government, to be gone through with as a matter of course. But, whether the heart is in it or not, the outward sign of religion is visible on every hand. Not only in the private homes, but in all public offices the "ikon" is seen fastened up in a certain corner of the room, and this is called "God's corner." The house is considered as dedicated to God, and the people burn candles before these images on feast days and cross themselves before them. They do not seem to think that drinking is incompatible with religion, for I noticed one of these images just over a bar, in a public house.

In travelling amongst these people one is struck with the evident popularity of the young Emperor and Empress. Good photographs of them are found in all the houses, in the shops, in the public offices, and sometimes even on the streets. No one is permitted to wear his hat in a room that contains the Emperor's picture in uniform. Not knowing this, I went into the post office with my hat on, when an officer came at once, pointed to the Emperor's picture, and motioned for me to take off my hat. If the photographs one sees are true representations, the Imperial pair are certainly a handsome couple.

Even in her calendar Russia is differentiated from the rest of the world. She still uses the old Julian calendar, and all her dates are twelve days behind ours. Thus to-day is August 8th by our reckoning, but here they call it July 27th. I understand that the present Emperor is trying to enforce the use of the Gregorian calendar, but is making little headway because the priests are against him. A change would disarrange all their feast days.

America has an enviable share in the trade of this country. Most of the flour, canned goods, and other edibles used here come from the Pacific Slope. America also sells a great deal of lumber, and many machines in this section. All of the supplies for the Manchurian railway are either bought in America or by Americans in Europe. One of the engineers, himself a Scotchman, told me that everything in connection with it passes through American hands. The Russian government stipulated that that part of the railway which traverses Russian territory should be built of Russian material only, but even there they were forced to buy American lumber for bridges.

Passports are a great nuisance here. No one is permitted to land without a proper passport, and it must be given to the hotel keeper as soon as one arrives at the hotel. Special permission must be secured to go into the interior, and I was forced to delay my visit to Nikolskoe eight hours to get that permission. After the passports have been properly visèd one must have another special permit before he can leave the country. I spent several hours yesterday at the police office trying to get permission to return to Japan; and when I finally secured the necessary papers they told me I would have to go to the governor's office on the morrow and secure his signature in addition. So I went there this morning, and only after waiting two hours and paying several fees, did I finally get permission to leave the country. It is a disgrace to the city that there is no one in either the police office or city council who can speak English. With an interpreter the passports could have been arranged much sooner. But I don't think they want to speak English, or to hear it either. Anglo-Saxons and their speech are not at a premium in this corner of the world. It is not only we poor foreigners who are subjected to this imposition about passports: every Russian subject as well must get a passport before he can travel to the next town, and if he desires to go to a foreign country he will have more trouble in getting away than we had. The whole business is an unmitigated nuisance.

A bill has been introduced in the Senate by Senator Penrose of Pennsylvania to pension Mrs. Gridley, widow of the late Captain Gridley, of the *Olympia*, at $100 per month.

EDUCATION IN THE ARMY.

There is said to be a considerable improvement in the condition of the Japanese soldier with regard to education. A table compiled by the War Department shows the following figures :—

		(1.)	(2.)	(3.)	(4.)
Guards	1897	—	802	1,830	362
(Tokyo)	1898	51	891	1,988	425

A WONDERFUL GUN.

We read in the columns of a Tokyo contemporary that "the Osaka Arsenal is now engaged in the manufacture of the 7-inch rapid-firing mountain and field guns *devised by* Colonel Arisaka." We can *not speak* with absolute accuracy about a 7-inch gun, as there is no such weapon in the British service, but we shall not be far wrong if we say that it would weigh 7 tons and fire a projectile weighing 130 lbs. What is Colonel Arisaka's mountain field piece, we wonder. Perhaps it is a 7-centimetre gun; in other words, a weapon firing a projectile with a calibre of 2.751 inches.

CORRESPONDENCE.

THE RELIGIONS BILL.

To the Editor of the "Japan Mail."

Sir,—Does Art. 6 of Chap. 1 of the "Bill Relating to the Law of Religions" now pending in the Diet forbid the incorporation of a "mission," *i.e.*, of the missionaries representing some one of the Boards or Societies having work in Japan? Also, does it forbid the incorporation of a missionary society on the part of members of churches whose conscientious scruples forbid them to set up a *kyōha* exercising general control over the organized local churches?

If I am correct in supposing that each of the above questions must be answered in the affirmative, would it not be more in line with the broad-minded principles which underlie the proposed law to strike out that article and substitute one permitting the incorporation of such bodies as those referred to above?

It seems to me that this point is quite important.

Sincerely yours, E. C. FRY.
Sendai.

THE "JAPAN MAIL" AND QUESTIONS AFFECTING FOREIGNERS.

To the Editor of the "Japan Mail."

Sir,—Having read the *Japan Mail* for years and followed through its columns the many discussions arising on questions of Treaty Revision, with its important bearing on the status of foreigners resident in Japan, I wish to acknowledge the helpfulness of the information which your paper has constantly given—information which would, to say the least, have been difficult to obtain from other sources. During this period of uncertainty the calm and rational view taken by the *Mail* of perplexing questions has helped much to lessen the uneasiness which was unavoidable in facing a new situation.

Yours, A SUBSCRIBER.
Yokohama, January 3.

THE WIDOWS AND ORPHANS FUND.

To the Editor of the "Japan Mail."

Sir,—As some doubt exists as to whether both principal and interest will be divided amongst the recipients of the Lord Mayor's Widows and Orphans fund, to which the amounts collected here are being remitted, we propose to instruct the Secretary of the fund to distribute the whole sum sent him through our channel, and that no part of it is to be capitalized.

I am, dear Sir, yours faithfully,
J. C. BUDD, Agent,
Chartered Bank of I., A. and C.

BUSINESS NOTES.

The tea market this year has been extremely active, remarks the *Shogyo*. Sales have been effected down to the last leaf, so that nothing now remains in Yokohama either in stock or for special delivery. The following table shows the amount of transactions concluded with various foreign firms in the Settlement up to the 20th instant, as compared with the corresponding period of last year :—

Firms.	Amount of purchases for this year. piculs.	Same for last year. piculs.
178	32,340	33,388
211	23,594	24,242
221	20,694	21,420
33	19 800	21,543
225	17,718	17,142
143	16,716	15,300
1	15,142	8,782
36	11,824	9,911
22	10,799	14,586
162	10,577	6,645
210	10,474	9,795
Nitto Boyeki	9,804	11,586
68	7,579	6,152
Seicha Kaisha	5,825	8,362
133	1,719	1,154
48	895	—
Total	215,500	210,000

As had been anticipated, the foreign trade of Japan for the first half of this month shows an excess in imports of 5,020,000 *yen* and in exports of specie of 170,000 *yen*. Below are the details :—

	1st half of December. yen.	Aggregate total from January. yen.
Exports	6,438,011	203,463,834
Imports	11,459,987	206,808,556
Total	17,897,908	410,272,390
Excess of imports	5,021,976	3,344,722
Export of specie	262,817	10,099,816
Import	84,493	19,940,177
Excess in export	178,324	—
Excess in import	—	9,840,361

Compared with last year the total trade has decreased by 32,460,000 *yen*, but the export, have increased by 37,770,000 *yen*. The excess in imports has also diminished by 108,200,000 *yen*, and trade, on the whole, seems to have entered upon a course of progress.

Commenting upon the extraordinary development of Trusts in Europe and America, the *Tokyo Keisai Zasshi* says that the recent operations of these vast aggregations of capital has proved extremely detrimental to the interests of commerce and industry, being attended with serious abuses, not only economical, but political. Some of the statesmen of Japan have now begun to direct their attention to the subject lest this country should be involved in similar misfortunes. But institutions of the kind, remarks our contemporary, already exist in Japan. One example is the corporation known as the Kwansei Union Steamship Company. It was in the 8th or 9th year of *Meiji* that the Osaka Shosen Kaisha entered into competition with one or two minor organisations in respect to the traffic to the westward of Osaka. It gained a complete victory, the result being the absorption of the weaker companies in the 18th year of *Meiji*, through the purchase of their ships and the transfer of the shares. This was the origin of the Kwansei Union, and it furnishes an analogy to the appearance of Trusts in Europe and America. Meanwhile, another competitor sprang up in the shape of the Iyo Steamship Company, and it was followed by still another, the Uwajima Kisen Kwaisha. These two corporations, however, signally failed, and were also amalgamated into the Union Steamship Company in the 22nd or 23rd year of *Meiji*. At one time the union was almost dissolved, but as the companies found they could not, stand individually a final amalgamation was effected in the 26th year of *Meiji*, the Kawnsei Company being constituted in its present form. The number of ships and amount of capital owned by the Union at present are as follows, according to our contemporary's calculation :—

Name of Company.	Capital paid up.	No. of ships.	Nominal amount of capital. Yen
Osaka Mercantile Marine	Whole	60	5,000,000
Chugoku Kisen Goshi	(Uncertain)	4	19,000
Uwajima-Okayama Joint Stock	Whole	5	120,000
Iyo Steamship	Half	6	300,000
Taiko Steamship	Whole	3	300,000
Awa Kyodo Kisen	Whole	4	200,000
Uwajima Kisen	30.000 Yen	2	100,000
Hijikawa Kisen	50.000 Yen	2	100,000
Nippon Kyodo	Half	—	500,000

The *Official Gazette* publishes a detailed report on the foreign trade of Japan as compiled by the Finance Department. The figures are as follows :—

EXPORTS AND IMPORTS (ASIA).

Country.	Exports. Yen.	Imports. Yen.	Totals. Yen.
China	2,387,469	5.489 667	7,877,137

NEWS OF THE WEEK.

The silver punch bowl and seven beakers to be presented to Mr. and Mrs. A. C. Reed by the foreign communities of Yokohama and Tokyo are now on view at Messrs. Kelly and Walsh, Ltd., and will be found splendid specimens of the Japanese silver smith's craft.

In the United States the smokeless powder stored in magazines for the use of sea-coast guns is said to have deteriorated to such an extent as to be dangerous to use. A 10-inch gun was lately burst by this powder that had been stored for two years, and the resulting examination showed that practically all the stored powder was affected. The cause of deterioration is being investigated.

The greenhouses attached to the residence of Mr. David Jackson, No. 160 Bluff, were destroyed by fire on Wednesday night. A gardener's carelessness is said to have been the cause.

Attention should be directed by the police to the conduct of the drivers of wagons and carriages. Their recklessness is positively criminal. On Tuesday morning one wagon, driven at a furious pace by a drunken *betto*, ran over a woman in Water-street, bruising her face and chest, and inflicting injuries of the gravest kind. Instead of stopping the driver at once whipped up his horse, and soon disappeared round the corner. No policeman was within call at the time.

The *Chinese Mail* received a long telegram from the north on Dec. 21, stating that an Edict had been issued by the Emperor on the 19th condemning Kang Yu-wei and Leung Kai-chiu for spreading false political reports, thus inducing men to work with them to the detriment of good government. The Edict urges the Viceroys and Governors of the Maritime Provinces to offer rewards of extraordinary value for their arrest, and, if failing to lay hold of them alive, to offer ample rewards for their murder.—*China Mail.*

Mr. A. Swanson, of Messrs. J. M. Laffin & Co., was brutally assaulted on board the P. M. steamer *China* on Saturday by a coolie named Nakajima Seikichi, who was employed in loading cargo. The coolie cut the foreigner in two different places on the forehead with a large jack knife, and bit him in the leg. The cause of the trouble was a dispute over money. The coolie demanded payment for putting some cattle on board, but it turned out that he was not engaged by Swanson. The man has been arrested by the water police.

In the little village of Broughton, near Newport Pagnell, a Mrs. Sarah King has entered upon her 100th year. She is in possession of all her faculties, and is able to read and thread a needle without the aid of spectacles, and to attend to many household duties. A photograph of this venerable lady was submitted to the Queen, who was pleased to accept it, and commanded her private secretary to send £5 as a present to Mrs. King, in the hope that it may be of some service to her.

A new steamer, to be called the *Cecil Rhodes*, built for the Tanganyika Concessions Company, and intended for service in connection with the laying of the telegraph line along the shore of Lake Tanganyika, has been launched at Wyvenhoe, near Colchester. The *Cecil Rhodes* is a twin-screw steamer of about 65 tons. After the launch she will be taken to pieces, packed into parcels of about 60lb. each, conveyed about 8,000 miles by sea, 350 miles over African rivers and lakes, and then carried on natives' backs for another 250 miles, after which she will be the first iron steamer launched on Lake Tanganyika.

A system of electrical driving and lighting has, says the *Engineer*, been adopted in the new shops of the Thames Ironworks and Engineering Company, at Blackwall. This company has in hand orders from the Admiralty for ten sets of machinery for 56ft. vedette boats, nine sets of machinery for 42ft. steam pinnaces, and six sets of water-tube boilers for 40ft. pinnaces. In addition to these, the Admiralty have given them the order for a third set of battleship machinery of 18,000 indicated horse-power.

Cuban war relics seem to be a drug on the American market, while, on the other hand, the scarcity of scrap iron is almost unprecedented. These two circumstances have resulted in the shipping to Philadelphia of great quantities of shot and shell from the battlefields of Cuba, which are being snapped up at prices varying from 15dols. to 17dols. a ton. In fact, all kinds of old iron, be they relics or not, are coming from the West Indies. From Cuban sugar plantations which were wrecked during the war large consignments of disused iron are being sent. Negotiations are now pending for the importation into the United States of all the old iron that can be found. Five thousand tons have been shipped from Cuba within the last two months.

The *Evènement* states that certain Germans, who belong to the cult of Heine, take special interest in the tomb of their loved poet in the Montmartre cemetery. Since the beginning of this year, the bag, in which visitors place their personal tributes to the poet, has contained no fewer than 385 cards bearing 492 names. On one of these cards was the following from a Berlin merchant :—"Heinrich Heine, with his bitter irony, has always pleased me. I have travelled well-nigh through the world, and I find that he is always right."

After a trial lasting six days judgment was delivered recently in the case of the District Judge of Mocsa, Hungary, and other officials of the Commune accused of torturing prisoners in order to obtain the confession of a robbery laid to their charge. District Judge Koloman Szabo was sentenced to three years', and Gedeon Molnar, an official accountant, to three and a half years' penal servitude, and Ludwig Goebel, a notary, and Ozunyi, the local judge of the Commune, to 12 and four months' imprisonment respectively. All the prisoners gave notice of appeal.

The *Times of Natal*, in a recent leader, headed "Retribution and Restitution: Boers dividing Natal," said :—"Absolutely trustworthy information reaches us that Boer surveyors have been actually for some time at work carefully and systematicelly surveying all farms in the Richmond district, with the avowed object of having reliable data for the redistribution of Natal farms among the leaders of the Boers, in the event of their success in the field! To anyone who may doubt the fact of these Boer surveys having been made in Natal, we will give the name of an M.L.A., whose farm among the rest has been so surveyed."

The Polish papers learn that it is intended to transfer the remains of Chopin from Paris, where his grave is between the resting-places of Cherubini and Bellini, to Cracow, for interment in the Royal vault of the ancient Polish Kings and Polish celebrities on the Wawe Hill. The intention, says the Vienna correspondent of the *Standard*, is to have the remains taken to Cracow by special train, and to make their reinterment the occasion of a great Polish festival. M. Frederick Chopin has given two thousand florins towards the expenses, which will be raised entirely among Polish patriots.

The public authorities who are removing the human remains from "Little Dorrit's Church," in Southwark, have already cleared away upwards of a thousand bodies, but in the process of doing so they have discovered new vaults, the existence of which was unknown or had been forgotten, and these also are choke-full of coffins. It is stated that the clearing out of the whole of the vaults and the re-interment of the remains at Woking will add fourpence per pound to the rates of the parish. The bodies are presumably those of persons of local standing or distinction, whom the parishioners or the church in past times desired to honour.

Writing in his customary vigorous style, M Urbain Gohier, in the *Aurore*, warmly protests against the outcry against the British. After recalling all that they did for France in 1870, he says that in any case France, who has allowed so many abominations to be perpetrated under her flag in Indo-China, in Madagascar, and in the Soudan, has no right to cry out against any other nation. "If we have any complaint to make against the British, why do we not tackle them ourselves? We bowed the head and neck for them at the time of Fashoda, in spite of our admirable fleet and invincible

Digitized by Google Original from CORNELL UNIVERSITY

admirals and the money we have spent upon them. But we think it more prudent to cry to the little Transvaal, 'Bravo, Boers! Go for them! Please revenge us.' To those," he adds, "who have any idea of what is due to the country's dignity there is enough in all this to make one die from very shame."

The American Consul at Capetown, finding that the Boer prisoners at the Cape were living in a state of luxury, authorised his colleague at Pretoria to advance money to the British captives there. President Kruger has forbidden the American Consul at Cape Colony to furnish Great Britain with any information regarding prisoners taken by the Boers. President McKinley has forwarded a communication to Pretoria informing President Kruger that the United States insists upon the sacred duty of watching the interests of the British.

The return of the number of courts-martial held and summary punishments inflicted on seamen and marines of the Royal Navy during the year 1898 is chiefly remarkable for the number of offences recorded of striking and attempting to strike a superior officer. Thus we find with, roughly 82,000 men in 1897, we had only 97 tried and punished on this account, while in 1898, with a total of 88,000, we had 149 insubordinate delinquents. It is thought that much of this increase is really due to the increase in the number of stokers lately entered, who have little idea of discipline. So much the more need for their being taught it.

At a town's meeting at Kidderminster, addressed by Mr. M. Ray, a delegate of the Imperial South African Association, a resolution was passed endorsing the policy of Her Majesty's Government in South Africa. Sir Frederick Godson, M.P. for the borough, in supporting the resolution, said his brother, Maj. *Godson, had* Cetewayo in custody when first captured, and the Zulu King said he never could understand why Great Britain interfered between him and the Boers. The Boers were a deceitful, treacherous people, a curse to South Africa, and if he had been left to deal with them he would have eaten them up. As it was, the British had eaten him and his people up, and they would find that the Boers would never rest until the British had eaten them up also. "Now," said Cetewayo, "if you British had let me 'eat the Boers up,' I should never have fought you unless you wanted a fight, and we could have had peace."

THE PATRIOTIC FUND.

Amounts received by the Chartered Bank of India, Australia, and China, on account of the Lord Mayor's fund for the widows and orphans of the officers and men of Her Majesty's forces who may lose their lives from the war in South Africa:—

AMERICAN TOPICS.

President McKinley is in favour of reviving the grade of Vice Admiral in the U.S. Navy and will elevate Rear Admirals Schley and Sampson to the position.

Mr. Peter A. B. Widener, the millionaire contractor of Philadelphia has announced that he has purchased thirty-six acres of land at Logan, a suburb of Philadelphia, on which he intends to erect and endow a home, hospital and school for crippled children at a cost of $3,000,000.

Among the entries on the Journal of the Senate is the following:—By Hale—For the construction of a Pacific cable by the Navy Department, to be operated by the Post-office Department, and appropriating $11,000,000 for this purpose. It is to run from San Francisco to Manila, via Honolulu, the Midway islands, Guam and Iloilo.

One of the most hopeful signs of a better tendency in the south was furnished in the Georgia house of Representatives when the Hardwick bill, which contemplated the practical disenfranchisement of the Negro voters of the state, was defeated by a vote of 137 to 3. The heartiness and almost complete unanimity with which the lower house ruled the measure out of court are in refreshing contrast to the short-sightedness and thinly disguised hypocrisy that have disgraced some other states.—*Boston Transcript.*

Chicago's municipal pawnshop, authorized at the last session of the Illinois legislature, has been established and is now operated under a charter from the State, at which money will be advanced on personal security at the rate of one per cent. monthly instead of twice that amount, as the private pawnbrokers have been in the habit of charging. At the same time it may be reasonably assumed that the amount advanced will bear a more equitable relation to the value of the pledge than has generally been the case in transactions of this character.

"The rural telephone service," remarks *The Electrical World*, "is said to be far advanced in north-eastern Ohio, and particularly in Geauga county, which is strictly an agricultural district. Not only is there an office in every township, but hundreds of farmers have telephones in their homes. One of the companies in the county named is strictly a farmers' company, it being operated by eight farmers, who own everything from franchise to switch-board. The primary object in constructing the lines was not to build them for an investment, but as a help in the transaction of business, and to give the families some of the social privileges that are too often lacking on the farm."

The law recently passed in North Dakota prohibiting the marriage of persons afflicted with hereditary disease is quoted with approval by the *Revue Scientifique*. It says: "Science makes great efforts, often without effect, to cure and correct diseases and abnormalities. It would be much simpler to prevent their occurrence. Is not prevention in all things a better method than cure? Our era is not accustomed to the radical customs of the Spartans, but they certainly contained much that was good, and without cruelty it is perhaps impossible to arrive at the same result." The trouble with such laws is, of course, that their passage by a single State is ineffective and merely drives diseased persons into adjoining States for the performance of the marriage ceremony.

Pittsburg enjoys the distinction of having the only woman in the States, or even in the world, who is at the head of a large steel and iron works business. The woman who holds this unique position in industrial circles is Miss Y. R. Baumgarten, who is at the head of the Pittsburg office of Joseph Joseph & Bros., of Cincinnati, dealers in rails, scrap iron, and railway supplies, says the Cincinnati *Inquirer*. She is in sole charge of all the business there, which, by the way, is the largest done at any of the branches of the company, and amounts to over a million dollars a year. She buys, and sells, inspects, superintends the shipping, and, in fact, does everything that a man would have to do under the circumstances.

It is a somewhat noteworthy fact, remarks the *American Silk Journal*, that countries which are large producers of raw silk do not, as a rule, figure largely in the manufacture of the same into fabric. The only important silk manufacturing country which is at the same time also a large producer of raw silk is France. Of the other manufacturing countries, such as the United States, Germany, Switzerland and Great Britain, not one is a grower of raw silk. China and Japan, which are very large exporters of raw silk, produce enough tissues for their own consumption and are also able to export; but they supply only light silk tissues, not suited to all uses. Japan especially has made great progress in the last decade as an exporter of silk goods, of which it now sends out several million dollars' worth yearly.

Writing on December 9, the *Literay Digest* said—"Rumours of serious dissatisfaction in Cuba, caused by the fear that the United States will ultimately annex the island, have again drawn public attention sharply in that direction. It is now twenty months since Congress disclaimed any "disposition or intention" to exercise sovereignty or control over the island "except for the pacification there-of"; and declared that when "pacification is completed," independent government is to be granted. A number of Cubans capable of bearing arms now think that pacification is completed, and that our control should be withdrawn; while many prominent men in this country think that if our control were withdrawn now, anarchy, would follow, and the last state of the island would be worse than the first. There are few men whose opinion on the situation would carry more weight than that of Gen. Leonard Wood, but he has made no public utterance on the subject. It is understood, however, that on his visit to Washington he recommended that part of our troops on the island be withdrawn, and that the Secretary of War will adopt this course." As we know by later news, the President is determined to keep his pledges to the Cubans.

What might be regarded as an unerring indication of prosperity in the west is found in the returns of the smaller colleges in Ohio, Illinois, Indiana and Michigan, whose clientele is drawn for the most part from the farm. The tuition fees and cost of living at these institutions are small, which fact, coupled with the increased prosperity of western agriculturists this year, accounts in part for the long list of names on their rosters for the present scholastic year. These institutions are numerous, says the Chicago *Tribune*, Ohio having thirty-nine, Illinois thirty-one, Iowa twenty-three, Indiana fourteen and Michigan eleven, but they do not suffer by the competition of the great universities. Each has its mission in life. Yale and Harvard this year have among their students young men who attended the smaller colleges last year, but who are now able to afford a more ambitious course. At the same time, many to whom a collegiate education was once an impossibility are now able to attend the comparatively inexpensive courses in the smaller college. The cheapness with which students make their way through some of these colleges is amazing. The estimated cost of living expenses, including board, at most of them is not above $150 a year, while at a Nebraska seat of learning it is said that $54 should cover the total expenditure of a student for a year.

United States Senator Monroe L. Hayward died at 6.20 a.m. on Dec. 5. Senator Hayward was stricken with apoplexy in August last and had since remained in a precarious condition. He was 59 years old and had lived in Nebraska City for thirty-two years.

Digitized by Google Original from CORNELL UNIVERSITY

Although a lawyer by profession, he made his wealth largely through investments in lands in Nebraska and Kansas. His election to the United States Senate was his first appearance in national politics. He was defeated for Governor by Poynter two years ago, reducing the Fusion majority from 18,000 to 3,000. When the last Legislature was found to be Republican, Mr. Hayward announced his candidacy for the United States Senate and the fight which followed was one of the most bitter in the history of the State. The long-drawn-out caucus deadlock finally resulted in his election. But soon afterward he was stricken with paralysis while addressing a political meeting. Senator Hayward was a veteran of the Civil War, serving in the Twenty-second New York Volunteers and later in the Fifth Cavalry. He married Miss Jennie Pelton of Putnam county, New York, in 1870 and his widow and two sons survive him. One of his sons is a surgeon in the United States Army and the other was a Captain in the Second Nebraska Regiment during the Spanish war.

Congregationalism, so far as its range of influence is spread in America, is keenly interested in the retirement from active pulpit life of the Rev. Dr. Richard Salter Storrs. Nor would it be just to say that this interest is confined to Congregationalism alone. All denominations are finding in the letter read from the pulpit of the Church of the Pilgrims, Brooklyn, matter for much regret. To an extent at least one of the most scholarly lights of the American ministry is passing off the platform of vigorous preaching. While the resignation by no means signifies that Dr. Storrs will be heard no more, it implies that as a permanent force he has left the scene. The loss will be felt to a much greater degree for the reason that he was a scholar, orator, man of affairs, and historian as well as pastor. An historic figure in the American ministry, he was ruler of an historic church, and, what is most remarkable, he has been its sole ruler. There have been several long pastorates in American congregations, but that of Dr. Storrs was probably unprecedented, He came to Brooklyn before Henry Ward Beecher; he was the first, as he is now the last, of that extraordinary group of preachers that made Brooklyn a city of ministers as well as a city of churches some twenty years ago. Steadily for fifty-three years he has kept at his pulpit, making this the first of all, though for over a quarter of a century he has been far more than a local force, a man of public importance from the Atlantic to the Pacific, indeed, an historian of recognized authority. Dr. Storrs, who is a native of Massachusetts, is now 78 years old.

The *San Francisco Chronicle* had the following on Dec. 7:—Captain R. B. Jones, known in many climes as the "Sporting Captain," died at sea on November 29th on board his steamship *Glenogle*, which was returning from Manila, whither she had taken the Thirty-second Infantry. His body was embalmed and brought to this port, where the *Glenogle* arrived yesterday. Captain Jones died after three days' illness with brain fever. He caught a cold in the Philippines. When the *Glenogle* arrived at Manila Jones received permission from General Otis to go to the front, and he spent two days on the firing line with the soldiers he had taken there in his ship. When he returned to the steamer he was ill, but upon his arrival at Nagasaki had so far recovered as to resume his duties. Death came upon him suddenly; Dr. Nicholson, the ship's surgeon, did all he could, but could not stay the disease. Captain Jones was one of the most popular skippers who ever visited this port. He was commander for many years of the steamship *Glenshiel*. He was the oldest English-speaking captain in the Chinese-Japanese trade, and had hosts of friends in every port he visited. Especially was Captain Jones celebrated for his studs of racing horses, one of which he maintained at Singapore and another at Shanghai, at both of which places he had won cups and fat purses. When in port here he always drove fast horses, and was well known to the men who haunt the Park and boulevard. The dead captain was a native of England, 55 years old. His home was at Burton-on-Trent, England, where his widow now resides. He leave two daughters and two sons, one of the latter a chief engineer of a steamship running between Liverpool and Cape Town. The body will probably be shipped to England.

NOTES FROM HOME PAPERS.

The Queen paid a visit of semi-state to Bristol in order to open the splendid Convalescent Home built in memory of her Diamond Jubilee, and was received with the rapture of welcoming loyalty which now-a-days attends all her movements. The whole South-West had precipitated itself upon the ancient and most picturesque city, the crowds were enormous, and the scene as the procession moved amidst rather unusual military display, is described as singularly beautiful. The replies to the addresses were written for her Majesty, who does not, when she writes her own thoughts, talk about "recreative institutions," and therefore they sounded conventional, but even the weather was loyal, and the Queen, who looked gratified, was evidently in fair health. As usual her Majesty did a characteristic thing, sending for an old cornet player who had played before her and the Duchess of Kent when they visited Bristol in 1830, and reminding him kindly of their meeting sixty-nine years ago.

Mr. Rhodes is the subject of Mr. Stead's character sketch in the *Review of Reviews*. Referring to the De Beers Company, Mr. Stead says it is the largest diamond producing company in the world. Since its amalgamation in 1885, it has supplied the world with diamonds which, sold wholesale, brought in no less a sum than £40,000,000. This, however, is by no means the chief distinction of the De Beers concern. It is chiefly notable because in its charter, or Articles of Association, Mr. Rhodes was able to secure the insertion of a proviso authorising the directors to appropriate from time to time such funds as they deemed it advisable to set apart out of profits for political or Imperial purposes. It was introduced by Mr. Rhodes, and assented to by his fellow-directors and shareholders solely out of deference to him. It was one of Rhodes's fads, they said; let him have his way. So he had it—as is his wont.

A tunnel under the Thames from Rotherhithe to Shadwell will provide a useful means of communication; and the County Council, having resolved in April to seek Parliamentary powers to construct the tunnel, could scarcely rescind its resolution in November. But £2,198,250 is a large sum of money, and the Council committed itself to the expenditure without adequate consideration of its other obligations, present and prospective. That latest report shows that the commitments for improvements, bridges, and tunnels exceed £12,000,000, and that an outlay of £3,000 000 for main drainage is imminent. Another item of prospective expenditure is the cost of a new county hall. This on the most moderate estimate means an outlay of £1,000,000 and it is improbable that a suitable site for building could be obtained for anything like the sum.

Mr. George Wyndham in an interesting speech delivered to his constituents at Dover, made a point which should be noted by persons who still believe in the likelihood of a successful invasion of the British islands. He pointed out that Great Britain, with an unrivalled position as to the acquisition of transports, and when the problem of safety from sea attack had not to be considered, had found a certain difficulty in transporting eighty thousand men by sea, and went on to ask what would be the difficulties encountered by a European Power bent on conquering Canada, Australia, or South Africa. In addition, how would a European Power manage to transport eighty thousand men to English shores,—even supposing our main Fleet to have been destroyed or decoyed away. The notion of a "snap" invasion while we had an adequate force, even if our Fleet had gone to the bottom, is a pure delusion.

Mr. Carson, M.P., states that in Dublin "soldiers are forbidden to walk through the streets for fear of offending the tender susceptibilities of the Boer sympathisers. Mr. Carson also calls attention to a little scene at a recent meeting of the Tralee Board of Guardians. A poor old woman presented herself for relief, reporting that her husband had been blind for fifteen years and that their two sons were away fighting the Boers. The Chairman of the Board observed that he believed the husband had worked when he was able, whereupon Mr. Slattery remarked, "But her sons are figting the Boers, and I would not ask a worse character of them." After discussion the applicant was allowed 1s. a week, it being understood that she would have got more but for the fact that she had two sons in the Army.

Sir J. Wolfe Barry recently made a most interesting speech on the congestion of Londons He believes that the "retardation" of business traffic between East and West, more especially coal traffic, costs the trade interests of London £9,000.000 a year, the owners of vehicles £1,189,000, and pedestrians £65,000, or a total of £2,150,000 a year. This he would correct by cutting a single mighty street, 125 ft. wide and 5¼ miles long, from West to East, and this, with its subsidiary connection, would cost £6,120,000. This had been ridiculed when originally proposed, but when the loss was fully understood it would be found that the saving fairly repaid the cost. The arterial street is probably a brilliant dream for the present, but if London advances for twenty years as it has done for the past twenty something very like it will have to be constructed.

The irrepressible "Mr. Dooley" has turned from the Dreyfus case to the Transvaal. In a monologue on the war contributed to the *New York Journal*, he describes President Kruger as follows:—"Kruger, that's th' main guy iv th' Dutch, a fine man, Hinnessy, that looks like Casey's goat an' has manny iv th' same peculyarities. He says, 'All r-right,' he says, 'I'll give thim th' franchise,' he says. 'Whin?' says Joe Chamberlain. 'In me will,' says Kruger. 'Whin I die,' he says, 'an' I hope to live to be a hundherd if I keep on smokin befure breakfast,' he says. 'I'll bequeath to me frinds, th' English, or such iv them as was here befure I come, th' inalienable an' sacred right to demand f'm me succissor th' privilege iv ilictin' an aldherman,' he says. 'But,' he says, 'in th' manetime,' he says, 'we'il have things the way they are.'" Mr. Dooley adds that if he was Kruger there would have been no war: "I'd give thim th' votes, but I'd do th' countin.'" It is evident from this "appreciation" that all Irish-Americans do not see eye to eye with Mr. Davitt in regard to the war.

THE BATTLE OF GLENCOE.

(By "The Times" Correspondent.)

On the arrival of Sir George White in Natal Lieutenant-General Sir William Penn Symons was sent forward to take command at Dundee, and on the outbreak of war the forces at his disposal were the 1st Battalion of the Dublin Fusiliers, the 1st Battalion of the Royal Irish Fusiliers, the 1st Battalion of the Leicestershire Regiment, the 18th Hussars, the 13th, 67th, and 69th Field Batteries, and small detachments of Natal Mounted Police and Carabineers. A few days after the war began the Boer forces occupied Newcastle, and our patrols began to come into touch with small parties of the enemy. On Wednesday, October 18, it was found necessary to withdraw a picket which had been posted five miles away at Glencoe, the point of junction of the Dundee branch line with the main line to the south. On Thursday the mail train from Ladysmith was fired upon at Elandslaagte, and a second portion of the same train, which was running in two sections, was a little later captured by the Boers. Nothing, however, seemed as yet to portend a serious attack upon our position at Dundee, and

Digitized by Google Original from CORNELL UNIVERSITY

General Symons, though fully prepared to meet such an attack, certainly did not expect it; though, curiously enough, Mr. Escomb, who was staying at Dundee, told me on Thursday that he had received information from a friendly Dutchman that a commando of 7,000 Boers from the east and a large commando from the north were to make a simultaneous attack upon the following day, information which, in the light of subsequent events, can be seen to have accurately reflected the intentions of the Boer commanders.

As a matter of fact, a large commando from the east under Lucas Meyer, Chairman of the First Volksraad and founder of the new Republic, now the Vryheid district of the Transvaal, crossed the Buffalo River at Landman's Drift on Thursday evening and pressed forward towards Dundee. At half-past 2 on the morning of Friday, October 20, a mounted infantry picket of the Dublin Fusiliers was driven in across Smith's Nek, where the road towards the river passes between the hills on the east of the town, a private being wounded. Nothing was known as to the strength of the enemy, and a company of the Dublins was sent forward to support. On the east of the town the ground slopes down for half a mile to a donga, or river-bed, from which on the other side the long ascent to the top of Talana Hill begins. In this donga the company of the Dublins took up position; hither when the battle began the infantry were pushed forward, and here they were formed for attack. As the dawn grew into daylight we could see the Boers all along the sky line on the top of Talana Hill, which lies on our left of Smith's Nek, and also on another kopje to the right of the Nek. About half-past 5 the Boers opened with their rifles on some of our men who were visible above the banks of the donga, and a few minutes later, to our great astonishment, and to the still greater astonishment of the camp, where nothing serious apparently was expected, the sound of a big gun was heard and a shell passed over our heads and made its way to the camp. Another shell speedily followed and a vigorous bombardment of the camp, at a range of 3,000 yards, at once began. It was now evident that the Boers were in force, their guns appearing to be about half-a-dozen in number. Presently *the cheerful sound* of our guns replying reached *us, one battery*, the 67th, firing from the camp, the others coming into action in forward positions on the high ground to the east of the town, the 13th on our right, the 69th on our left. Later on, as the Boer fire slackened, these two batteries moved down to positions immediately on the town side of the donga, firing at a range of about 2,000 yards. For two hours the battle consisted of a sharp artillery duel, till at 7 30 the Boer guns went out of action, whether disabled or not it is impossible to say. Their range had been excellent, but their shell fortunately defective, never bursting, so that our losses at this stage were insignificant, while our shrapnel, beautifully aimed at the crest of the hill and bursting on the flat summit alive with Boers, must have been very destructive.

Meanwhile, three regiments of infantry—the Dublins, the Rifles, and the Irish Fusiliers—had been moved forward to the donga, the Leicesters and 67th Field Battery being left to guard the camp against a possible attack from the north, and as soon as the Boer guns were silenced General Symons gave the order to assault Talana Hill. The hill rises about 800ft. above the level of the donga, and the distance to the top was more than a mile. The first portion of the ascent is gentle, over open ground, to a homestead known as Smith's Farm, surrounded by a broken wood. Above the wood the ground is rough and rocky, and the ascent steep, and half way up from this point a thick wall runs round the hill, the fringe of a wide terrace of open ground. Above the terrace the ascent is almost perpendicular, and at the end was the Boer position on the flat top so characteristic of South African hills. Altogether the position seemed impregnable, even if held by a small body against large forces; and General Symons must have had extraordinary confidence in his men when he ordered 2,000 to take it in the teeth of a terrible and sustained fire from superior numbers of skilled riflemen. His confidence was fully justified. It is said that he deliberately resolved to show the Boers that Majuba was not the measure of what British infantry could do, and if so he more than succeeded. To find a parallel for the endurance, tenacity, and heroic determination to press forward over all obstacles and at all hazards one has to go back to Wellington's invincible infantry in the Peninsula.

The morning was dull and cheerless, with drizzling rain, and the men had to go through their eight hours' fighting without their breakfast. The wood was the first cover available after leaving the donga, and in the rush for this position the Dublins led the way, though afterwards the three regiments went on practically side by side. The advance of the infantry was covered by a vigorous cannonade from our guns, but the appearance of our men in the open was nevertheless the signal for a storm of rifle fire from the Boers, though our losses at this stage were extraordinarily small. In the wood, which for some time marked the limit of the advance, they were considerable, and here about 9 30 General Symons, who had galloped up to tell his men that the hill must be taken, fell mortally wounded. Throughout the morning he had exposed himself perhaps unnecessarily, his position always being marked by the red flag carried by a Lancer orderly. By 10 o'clock our men, creeping up inch by inch and taking advantage of every available cover, had gained the shelter of the stone wall which serves as a parapet to the terrace, but for a long time further advance seemed impossible. As often as a man became visible the Boers poured upon him a deadly fire, while, whatever their losses from our artillery they rarely afforded a mark for a rifle. About 12, however, a lull in their fire afforded our men an opportunity for scaling the wall and dashing across the open ground beyond, and then the almost sheer ascent of the last portion of the hill began. Here it was that our losses were greatest, the Rifles losing most heavily, and it would seem that if any distinction can be drawn to this regiment belonged the first honours of the day. Colonel Gunning, who was always in front of his men, was shot through the head near the top of the hill; Captain Pechell, who had only arrived two days before from the Sudan and had led his men splendidly throughout the fight, also fell; and out of 17 officers who went into action the battalion lost five killed and seven wounded. The Royal Irish Fusiliers also lost very heavily, the Dublins, more fortunate apparently, in their position, escaping most easily. As our men neared the top our guns were compelled to slacken fire, and the Boers, of course, were enabled to strengthen their rifle fire accordingly. The last portion of the ascent was rushed with the bayonet, but the Boers did not await the charge, the few who had stood their ground to near the end being seen flying precipitately across the top of the hill when our men reached the crest. About thirty dead and wounded were lying on the ground and cases of ammunition and Mauser rifles strewn about showed the hurry of the flight. Boer ponies were galloping about, and one of the humorous sights of the day was men of the Dublin Fusiliers gaily riding back from the battle on these captive steeds. The Rifles captured two Transvaal flags, and a field hospital was found with 70 wounded Boers behind their position.

During the last stage of the fight our guns had been moved up from their second position behind the donga to positions on the flanks of the wood, and when our men emerged on the top of the hill a battery was pushed forward along the road to the top of the Nek. From here the Boer army was visible within easy range retreating across the open country below, and if the opportunity had been promptly seized the whole force could have been annihilated or compelled to lay down its arms: but there was some unfortunate misunderstanding about an armistice, and the opportunity was lost. The defeat of this commando has been a surprise and a salutary lesson to the Boers; the results of its total destruction or surrender would have been incalculable. As it was, however, the victory was well worth the price that was paid for it. The impression made on the Boers both by our infantry and artillery was enormous. One wounded prisoner declared that he had had much experience of Kaffir wars, but this was quite a different business; "It was awful!" Since Talana Hill Lucas Meyer's commando has disappeared and apparently ceased to be a factor in the campaign. The victorious force had afterwards to retire from Dundee, but their opponents of Friday last played no part in the operations that led to the withdrawal.

As we returned from the field rain came down in torrents. All day long we had expected an attack from the Newcastle road or Impati Hill to the north, which fortunately never came; but in the course of the afternoon firing, whose reason no one could explain, was heard towards the north-east. The cavalry had been sent out in this direction in the morning to operate on the right flank of the Boers position and as a squadron of the Hussars, accompanied by Colonel Möller and four sections of mounted infantry, disappeared and were not heard of by us again till we learnt in Ladysmith that they had been captured, it may be presumed that this firing marked the position in which they had been cut off and surrounded.

THE BOER WAR.

A BRILLIANT SORTIE AT LADYSMITH.

London, Dec. 11.

The *Daily Telegraph* publishes these dispatches from its special correspondent:—

Ladysmith, Friday, Dec. 8.

The most brilliant piece of work that has been done during the siege was accomplished at an early hour this morning. A column of Light Horse Natal Volunteers, supported by British regular cavalry, went out last night under command of General Sir Archibald Hunter. Before dawn broke they attacked the guns on the hill near Lombards Kop, carried the position, blew up the Boer guns, including a 6-inch Creusot piece and one howitzer, and captured a Maxim-Nordenfeldt quick-fire gun.

The gallant little force left town before 10 o'clock last night and took up a position near the foot of Lombards Kop. At about 2 o'clock this (Friday) morning the advance began. The troops got past a Boer picket in the darkness and were charging several hundred yards up the hill when the picket awoke and the sentry hailed "Wie Goat Daar" (Who goes there?) Getting no reply he fired his rifle and then ran off shouting "Willem, Hans, Marteens. Flee—the English are upon you."

The Boers round the guns fired several volleys at the advancing troops and then fled dismayed down the opposite side of the hill. Our men seized the guns without opposition. Then engineers, men of No. 100 Mountain Battery, blew up the heavy guns with guncotton and carried off the Maxim-Nordenfeldt.

The Boers had built a splendid emplacement on top of the hill, but they bolted before our men like rabbits, leaving everything, even their private letters behind them. One of these epistles said that they had bombarded Ladysmith for a month and nine days, but that the "Rooineks" were going about unconcernedly, and if the town was to be taken the Boers must do it at terrible loss of life.

Our troops brought away the breechlock of the Long Tom, together with the rammer, sponges, sights, friction tubes, and other fittings of the weapons. All the guns on the hill are quite destroyed now and utterly useless for offensive or defensive purposes.

The whole operation, counting from the moment at which the order to charge was given, was carried out in three-quarter's of an hour, with a loss on our side of seven men wounded.

This magnificent piece of work has evidently filled the Boers with dismay, as their guns on Mount Bulwan have practically been silent al day. The success of the attack cannot fail to have an immense effect upon the morale of the Boers.

At daybreak a smart skirmish took place between the Eighth Hussars and the Fifth Lancers and the enemy to the north-west of Ladysmith, near Peworth Hill. Our cavalry had been covering an attack on the guns during the night and the Boers thought that all our troops were engaged at Lombards Kop. They therefore tried to get near the town, but the movement was checked in capital style by the cavalry and our infantry on a long hill. The fighting was over at about 6 o'clock. Our total loss for the morning's work was four killed and seventeen wounded.

SHARP FIGHTING AT KIMBERLEY.

New York, Dec. 6.

A cablegram from Cape Town says: A dispatch from Kimberley, dated November 28th, reports sharp fighting as the result of the reconnoissance in force at dawn of that day. Major Scott-Turner of the Black Watch led the attack on the Boers, who held an intenched position on Lazarette ridge. The British force passed the Boer pickets, who were sleeping, and rushed the redoubts in the face of a hail of bullets. They were unable to hold the position, as the enemy was rapidly reinforced and poured in a terrible fire. Scott-Turner's horse was shot beneath him and he received a bullet in the shoulder.

Scott-Turner's attack was part of a considerable sortie, in which ten British guns and a large part of the garrison engaged. The fighting lasted several hours. The British failed to capture the enemy's laager, which was apparently the object of the sortie, and were not strong enough to hold other positions. They therefore retired. The Boer artillery was excellently served. The British assert that a party of Boers again raised the white flag and fired from beneath its protection. They also, it is said, repeatedly fired on an ambulance. Some of the Boers used explosive bullets. Several wounded Boers were taken back to Kimberley, as were also eight uninjured prisoners. The British losses were slight.

Digitized by Google Original from CORNELL UNIVERSITY

London, December 7.

The sortie from Kimberley on November 28th appears to have been much more serious than had been supposed. Details are not arriving of a reconnaissance in force by mounted troops under Major Scott-Turner at dawn on a ridge near Carter's farm, where the Boers were strongly intrenched. Finding the Boer pickets asleep, Major Scott-Turner proceeded along the ridge under cover and rushed the Boer redoubts at 5.25 a.m. in the face of the hail of bullets.

The Boers hoisted a white flag and fired at the British under its protection before surrendering. Owing possibly to the exhaustion of their ammunition the British were unable to follow up the attack and to seize a large Boer laager about 300 yards ahead, especially as Boer re-inforcements were seen approaching, and the enemy was keeping up a heavy fire from the shelter of the thick bush.

During the sortie an armoured train reconnoitered north and south, while a considerable force of British, with field guns and Maxims, advanced toward Spytfontein, holding the Boers in check in that direction.

Ten guns were engaged simultaneously, and, viewed from the conning tower, an artillery duel seemed to be proceeding in every direction, except toward Kenilworth, the fusillade being terrific. At 8 o'clock, having no force sufficient to hold the position he had stormed, Major Scott-Turner began gradually retiring his men. He had a horse shot from under him and a bullet went through the fleshy part of his shoulder. Several men had terrible wounds.

It is alleged that the Boers used Martinis and explosive bullets, and they frequently fired at the British ambulance wagons. The British captured twenty-eight of the enemy.

Modder river dispatches say that the Boers are encamped amid the hills half-way to Kimberley; but it is also asserted that a large body of the enemy have gone in the directions of Jacobsdahl. It is possible, therefore, that Lord Methuen may endeavour to clear his right flank as far as Jacobsdahl before continuing his advance. He is still waiting at Modder river for stores, guns, and ammunition.

London, December 6.

The War Office has received the list of casualties during the sortie from Kimberley, November 28th, as follows:

KILLED.

Major Scott-Turner of the Black Watch.

Lieutenant C. W. Wright of the Kimberley Light Horse, and twenty non commissioned officers and men.

WOUNDED

Captain Waldeck, Lieutenants Clifford and Watson, and twenty-eight non-commissioned officers and men.

THE NAVAL GUNS AT LADYSMITH.

A correspondent, writing to *The Times* from Natal, says:—

You may be interested to hear a little about the Navy, who have come to the front as usual and met an emergency. From the first it would seem that what was wanted were long-range guns which could shell the enemy at a distance outside the range of their Mauser rifles, and the Captain of the *Terrible* therefore proposed a field-mounting for the naval long 12 pounder of 12cwt., which has a much longer range than any artillery gun out here. A pair of wagon wheels were picked up, a baulk of timber used as a trail, and in 24 hours a 12-pounder was ready for land service. Captain Scott then designed a mounting for a 4 7in. naval gun by simply bolting a ship's mounting down on to four pieces of pile. Experts declared that the 12 pounder would smash up the trail, and that the 4.7in. would turn a somersault; the designer insisted, however, on a trial. When it took place nothing of the kind happened except that at extreme elevation the 12 pounder shell went 9,000 yards and the 4 7in. (Lyddite) projectile 12,000 yards. Captain Scott was, therefore, encouraged to go ahead, and four 12-pounders were fitted and sent round to Durban in the *Powerful*, and also two 4 7in. guns. People say here that these guns saved the situation at Ladysmith. A naval friend writing to me from the camp says:—"The Boers complain that we are not 'playing the game'; they only expected to fight Roomicks, not sailors who use guns that range seven miles, and they want us to go back to our ships. One of our Lyddite shells went over a hill into their camp, killed 14 men, and wounded 30. Guns of this description are not, according to the Boer idea, at all proper, and they do not like our way of 'staggering humanity.' Had these guns been landed earlier how much might have been saved? It is a peculiar sight to see the 4 7in. fired. Many thought it would turn over, but Captain Percy Scott appears to have well calculated the stresses; there is with a full charge of cordite a slight rise of the fore end, which practically relieves all the fastenings. Hastily put together, and crude as it looks, is really embraces all the points of a scientific mounting, and it wants a great expert to pronounce an opinion on it. The gun is mounted so high that to the uninitiated it looks as if it must turn over on firing, but it does not, and the higher angle of elevation the less strain there is on it. The arrival of our guns practically put the R A. guns out of use, for they can come into action 2,000 yards behind those supplied to the soldiers and then make better practice. Their arrival has, every one admits, quite changed the situation.

Captain Scott has also rigged up a searchlight on a railway truck with a flasher attachment, the idea being to use it for communication with Kimberley and Ladysmith if these places are surrounded. It has been tested at a distance of 40 miles, and proved a great success. I am told, too, that he is now engaged in designing a travelling carriage for a 6in. gun, and has, indeed, converted the *Terrible* into a factory for curiosities in gun mountings.

Each mounting, by the way, has an inscription upon it, presumably concocted by the ship's painter. One, a parody upon the Scotch proverb, runs: "Those who sup with me will require a devil of a long spoon"; another, "For what we are going to receive may the Lord make us truly thankful—Oom Paul"; and a third, "Lay me true and load me tight, the Boers will soon be out of sight." I saw one of these guns fired with an elevation of 24deg. and a range of 12,000 yards, and fully expected to see the whole thing capsize, but it hardly moved. After the firing of several rounds I carefully examined the mounting and noticed that, crude as it might appear, a wonderful amount of practical knowledge was apparent in its construction; the strain was beautifully distributed, every bolt and each baulk bearing its proportionate share. It is in every way creditable to the Navy that when an emergency arises such a thing could be devised and made by the ship's engineering staff in 24 hours.

WAR NOTES.

Lady Sarah Wilson, aunt of the Duke of Marlborough, who was captured by the Boers while acting as a correspondent for the London *Daily Mail*, has been exchanged for a Boer woman who was a prisoner at Mafeking.

"When we had got their position," writes an officer at Elandslaagte, "a man came with a flag of truce in one hand, while he fired right and left with his revolver in the other. Can one wonder if Tommy shoots them, surrender or no?"

The War Office has issued a notice that after January 1st a deduction will be made from the pay of soldiers serving in South Africa—in the case of privates, 4 pence a day for wives and a penny for each child; in the case of sergeants, 8 pence for wives and 2 pence for each child. These sums have thus far been paid by the Government. The order indicates the belief that the campaign will be a long one.

The 2nd Battalion Lancashire Fusiliers, recently ordered to the front, is a battalion to rejoice the heart of its commanding officer. He leads to the front 1,100 men of over seven years' service, nearly all of whom distinguished themselves in Lyttelton's brigade before Omdurman. This, the old 20th Regiment, is in the 211th year of its existence. The men almost without exception come from Lancashire.

When the army corps first went to Africa, Gatacre was generally regarded in military circles as the strongest of the three division commanders. The best that his admirers can now say, remarks a London paper, is that South Africa has always been a graveyard for military reputations. If Gatacre recovers his prestige it will be because sympathy is excited by premature attacks, like that made by Lord Durham, who in the safe retirement of a fat stock sale luncheon described Gatacre as a man unfit to command troops in South Africa.

The Boers fear the British bayonets. This is illustrated in the full accounts of sorties at Ladysmith. It seems that in Sir Archibald Hunter's sally from Ladysmith to capture the Boer guns, the British did not carry bayonets. While they were storming the hills the Boers, suddenly aroused from sleep, rushed to the edge, and opened an indiscriminate fire upon them. But just before the British secured a footing on the top of the hill, some one among them shouted: "Fix bayonets and give them cold steel!" At this the Boers turned and fled into the darkness.

The Lord Mayor of Dublin, Mr. Daniel Tallon, presided at a meeting of the corporation on Dec. 11th called to protest against the Transvaal war. The clerk announced that there was no quorum, but the Lord Mayor insisted on making a statement in which he declared that the war was a wanton and unprovoked aggression undertaken by Mr. Chamberlain and capitalists "against a handful of farmers." He further declared that America was "opposed to this iniquitous war." In the meantime the members present shouted "No quorum!" and "order!" and the tumult in the galleries drowned all the speeches. Eventually the Lord Mayor left the chair with the galleries cheering for President Kruger. No attempt was made to adopt the previously prepared resolution against the war.

The news of General Gatacre's reverse made an immense impression in Paris. Although the afternoon papers predicted the gravest consequences in the disaffected portion of Cape Colony they could not be accused of unseemly exultation over British misfortune. Most of the journals saw in the defeat an undoubted trap laid by Boers working in conjunction with Dutch traitors. The *Journal des Debats* epitomized the general opinion by saying that Sir Alfred Milner had threatened in vain to overwhelm the disloyal Dutch with the thunderbolts of British wrath and that even he must now recognize that race sympathy is stronger than loyalty. It saw in the attitude of the Afrikanders the inevitable result of the tactless language of the British press in referring to the war as a struggle between the British and Dutch for supremacy in South Africa. The *Temps* said: "The story of the ambush at Stormberg reads like a chapter from Cooper's 'The Spy.' The situation resembles that of the American War of Independence, when the colonists devoted themselves to deceiving, misleading, and ambushing the British Generals for love of their country and with the assent of Washington."

The effect of Lyddite shells is to be judged from following paragraph respecting fighting at Spyfontein on Dec. 9th. The naval contingent consisted of four companies of marines and fifty sailors, under command of Captain John E. Bearcroft of the cruiser *Philomel*. They began to fire at the enemy from a ridge facing Spyfontein. They fired fourteen charges of lyddite at ranges varying from 6,700 to 7,200 yards. One shell fell on a Boer tent, which immediately disappeared. Everything in the immediate vicinity was wrecked. Another of the missiles dropped among a bunch of fifteen horses, which were blown to atoms. It is not known whether there were any Boers near the animals. It is believed that the enemy did not see the gun which did the damage, it having been painted the colour of the khaki uniforms worn by the men, and smokeless powder being used. There was scarcely a flash when the gun was discharged. The bluejackets have chalked the name "Joey Chamberlain" near the muzzle of their gun. The first lyddite shell burst over a high point in the range of hills. The area of destruction was enormous. The whole ground appeared to be churned into red dust. The Boers hurriedly left an emplacement which they were preparing for a forty pounder. The emplacement was apparently destroyed.

Discussing the defeat of General Gatacre at Stormberg, the *Daily News* said:—"The reverse General Gatacre has suffered is a sadly emphatic commentary on the peculiar difficulty of military operations in a semi-disaffected country. The enemy's spies are everywhere, and nowhere can we rely confidently on any counter-information. General Gatacre seems to have been completely trapped. Of course he will be immediately re-inforced." The *Daily Chronicle* said:—"There is only too much reason to fear that this is the worst illustration we have had yet of inadequate equipment and insufficient scouting. How far this disaster was due to lack of judgment on his part and how far to lack of artillery is not quite clear, but the patient public cannot help recalling that General Methuen's victory at Modder river was won by artillery re-enforcement at the critical moment, and all they would like to know is how many times this particular lesson is to be learned." The *Standard* considered the event in the highest degree deplorable. "It will tell against us unfavourably in the Free State, among the colonial Dutch, and even among the natives. A great deal of evidence has been accumulating to show how

Digitized by Google Original from CORNELL UNIVERSITY

deeply the colony, or at least the northern and western portions of it, are honeycombed by disaffection. Our Generals have to cope with a rebel colony as well as with hostile republics and must take measures to lay their plans in accordance with the details."

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

FRANCE.

Shanghai, Dec. 30.

The French Government is to introduce Bills in Parliament assigning 120 million francs for the defence of the coasts and colonies, and 400 millions for the increase of the fleet.

MAFEKING.

News from Mafeking dated the 12th of December says that the enemy is firing daily on all sides, but that the health and spirits of the garrison are good.

ARTILLERY FOR EGYPT.

The Royal Malta Artillery goes to Egypt.

LADYSMITH CASUALTIES.

Later.

A despatch from Ladysmith dated the 22nd says that the British casualties since the beginning of the siege are 70 killed and 256 wounded. There are also many cases of enteric fever.

THE YEOMANRY.

According to an officially sanctioned statement the Government regards the formation and despatch of the Imperial Yeomanry as one of the most pressing needs of the situation. The *Daily Telegraph* says that the Government is now prepared to accept the services of some eight to ten thousand Yeomanry.

Note.—This portion of the message is somewhat obscurely worded. It is uncertain whether "18 thousand "or" 8 to 10 thousand" is meant.—ED. *J.M.*

CHIEVELEY.

The British at Chieveley continue heavily shelling the Boers' positions at Colenso. The Cavalry Brigade made a reconnaissance due west from the Modder River.

SEIZURE OF A GERMAN STEAMER

Shanghai, Dec. 31.

A German steamer, the *Bundesrath*, having on board three German officers and twenty men dressed in Khaki, has been seized in Delagoa Bay and taken to Durban. The Government is convinced that it was not seized without ample justification, and will await the decision of the Prize Court. The captain of the *Bundesrath* declares that he had no contraband, and has appealed to the German Government, who immediately promised interposition.

A BOER STORY.

A Boer despatch says that, on December 25th, the British hotly attacked the Boer fort at Malopo outside Mafeking, and that they lost 109, the Boers losing 9. Cecil Cavendish Bentinck being among the wounded.

LADYSMITH.

White has made a sortie from Ladysmith and captured a hill.

THE UNITED STATES AND CHINA.

Shanghai, Jan. 1.

It is stated in Washington that the result of Mr. Secretary Hay's negotiations for securing the open door in China is most gratifying. Great Britain, Germany, France, Russia and Japan have responded favourably.

SKIRMISH AT DELFONTEIN.

The Volunteers at Delfontein, 29 miles south of De Aar Junction, dispersed a party of Boers from the railway on Christmas Day. There were no casualties among the Volunteers.

FRERE CAMP.

Reuter telegraphs from Frere camp that several hundred Boers were cut off on the south side of the Tugela on Saturday, owing to the river's suddenly rising.

LADYSMITH.

Lieutenant Dalzel, of the Devons, has been killed and others wounded by a shell striking the mess-room in Ladysmith.

CAPE COLONY.

There are reports of increasing disaffections in Cape Colony, but there is nothing like concerted action. The authorities are fully prepared.

THE COLONIES.

Colonial Volunteers continue enrolling at many centres. Another New Zealand contingent sails on the 15th of January, and more will follow.

IRELAND.

The Duke of Connaught has been appointed to the command of the troops in Ireland.

AN AMERICAN ATTACHÉ.

The United States is sending a military attaché to the Boers.

THE LONDON IMPERIAL VOLUNTEERS.

Col. Howard Vincent is to command the infantry battalion of the London Imperial Volunteers.

THE IMPERIAL YEOMANRY.

The Prince of Wales has accepted the honorary colonelcy of the Imperial Yeomanry.

BREACH OF NEUTRALITY.

The Times' correspondent at Lorenzo Marques telegraphs that the suspicions are confirmed of close relations existing between the Boers and a foreign consulate in Pretoria. There are persistent rumours in Lorenzo Marques and in Durban of guns and ammunition for the Boers being smuggled through at Delagoa Bay.

BOERS ROUTED AT COLESBURG.

Shanghai, Jan. 2.

The evening papers publish news that French routed the Boers and occupied Colesburg on the morning of the 1st. After a night march the cavalry and light artilley outflanked the enemy, while the infantry and field artillery made a feint of a frontal attack. The Boers were surprised and fled in disorder eastward.

BOER ATTACK REPULSED.

It is reported that 2,000 Boers attacked Dordrecht, but were repulsed.

LADYSMITH.

The officers wounded in the Messroom at Ladysmith are as follows:—

Lieuts. Dent, Twiss, Caffys, Scafe, and Kane of the Devous; Byrne of the Inniskillings; and Tringhan of the Queen's. The enemy's artillery has improved in accuracy and the garrison is feeling the pinch of the siege, but is confident.

RECONNAISSANCE FROM CHIEVELEY.

A reconnaissance made on the 30th from Chieveley proved that the Boers still hold Inlawe.

THE SITUATION AT COLENSO.

Shanghai, January 3.

Correspondents wiring from Chieveley, are unanimous in saying that the task confronting Buller is stupendous. The Tugela is in full flood and the Boers' position is a perfect fortress.

DISAFFECTION IN THE CAPE COLONY.

Ugly rumours are current in Capetown of disaffection in the Victoria West and Clanwillian Districts.

THE SEVENTH DIVISION.

The Seventh Division embarks by the 11th instant.

A SUCCESSFUL ATTACK AT BELMONT.

Later.

An official despatch says that Colonel Pilcher with a force largely composed of Canadians and Australians made a forced march of 22 miles and surprised and completely defeated a Boer commando at near Belmont on the 1st inst., taking their laager with 40 prisoners besides the killed and wounded. The British casualties were Lieut. Adie, of the Queensland Mounted Infantry, severely wounded, and 3 men killed.

THE FIGHT AT DORDRECHT.

The British success at Dordrecht is confirmed.

THE FIGHT AT COLESBERG.

General French with his infantry in wagons, 5 squadrons of cavalry, and 10 guns attacked the Boers at daybreak on the 1st. He shelled the laager from a kopje overlooking Colesberg, silencing their guns, and then took up a position cutting off the retreat of the Boers by the road bridge. The enemy from 5,000 to 7,000 strong, occupied a strong laager near the junction. The British loss was 2 killed and 7 wounded.

IMPERIAL COURTESIES.

The Japanese Minister in Berlin has had an audience with the Emperor William and presented the Order of the Chrysanthemum which the Emperor of Japan has conferred on the Crown Prince.

MORE TROOPS FOR SOUTH AFRICA.

Shanghai, Jan. 4.

It has been decided to employ outside Great Britain twelve militia battalions, of which seven go to South Africa, two to Malta, two to the Channel Islands, and the destination of the twelfth is undecided.

THE COLESBERG FIGHT.

There is nothing official yet about the Colesberg fight.

RESERVE OFFICERS CALLED OUT.

Later.

An Army order sanctions the employment of a certain number of reserve officers not above the rank of Major to fill vacancies.

GEN. FRENCH.

An official despatch says that General French's position is unchanged; he is still manœuvring. The despatch adds that with small re-inforcements he could dislodge the enemy from Colesberg.

NEW GUNS FOR THE ARTILLERY.

It is stated that the Defence Committee

Digitized by Google Original from CORNELL UNIVERSITY

of the Cabinet has decided to ask for over 5,000,000 sterling to provide new guns for the Artillery.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

FRENCH COAST DEFENCE.

Saigon, Dec. 30.

When Parliament re-assembles the Government will introduce a Bill appropriating 120 millions of francs for the defence of the coasts and the Colonies. The works will be completed in thirty months.

SOUTH AFRICA.

Saigon, Dec. 31.

The bombardment of Ladysmith continues.

Some engagements have taken place around Kimberley and Mafeking.

Cannon shots are exchanged between the English and the Boers at the Modder River.

SEIZURE OF A GERMAN SHIP.

Saigon, Jan., 1.

An English cruiser has captured in Delagoa Bay a German steamer called the *Bundesrath*, on suspicion of carrying contraband of war. The affair has been submitted to the Prize Court in Durban.

SOUTH AFRICA.

Saigon, Jan. 4.

News from London says that General French has not occupied Colesberg. The battle continues around the town.

The Boers in the morning attacked the English at Molteno.

CHESS.

All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 454.

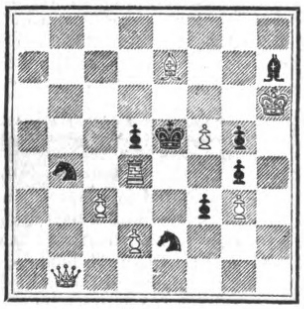
Key move Kt to Q B 5

Correct answer received from "East Anglia."

PROBLEM No. 455.

By JOSEF SVEJDA, Prague.

BLACK.



WHITE.

White mates in three moves.

GAME No. 580.

EVANS GAMBIT.

White—A. C. Kaye. Black—V. Brent.

WHITE.	BLACK.	WHITE.	BLACK.

NOTE.

White's sixth is, probably, premature. The strongest move is P to Q4. This is the move of all, or nearly all, the great "Evans" players.

Of course, White's sacrifice of Kt is unsound.

GAME No. 581.

To what special faculty are we to attribute the remarkable accuracy of Mr. Blackburne's blindfold play? In one instance it is on record that he announced mate in sixteen moves. And in the following game, played at Hereford in 1897, he not only announced mate in six, but called out "with the utmost rapidity" seven variations which exhaust the position.

FRENCH DEFENCE.

CHESS AND PHRENOLOGY.

To have the power of playing Chess very skilfully, the organs of number and order must be proportionately expanded. Music springs from the same source, and accordingly Chess-players and musicians will ever be found intimately mingled. Philidor was a composer of music; and at the present time we find both of these arts cultivated by the same persons to a considerable extent. The organs laid down by Combe, the phrenologist, as number and order, were largely developed in the head of Philidor. The same conformation of brow was visible in M. Deschapelles. In playing Chess with a stranger, it will not be uninteresting to compare his style of game with the superficial observation you may be enabled to make by glancing at his craniological presentment. Men possessing high, sugar-loafed heads, piercing conically the air in a point, like the Peak of Teneriffe, will, thanks to this preternatural possession of the bump of "firmness" or "obstinacy," contest the game long after hope would have ceased to draw breath in the frames of their fellow-mortals. . . . Another class of amateurs, by way of distinction, may be called, but not invidiously, the "flat-headed"; each cranium of this species being depressed at its apex, constituting a species of tableland like that whereon stands Mexico. Men thus formed are marked through life as waverers. They hesitate, and doubt, and waver, and philosophize, and dream away existence like most true gentlemen. Get them into the slightest scrape at Chess, and they reel instanter; win a Pawn, they sweat blood and water; capture a Knight, and they give up the game. To the credit of the fair sex be it said, that of lady Chess-players by far the majority display the organ of—we dare not say "obstinacy," but may write "tenacity of purpose."

The same organ, or faculty, equally applies to the attainment of kindred subjects of study. Good Chess-players play all games of society better than other people, speaking wholesale; and to their honour be it said, they seldom permit their talent to prostitute itself to the baser objects of gambling. Chess-players take up Whist, Draughts, and similar pursuits; but rarely number themselves among Mammon's votaries who crowd the race course.—*The Chess Players Chronicle.*

CHESS IN VIENNA.

An interesting tournament commenced in Vienna on December 17. To improve Chess in Austria-Hungary, the late Baron Kolisch bequeathed a fund to the Vienna Chess Club for investment, thus endowing the periodical national tournaments, of which the first is to be held now. If the best players will enter it ought to prove an important event. The prizes are 1,000f., 750f., 500f., 400f., 300f., 200f., 150f., 100f., and 50f. Not more than sixteen players are admitted.

CHESS MASTER DEAD.

Dr. Max Lange, the famous German chess-master, theoretician and problemist has died at Leipsic. He was born, in Madgeburg in 1832.

DEATH.

At No. 74, Yamate-cho, on the 10th inst., at 4.45 a.m., HARRIET CHARLOTTE (Ettie), wife of A. H. Cole Watson.

SUMMARY OF NEWS.

THE Transvaal has refused to allow the American Consul at Pretoria to represent British interests.

THE Imperial Yeomanry for service in South Africa are expected to be a splendid body of horsemen.

THE Vickers and Maxim Company have received orders to manufacture 47 6in. quick firers continuously.

REUTER telegraphs from Lorenzo Marques that Pretoria reports that the police at Kuruman have surrendered. One hundred and twenty prisoners were taken, including 12 officers, besides 70 natives and stores and ammunition.

LORD ROBERTS, the British Commander-in-Chief in South Africa, accompanied by Lord Kitchener, has arrived at Cape Town.

ONE hundred thousand tons of shipping has been already taken up for conveying rice from Rangoon to Bombay for the famine tracts.

THE body of a Japanese, dressed in the clothes of a coolie, was found drowned on Monday evening, opposite the Club Hotel.

A JINRIKISHAMAN, Naito Kamekichi, was found dead on Sunday morning at Kitagata. It appears that he fell from his garden to the road below, a distance of many feet.

ACCORDING to latest advices from England, the total amount then received by the *Daily Mail* from the sale of Kipling's poem, "The Absent Minded Beggar," was £15,000.

TWELVE additional batteries of artillery will leave England before the end of the month The Government has decided to raise six new batteries immediately, but not necessarily for service in South Africa. There will be a further increase later.

A CHINESE Eurasian late in the employ of the Pacific Commercial Company, who forged a cheque in the name of Mr. Salabelle, the Manager, for *yen* 750, cashing it at the Van Tai Exchange, was caught at Fujisawa on the 8th, and brought to Yokohama.

ON Tuesday the British community in Yokohama give an entertainment to raise funds for the widows and families of those who may fall in South Africa. The following week the Tokyo British residents have a similar demonstration at the British Legation.

THE German steamer *Herzog* (which was seized in Delagoa Bay by a British man-of-war and conducted to Durban as having on board contraband of war in the shape of ambulance apparatus from Belgium for the Boers) has been released at Durban.

THREE robbers, one armed with a kitchen knife, and the others with toy pistols, entered the house of a *saké* merchant in Tachibanacho Nichome, Yokohama, on the morning of the 9th and threatened the inmates. They received *yen* 27 and a watch and escaped.

THE Ruby Mines Company, Limited, of Megok, Burmah, is reported to have discovered a fine ruby, which gives promise of being a very valuable stone. It weighs 75 carats and, looked at in the rough state, is perfectly flawless and clear. It is valued now at over £25,000.

THE Boers made a determined assault on Ladysmith last week, and the fighting was fierce on both sides, lasting nearly all day. Several times the Boers held the British trenches, but were finally beaten off with heavy loss. Enteric fever is very prevalent in Ladysmith, 23 deaths occurring last week.

M. PIERRE LOTI is making a tour through India and Central Asia. He visits Cabul on, it is stated, a special invitation from the Ameer. In order to facilitate his expedition, M. Pierre Loti has been given an honorary diplomatic appointment by the French Government.

IT was stated in the Odessa Press a few weeks ago that 10,000 troops were shortly to leave there in order to reinforce the Russian garrison in the Far East. The first detachment was to sail on Dec. 2nd. The despatch of convicts by the Volunteer Fleet was to be abolished from January 1st.

A STRONG reaction in public opinion in regard to Sir George White has set in. His prolonged and successful defence and brilliantly effective sorties from Ladysmith have produced a great impression, and an entire and favourable change has taken place, especially in the comments of the press.

A YOKOHAMA lad named Kumataro, the son of a tub maker, attempted suicide on the 5th with a knife used in his father's trade. The wound was four inches long and one inch deep. The lad had been sick for some time, and as the result of brooding over the matter tried to end his life to save his father further expense.

AN incident of the bombardment of Ladysmith has been the shelling of the Town Hall by the Boers. General White addressed a remonstrance to General Joubert informing him the building was being used as a hospital. General Joubert replied that such a use was unjustifiable in view of the existence of a neutral camp.

THE India famine relief returns for the first week of December show big increases, the totals returned being:—Central Provinces 812,280, Bombay and its Native states 654,468, Baroda 287,547, Rajputana and Ajmere-Merwara 223,496, the Punjab 81,128, and the Central India States 40,808. The cattle generally in Rajputana are described as in a bad plight.

A FISHERMAN named Uchida Ushizo called at the house of Enomoto Kamekichi, Sugita, on the night of the 3rd inst, armed with a sword and further provided with a can of oil, in order to kill Enomoto and Uchida's wife. Finding the house deserted, he set fire to it, but the flames were soon extinguished by neighbours. Uchida's wife, named Hatsu, it appears, had eloped with Enomoto.

THE Court of Appeal has given judgment in the case of the *Times* v. Lane, which raised the point whether there was or was not copyright in the report of a speech delivered in public. In effect the Court decided that the printer or reporter of a reported speech had no claims to its authorship, and therefore none to copyright in it. This judgment reversed the finding of Mr. Justice North in favour of the plaintiffs. It was intimated that the case would be taken to the House of Lords.

A COLLISION resulting in some damage to the quarantine steamship *Minatogawa* occurred off Wada point on Tuesday afternoon, says the *Kobe Herald*. The Hamburg-America steamer *Sarnia* was approaching the harbour, and when off the Point ran into the *Minatogawa*, striking her almost amidships. The quarantine steamer had her plates indented, and one was holed close to the waterline, while the covering board was smashed. The damaged vessel was heeled over to starboard and the hole temporarily stuffed up. The accident, it is said, arose through the *Sarnia* refusing to answer her helm.

THE *Times* makes the following interesting announcement:—We understand that General His Royal Highness the Duke of Connaught was amongst the first to seek employment in the present war, and was even willing to waive his seniority for this purpose. But it was not deemed expedient that an officer so senior as a General to Sir Redvers Buller should serve under him. In fact, there was no place in the army of South Africa to which a General of His Royal Highness's seniority could be posted. To his great disappointment, therefore, it was not found possible to employ him.

SOUTH AFRICA.

Saturday, Jan. 6.

Springfield, in the direction of which, according to to-day's telegrams, Thornicraft's horse made a reconnaissance, is a town lying to the north-west of Frere and almost due west of Chieveley, from both of which places it is at nearly the same distance, namely 18 miles. There is no road, however, from Chievely to Springfield, and the probability is, therefore, that Thornicraft made his reconnaissance from Frere. Whichever was his point of departure, the fact that the Boers followed him for nearly eighteen miles when he retired shows that they are in a resolute mood and in strength. The interesting feature of the news is that it shows the Boers to be in considerable force to the south of the Tugela, for Springfield is 8 miles from the nearest part of the Tugela's course. How is that to be reconciled with the news received a day ago that the Tugela is in flood and quite impassable? It is true that Springfield lies beyond the Little Tugela, but the Little Tugela does not appear to be a serious obstacle, and besides it does not necessarily follow from the telegram that the Boers seen by Thornicraft's horse were in Springfield. They may have been camped on the Frere side. At all events, they were on Buller's side of the Tugela itself. Reuter telegraphed, a few days ago, that several hundred Boers had been cut off by the sudden rising of the river. Then he telegraphed about a reconnaissance which showed them to be still in possession of a place with a curious name which we identify as Inhlawe. If the identification is correct, then the reconnaissance showed the Boers to be on Buller's right flank and south of the Tugela, and this last reconnaissance shows them to be also on his left flank, and south of the Tugela. We may expect to hear, then, of some heavy fighting in Natal before long. If a flooded river divides the Boers' forces, Buller is not likely to lose the opportunity of striking at the columns which happen to be on the south of the river, especially as they are in considerable strength and their annihilation would make a great difference in the situation.

Monday, Jan. 8.

President Steyn's proclamation, as reported by to-day's telegrams, is a measure that can not fail to revolt the sentiment of the civilized world. In the Orange Free State there are thousands of Englishmen who settled there in good faith that they might expect to receive at the hands of the authorities treatment consistent with the ordinary dictates of humanity. The country of their adoption has benefited immensely by their presence, and they have shown themselves peaceful, law-abiding citizens. These persons are now required to take up arms against their own nationals, or to suffer whatever penalties it is within the power of the law to inflict, confiscation of all their property and expulsion from their homes being the least of such pains. The safety of the State is a paramount consideration in the eyes of its administrators, but to compass the safety of a State by such means is to sacrifice its honour. What would be said if the British Government issued a similar proclamation with regard to the Cape Colony, Natal, Griqualand and the other districts invaded by the Boers? The world would raise a scream of horror. It is impossible to conceive any cruelty more revolting. Men who call themselves men could not bear arms against their own country, yet the alternative may be dire suffering, if not death, for their wives and children. After this our only prayer is that the Orange Free State may be crushed as speedily and thoroughly as possible. The brave and stubborn resistance made by the burghers had already excited a feeling of sympathy with them even in the bosoms of Englishmen, who love a stout adversary, and are willing to strike hands of friendship with him after a fight. But this abominably cruel and uncivilized act places the Transvaal Boers beyond the pale of all respect or consideration, and makes us long for the doom which will surely overtake them. Steyn's vile proclamation is, indeed, a sure sign of the straits to which the Republic is reduced, for he himself knows well how such a step will be judged, and as a man whose record shows him to be refined and magnanimous, he must have been terribly tortured before he affixed his signature to the document.

Public feeling in Germany is said to be increasing with regard to the *Bundesrath* affair. Public feeling in Germany has shown itself so hostile to England throughout the course of the South African war that we are not surprised at any new development. Yet the Germans should have begun to reflect ere this. How comes it that hundreds, if not thousands, of their fellow-nationals are now fighting for the Transvaal, and were marshalled in her ranks ready to fight for her before the war broke out? How comes it that Pretoria is garrisoned at present almost entirely by Germans; that the guns of the Republics are trained by Germans, and that the strategy of their armies is suggested by Germans? Were the preliminaries for all these things arranged after the war broke out, or had they not been arranged long before the beginning of the war, and does not the fact prove conclusively that the Transvaal was bent on going to war and that it had the sympathy of many Germans in that programme? One imagines that these things should alter the aspect of the struggle in German eyes, and should convince them that this combat is not an outcome of British aggression, but primarily an attempt on the part of the Boers to drive England out of Southern Africa. There are no signs, however, of such an awakening to the truth. Even the *Bundesrath* incident is exciting public feeling, though there is nothing to differentiate England's action from the procedure recognised by the most ordinary provisions of international law. If the German officers and men found in the *Bundesrath* had pledged themselves in any way to serve the Transvaal, their own seizure and the confiscation of the ship carrying them are strictly within the rights of belligerent England. The whole question turns on the evidence obtainable as to their actual status or their intended status. Concerning that the British prize court may be trusted to give a fair and just decision. There can not be the smallest moral doubt that the officers and men were about to fight against England, but unless some proof is forthcoming, they will be released on giving their parole not to serve for the Republics during the war. Any thoughtful German should be capable of seeing that such incidents are inevitable under the circumstances, and that if England is entitled to protect herself at all, she is entitled to prevent the passage of reinforcements to an enemy in arms against her. But unfortunately prejudice of a very violent nature seems to sway public opinion in Germany at present, and there is a disposition to deny the most elementary belligerent rights to England simply because she is England. The mood will pass, we have no doubt.

The news from Mafeking, though not important as to dimensions, is somewhat disquieting. This, doubtless, is the true version of Boer story that 109 Englishmen had been killed or wounded in an attack upon Molopo fort. Fifty-four is the true number, and the Boers, with their usual veracity, just doubled it, and threw in an extra unit for the sake of appearance. The disturbing feature of the intelligence is that it suggests a somewhat desperate state of affairs at Mafeking. The feat itself is very fine. A party of eighty attempting to carry a fort by escalade, and losing their whole number except twenty-six is an exploit to be applauded in spite of its failure. But we fear that these forlorn efforts would not be made did not the garrison find themselves in great straits. They have made a grand defence, and every day they can keep the British flag flying is a gain, since they thus hold a large force of the enemy beseiging them. But they are evidently hard pressed. Another fortnight might make a great difference in the situation. We hope that they can last so long, but we fear.

Wednesday, Jan. 9.

We do not think it an exaggeration to say that the news from Ladysmith is of great importance. It is not the mere fact of a victory having been gained by the Ladysmith garrison that seems to be of moment. The cardinal points are the reasons which led the Boers to deliver this assault and the consequences of their failure. It is impossible, of course, to speak with any assurance, but everything suggests that Joubert saw a crisis and felt himself obliged to treat it as such. The Boers invested Ladysmith at the end of October. For more than two months they have been trying to reduce it. There can be no doubt that they never anticipated such an obstacle. They believed that they should be able to over-run the whole of Natal and annihilate Sir George White's command before re-inforcements could arrive from England. They believed that, simultaneously, they should be able to over-run the greater part of the Cape Colony, capture the important towns, and gain such an access of strength by combination with their fellow-nationals to the south of the Orange River, that the task of wresting Natal and the Cape Colony from their hands would be altogether beyond England's strength, to say nothing of the invasion of the two Republics. But Ladysmith upset all their calculations. They found themselves unable to capture it, and they dared not push on to Maritzburg and Durban, leaving Sir George White in their rear, even if their experience of the difficulty of successful attack in the face of modern weapons had not already induced them to panse in their career. But their programme, though disturbed, was not altogether defeated. They gained on the Tugela a strategical position of such strength that there was a reasonable pro-

Digitized by Google Original from CORNELL UNIVERSITY

spect of holding it in the face of any attempt to relieve Ladysmith, and of thus achieving the destruction of Sir George White's force at any rate; an object much smaller than that originally contemplated, but not by any means insignificant. We have always to remember that a campaign against the two Republics from the direction of Natal presents very great natural difficulties compared with an invasion from the Western border. The Boers wanted to make Natal the battle-field. Even if defeated there, they could have fallen back on the Drakensburg range, and held the passes against much heavier odds than England was likely to bring to the assault. Thus, even though they could not reach Maritzburg or Durban, the main part of their purpose would be accomplished if they could so arrange as to make the Tugela River their first line of defence, and the Drakensberg mountains their second. We do not say that their original plan took that form, but we think that their secondary plan followed those lines. Early in December, it became evident that their challenge was to be accepted in part, at any rate. General Buller massed three brigades on the South bank of the Tugela, and, on the 16th, made an unsuccessful effort to cross the river and march to the relief of the beleaguered garrison. Almost at the same time, Methuen's advance to the relief of Kimberley was effectually checked at the Modder River, and Gatacre's attempt to drive the Free-State Boers over the Orange River was signally defeated. The prospect looked then very bright for the Boers. If England continued to divide her troops, sending driblets to reinforce *the three columns* which were "held up" at Colenso, at Maggersfontein, and at Stormberg, and if she also limited her despatch of battalions to the number first contemplated, the Boers might fairly hope to hold their own, though they could no longer hope to drive every Britisher out of South Africa. But it presently became evident that England had determined to approach the task more resolut ly, and, further, that instead of placing her men just where the Boers wanted them, she was going to take advantage of the line of least resistance developed by Joubert's partial failure and march an army of thirty thousand men into the Orange Free State, with a second army of as many more to follow. From the day (29th December) when the Fifth Division landed at Cape Town instead of proceeding to Durban, England's intentions could scarcely be misconstrued. Joubert then had to sit down to think, and very likely his reflections were accelerated by the importunity of the Free-Staters, who saw an imminent risk of their country being invaded while they were detained in Natal bombarding an obstinate camp of Englishmen and guarding trenches from which Buller showed no disposition to oust them hastily. Joubert had not many days at his disposal. Eleven thousand men arrived at the Cape on December the 29th, and at least as many more might be expected by January the 16th. Roberts would then have three Divisions for the invasion of the Free State. Could Joubert afford to keep some thirty thousand men in Natal while such dangers were pending on the Western frontier of the Free State? Had not the time come either to abandon the seige of Ladysmith and carry his forces over to oppose Roberts, or to make one last determined effort to capture the beleaguered town and then to leave Buller sitting on the Tugela? That is how the problem presented itself to Joubert, we imagine. But his choice of alternatives was not quite free. To abandon the siege and retire on the Drakensberg would have involved a retrogressive movement with an army of some twenty thousand men on his heels. The thing might not be impossible, but the Boers like to choose their own positions and to stand entirely on the defensive in shelter-trenches, which advantages they would have to forego in a retreat. Besides, there were the siege guns, which could not be limbered up and whisked off like field-pieces. And then, finally, there was the intense disappointment of resigning the Ladysmith prize. We can not wonder, under the circumstances, that a bold effort to carry Ladysmith by escalade was chosen as the best course. Had it succeeded, Joubert would have been strong enough to draw off his troops at his own convenience, and plant them on the south of Bloemfontein before the 25th instant. The Boers tried to carry Ladysmith by storm on the 9th of November, and lost same nine hundred men in the essay. They can not have had much inclination to renew the attack. At the same time, they doubtless thought that White's soldiers were very tired. Their numbers had been thinned by bullets and by disease, and some of their artillery must have been rendered unserviceable. Altogether, they probably looked considerably less formidable than they did on the 9th of November, whereas the Boers had now twenty thousand men to hurl at them. There is some uncertainty about the time the attack lasted. We can not clearly discover whether it continued for two days or only one day, though fuller details may be received before this is in type. At all events it failed, and apparently there is no intention of renewing it, for White's telegram is dated 2 p.m. on the 7th, and the attack had concluded on the 6th at 7½ p.m. As to the fight itself, we need not say much. The Boers have twice beaten back our men in fair combat, and, although the odds were largely in their favour at Ladysmith, whereas they were largely against us at Colenso and Maggersfontein, we do not think that there is very much cause for exultation on that score. But we do think that this failure has an important bearing on the campaign. Ladysmith may yet fall. Its provisions, if not its ammunition, must be well nigh exhausted. But the evil day has been at least postponed, and with its postponement the Boers' embarrassments seem to have begun.

The *Jimmin* translates the figures compiled by us with reference to the numerical strength of the force that Great Britain is assembling in South Africa, and arrives at the conclusion that England is the only Power in the world which could accomplish anything of the kind. It laughs at the *Tageblatt's* criticism that the day of England's decline has dawned; predicts with confidence that she will annex the two Republics, or, at any rate, that her programme of expansion in South Africa will suffer no check, and points to her Navy which remains the most powerful engine of war in the world, enabling her to make stupendous efforts like this South-African campaign, and to shake all nations by a display of her might.

THE RUSSIAN REPRESENTATIVE IN KOREA.

Saturday, Jan. 6.

It apparently suited M. Pablov's convenience to make the eastward journey, *en route* for his post in Söul, *viâ* America, and he naturally took the opportunity of paying a visit to his colleague Baron Rosen in Tokyo—a simple incident, not at all out of the routine of every-day happenings. But of course the event has furnished food for the sensationalists, who see in it a confirmation of the rumours recently circulated about strained relations between Japan and Russia in Korea. The fact is that Korea sits heavily on the heart of many Japanese. If there were some other country equally accessible which the newspaper reporter of Young Japan could take for a happy hunting ground, we should hear less of Korea. But it constitutes at present the only place where the Japanese special correspondent finds material and a field, and under these circumstances we can not wonder that the little empire receives factitious importance. Naturally Mr. Hayashi Gonsuke has been interviewed, since his return from Söul. He says that a trip home at New Year's time is the obvious privilege of a diplomat whose place of service is not too remote to permit such an indulgence, and that he himself had commenced his arrangements for coming to Tokyo when he received a message summoning him. He hopes to return ere long. He speaks lightly of all the rumours about strained relations, and says that his countrymen ought to think seriously of moving Nagasaki to Masampo—a figure of speech intended to convey an idea of Mr. Hayashi's high estimate of the latter place's capacities.

Wednesday, Jan. 10.

It is insisted by the *Jimmin* that Russia persists in treating the Masampo affair as a diplomatic question, and that Mr. Pablov has asked the Korean Government, first, to punish the Masampo local officials who made an agreement with him which they failed to implement; and secondly, to give some other land by way of substitute for the Masampo lots that should have become Russian property. Our Tokyo contemporary writes in a somewhat vehement strain, and one can easily see that its article is intended to stiffen the vertebræ of the Foreign Office in Tokyo. It is a well-known philosophical principle that the development of the realizing faculty is one of the marks of high civilization, and we often think that if people constantly recalled the principle, their practice would be more likely to illustrate it. Let us try to put ourselves in the place of M. Pablov. Visiting Masampo, he had an interview with the local officials and concluded with them some sort of agreement, or arrived at some kind of understanding, with regard to certain lots of land, which were then and there actually marked out. M. Pablov doubtless left Masampo under the full conviction that he had acquired the land, not can any reasonable person be disposed to deny that his conviction was justified. Bur during his absence in Russia the land was sold to Japanese subjects, the money duly paid and delivery taken. Now it is quite plain that an act of bad faith had been perpetrated at M. Pablov's expense. Not bad faith on the part of the Japanese buyers. They may have known, or they

Digitized by Google Original from CORNELL UNIVERSITY

may not have known, that M. Pablov had been in treaty for the land, but it was not their business to investigate such questions. Provided that the owners of the land were prepared to sell it, and provided that the local officials were prepared to register the sale, the Japanese purchasers occupied an unassailable position. But the local officials? They had entertained M. Pablov's application and had given him to understand that the land would be his. Apparently no documentary promise was obtained, but there certainly seems to have been verbal consent. Why then did the local officials sanction the sale of the land to third parties? The most probable explanation is that M. Pablov neglected the precaution essential to the conclusion of all contracts in the East—he did not pay bargain money. If that supposition be correct, then it is evident that the local officials were placed in a difficult predicament, for they could not reasonably ask the owners of the land to forego the advantage of receiving ready cash for their property from the Japanese buyers, in order to hold it over on account of a purchaser in the future, whose final action could not be regarded as certain from the standpoint of Eastern custom. M. Pablov should have placed himself in direct communication with the owners, and should have complied with all the preliminaries usual in Korea under such circumstances. Not having done so—we are still going on our assumption—he has no legal ground of complaint. But he surely has a moral ground. He is surely entitled to ask for an explanation of the local officials' conduct, and to expect that assistance will be given him to repair, in some form, the loss to which their ill-considered complaisance exposed him. A Japanese *Chargé d'Affaires*, or a British *Chargé d'Affaires*, similarly circumstanced, would scarcely let the matter rest without protest. Of course it does not concern the Government of Japan at all so long as her subjects are not disturbed in the tenure of property which has lawfully come into their possession. But M. Pablov's remonstrance appears natural, and we can not find any reason for regarding it as unwarranted or aggressive.

THE BUDDHISTS.

The Buddhist agitation against the Religions Bill introduced by the Government is diminishing. It is understood that the friars of the Eastern Hongwan Temple have abandoned their attitude of opposition, and that the campaign is now carried on by the *Dai-Nippon Bukkyo-to Domeikai*, an association of which Mr. Ishikawa Shuntai, the *Yakuso*, or Managing Director, of the Eastern Hongwan-ji is the master spirit, and Mr. Okamoto—formerly a Major in the Army whose mutinous proceedings would have cost him his life had not the Courts admitted a plea of insanity—is a prominent member. The Association is believed to have succeeded in stirring up very strong feeling in Noto, Kaga, and Echizen, the great strongholds of the Shin sect, and its members are credited with the intention of pushing their crusade even to the forced resignation of Count Otani, the *Bussu* of the Sect. We take it, however, that the agitation has lost much of its *vim*.

RECENT COMMENTS ON THE MILLER CASE.

Saturday, Jan. 6.

Mr. Takahashi, who acted as counsel for Miller, has presented a petition to the Throne praying for grace for the murderer. He bases the prayer on three grounds; that Miller was the first to come under Japanese Jurisdiction after the Revised Treaties went into operation; that the murdered women were persons of the most disreputable manner of living; that the murdered man, Ward, also belonged to a very evil category, and that there was consequently some excuse for the sentiment of animosity harboured by Miller toward them; and finally, that Miller showed his respect for Japanese judicial procedure by confessing his crime before the Appeal Court. Mr. Koga, the Chief Procurator of the Supreme Court, is said to have offered no opposition to the forwarding of this petition. We think, for our own part, that there is nothing whatever to extenuate Miller's crime, It is true that the people he murdered were habitually guilty of conduct which might well stir a man to anger. But such an argument has no force whatever unless the feeling of wrath was engendered on a higher plane of morality than that of the wretched victims. There was nothing of that kind in Miller's case. All the evidence, as well as his conduct throughout the trial, went to prove him an utterly degraded and bestial type of person; a worse creature, in fact, than any of those whom he did to death in such a ferocious manner. As to his confession, it would certainly constitute a strong plea for mercy. But we know how it was made and at what instance, and we have seen the mood that followed it. Finally, there appears to us to be not a shred of validity in the treaty-revision court. Having assumed jurisdiction over foreigners, the wisest thing the Japanese can do is to exercise the power without fear, favour or sentiment of any kind. If the punishment of death be warrantable in any instance, it is warrantable in Miller's.

Monday, Jan. 9.

In the interests of the most commonplace justice we enter a protest against the untiring attempts of the *Japan Herald* to bring discredit upon Japanese institutions and Japanese character, and to pervert even the best-intentioned actions of the people of this country into causes of complaint and contempt. Every reader of the columns of the local foreign press has long ago grown weary of this perpetual outpouring of streams of slander and rancorous abuse, and, for our own part, experience has taught us that each attempt to stem the torrent merely has the effect of only turning it into the channel of vulgar personalities. We can not, however, suffer to pass unnoticed the *Japan Herald's* comments on the action of Mr. Takahashi in petitioning the Throne for a reversal of the sentence of death passed on the murderer Miller. We ourselves do not endorse the reasons advanced by Mr. Takahashi, but that he does his simple duty in petitioning the Throne, we can not doubt for a moment. As counsel for the condemned man he must leave no stone unturned in the interest of his client, and since a petition to the Throne is one of the resources indicated by law, he is bound not to neglect it. His untiring and zealous action on Miller's behalf deserves the gratitude of foreigners, and if he had not taken this course, the first to make his negligence a ground for malicious attack would have been the *Japan Herald*, which now abuses him for taking it. Mr. Takahashi's services in this matter must be in great part gratuitous. For giving them in Miller's behalf he undoubtedly merits applause and thanks from foreigners in general, whereas the *Japan Herald* insults him, and does not hesitate to suggest that he and the Japanese who have provided funds for Miller's defence are not personally disinterested in their conduct. It is quite impossible for the *Japan Herald* to attribute human actions to any motive but self-interest. To all the events of life and the doings of men it applies a code of the lowest morality, and even the sentiment of benevolence, or the love of fair play, or the desire to provide all possible facilities of defence for the first Occidental tried by a Japanese criminal tribunal, even these intentions, one and all commendable, are reduced by the *Japan Herald's* vile rule to "personal interest." It is thus that even a pro-foreign impulse on the part of the Japanese is seized by this importunate reviler as an occasion for insulting and attacking them. Nor does the *Japan Herald* content itself with slandering Mr. Takahashi and those of his countrymen who have cöoperated to provide for an American citizen the best protection afforded by law. It twists the affair into a pretext for reflecting on "certain phases of Japanese idiosyncracy" and endeavours to deduce from it a proof that the whole nation is subject to attacks of "spurious sentimentality" and deficient in a sound sense of the dictates of justice. Concerning the sentimentality of the matter, in the first place, Mr. Takahashi, as we have said, is simply discharging his plain duty; and in the second, if any charge of "spurious sentimentality" can be preferred against a barrister who petitions the Throne on behalf of the man he has undertaken to defend, what shall be said of the people of England, where scarcely one notorious criminal mounts the scaffold without evoking, if not a petition to the Home Secretary, at any rate some display of newspaper assistance; or of America, where the most ferocious murderers are usually the objects of the most marked sympathy? It is the total inability of the *Japan Herald* to measure Japan and the Japanese by any standard but its own inveterate hatred, or to pay any attention to the conditions existing in other countries before drawing large condemnatory deductions from those that exist here—it is this ceaseless display of malicious bias that renders its writings a continual means of estranging foreigners and Japanese. Such bias naturally disposes it to accept readily the most damaging statements, however improbable they may be intrinsically. Nine-tenths of the article to which we are referring is based on the assumption that Mr. Takahashi has attempted to estimate Miller's crime by pleading that the victims were, after all, only abandoned characters whose removal was really more beneficial than otherwise to the welfare of the community. Mr. Takahashi has done nothing of the kind. That is another of the reckless misrepresentations for which the *Japan Herald* is notorious; misrepresentations that it never shrinks from making when they can be used to injure Japan. What Mr. Takahashi has done is to urge that these de-

Digitized by Google Original from CORNELL UNIVERSITY

graded people, in their intercourse with Miller, were more likely to have tried his patience beyond endurance than folks less unscrupulous in their methods would have been. In short, Mr. Takahashi's plea has reference solely to the nature of the provocation Miller received, and does not in the remotest degree seek to minimize the value of the victims' lives. Thus the whole of the *Japan Herald's* elaborate attempt to convict the Japanese of unwholesome and ill-balanced idiosyncracies rests solely upon its own idiosyncracy for reducing all their actions to motives of the grossest character. Moreover, even in an affair like this it can not escape the influence of racial prejudice. Here is a Japanese barrister who gives his services gratuitously to defend a foreign criminal, and who petitions the Throne to commute the murderer's sentence of death, yet the *Japan Herald* asks its readers to believe that Mr. Takahashi is influenced by the thought that "the male victim" of Miller's murderous attack "was only a foreigner." Is it possible to display blinder bias, or to adopt a course more unjust to the Japanese? Finally, the *Japan Herald* asks "why, on the one hand, Miller's crime should arouse such slight reprobation, while, on the other, there should exist an unmistakeable (*sic*) animus against a victim of judicial incompetence." What evidence is there that Miller's crime arouses "slight reprobation" in Japan? The law courts have condemned him to death and not one solitary voice has been raised in his behalf except that of his counsel, who in petitioning the Throne for grace, is *simply completing* the duty which he undertook to discharge when he assumed the charge of Miller's defence. Not the remotest hint has been offered in any quarter that Miller's brutal crime does not receive Japanese reprobation, yet this singularly mendacious *Japan Herald* would have its readers believe that public opinion has made some demonstration in that sense. What evidence, again, is there of "an unmistakable animus" against Kent? Kent's case awaits hearing by the Court of Appeal, and in the meanwhile an eminent Japanese Judge has adopted the unprecedented course of publicly traversing the verdict of the lower tribunal in an essay over his own signature. Is that a proof that unmistakable animus exists against Kent? In the face of violent attacks by foreign local journals against the propriety of Kent's condemnation, not one Japanese journal has attempted to justify it. Two legal experts have discussed the matter in a temperate spirit and with an evident desire to elucidate the truth, but so far from there having been any display of animus, there has been a remarkable absence of such display —remarkable because, had Japanese journals condemned the finding of a foreign court in terms so strong as those employed by the foreign local journals in condemning the finding of the Japanese court that tried Kent, there would most assuredly have been a strong display of resentment on the part of the local foreign press. We entirely disagree with the sentence passed upon Kent, but we have only praise for the demeanour shown by the Japanese public in the matter. Also, we think that if ever a murderer deserved the gallows Miller is the man; but we are persuaded that Mr. Takahashi is discharging his simple duty when he exhausts all available resources in his client's cause, and we have only applause and thanks for him and for the other Japanese who have helped to provide for an American citizen the best machinery of defence when on trial for his life before Japanese tribunals. That such acts should be perverted into a weapon for attacking these persons' nationals and slandering themselves, is not the least disgraceful of the many disgraceful performances which stand to the credit of that perennial slanderer and mischief maker, the *Japan Herald*.

Friday, Jan. 12.

It is stated that much discussion has been caused in Japanese legal circles by the petition that Mr. Takahashi has submitted to the Chief Public Procurator for presentation to the Throne, seeking a mitigation of the death penalty in Miller's case. On the whole, the balance of opinion seems to be that Mr. Takahashi's reasons deserve consideration, but it is thought very questionable whether the petition ought to come direct from the barrister engaged in defending him. We do not, for our own part, see any ground for objection on the latter score. No one is better acquainted with the circumstances of the case than the barrister who conducted the defence, and no one is under a greater obligation to exhaust every possible resource in the wretched man's behalf. But as to the points advanced by Mr. Takahashi, to call them reasons is a singular stretch of courtesy. One point and one point only differentiates the case from the ordinary category, and that is the fact that it was the first trial of a foreigner on a capital charge under Japanese jurisdiction. We do not know how that feature presents itself to Japanese minds, but to foreigners it seems unworthy of a second thought.

THE IMPERIAL UNIVERSITY'S HISTRIOGRAPHICAL WORK.

Since 1896 the Imperial University has been engaged collecting materials for a history of Japan. It has had a considerable allowance from the Treasury for the purpose, and the plan adopted has been to send the students into the country during their summer vacation, for the purpose of visiting temples and residences of old families. and obtaining copies of documents that help to throw light on matters in bygone ages. The grant from the Treasury terminates at the close of the current fiscal year, but the Diet is to be asked to sanction its extension for another five years, at the rate of 20,464 *yen* yearly. This will not complete the work, however. The present estimate is that 15 years will be required to investigate all the material available. The history, when finished, will be a colossal affair, costing 800 *yen* a copy, according to the forecast published by the press. If so it will find few purchasers and still fewer readers. It will be like the history of Mexico compiled by an English nobleman at a cost of sixty thousand pounds and sold—or offered for sale —at a hundred pounds a copy. We have never met any who had even seen the history, with the exception of an individual whose hobby was to delve among the unused volumes in the British Museum. But of course the University authorities will bring out a library edition of the work. Library editions are much to be desired in many cases. What has become of the magnificent work which the late Mr. Walters of Baltimore caused to be compiled illustrating his celebrated collection at Baltimore? The book must have cost a small fortune, and its chief compiler was the greatest living authority on Chinese porcelains, Dr. Bushell, of H.B.M.'s Legation in Peking. Occasionally one encounters an American millionaire who has a copy of the work in his library. But he can never claim the honour of having read it. All that he has done is to look at some of the pictures. The same may be said of Mr. Heber Bishop's book on jade. A hundred copies were published at a thousand dollars (gold) per copy. Where are they and who has seen them? However, we do not by any means desire to disparage the efforts of the Imperial University. Our object is simply to express a hope that the big book will be rendered accessible to the general public, not after its completion, but by degrees as the compilation proceeds.

TRIALS BY JAPANESE CRIMINAL COURTS.

If only for the sake of not bringing discredit upon foreign intelligence, it is much to be desired that the persons who make a business of showing things to be as bad as they possibly could be in Japan, would post themselves in elementary facts before publishing their criticisms. We make this remark with reference to statistics of persons awaiting trial at the Kajibashi House of Detention. There are 55 persons who have been waiting for 3 months, and 28 who have been waiting for 6 months. Nothing need be said about the cases waiting for hearing in the Appeal Court and the Supreme Court, because delays in such instances are notorious, the world over. But does the record of persons waiting to be tried in open court, their preliminary examination having terminated—does that record justify the criticism of a local contemporary that it is "a melancholy story of the deliberation with which the legal machinery moves in this country," and that it denotes a "practice entirely opposed to all principles of humanity and justice?" We are very far from thinking that Japanese judicial procedure is secure against just accusations of tardiness, but we do not believe that it is much worse than legal procedure in our own country, and, before condemning it in wholesale terms, some comparative statistics should be furnished. The truth is that everybody thinks himself qualified to be a critic in this part of the world. Folks write glibly about subjects that never before occupied their attention in the smallest degree, and their remarks excite merely ridicule among intelligent Japanese.

JAPAN AND CHINA.

A telegram from Peking says that Baron Nishi, the new Japanese Representative, has arrived in that city and presented his credentials. Meanwhile Mr. Yano, Baron Nishi's predecessor, has been interviewed with regard to the rumours of his engagement by the Chinese Government in the capacity of adviser on foreign affairs. He denies the engagement, but says that he is going to pay another visit to China.

THE REVISED CRIMINAL CODE.

It is expected that the draft of the Revised Criminal Code will be submitted to the Diet on the 20th instant. It consists of 306 Articles, being thus 124 Articles shorter than the present Code. We can not speak confidently of the changes proposed, but rumour says that one of the most important is the abolition of the inferior limits of penalties. The discretion of a Japanese judge is now restricted in both directions. He may not exceed a certain punishment for a certain crime, and he may not give less than a certain punishment. A very striking illustration of the evils resulting from the latter limit was furnished in the *Tamba Maru* case. Even supposing that the court was right in its analysis of the evidence—a supposition which seems to us quite untenable—, such a penalty as six months' major imprisonment was enormously disproportionate to the crime. But the judges had no power to pass a lighter sentence. Having concluded that the offence fell within the purview of a certain Article of the Code, their hands were tied as to the smallest penalty. The Anglo-Saxon system refrains from fixing an inferior limit, and certainly that seems the wiser principle if the competence and integrity of the Bench are assured. We trust that rumour is correct in assigning such an intention to the revisors of the Code. But, at any rate, there can be little hope of the new Code's passing both Houses of the Diet this session. The 19th of February is the closing day, and although the legislature passed the Civil and Commercial Codes without much debate, it will probably have a great deal to say about the Criminal Code. The interval between January 20th and February 19th can not suffice.

CRIMINAL PROCEDURE IN JAPAN.

Of course it is absolutely false to pretend that we deny or have ever denied, the desirability of reforming the system of criminal procedure in Japan in the sense of accelerating trials. In the very notes which are made the subject of this characteristically baseless charge, we stated that changes are a desideratum. What we traverse is the singularly reckless extravagance of the criticisms penned against Japanese methods. Such criticisms simply injure the cause of reform since by their intemperance they excite the indignation of those to whom they are addressed, and by their blundering mis-statements they provoke ridicule instead of suggesting the desirability of improvement. As to *habeas corpus*, we have only to repeat what we have often said and what must be patent to any one sufficiently unbiassed to admit that in this wide world the English systems are not the only ones commendable—we have only to repeat that there are other means of attaining the same end, and that such means were included in the Japanese Code of Criminal Procedure as its compilers imagined. The working of the Code has shown, however, that the machinery it provides is not altogether satisfactory, and that amendments are necessary—amendments which the revisionary committee is understood to have under consideration. Meanwhile it is evident that some of the defects on which we, in common with others, commented strongly two years ago, were due in part to the method of applying the Code not to the imperfection of its provisions. This is shown by the great improvement that has taken place since the present Minister of Justice came into power. Mr. Kioura is a legal expert with full practical knowledge, and has been able to issue instructions which have so greatly facilitated the work of the Judicial officials that the number of cases awaiting trial last December was very much less than the number for the corresponding period of 1898. But the Code itself wants amendment, as all intelligent persons admit.

MARQUIS ITO.

Marquis Ito, interviewed by a representative of the *Kokumin Shimbun*, ridicules the talk of a triple alliance between himself, Count Okuma and Count Itagaki. In the first place, the two latter have political parties at their backs and he has none. It would be as rational to talk of two capitalists associating themselves in a business enterprise with a man who brings no capital whatever to the combination. (The simile is not very happy, for Marquis Ito would bring capital which, though it does not take the precise form of a political following, is at least as valuable.) In the second place, it is thoughtless to talk of a preliminary agreement for composing differences of political views. Such an agreement has little practical value. The differences in question can not be reduced to a general formula: they assert themselves when the occasion for action arises. Passing to the problem of the reform of political parties, the Marquis admitted its necessity, but appeared to think that the chief desideratum, leaders to lead the reform, was not likely to be speedily satisfied. He spoke also of education, and expressed the opinion that, in general outline, the programme should be, not to aim at too high a standard in elementary education, but to provide a sufficiency of good schools, technical and otherwise, where lads who had passed their preliminary courses could, if they so desired, obtain further instruction fitting them to become useful members of society. With regard to the educationists who entertain conservative or anti-foreign views, the Marquis thought that the atmosphere of Annam or Burmah would be more congenial to them than the atmosphere of Japan.

WOMAN'S RIGHTS IN JAPAN.

Messrs. Kataoka and Ando, prominent members of the House of Representatives, are said to be about to introduce a bill for investing a wife with the same title to protection against extra-marital irregularities on the part of her husband as a husband now enjoys against such irregularities on the part of his wife. These gentlemen will deserve a high place in their country's gratitude if they succeed in establishing the doctrine of reciprocity of obligation in married life. Japan, in that respect, has not advanced much beyond the point where Greece stood in the days of Andromache and Hector, and Rome in the time of Scipio and Tertia Æmilia.

THE PEST.

Saturday, Jan. 6.

Kobe seems to have successfully beaten back the pest. Since the 25th instant there has not been one fresh case there. The total number of sufferers from the outbreak of the malady until the present time has been 55; namely, 27 in Osaka, 23 in Hyogo, and one each in Fukuoka, Nagasaki, Wakayama and Shizuoka. Of these 55 patients only 10 have survived. The physicians engaged in treating the sick are understood to say that Yersin's serum as a cure has little or no efficacy. It is doubtless useful as a preventive, and possibly as a cure if injected in the earliest stage of the malady. But unfortunately the earliest stage never comes within range of treatment. Before the physicians have cognisance of a case, it has usually run for several days, and even reached the point of fever and perceptible swelling of the glands. The doctor who lost his life recently in Osaka attributed the inception of the disease in his case to contact with the saliva of a patient whom he was examining. He felt some uneasiness about the incident at the time, but did not employ the serum. If even an expert shows so little care about taking precautions in time, what can be expected of ordinary folks? In the matter of sanitation, the Authorities have come to the conclusion that one of the most effective measures is to pull down the ceilings of a house where a case has occurred, whether among rats or among human beings. It is a violent measure of precaution, but the people seem to be reconciled to it, and the cost is defrayed out of the sanitation fund. In Tokyo a system of examination will be immediately inaugurated, it is understood, in the case of the lowest classes, whose conditions of life are far from being sanitary. The city has now emerged from its recent operation of cleansing, which rendered the atmosphere very noxious for some time.

Monday, Jan. 8.

There has been another case of Pest in Osaka, and from Utsunomiya comes a report that some dead rats were found there, but the experts have not yet determined whether the bacillus is present in their bodies. Tokyo also has had an alarm in connexion with dead rats; happily a false alarm, for examination failed to detect anything serious.

The latest conclusion that the medical experts have arrived at with regard to Pest is the most disquieting. They have proved beyond doubt that the malady attacks a victim in two ways, either by the course hitherto familiar or by invading the lungs. This lung-pest is an appalling form. Every cough, every breath, of a sufferer sends into the air a crowd of bacilli carrying the disease to healthy people. The record of the Adachi family is a shocking illustration of that fact. Adachi Masa, a girl employed at a factory in Osaka, was taken ill on the 18th of December and died on the 21st. Then her two parents were seized, then her brother, then her elder and her younger sisters, then four of her fellow-workwomen, then the two physicians who had attended the patients, then the wife of one of the physicians, and then the latter's *jinrikisha*-drawer—14 victims in all. We gather from the newspaper accounts that some, at least, of these cases

Digitized by Google Original from CORNELL UNIVERSITY

were not diagnosed as pest. The girl Adachi Masa herself was supposed to have died of acute inflammation of the lungs, and it was not until several had been attacked that the truth was discovered. Dr. Wakabayashi suspected it and called Dr. Baba to his assistance. Both perished, owing to having conducted their examination without the extraordinary precautions required under such circumstances. Dr. Kitasato is understood to say that a physician called to treat a case of lung-pest will have to cover himself from head to foot, leaving only his eyes exposed. He regards this form of the disease as most alarming, and predicts terrible consequences unless it can be checked.

Wednesday, Jan. 10.

Another medical man has succumbed to the Pest in Osaka, the malady in his case also attacking the lungs. It would seem that two fresh cases have occurred in that city, though the statements published are too confused to be read clearly. The Osaka type of the disease is appallingly fatal. Out of 39 persons hitherto attacked, 36 have perished. The Home Department has given instructions that still more stringent measures of prevention are to be adopted, and the Sanitary Bureau is collecting 300 physicians for the purpose. Meantime a disinfecting apparatus on the most approved plan has been erected in Kobe. Some doctors are said to recommend that people who have to enter places where there is much dust or to travel by crowded trains, should use respirators.

Thursday, Jan. 11.

The wives of the late Doctors Baba and Wakabayashi have both succumbed to the pest and a fresh case is reported from Osaka, an engineer's assistant in the local office. The Sanitary authorities of that city appear to be adopting very strenuous measures to combat the disease. They have voted a sum of 10,433 *yen* for purposes of disinfection and medical inspection, and three hundred additional physicians will soon be at work. As for Tokyo, the project of paying 5 *sen* for every rat brought to the police is to be carried into practice from to-day (11th).

The family of each of the unfortunate doctors who died at Osaka has, in accordance with the official arrangement, been presented with a present of money amounting to five times the salary the deceased used to draw. As each unfortunate inspector had been drawing 100 *yen* a month, this present, says the *Kobe Herald* amounted to 500 *yen*. Besides, another donation of 100 *yen* has been awarded to each family by the local office towards the funeral expenses. The colleagues of the unfortunate gentlemen have also presented 100 *yen* to each family, while the Governor and other local officials are collecting contributions from among themselves and also from others, so that the funeral ceremony of the two martyrs to duty may be performed in a way befitting their services.

Friday, Jan. 12.

Three physicians and the wives of two of them have already succumbed to the Pest in Osaka. We now learn that the wife of the third has been attacked. The disease has no mercy. On the other hand, no fresh case was reported yesterday, and it turns out that the last supposed seizure —an engineer's assistant in the City Office—was not really pest. Possibly the change of weather may help to check the spread of the malady. In Tokyo the carcases of 91 rats, killed or found dead between the 21st and the 31st of December, have been examined by experts, but the bacillus was not found in any case.

THE "LIGHTNING BURGLAR."

Sakamoto Keijiro, known in Japan as the "Lightning Burglar" because of the extraordinarily rapid nature of his movements, was convicted some time ago and sentenced to death. The indictment comprised 31 different counts, all of which were proved against him. Some had involved murder as well as robbery, and few were without the adjunct of "cutting and wounding." It is said that during the period of Sakamoto's operations, the people of Saitama and Chiba Prefectures, where his depredations were mainly carried on, could never rest peacefully at night, for there was no possibility of predicting where the man would next appear, sword in hand, just as ready to commit murder or rape as to steal money. When Sakamoto was convicted, he broke out in Court, and reviled the judge and the public procurator, calling them worse robbers than himself. He appealed against the sentence, but it was confirmed by the Court of Appeal, and the man then carried his prayer to the Court of Cassation, where its fate is now pending. Meanwhile he appears to have made up his mind that all hope is at an end, for he has confessed. In addition to the 31 crimes already proved against him, he charges himself with two robberies attended with murder, eighteen accompanied by cutting and wounding, and twenty achieved by intimidation with ethal weapons. Thus his record is 71 crimes of the worst description.

TRADAL TROUBLES.

Thursday, Jan. 11.

There appears to be a somewhat serious trouble in Yokohama between foreign and Japanese silk-men with regard to weights. We gather from Tokyo newspapers that it has its origin in a desire on the side of the Japanese to correct certain commercial customs which they consider reprehensible. The first of these customs attacked by them is that which has been hitherto pursued in weighing silk. In a parcel of 250 catties it has not been usual to take account of any fraction less than one-quarter of a catty, but the Japanese now insist that anything over one-eighth of a catty must be considered. Such, at least, is the ground of dispute as set forth by vernacular journals, and it is added that the Japanese middle-men are disposed to make much of the fact that the weights and measures in use have been officially fixed, and should, therefore, be observed with absolute accuracy. To outsiders the question seems of the most trivial dimensions, but we presume that it has importance, for both sides are displaying considerable resolution. Treaty Revision is dragged into the matter by a Tokyo journal, but we can not perceive what Treaty Revision has to do with it. The Japanese are acting most unwisely if they allow any romantic notions to obtrude themselves into the domain of commerce. The silk trade seems to have been conducted in a satisfactory manner for many years. It has brought vast sums of money to Japan, and has greatly enriched many Japanese merchants without conferring anything like commensurate profits on the foreign middlemen, who appear to have managed the business in a most efficient and economical manner, taking all the risks on their own shoulders and giving the bulk of the gains to the Japanese. Why there should be a disposition to disturb such a state of affairs we can not understand, and if several important British and American firms agree that a certain course is just and expedient, the probabilities are immensely in favour of their being right. It is not to be denied that some of the methods pursued in the silk export trade of Japan differ from those pursued in other countries, and are distinctly objectionable from a Japanese point of view. But there are excellent, though not, we hope, permanent, reasons for them, and at any rate, this petty question of one-eighth or one-fourth of a catty does not belong to the category of solid grounds of dispute.

Friday, Jan. 12.

The dispute between the foreign buyers and the Japanese sellers of silk in Yokohama continues. According to vernacular newspapers, the difference of weight represents a value of 1.30 *yen* in a hundred catties, and that difference, when applied to all the parcels of silk now contracted for, would aggregate 572 *yen*. The monetary total is a mere bagatelle, but the Japanese claim that, in the course of years, it would amount to a very substantial figure.

THE LAW OF ELECTIONS.

The old dispute about the amendment of the Law of Election will occupy the attention of the Diet almost immediately after its re-assembly. The Government's proposals are these:—(1) That every town (*shi*) shall return one member, and that if its population exceeds 80,000 it shall return two members, provided that the excess is more than 30,000. This rule would apply to all multiples of 80,000, so that a town with a population of more than 190,000 would return 3 members. For rural districts, one member would be returned for every 120,000 of population, and one for every additional fraction of that number above 60,000. This method would increase the membership of the House from 300 to 426. (2) The system of voting to be unsigned ballots, uninominal. (3) The monetary qualification for the franchise to be the payment of 5 *yen* of annual taxes. (4) The qualification for candidates for election to be an age of 30 years. (5) That teachers in elementary schools, Government contractors, and officers of juridical persons undertaking Government contracts shall not have the franchise. (6) That these amendments shall become operative from July 1st, 1900. On the other hand, there is a bill, introduced by a Liberal member, which (1) makes no distinction between the urban and the rural populations, but gives to every 100,000 of the people the right of returning one member, thus raising the total membership to 442; (2) provides for multinominal voting with unsigned ballots; (3) makes the age of candidates 25 years; (4) gives the franchise to school teachers and Government contractors; and (5) postpones the operation of these changes until the date of the next general elections.

Digitized by Google Original from CORNELL UNIVERSITY

MR. HAYASHI ON KOREA.

Mr. Hayashi Gonsuke, Japanese Representative in Söul, who is now on a visit to Tokyo, denies that his return has any political significance. Speaking to a representative of the *Kokumin Shimbun*, he outlined a very sensible and moderate programme for Japan in the peninsular Empire. Competition in the field of politics, he said, is not her object. To obtain political influence it would be necessary to join hands with some other Power. It is her wish to stand aside from all interference in the domestic affairs of the peninsula, and to limit herself to pushing the commercial and industrial interests of her nationals. To enter the political arena would involve collision with other States, whereas in the field of commerce and manufactures all may work peacefully side by side. If other Powers attempt to interfere with her lawful rights in the latter field, she must defend herself, and if other Powers undertake any territorially aggressive programme, she must resist it vehemently as a matter of self-defence. But otherwise there need be no friction. Japanese and foreigners may live amicably in the same settlements, and Japan need not be troubled as to what State's boundaries are conterminous with her own. She does not seek any monopoly, but she holds a special position in Korea, and foreign States can not fail to recognise the fact. They recognise also that the presence of her soldiers in Söul is essential to the preservation of public peace and good order. Owing to the fact that the line of telegraph from Söul to Fusan is in her hands and has been guarded by her gendarmes, a new road has been built and general benefit has resulted. Some publicists have urged that the line of Japan's natural expansion lies in a southerly direction, and that she ought to follow it in preference to choosing the Korean field. Mr. Hayashi does not share that view at all. He would make Korea a prime object, and devote remaining capacities only to southerly enterprise.

SUBSIDIES TO STEAM-SHIP COMPANIES.

It is stated that the annual subsidy of 880,000 *yen* granted to the Nippon Yusen Kaisha is to be reduced to 620,000 *yen*, and that the Osaka Shosen Kaisha will receive 180,000 *yen*, the Treasury thus reducing its total payment by 80,000 *yen*. There is a strong disposition in Japan at present to improve the steamship communications between this country and Northern China. The *Jiji Shimpo* remarks that, in 1899, the foreign trade of 19 out of the 22 Chinese treaty ports—those of Northern China being excluded, namely, Tientsin, Chefoo, and Newchwang—aggregated 469 million taels, and grew to 610 millions in 1898; whereas the corresponding figures for the three northern ports were 62 millions and 132 millions respectively, thus showing a much more rapid rate of increase. The greater part of the trade of the three northern ports goes to Shanghai, and the idea is that if the goods could be carried direct from Kobe a considerable saving would be effected. The Osaka Shosen Kaisha is showing considerable enterprise in connection with the Kobe-Newchwang-Tientsin-Amoy service, and the Yusen Kaisha is urged to adopt a similar policy.

THE BOOK-SHELF.

Mr. de Ryke on the Yellow River; Yokohama, Messrs. Kelly & Walsh, Ltd.

Mr. DE RYKE, who has served for many years as Hydrographic Engineer to the Imperial Home Department of Japan, and given many proofs of high ability in his profession, publishes a brochure containing "Comments on a report made by M. A. Rouffart, under date of January 24th, 1899." The Yellow River has probably wrought more destruction to life and property within historical times than any other river in the world. If the task of restraining its devastations had been within anything like easy reach of human efforts, the Chinese would doubtless have grappled with the problem long ago. But they have never been able to achieve more than a very temporary measure of relief, and the question now is whether Occidental science can help them. We must confess that on reading Mr. de Ryke's very lucid and convincing statements, statements which seem to assert a conclusive claim to attention and belief, we detect little ground for hope. That the river could be brought under control and kept under control if men like Mr. de Ryke were given *carte blanche* to deal with it, there can not be much doubt. But there is equally little doubt that the Chinese Government, so long as it retains its present characteristics, will never give *carte blanche* to any one, and that it will not be encouraged by learning from these comments by a competent authority that that in order to discover how to deal with the Hoang Ho scientifically, a preliminary survey costing a million of taels and requiring three years' labour is necessary. The perplexing features of the Yellow River are the extraordinary quantity of solid matter contained in its water—it is so turbid that a piece of white cloth dipped into it immediately assumes a rusty-red colour—, and the fact that throughout a considerable part of its course its bed is at a commanding height above vast areas of plains through which it runs, so that, when it bursts its banks, devastating floods sweep resistless over huge expanses of country. The Chinese have been ridiculed for making secondary dykes on each side of the river, at a distance of a mile to two and a half miles from the first dykes, or real flood banks, which secondary dykes, useless in any case for restraining the river, are left in a neglected condition. Mr. de Ryke, however, shrewdly points out that these secondary dykes are not intended to control the river at all. Their object is to protect the people living within from inundations coming from the land side; inundations caused by a break in the river's banks at some point higher up. Such inundations would not advance with any great pressure and consequently the dykes for keeping them back need not be very solid. In other respects, too, Mr. de Ryke shows that the Chinese have not been without shrewdness in their manner of dealing with the river, but they have never seriously tried, probably they never had the power, to prevent the injury and neglect to which the mountainous basin of the Hoang Ho has been subjected by the dense population living on its banks, and grasping eagerly every aid to survival without consideration for the consequences to unborn generations. Certainly these consequences are stupendous enough. To regulate the stream in Shantung alone, that is, to regulate it through a distance of 252 miles out of its total length of 2,500 miles, Mr. Rouffart estimates an outlay of 32 million taels, and Mr. de Ryke declares that the double of that sum would be needed, giving, moreover, reasons which seem to establish his point conclusively. Mr. de Ryke, indeed, brings to his task of comment remarkably lucid conceptions and expert ability evidently of a high order. The subject he has to treat is dry enough, but he manages to make it quite attractive by the quality of his knowledge and the method of his reasoning. His remarks about *reboisement* are in themselves sufficient to repay perusal of the whole pamphlet, for people are wont to talk of afforestation as though it were an easily applicable remedy, whereas by the time that afforestation is urgently needed, the very causes operating to make it a desideratum have also operated to invest it with immense difficulties. The injury wrought by ill-regulated mining operations is also very clearly set forth in this brochure, and the author illustrates his remarks by reference to the working of the copper mines in the Mozumi valley of Hida in Japan, an illustration which shows that Japan also is sowing tares of trouble for her children in the future. Not in our generation, nor yet in the generation of our sons or of our grandsons, will the Hoang Ho monster be chained. It will continue to exact its yearly tale of thousands of lives and millions upon millions of property. It is one of the flails with which Providence chastises China for her unprogressiveness.

KOBE HARBOUR.

A telephonic message from Kobe says that it has been decided to carry out the extensive scheme of harbour improvement recently planned for that place. The outlay involved is 26,143,880 *yen*, of which total the Treasury is to be asked to give 14,950,000 *yen* in ten yearly instalments, commencing from the current year. With regard to the remaining sum, 699,880 *yen* will be raised by municipal taxes, and a loan of 10,494,000 *yen* will be floated. The interest on the loan is not stated, but we presume that it will be 6 per cent. The loan, we gather, is to run unredeemed for 10 years, and to be thereafter redeemed in 69 years, the redemption ending in the 111th year of *Meiji*. If the rate of interest is 6 per cent., this should prove a very tempting investment.

THE DAIKOKU CASE.

We learn from Tokyo journals that an amicable arrangement has been effected between the German and Japanese firms which, last summer, found themselves disputing about the right to use a trade mark in the form of *Daikoku* on bottles containing brandy. The German firm, as we understand the facts, duly applied for and obtained the registration of its mark. But the Japanese firm had been using a similar mark for some time previously, and thus the difficulty arose. The settlement arrived at is that the Japanese firm takes over the German business. Dr. Lönholm is said to have represented the German firm.

TAXATION IN TOKYO.

Monday, Jan. 8.

The Tokyo Municipal Authorities are said to be casting about for ways and means to meet next year's outlays. Faced by a deficit of six hundred thousand *yen*, they have decided to raise the house tax, on the one hand, and, on the other, to impose special taxes on the Tram Company, the Electric Light Company, and the Gas Company. The method to be pursued in taxing the Tram Company is not mentioned, and the public are not likely to object, for the company presents the invidious spectacle of an enormously profitable business whose directors think only of enriching themselves and their shareholders, and pay no concern to the comfort or convenience of the citizens. But the taxes on the Electric Light Company and the Gas Company are expected to take the shape of imposts on each pole erected by the former and on each length of pipe laid by the latter. The two taxes may produce nine or ten thousand *yen* per annum. We did not know that the Municipality had power to put such burdens on special concerns, but presumably the City Assembly is omnipotent within the bounds of the city.

Thursday, Jan. 11.

It seems that there is to be a large increase of municipal taxation in Tokyo. The following statement embodies the proposed changes:—

	Rates for 1900-01.		Increase as compared with 1899-1900.
Land Rate (*chiso*).	½ of	Land Tax.	Unchanged.
House Tax (*kaoku-zei*).....	9 *sen*	per unit.	+ 2.7 *sen*
Income Tax (*shotokusei*).....	40/100	of State Income Tax.	+ 5/100
National Business Tax (*kokusei-yeigyosei*).....	40/100	of State Tax	+ 18/100
Local Business Tax (*chihosei-yeigyosei*).....	40/100		+ 20/100
Miscellaneous Tax	50/100		+ 20/100

Tokyo has hitherto been much the most lightly taxed city in the Empire, and the most backward in every respect. We trust that this increase of taxes means a general improvement of the municipal system.

Friday, Jan. 12.

We stated in our last issue that the Tokyo Municipality had decided to make certain increases in the rates of taxation for the approaching fiscal year—April 1st, 1900, to March 31st, 1901. Our vernacular contemporaries now give the exact figures. They are these:—

	1899-1900	1900-01	1899-1900	1900-01
Land Rate ...	39,056	38,909	½	½
House Tax ...	703,332	1,100,971	6-3 *sen*	9 *sen*
Income Tax...	183,120	160,000	35/100	40/100
Percentage of National Business Tax	21,455	327,068	20/100	40/100
Local Business Tax	19,710	26,360	20/100	40/100
Miscellaneous Tax	80,067	134,845	30/100	50/100
Other sources of Revenue...	—	181,000	—	—
Totals.....	1,626,364	1,877,956		

N.B.—It will be observed that the table is arithmetically incorrect, but we reprint it as it appears.

Concerning the reason for this increase, it appears that a sum of about two hundred thousand *yen* is required for the repair of the streets, and the remainder of the additional income is for the expenditures of the City and District Offices and for a reserve fund. But further outlays have to be anticipated. If the Bill relating to scavengering improvements becomes law, it will involve an expenditure of something like a hundred and fifty thousand *yen*, and a further sum of twenty thousand must be allowed for purposes of special sanitation. It is to defray these last two items that the idea is mooted of taxing the trams, the electric lighting companies, the gas companies, and the street railways—whenever they come into existence—, but the revenue thus derived would still be insufficient, and the Municipal Authorities are said to be considerably perplexed. They will probably end by an additional house tax.

OWNERSHIP OF REAL ESTATE BY FOREIGNERS.

Tokyo newspapers contain an interesting statement. The Head of the Hokkaido Administration, they say, seeing that the development of the districts under his control would probably be much promoted by encouraging foreign enterprise and the investment of foreign capital, applied to the Home Department urging that juridical persons who had complied with the requirements of Japanese law, should be allowed to own real estate, whether they consisted entirely of foreigners, or were organized by foreigners and Japanese in combination. The Home Department replied that, according to the provisions of Japanese law, there was no obstacle to the ownership of real estate by juridical persons composed of foreigners. A ruling upon this point having been already obtained from a Court of Law, the declaration of the Home Minister was scarcely necessary, but it will help to reassure the doubters and to silence the cavillers who are quite determined to show that even the privileges granted by Japanese law are illusory and of small value.

"SHAMEFUL STATISTICS."

"Shameful statistics" is the term applied by the *Japan Herald* to certain figures recently published by Tokyo journals with reference to the number of persons confined in the Kaji Bashi House of Detention on the 15th of last December. The *Japan Herald* displays in this instance its invariably reckless disposition to construe in the worst possible sense everything relating to Japan. It says that "in one prison alone no less than 292 prisoners are all awaiting trial, none of whom has been incarcerated for less than three months." It calls this a "crying scandal," and it writes as though all these people were still without trial. But the truth is that out of the 292 persons, no less than 209 have been actually tried, found guilty and sentenced to various terms of imprisonment. What they are awaiting is, not their first trial, but the result of appeals made by themselves to higher tribunals. To put the matter more accurately, 49 of them having been found guilty by courts of first instance, and having been unsuccessful on appeal, are now awaiting the result of their final recourse to the Court of Cassation; and 160 having been found guilty by courts of first instance, are awaiting the hearing of their cases on appeal to the Appeal Court. Only 83 are awaiting their first public trial, and of that total 55 have been waiting for three months and 28 for six months. Moreover, the "one prison alone" spoken of by our contemporary is the house of detention for all Tokyo with its population of a million and a half. Out of all the lawbreakers in that big city, only 55 have not been brought up for public trial after 3 months' delay, and only 28 after six months' delay. All have been duly examined by magistrates and remanded for trial. Such are the statistics to which the *Japan Herald* applies the term "shameful," and such is the state of affairs which it calls "a crying scandal." How many prisoners, we should like to know, lie awaiting trial for 3 or 6 months in British jails. In the most populous circuits of England there are three assizes each year, one in spring, one in summer, and one in winter; but in the other circuits there are only two assizes in the twelvemonth. Even in London, therefore, a prisoner, after he has been remanded for trial, may have to wait for three or four months, and one-fourth of all the prisoners remanded have to wait at least three months on the average, while any prisoners whose cases are not disposed of at the first assize, must wait four months longer. In country circuits one-sixth of all the prisoners remanded have to wait for five months, and such of them as are held over have another six months of delay before them. Not the slightest thought is given by the *Japan Herald* to those elementary facts. It sees, as it imagines, an opportunity to vilify Japanese institutions, and it rushes blindly to the attack, the only result being to create a sense of indignation and unfair treatment among the Japanese, and to add another to the already innumerable proofs of its own vindictive bias.

NOTES ON CURRENT EVENTS.

There seems to have been a very heavy snow-fall throughout the country. In several places—notably in Hokkaido and on the Gan-yetsu line (Iwashiro-Echigo)—the railway services have been interrupted by the drifts.

It is stated that the *Morgan City*, which went ashore last summer at Ounoichi in Bungo, can be raised at a cost of 65,000 *yen*, and that her repairs subsequently will cost 80,000 *yen*. The question of undertaking the work is now under consideration.

The *Chugai Shogyo Shimpo* estimates that during the year which has just commenced Japan's payments abroad will aggregate fifty million *yen*; namely, 30 millions by the Naval Department, 6 millions by the Department of War, and 14 millions by the Department of Communications.

The *Chiwo Shimbun* says that, according to intelligence received by the Authorities in Tokyo, the Queensland Government has decided, in deference to the suggestion of Her Majesty's Ministry, to postpone for one year the operation of the new law for excluding Japanese immigrants.

There are to be naval manœuvres on a large scale next April. Two fleets will

Digitized by Google Original from CORNELL UNIVERSITY

operate; one composed of the Standing Squadron and the Yokosuka Squadron; the other, of the Saseho and Kure Squadrons. The manœuvres are expected to last for six days, and during the latter three days the Emperor will inspect them, Vice-Admiral Viscount Ito acting as *Baishin-kwan*, or assistant judge.

The American and English ladies of Tokyo are getting up a concert in aid of the fund for the widows and orphans of soldiers who lose their lives in South Africa. Some of the most talented of the Yokohama amateurs have promised their cöoperation, and with the combined forces of Tokyo and Yokohama there will doubtless be an excellent programme. Eight o'clock on the evening of the 24th instant is the time chosen, and the place will be the British Legation, Her Majesty's Minister having informed the Committee of Arrangement that his salons are at their service.

The bandits of Formosa, regarding the New Year festivities as a good opportunity to make a raid, broke into the *Bemmusho* at Mato, and finding most of the inmates under the influence of *sake*, abstracted 3,400 *yen* from the safe. The Japanese rallied and turned upon the marauders, who numbered 80 or 90. Bent mainly upon plunder, the bandits sought rather to escape with their booty than to injure life or property. They succeeded in getting away with the money, but three of them were captured, having been disabled by wounds. Two Japanese also were wounded.

The *Yomiuri Shimbun* has a telegram to the effect that the British Representative in Söul has presented a species of ultimatum to the Korean Government, in the sense that unless a definite answer be given by the 27th instant, with regard to the mining concession sought by Mr. Prichard Morgan, it will be taken for granted that the Korean Government has tacitly consented, and mining operations will commence at once. We do not believe this as it stands, though very likely strong pressure is being exercised to expedite matters in Söul.

The Tokyo Tram Company paid a dividend of over 30 per cent. when it last rendered accounts to its shareholders, and we now read in a vernacular contemporary that its customers and their fares on the 1st and 2nd instant were as follows:

PASSENGERS.		FARES.	YEN.
Jan. 1, 1900.....	108 900	Jan. 1, 1900.....	4,040
Jan. 1, 1899.....	96,700	Jan. 1, 1899.....	1,690
Jan. 2, 1900.....	107,400	Jan. 2, 1900.....	3,780
Jan. 2, 1899.....	89,600	Jan. 2, 1899.....	3,230

Meanwhile the Company goes on calmly destroying the streets and making no adequate effort to mend them. Wonderfully phlegmatic folks truly are the citizens of Tokyo! What has become of the electric railway, too?

His Majesty the Emperor, in accordance with the usual custom, received the Ministers of State and ex-Ministers of State and the Foreign Representatives in the Palace on the 5th instant, and entertained them at luncheon. The viands are said to have been entirely in Japanese style, and after luncheon there was a display of *Dakiu* and old-style dancing in the Park. The Emperor, observing the brevity which distinguishes all the utterances of the Sovereign in Japan, welcomed his guests and wished them the compliments of the season, and Marquis Yamagata, on behalf of the Ministers of State, and Baron d'Anethan, on behalf of the Foreign Representative, acknowledged His Majesty's gracious words in fitting terms.

A GERMAN OFFICER'S OPINION.

The following is the remarkable letter addressed by a German Officer to *The Times* on the 20th of November, a letter which has been amply justified by events:—

Sir,—Aided by a thorough personal knowledge of the military conditions existent in England, and that to an extent perhaps possessed by very few non-British officers, notwithstanding the latters' proneness to most exhaustive criticism, I am naturally following your military operations in the Transvaal with the greatest interest, so much the more as circumstances have, during the past few years, afforded me an accurate insight into the affairs of South Africa. Several points occur to me from a military side which I am persuaded are not sufficiently taken into account in England. I take it as granted that you sufficiently understand at home the immense gravity of the war as regards the continuance of the British Empire as *Weltreich*, and that you are consequently resolved on victory, cost what it may in time, life, or money sacrifice. Assuming the foregoing, there can be no doubt that England, with its exhaustless sources of power, will be able to achieve its end, even should the whole of Southern Africa rise rebelliously against her might. The other and the real question is, however, whether England is not again, as has so often previously occurred, underrating her opponent and proceeding against the foe with too few forces, and this I am convinced is the case in the present issue, notwithstanding the extent of the forces which at first sight seem to be in employment. One is apt to overlook that just as little as the conditions of the South Africa of to day can be contrasted with those of a decade ago, much less is the military power of the Boers in 1899, with their Mauser rifles, their quick-firing guns, and strategical science comparable with that displayed by them in 1881 and 1884, when those aids were wholly wanting. Again it appears that England is wholly deceived as regards the number of efficient combatants at the disposal of the Transvaal and Orange Free State of to-day. You continue to appraise their number at 35 000 to 40,000 men, when it actually amounts to at least 60,000. This body of armed efficient opponents you expect to defeat with a force of, all told, including the Cape and Natal Volunteers, say, at the most favourable estimate, 80,000 men. I use the words most favourable with the fullest possible consideration, as in the case of Ladysmith, Kimberley, and Mafeking being taken before the British reliefs can raise the sieges of those places the numbers quoted will be very materially diminished. From these 80,000 troops have to be deducted those required for keeping open the requisite base lines as well as the forces necessary for checking risings in the Cape Colony and in Natal and those needed for garrison duty in the chief centres. I am of opinion, one which is freely shared by my brother staff officers, that not less than 40,000 to 45,000 will be absorbed by such considerations and necessities, leaving no more than 35,000 to 40,000 for active military operations. It has further to be taken into account that the majority of the men are unused to the climate, and that an unusual percentage of sickness may therefore be expected; that the local geography is a sealed book to most, and that an unusual number of reserve men have been reworked into the military condition necessary for such a campaign. I do not consider that our German view is unjustified—viz.:—How can England expect to crush a force of at least 50,000 Boers with an army comprising at the outside 40,000 men available for offence? Consider that these 50,000 Boers are acclimatized, they know every yard of the country and all its capacities for traps for the bravest, most competent European troops. They shoot admirably, they are manœuvred with astonishing strategical ability, already revealed in the trifling operations hitherto carried out; they can ignore questions of food and encampment to a degree out of the question with British-fed troops, and they are contending for their rotten oligarchy with the courage of despair, which has, however, been heightened by success of a certain nature up to the present. They have found time during their advance south to put their rear route in an able state of defence; they have spies innumerable at their service in every quarter of the operations, and, moreover, are assisted by the code telegrams which foreign representatives and Powers are still allowed to exchange, and which these "friendly" Powers are persistently abusing; they are in possession of vast accumulations of food, weapons, and ammunition to an extent which will enable them to prolong the war for an indefinite period. Finally Pretoria has been fortified in such an able manner that an almost insignificant defensive force will be able to hold the place, whilst the main army can be devoted to other duty. Taking all the foregoing into due account, the conclusion has to be arrived at that if England means to come out victorious she will have to be represented in South Africa by an immensely increased numerical force, at any rate one quite beyond the proportions of anything as yet conceived by the public. Happily for her she can easily double or treble her power in South Africa without in any way reducing her power in India or in her colonies. I mean thereby the thousands of trained men in all parts of her Empire who are able and willing to proceed South. Judiciously mixed with your able Regulars they would be quite efficient for garrisoning the chief places in Cape Colony and Natal, for keeping touch between columns and bases, and for overcoming any treachery of the natives, white or black. Such judicious strengthing would have the result that the regularly trained and seasoned men could be dispensed from such duties and would be available for the offensive operations of your Regular Army. Such men are to my knowledge to be had in England and in your various colonies in thousands, and an appeal from your Queen to her people in all climates would convert thousands into hundreds of thousands, from which only the best material might be chosen.

And when one takes into account the tremendous balance which is at stake on this war for England, surely the increased expense of transport and such like is justifiable. The fitting out and payment of an additional 50,000 or 60,000 of such men ought not to be considered for a moment; certainly such expense will be vastly less than will result if England continues to push on the war with her present insufficient troops, all too good to be exhausted slowly by an immediate imprudent parsimony. As is well known, nearly all England's military mishaps during the present century have to be ascribed solely to her persistent under-estimation of her opponents' resources. Will your leaders repeat the fault in view of an enemy furnished with every modern advantage of war, or has she at last realised the advantages and responsibilities which attach to the government of 400,000,000 of British subjects—the latent power at her disposal with which to safeguard the latent possibilities of a nation of nations? Upon this decision hangs neither less nor more than the whole future and destiny of the British Empire. An untoward end of the present military operations in South Africa is the beginning of the dismemberment of the whole nation, a fact, it is hoped, clear to every Briton, as it is at least to every thinking European. An England which is impotent to reduce and hold South Africa is destined not only to become the scorn and victim of all other nations, but is safe to lose all her colonies and fall to the rank of a third class State. I remain, &c.,

Berlin, Nov. 14. A GERMAN OFFICER.

FEAR AND DEATH.

(An Arab Legend).

The Spirit of the Plague entered the gate.
One, watching, asked, "How many wilt thou slay?"
"A Thousand," spake the Spirit, "is my quest."

The Plague made end. The Spirit left the gate.
The Watcher cried, "Ten thousand didst thou slay."
"Nay, One," the spirit said; "Fear killed the rest."

—R. R. Bowker in the *Century*.

Hirai Kiichi, aged 30, a well-known Hote thief, was arrested on Wednesday night by the Isezakicho Police. While staying at a Hotel in Hongo, Tokyo, in December, he robbed visitors of goods to the value of some *yen* 200.

Digitized by Google Original from CORNELL UNIVERSITY

A MARTYR TO ITS OWN METHODS.

THE *San Francisco Chronicle* has an amusing article on the subject of "Japan and China." One of the charms of the essay is the bewildering nature of its statements. It declares that "if China should come under Japan and her people be impregnated with the spirit of Japan, the West would be menaced with something far more serious than a collision of its leading Powers. It would be confronted by an Oriental combination which, if intelligently directed, might strike a severe blow at Western civilization." So, then, the San Francisco Journal believes that the spirit of Japan is inimical to Western civilization. We have been accustomed to think differently. We have been accustomed to think that Japan had adopted Western civilization with a thoroughness which surprised the world. Certainly that is what she has been doing in a most wholehearted manner for the past thirty years, and the Powers of the Occident have publicly acknowledged the genuineness of her efforts by admitting her to their comity and placing their nationals under her jurisdiction. We have also been accustomed to think that China's proclivities lay in the other direction. We have been accustomed to think that China eschewed Western civilization with a persistent aversion which has aggravated the world. *Certainly* that is what she has been doing in the most unequivocal and obstinate manner for the past hundred and thirty years, and the Powers of the Occident publicly proclaim their appreciation of the fact by discussing whether they shall proceed to cut her into pieces and divide the portions among themselves, or whether they shall combine to force upon her the policy of abandoning her seclusion and admitting all to free and equal privileges. Yet we now learn from the *San Francisco Chronicle* that if China should become imbued with the spirit of Japan, a severe blow would be struck at Western civilization. That is bewildering. Reading on, we detect a strange confusion in the mind of the American editor; a confusion between the interests of individual Occidentals and the interests of Occidental civilization. He evidently thinks that if Japan succeeded in carrying on her foreign trade without the invention of the foreign middlemen who now reside in her territories, Occidental civilization would suffer. Well, so it would, in the sense that Japan would be deprived of a good many useful object lessons. But that is not what the writer in the *San Francisco Chronicle* really means. What he means is that Japan is at heart hostile to foreign civilization and that she would go back to her old ways were it possible to do so. There is no basis for discussing such a question. We leave the San Francisco newspaper in honorable possession of its wild suspicion, and pass on to note the quaintest part of its article. Here, as might have been expected, we find the trace of the subtle old Yokohama serpent which, by untiring ejection of venom, occasionally succeeds in poisoning somebody's mind. Quoting from that disseminator of delusions, the *San Francisco Chronicle* says:—

> In its issue of November 15th that journal prints a gloomy account of the "Heavy Taxation and Troubles Arising From the Revised Treaties," in which it says that so far as foreigners are concerned "Japan is becoming, if it has not already become, an excellent country to live out of, rather than to continue to endeavour to reside in it." This disposition is induced by "the weight of taxation which foreigners now find they are being called upon to bear," and which is undermining profits and individual incomes. A long list of vexatious imposts to which business men are subjected is furnished, and the writer concludes with the remark: *Thus by various overreaching ways Japan is, by its narrow-minded policy and the number of enactments which have been made, rendering this country Japan) as undesirable place for business purposes or for foreign residence.*"
>
> Clearly this policy is inspired by the "Japan for the Japanese" idea, which also finds expression in the absolute prohibition of mining, lands owning and farming to foreigners. *Since the revised treaties have gone into effect a persistent effort has been made to render the position of foreign traders untenable in Japan.*

We recommend special perusal of the italicised portions of this extract—italicised by ourselves. Do they not plainly suggest, and are they not intended to suggest, that since the Revised Treaties went into operation, the Japanese Authorities have adopted various measures having for their object the embarrassment and annoyance of foreigners? The Yokohama slanderer leaves himself a narrow bridge to escape from this charge of false representation. But it is a bridge which no ordinarily truthful person would think of crossing, for when Japan is charged with rendering the country undesirable for business purposes or foreign residence by various over-reaching ways and by the number of enactments which have been made, and when the article containing this charge is headed "heavy taxation and troubles arising from the revised treaties," no reader could doubt for an instant that the intention is to accuse this country of taking advantage of its newly acquired jurisdiction to drive foreigners out of the land. The San Francisco journal naturally interprets the article in that sense, for it says explicitly that "since the revised treaties have gone into effect a persistent effort has been made to render the position of foreign traders untenable in Japan;" and the Yokohama journal endorses that interpretation by reproducing with approval its American contemporary's comments. What, then, is the "persistent effort" that has been made "since the revised treaties went into effect?" What are the "number of enactments that have been made rendering this country an undesirable place for foreign residence?" What is the "heavy taxation arising from the revised treaties?" The whole thing is a myth. The "persistent effort" is a pure delusion. The numerous enactments are a figment of the imagination. Not a single tax has been imposed on foreigners to which the Japanese people also are not subjected, and to which the Japanese people were not subjected long before the new treaties went into operation. Are we asked to suppose that the Japanese Government, several years ago, devised and enforced a heavy system of taxation for their own nation of forty millions of people in order that, by and by, a couple of thousand foreigners might equally suffer from the impost? Was the EMPEROR'S gracious Edict one of the "persistent efforts made to render the position of foreign traders untenable in Japan"? Were the liberal and statesmanlike Instructions issued by the Prime Minister, the Home Minister, the Minister of War and the Minister of Education,—were these documents among the numerous "enactments which render Japan an undesirable place for foreign residence"? There is something which tends to make Japan an undesirable place for foreign residence and to render the position of foreign traders untenable, and that is the untiring flow of false accusations and venomous misrepresentations that emanate from the journal quoted by the *San Francisco Chronicle*, for let the Japanese be never so patient and discerning, they can not but learn to dislike people who tolerate and support the dissemination of such flagrant injustice.

THE PATRIOTIC FUND.

Subscribers to the Patriotic Fund in Yokohama will no doubt be interested to know how their money will be spent. From a statement in a recent issue of *The Times* it would appear that the fund will be applied to the best possible purpose. *The Times* states that the section of the Lord Mayor's Fund for which these subscriptions are collected will be administered by the Royal Commission of the Patriotic Fund, 53, Charing Cross, but will be held apart from the ordinary Patriotic Fund. The statement proceeds as follows:—

The Transvaal war section will be devoted exclusively to the relief of sufferers from the present war, and only such proportion will be invested as actuarial calculations may eventually show to be necessary to meet future claims. Provisionally, allowances are being made as follows:—Immediate relief to the amount of £5 for a widow and £1 for each child; then 3s. 6d. a week for the widow and 1s. 6d. a week for each child of a private soldier; 4s. a week for the widow and 1s. 6d. for each child of a corporal; 4s. 6d. a week for the widow and 2s. for each child of a sergeant; and 5s. a week for the widow and 2s. a week for each child of a colour-sergeant; such payments being made quarterly in advance. That no time is being lost, too, in the affording of relief is shown by the following illustration:—On October 25th, the fund heard from the War Office that one of the Gordon Highlanders who had been killed was a married man. By post the same night a money order for £5 was sent to the widow together with a form for her to fill up as a preliminary to a permanent allowance. On the form being returned it was found she had one child. Thereupon an additional £1 was despatched, and on November 9 she received payment of her pension up to the end of the year, when her regular quarterly allowance will begin. Such allowance is continued to a widow so long as she does not marry again, while in the case of boys it is paid up to the age of 14 and in that of girls to 16. Whether or not it will be possible to increase these allowances will depend on future developments.

CORRESPONDENCE.

THE BRITISH FORCES IN SOUTH AFRICA.

To the Editor of the "Japan Mail."

Sir,—I enclose (a) An estimate of the Troops that were in South Africa at the end of September last; (b) A tabular statement of the movements of Transports completed during September and October; and (c) A short diary of the salient events of the war up to the end of October.

The first is compiled from the Official Army List; the two latter from the Journal of the Royal United Service Institution.

Together they may perhaps serve as a convenient means of reference for such of your readers as are interested in the course of the war in South Africa, and, if they have the effect of supplying a want, I shall endeavour to add to them from time to time.

I remain, Yours faithfully,

A. G. CHURCHILL, Lt.-Colonel.

Tokyo, January 7th, 1900.

TROOPS IN SOUTH AFRICA AT THE END OF SEPTEMBER, 1899.

Cavalry.—5th Lancers.
18th Hussars.

Artillery.—13th, 67th and 69th batteries R.F.A.
10th Mountain battery.
14th and 23rd companies Western Division R.G.A.

Engineers.—7th and 23rd (field) companies.
8th (railway) company.
29th (fortress) company.

Infantry.—1st Manchester.
1st Royal Munster Fusiliers.
1st Liverpool.
1st Leicestershire.
1st Loyal North Lancashire.
2nd Berkshire.
1st Kings Royal Rifle Corps.
2nd Royal Dublin Fusiliers.

Army Service Corps. 5th, 22nd and 41st companies.

SHORT DIARY.

Sept. 8.—A Cabinet Council was held at which it was decided to demand from the Transvaal Government a definite reply to the British proposals, and to despatch 10,000 additional troops to South Africa.

Sept. 18.—A reply was received from the Transvaal Government rejecting the British proposals.

Sept. 21.—President Steyn of the Orange Free State counselled the Raad to take part with the Transvaal in the event of hostilities.

Sept. 22.—A Cabinet Council was held and a despatch forwarded to the Transvaal Government stating that the British Government would now formulate its own proposals for a settlement.

Sept. 28.—The Orange Free State resolved to support the Transvaal Government.

Sept. 29.—A Cabinet Council was held to decide on the situation in the Transvaal.

Oct. 7.—A proclamation was issued calling out the first class Army Reserve.

Oct. 9.—The Transvaal Government despatched an ultimatum to the British Government containing the following demand: (1) All points of difference shall be submitted to arbitration; (2) The British troops shall be instantly removed from the borders; (3) All re-inforcements landed in South Africa shall be withdrawn in a reasonable time; (4) Troops now on the high seas shall not be landed in any South African port.

Oct. 10.—The British Government declined to discuss the terms of the ultimatum.

Oct. 11.—The British Diplomatic Agent, Mr. Conyngham Greene, left Pretoria for Capetown.

Oct. 12.—Boer troops entered Natal in 3 columns, by way of Laings Nek, Botha Pass, and Wakkerstrooms Pass. An armoured train was derailed by the enemy at Mafeking, the wreckage shelled, and Lt. Nesbitt, with 15 men and 2 guns, captured. Lt. Nesbitt and 14 of the men were wounded.

Oct. 13.—Reconnaissance in force by Sir G. White from Ladysmith towards Acton Homes. The Boers declined battle. Newcastle was evacuated by the inhabitants.

Oct. 14.—Col. Baden Powell made a sortie from Mafeking. British casualties 17. Boer loss said to be heavy, some accounts] giving it as 300 killed. Wires south from Kimberley and Mafeking cut.

Oct. 15.—Newcastle occupied by the Boers. In an armoured train action at Spytfontein, the Boers were repulsed with a loss of 5 killed. No British casualties. Vryburg was betrayed to the Boers.

Oct. 18.—The Government announced the calling out of the Militia and Militia Reserve.

Oct. 19.—Boers captured a train at Elandslaagte with some Officers and men, and civilians.

Oct. 20.—Battle of Dundee. British loss 239 killed and wounded, including Genl. Symons mortally wounded. Boer loss 500 to 600 killed, wounded and prisoners. A squadron of the 18th Hussars was captured.

Oct. 21.—Battle of Elandslaagte. British loss about 250 killed and wounded. Boer loss 100 killed and wounded, 200 missing, 300 prisoners.

Oct. 23.—Major-Genl. Yule evacuated Glencoe and marched South to join Sir G. White at Ladysmith. Major-Genl. Sir W. P. Symons died at Dundee.

Oct. 24.—The Kimberley garrison engaged the enemy at Riverton Road Station; the Boer force was dislodged and Commandant Botha killed. British casualties 24.
Sir G White defeated the Boers at Rietfontein. British casualties 110 Boer casualties 280.

Oct. 26.—Major-Gen. Yule joined hands with Sir G White at Ladysmith.

Oct. 27.—Proclamation by H. M. The Queen calling out the Militia and Militia Reserve.

Oct. 30.—Sir G. White made a reconnaissance in force from Ladysmith.
The British casualties were 300, and a force, consisting of the 10th Mountain battery, and 10 companies of the 1st Royal Irish Fusiliers and 1st Gloucester Regiment, having been detached to a flank, was surprised and cut off, and, having previously lost its ammunition, was forced to surrender.
Boer loss about 600.

Oct. 31.—Boer attack on Mafeking repulsed with heavy loss.

THE KENT APPEAL.

(To the Editor of the "Japan Mail.")

Sir,—In view of certain press comments, it seems just that the public should be informed authoritatively, that the defence of Mr. Kent, though not undertaken gratuitously, has not, nor will, cost him or any foreigner anything whatever.

Yours faithfully,

LOWDER & AKIYAMA,
Counsel for the Defence.

Yokohama, January 8th, 1900.

THE "DAILY TELEGRAPH" SHILLING FUND.

To the Editor of the "Japan Mail."

Sir,—At a Committee Meeting held on the 3rd inst. of the St. George's and St. Andrew's Societies, combined for the purpose of raising funds for the relief of sufferers from the war, attention was called to a paragraph appearing in *Truth* of the 2nd November in which the writer criticises the administration of funds by the Patriotic Commission, by stating that amounts received on former occasions were captalized and not disbursed in full.

In view of the objection of some would-be Subscribers to the Mansion House Fund, which it is understood will be handed to the Patriotic Commission for distribution, it was decided to open a subscription list under the auspices of the above Societies in connection with the *Daily Telegraph* Shilling Fund.

Digitized by Google

Donations will be received by the Hongkong & Shanghai Bank; Chartered Bank, I. A. & China; and National Bank of China; or by H. A. Stewart, Hon. Secretary St. Andrew's Society; and H. J. Sharp, Hon, Secretary St. George's Society.

Yours faithfully,
W. F. MITCHELL,
President St. Andrew's Society.
W. W. TILL,
President St. George's Society.

Yokohama, 8th January, 1900.

WIDOWS AND ORPHANS FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—To elicit information as to the disposal of subscriptions to this fund, we telegraphed our London office as follows:—

"Subscribers to the Mansion House Fund are very anxious to know if the whole amount obtained will be divided amongst the Widows and Orphans."

and have this morning received the following reply:—

"In reply to your telegram—Yes. Will not be capitalized."

I am, Dear Sir,
Yours faithfully
J. C. BUDD, Agent,
Chartered Bank of India Australia and China.

Yokohama, 9th January, 1900.

THE "TAMBA MARU" CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since, by the publication of the able article on the peculiar features of this case in your issue of Dec. 31st, you appear to recognize it now as public property, may I be allowed the privilege of a little space in your columns to put before your readers some few further comments *which may* perhaps prove of interest?

Let me say at the outset that I cannot help agreeing with you in thinking that we, as foreigners, should dismiss from our minds any idea of *racial prejudice* having been a factor in the two extraordinary judgments lately delivered on the parties concerned. Surely, with the words of the recent Imperial Rescript yet sounding in their ears, words which we are asked to believe are held by Japanese as almost Divine utterances, we might reasonably expect that, if any discrimination were allowed to interfere with the pronouncement of the judgments, it would at the present time, in the minds of officials, at any rate, tend to be exercised rather in favour of the foreigner than against him?

You have commented, in scathing terms, on the apparent injustice done to the third officer in the rejection of evidence tendered in his favour, as being unworthy of credence, while on the other hand it would seem as if the Quartermaster's unsupported testimony had been to a great extent accepted as fact, notwithstanding that, in the matter of the biting, it would appear absolutely plain to any reasonable mind he was lying through thick and thin!

There is, however, yet another point I think worthy of attention, and it is this. Commenting on the medical evidence as to the incapacitation of the quartermaster for work for 20 days, you write: "The notion that a black eye should incapacitate a man for 20 days sounds extravagant to Englishmen. *But there again the medical testimony was clear and the judges had to be guided by it.* There are black eyes and black eyes. Such a question is for a physician alone to determine. Thus we may condemn the law, and we may query the doctor's diagnosis, *but the Court's decision does not seem open to objection on those scores.*" (The "italics" used above, as well as those found later on, are mine, and intended to emphasize the points I am trying to make.)

Now here, Sir, I have to join issue with you. Reference to the report of testimony adduced during the trial of the Quartermaster, as published in the *Japan Mail* of December 22nd, will show the following evidence given by a certain physician, Fujii Yukio, which I will give verbatim. "He deposed to having examined Mr. Kent on December 13th, and given him a certificate as to his wounds. These were probably caused by a bite, but, as some two weeks had elapsed, it was hardly possible to determine the point with precision. There were three other wounds, but these might have been caused by a *fleabite*, or *by a cockroach!* Witness saw Mr. Kent's trousers, but *they were not in any way torn, nor was there any hole such as a tooth might cause!* Witness got the impression of the accused's tooth, but *it was impossible to say that the wound had been caused by a bite.*"

Now, Sir, it would seem to be apparent that the judges had accepted the two medical testimonies, both as to the "black eye" and 20 days' skulk, and also the foregoing, as worthy of all credence. In the "reasons for the judgment" passed on the Quartermaster I find the following in the *Japan Herald* of Dec. 23rd, which I presume may be taken as a fair translation: "In the Chiho Saibansho Kent stated the accused bit him while the latter was standing, whereas in this Court he stated that he was bitten while sitting. Thus *there is a discrepancy of evidence on a most important point.* Also Kent's statement that the accused *continued his biting, in spite of his being struck in the eye!* Again this is hardly credible, for *the blow in the eye must have temporarily incapacitated him!*" (Oh! that these learned judges might have had the privilege of witnessing even one of our latter-day so-called "champion fights," with light gloves, and how much more so one of the good old days of fair fighting, with bare knuckles, right to a finish, as in Tom Sayers' days!) Later on, in the same statement, it is made plain that, although the judges felt bound to admit that Kent had been bitten, it was not absolutely clear whether the injuries were self-inflicted, or were inflicted by others.

Now comes the question, are Japanese judges so hedged in by the laws that they are not allowed to discriminate, or to exercise their own discretion, on medical evidence tendered, or is it that the average Japanese legal mind, which in such a case we may surely consider was fairly represented, is incapable of such ordinary common-sense discrimination? Here in the first case we have the medical evidence that a strong able-bodied man is absolutely incapacitated for work for 20 days or more through a blow in the eye! Did it occur to these sapient judges that, allowing him even the best of all good intentions, and belief in what he stated, the doctor may have been very much, in such a case, in the hands of his patient? Let the latter state daily that he experienced fearful pains at the back of his head, very bad singing in the ears, or such like, and that he could not possibly work, how is the doctor to prove this true, or absolutely false? Have such things never been known as a man "skulking" from work, as the outcome of some slight accident or small injury? I am glad to recognize that, in the robuster minds of most foreigners, there is more of a general tendency to make light of, than to magnify, slight injuries, and in most cases "skulking" for such a cause would be regarded with scorn, although be it said in all fairness many instances to the contrary have been recorded, and brought to light, in English courts before now. But can it be said of the Japanese that, in such cases, there is no general tendency to "skulk"? Does he not, in this respect, generally follow the lines of most Orientals—*When hit fall down and die, when sick, cave in,* and *think of his lot in the Cemetery*? I appeal to your own and your readers' experience on this point with confidence.

Now, turning to the medical evidence about the biting of Kent, the doctor made a point by saying he *could find no holes in the trousers Kent had worn.* Did these sapient judges expect that the quartermasters in the N.Y.K. service were specially fitted out with fangs which might adorn the jaws of a beast of prey? It is to be presumed that the trousers worn by Kent were of some ordinary woollen cloth, and it might have been interesting and instructive had it occurred to one of these wise judges to test in open Court, either on the person of the learned doctor, or on one of their own number, whether if, biting on to a similar garment, with a leg inside of it, they could manage to *bite holes in the cloth*, without making the other party "squeal," or begin to think he was being bitten!

But enough of this, Sir, except to say that within your recollection, as of mine, there must be scores of cases wherein medical testimony has been adduced for and against a certain point, all apparently in good faith, but of an absolutely contradictory nature.

Now, however, I would like to turn to a far wider and more extended view of the whole question, and one which I do not remember having been commented upon, in the public press any way, and it is this.

Are there not very good grounds for concluding that, in dealing with a question like this, or in fact any question, be it a moral, social, political, legal, business one, or what not, the average European (especially, perhaps, the Anglo-Saxon) and the Japanese *approach it from altogether different standpoints?* Must we not, in commenting on what appears to us utterly illogical reasoning on any certain facts or questions at issue, take into consideration the possibility, nay I would say the probability, *that the Japanese mind is affected by entirely different planes of thought to our own*, and that to expect from them any similar conclusions from what they may consider perfectly logical reasoning, would be futile?

Is the "Gilbertian" idea of "topsey-turvey-dom" in Japan altogether farcical, or is it unreasonable to think that perhaps, just as the Japanese carpenter, in using a plane or saw, exerts his greatest force in the pull towards him, and the Japanese writer works from right to left, while our custom is exactly the reverse in both cases, so it may be that the Japanese thinker, in considering any question on its merits, starts from a different basis, travels by a different route, and naturally arrives at a very different conclusion from what we should expect?

My own experience here, extending as you know over a good many years, has led me to this conclusion, that their methods of thought *are entirely different from our own*, and, although I must confess often strongly against the grain, I have many times been led to acknowledge this practically, by making allowances in their favour on questions which to my own mind admitted of but one reasonable conclusion, and *that certainly not theirs!* Just to give your readers one or two most familiar examples of what I mean. A servant in your employ, who has nothing against you or his place, everything apparently being comfortable for him, as on the other hand his work is satisfactory to you, finds out that he can get, it may be, a little better wages or a slightly easier billet elsewhere. Now, although he knows himself that his leaving you at short notice may put you to inconvenience, does it occur to him as a general rule to come to you to explain the position, giving you at any rate the option, as one who has the prior claim to his services, of bettering his position by, say, either higher pay or easier work? No! you will hear that "His aged grandmother has fallen very sick, and his constant attendance seems to be necessary," or it may be; "His father is very ill in Tokyo, and he has been telegraphed for to go up there at once"; or some such urgent excuse, which it may be noted generally comes about the end of the month or towards "pay day," and so he leaves you with very kind expressions of regret and thanks for all your kindness, while you on your part express great sorrow at the bad news received, sorry to part company, etc., etc.

In a few days you hear that he is employed in the same capacity at a near neighbour's, and soon after you meet him in the street, and he greets you with a pleasant bow and smile, which seems to convey the impression

Digitized by Google
Original from CORNELL UNIVERSITY

that he is pleased to see you looking so well, and bearing up under the blow which the termination of his faithful services must have inflicted!

Here again is another common case: In your employ as head servant is a man who has been with you for many years, has had gradually a very great deal of the entire household control and management left entirely to his care, and has proved himself, as far as you can judge, a thoroughly tried and trustworthy servant, and you would think and expect devoted to your interests. For a few months you have employed as an extra hand, probably even got in through the old servant first named, a man whom you gradually come to suspect of petty acts of dishonesty, and eventually decide to dismiss. During the time you may probably have discussed over and over again the things you have suspected with your head servant, but could never obtain any satisfactory proof, although perhaps he would concur in the desirability of dismissal, but when once the obnoxious one is "fired out," and fairly off the premises, you find evidence crowding in upon you that your trusted servant knew all the time of the truth of what you suspected, and also of many more peculations which had never come to your notice at all, and he will explain that, although manifestly very sorry you had been victimised, he *could* not bring it all to your notice before, while the other one was still in the same employ! To put a somewhat bigger, but, I think, relatively parallel case. What would be said of an Accountant of, say one of the foreign Banks here, who, knowing that one of the staff under him had been systematically embezzling from the Bank for months past, yet failed to report it to his Manager, or to make it known in any way until one particular act was discovered, and the culprit dismissed?

The foregoing are, I am convinced, "common or garden" experiences to many householders here, and will read like truisms. You, Sir, may say, as I think I have seen virtually in your writings before, "Oh! Yes! but you are dealing in Yokohama with a low class of Japanese,—the sort who, like parasites, attach themselves to foreign settlements." Well, that may be so, although I have yet to learn that, in their dealings of a similar nature with Japanese employers, servants act and behave differently. Any way, if it be so, all I can say is, so much is the case the worse for the Japanese, for whereas I would make some allowances for them for what I believe to be different modes of thought and reasoning, you would in that case pluck away even that shred of decency, and leave them bare indeed, convicted of the most barefaced deceit and low cunning!

Now for just one more instance of a business nature, not probably so familiar as the foregoing to the majority of your readers, but still I think very noteworthy, and I can assure you, from my own personal experience, absolutely true. We will say that negotiations have been instituted by telegram for the importation of certain goods from the home side at the instance of a Japanese dealer, which have at last resulted in the settlement of price, etc., leaving me a small working commission, but at which he only consents to take half the quantity offered, advising me to take for myself the other half, or I may feel fairly confident about the risk and say—"Oh! very well, if you only care to take half I will chance the other half myself, and see what comes of it." Soon the market for these goods goes up considerably both at home and here also, and the little lot which I have taken at my own risk I determine to put by as a "plum," waiting further developments, my friend the dealer having meanwhile resold his at a fair profit, but this, whether or no, does not affect the sequel. Eventually the goods arrive here, my lot, still unsold and on my hands, being amongst them, the market meantime having still further risen, and on the current market value showing me a very handsome profit: What the profit means the dealer who first negotiated for the other half knows within a few cents practically, and probably others in the same "guild" know too. Now, will he be content himself, or allow others if he can help it, to let me make that fair profit on goods entirely at my own risk, which the improved market value enables me to expect? No, Sir! unless he can get *a bite out of my plum* by endeavouring to make me let him have them at something decidedly under proper value, he will not only decline to buy himself, *but* he will do his level best to keep others from buying, and will even go so far as to buy from my neighbours goods of a similar character, at even a higher price than he will offer me, knowing that they are at the time getting only a working commission on theirs, whilst I should be making a good substantial profit! I might instance, did space permit, many more examples of a like nature in support of my theory of differences of standpoint, thought, reasoning, and resulting conclusions, and in support also of what I believe myself to be the logical deduction therefrom, which is that, certainly not for a very long time, if indeed ever, are we likely to see that community of thought and interests which some of the "rose-spectacled" fraternity seem to think may be reasonably looked for as the outcome of Treaty Revision, Mixed Residence, etc., between the natives and European sojourners here! As to what may be adduced as reasons for this, to my mind, strong line of demarcation, is, I feel, a much wider matter again, and one to which far more space might be devoted than I can ask for now, even if competent to approach it. Just one point, however, may be perhaps permitted to me to notice. In the case of the foreigner there may be apparent perhaps the influence of heredity, of inborn respect for a gradual common-sense observance of law and order, founded in the main on the justest system of equity, and with as a base the grand old Golden Rule, "*Do unto others as you would that they should do unto you.*" It is a great satisfaction, any way, to remember, as we all must do, that in the earliest years of a boy's training at school, there is sure to be instilled into him, if he has it not already, the conviction that to do or say certain things, proscribed by a recognized although unwritten law, would be "caddish," "mean," "snobbish," or the like!

Has the Japanese youth any such guide and influence? Have they such feelings amongst themselves in their early years, apart entirely from what teachers may inculcate? If not in themselves, are their teachers now, or likely to be for generations to come, of a kind who could be expected to thoroughly inculcate such principles?

Now, Sir, allow me just a few closing lines to "come down out of the clouds," and suggest a few practical lessons, for us foreigners, especially, to be drawn from these recent *Tamba Maru* cases. It has certainly been a maxim previously for Europeans here, Anglo-Saxons more especially, *Don't begin hitting if you can help it, but if you do, hit hard!*" Now this would seem to have to be altered, and some mature consideration be given, if absolutely forced to hitting, whether you shall hit hard enough for the effects to last for 5, 10, or 15 days, or go the "whole hog" for the 20 days limit.

Then, again, on the other side of the question, if unfortunately mixed up in a fray, and hit yourself, it would seem most imperative that, if you desire to see your assailant laid by the heels properly, and given the benefit of a little time wherein to work for his country and abstain from acts of violence towards the community, *you must be quite incapacitated for at least 20 days!* Let all of pugilistic tendencies take these hints to heart, but meanwhile perhaps there may be many of a more pacific nature who would sooner avoid all rows if possible, and, like your correspondent, prefer, even it may be at some cost in self-respect, to purchase

"PEACE AT SUCH A PRICE."

Yokohama, 2nd January, 1900.

STATE PURCHASE OF RAILWAYS.

The Editor of the *Kokumin* asked me to contribute a few lines on the subject of State Purchase of Railways in Japan, but, finding that what I wrote was too long for publication in this number, he requested me to give here a short sketch of the original article:—

Many reasons are brought forward in favour of State administration of the railways of Japan.

1. It is said to be necessary as part of one consistent scheme of national *defence*.

[Now, though this necessity may be admitted in the case of an inland state like Germany, hedged round by foes, it is not so obvious in the case of an *island* like Japan. In France the lines (with one exception) belong to private companies, while in Italy and Holland the State lines are leased to private companies to work them. The England of the West, facing a chorus of enemies, has a crowded complexity of private lines alone.]

2. It is feared that *foreigners* might come into possession of the railways unless the State secures them.

[Might not this caution apply to many other important things besides Railways?]

3 *Business men* support State purchase, in the hope of obtaining thereby lower rates or greater facilities.

[The lowest rates in the world are those charged by the private companies of the United States; in Prussia, the most successful instance of State management, rates are low, but speed and other items of service are so inferior that they would not be tolerated by the business-men of England or America; yet Prussia should be an ideal country for good service, being so centrally situated and so densely populated. Apart from wounded pride, it would be a good thing for the business-men of Japan if their railways were owned and managed by foreigners.]

4. State ownership would be good *fiscal* policy: the Government would draw a large amount of revenue from them (in the case of Prussia 6,000,000 yen a year), and might also count on this revenue showing an increase year by year, owing to the future growth of trade and population.

(But does not this argument cut across the hopes of the business-men as to lower rates, etc.? And is not railway transport such a necessary of life that Government should aim at making it as cheap as possible rather than at managing it so as to extract revenue. Develope industry; then revenue will come of itself. Again, the revenue from railways would be uncertain: periods of depressed trade, crises, or war, might overthrow the estimates of the Finance Minister. Lastly, some future invention might appear which would supersede the present methods of railway transport; then the State property would be much depreciated, the revenue might disappear, and national credit might be injured.]

5. It is said that large combinations of industries under one management are beneficial to the ordinary public, as shown by the experience of *Trusts* in United States and Germany.

[There is difference of opinion on this matter in the U.S., but, supposing the conclusion were admitted, it must be remembered that a Trust is not quite the same as a State monopoly: if the Trust abuses its opportunities, the nation arises, with the State to enforce its protest; but there is no such safeguard when the State goes wrong. And to manage a large Trust successfully requires the very highest business ability: can the Japanese Government command such ability among its own people? The *Prussian* higher officials are men of exceptional ability.]

6. There is the temporary reason, that State purchase would remedy the present *scarcity of capital*; in exchange for their shares the individuals would receive foreign capital or Government bonds, and thus they would be able to develope much new business.

[Would this new business prove a better investment for the individuals than the various railways which they now control? A sudden

Digitized by Google Original from CORNELL UNIVERSITY

flush of capital in their hands would probably excite reckless speculation and a crop of foolish enterprises. Scarcity of capital is best remedied by a national habit of *saving*, which avoids the additional taxation inseparable from State Purchase.]

7. It is urged (by Lieut. C. I. Osawa) that the competition of private railways *favours large towns* at which competitive lines meet, but that small and intermediate towns are unjustly treated, receiving poor service and paying higher mileage-rates. Thus they intensify inequalities already existing; they give to those who already have, and neglect those who have not. (But Government does the same when it grants money-aid to successful students, and leaves the weaker ones without assistance.)

[This complaint is often heard in England; yet small English towns receive better treatment than similar towns in Prussia, though, since large English towns are *so much better* served than large towns in Prussia, the *relative* injustice seems greatest in the land of private railways. But the consideration of Col. Osawa's argument belongs to the discussion of the next one.]

8. Even if State management does not provide lower rates or better facilities than private companies yet is *more just*. *Transportation is a necessity* of industrial life, and should therefore be administered with absolute justice, with no favouritism of one district, town, or individual, in preference to another. Such strict impartiality can only be secured by State ownership.

[This argument deserves patient hearing because if it is impossible under a régime of competitive companies to manage without causing serious injustice, then the State should undertake the task.

But there are difficulties. *Towns on the sea-coast* have the advantage of very cheap competitive service by ship, and therefore they enjoy *specially* low railway rates: would the *State also* purchase the *shipping* in order to neutralize this natural advantage? or, leaving things as they are in the maritime industry, would it offer to inland towns the same low mileage-rate which private companies now give to sea-coast towns. If the latter, what becomes of a large annual revenue which is promised with State management? If the former alternative is chosen we are starting on a great journey.

Again, *Rice* and other grain are necessaries of life: shall the State therefore manage their production and distribution? The coal and iron and other industries, should they come under the same protecting arms?

From the high stand-point of Justice we see vast horizons open, too vast for the practical contemplation of any Government. All capitalistic production is accompanied by injustice. Sincere men who base their advocacy of State railways on *Justice* must extend their argument to the advocacy of general *State Socialism*.

"And why not?" it may be asked.

The people of Japan must answer for themselves, having the experience of the world to guide them. The future of Japan depends on their answer: do they wish to take a great step towards the establishment of bureaucracy, with its rigid *uniformity*, or will they encourage the growth of that mental *variety* which is the product of healthy freedom. The world has risen to civilisation through the fact of *variation*, and those nations have risen most whose institutions and political instincts allowed most opportunity for variation. State administration is essentially *against* variation. Japan has only recently been delivered from an almost fatal imprisonment, during which she remained beautifully stagnant, with scarcely any variation, for 250 years. Does she wish now to construct another subtle web of bondage?

The two strongest nations are those in which individuals have always done most, and Government least. We sometimes hear that Japan aims at becoming "the England of the East." Is that likely to happen if she adopts a general policy antagonistic to that which developed the prosperity she admires?

"But," it may be replied, "the Japanese are not Anglo-Saxons, and a policy which developed prosperity among the latter race may not be good for the former. At any rate, in the present critical stage of Japanese history, it will be a prudent measure for the State to assume management of the *railways*. That step need not be followed by others in the direction of general State Socialism; it will be simply the establishment of one particular State Trust justified by the special circumstances of the case. Why this animus against State administration?"

An Anglo Saxon would answer, "Out of concern for the *future vitality* and *higher development* of your nation. A minutely-managed bee-hive is an admirable spectacle, but a community of discontended competing humanity is on the whole a more promising sight.']

* * * * *

Thus it is not State Purchase in itself which is so important, but the fact that such a measure indicates the *tendency* of the national disposition to drift into complete State administration.

At present there is no political necessity for State railways, and the scheme of purchase might, by increasing the amount of Government obligations, impair the national credit, and so render it less easy to raise the next foreign loan. Just now the management of railways offers a useful training-school for Japanese individuals; they manage railways better than export or import trade. The State should insist on proper maintenance of permanent way and rolling stock, and should veto any action of private companies which is unpatriotic or seriously unjust. Meanwhile the two systems, State and private railways, improve each other by rivalry. Let the State management prove by greater success than it has yet attained that it can make Railways a source of national strength: then at a later date it could absorb the other lines without any loss of credit.

E. Foxwell *in the Kokumin.*

DROWNING FATALITY IN YOKOHAMA HARBOUR.

A Board of Trade enquiry was held at the British Consulate on Friday by Mr. E. Hobart Hampden, Vice-Consul, into the disappearance and supposed death of Andrew Nicholson, quartermaster of the British steamer *Cowrie*.

Mr. D. J. Davis, master of the *Cowrie*, read the following entry from the log:—"January 3rd, 1900. About 9 p.m. reported by police that quartermaster Nicholson fell out of sampan in which he was proceeding to the ship and was drowned. He was coming on board from shore leave."

Mr. Davis said he last saw Nicholson on the morning of the 3rd and gave him 24 hours' leave. Nicholson had not been on board since. Witness had every reason to believe that Nicholson was the man reported drowned by the police.

Emanuel M. Antonio, a quartermaster on the *Cowrie*, stated that he came ashore with Nicholson on Wednesday morning. Witness last saw him at about 4.15 p.m. the same day. Nicholson went into a hotel close to the Consulate. Witness asked him to come aboard, but he did not seem to take any notice. He was not very drunk and could walk well enough. He came as far as the police box at the foot of the pier and then went back to the hotel, saying he did not want to go aboard with witness.

The enquiry was adjourned.

Shanghai papers given some details of the murder of Mr. S. M. Brooke, an Anglican Missionary, belonging to the S. P. G., who was seized by the "Boxers," a turbulent set of natives now giving a good deal of trouble around Taianfu, which lies south of Tientsin. He was seized and had a rope put round his neck and dragged through the streets. The matter was at once reported to the Governor who took the matter in hand. Foreigners are warned that it is dangerous for them to travel in Shantung.

BUSINESS NOTES.

The *Shogyo* is extremely pleased at the steady development of the silk trade of Japan, and gives the following comparative figures for the past two years:—

	32nd year of *Meiji*. Bales.	31st year. Bales.
Carried over	1,076	7,351
Arrivals	96,820	80,403
Sales	53,088	45,703
Direct export	21,549	11,519
Reshipped	10,131	6,347
Stocks	13,127	24,184

Thus an increase of over 20 per cent. is noticeable in arrivals for the last year. The increase of 16 per cent. in sales and 90 per cent. in direct export is remarkable.

According to the *Mainichi*, funds to be collected and distributed during the month of January are as follows:—

	Yen.
National taxes—	
Dry and wet fields and rural house lots	8,322,725
Urban house lots	810,725
Mixed *saké*	76,284
Alcohol business tax	36,401
Patent medicine business tax	53,002
Total	9,299,134
Calls on shares of various companies	476,250
do do railway companies	776,000
Debentures	85,500
Total	1,357,300
Dividends of banks and companies—	
Banks	9,244,700
Companies	3,231,496
Railway companies	1,128,798
Interest on Industrial debentures	130,500
Interest on coal mining and railway company's debentures	30,000
Redemption of Industrial Bank's debentures	81,240
Total	13,846,734

According to the *Nichi Nichi* the aggregate total of imports and exports from January to December 25th this year reached 423,000,000 *yen*, the excess in imports being over 5 millions. Compared with the previous year the figures stand as follows:—

	Up to Dec. 25, 1899. Yen.	1898. Yen.
Exports	209,303,480	116,454,625
Imports	214,343,125	268,856,906
Total	423,657,605	430,311,531
Excess in imports	5,050,645	107,402,932
Export of specie	10,440,202	86,603,932
Import of the same	20,015,864	42,487,095
Excess of export	—	44,116,837
Excess of import	9,575,662	—

FIRE ON THE BUND.

Fire broke out some time after 11 o'clock on Friday night in the compound of No. 13 Bund, occupied by Messrs. Oppenheimer Frères. The building containing the servants' quarters was the scene of the outbreak, and this was completely destroyed, but though the sparks and flames emitted were sufficient for a much more serious conflagration the actual amount of damage was not heavy—some 2,000 *yen* in all, which is covered by insurance in the Union Fire Insurance Company (Mr. P. Sarda Agent). The results, however, might easily have been much more serious, for just adjoining the blazing building were the offices of the Canadian Pacific Railway Company and also of Messrs. Oppenheimer. Fortunately the wind was favourable, a good water supply could be obtained, and the Brigade men worked with such good will and smartness that all danger of the fire spreading was soon averted. The upper floor of the C. P. R. building, occupied by Mr. Masujima and the Chamber of Commerce, was slightly scorched on the outside, a plate glass window was broken, and some slight

Digitized by Google Original from CORNELL UNIVERSITY

damage was done by water. The fire is attributed to the carelessness of a servant.

Superintendent Morgin sends the following statement:—

At 11 o'clock on Friday night I received an alarm from one of our night patrol men of a fire at No. 13 Bund. I immediately turned out with our Brigade men, 2 hose reels with stand pipes, and a steamer. On my arrival I found a single storey servants' quarters belonging, as I understood, to Messrs. Oppenheimer Freres was enveloped in flames. We immediately began to play with water from the hydrants, and with the assistance of the Police Brigade we managed to put the fire out without using the steamer. I am glad to say that only the servants' quarters in which the fire originated were destroyed. At No. 14, the next door, a wooden Venetian shutter facing No. 13 caught fire and it looked rather dangerous at one time, but as soon as I had a hose through it was put out with comparatively little damage. The cause of the fire so far is unknown.

NEWS OF THE WEEK.

At the battle of Graspan, Major Plumbe, of the Marine Infantry, was shot while leading his command up the steepest kopje. As he staggered to fall never to rise again he exclaimed, "Forward, men, never mind me."

Those who think that it is wrong for a bishop to make a joke will not be pleased with the Bishop of Winchester. At a recent ecclesiastical luncheon party one of the clergymen present unctuously observed, "Now to put a bridle on our appetites!" to which Dr. Davidson at once retorted, "Now to put a bit between my teeth!"

A robber named Tanaka Shoichi broke into the house of Irisawa, a silk merchant in Fukushima Ken, on the 2nd inst., and stole 21 pieces of habutai silk—valued at *yen* 480. He sold the same to a man for *yen* 180, this purchaser thinking to make a great profit by bringing the silk to Yokohama. Before he could dispose of the goods, however, the police were informed of the theft, and he was arrested on Wednesday morning by the Isezakicho Police.

The Dean and Chapter of Canterbury have just received from a lady whose name is not made public a costly gift, consisting of an exact copy of the robes worn by Thomas à Becket, now deposited in the Cathedral at Sens. They are of scarlet and interwoven with gold and silver, and decorated with pearls and other precious stones. They comprise cope, chasuble, stole, &c., and make a very magnificent and interesting collection.

Washington dispatches state that it is positively decided to appoint Mr. Meiklejohn, assistant secretary of the War Department, as Governor-General of the Philippines when the war is over. General Otis has had such an arduous time that he will undoubtedly be glad to get away as soon as he can be relieved, though he will not say a word about wanting to go as long as he is needed. His time for retirement from the army is not far off.—*Manila Times.*

Colonel P. F. Robertson, late of the Gordon Highlanders, tells an interesting story of the Boer Commandant Joubert and of General Hector MacDonald's sword, which was one of the Boer trophies of the day at Majuba:—"I told Joubert of the promotion of Hector MacDonald from the ranks and of the claymore that the officers of his regiment had presented him with. The General was much interested, and said, 'That brave officer must have his sword back again. I will search the Transvaal for it, and offer £5 reward for it.' General Joubert recovered Lieutenant Hector MacDonald's sword from a Boer farmer, who, when he heard the particulars, declined to accept the offered reward, and General Joubert handed his sword back to Lieutenant MacDonald at Newcastle."

Kobe papers state that Mr. Bardens has, by advice of his counsel, again appealed against the judgment ordering him to pay a fine of thirty *yen* in the matter of the accidental striking of a child with a whip. This case first came before the Kobe Ku Saibansho, which dismissed the charge; it was carried by the Procurator's appeal to the Chiho Saibansho, when the defendant was convicted and fined 30 *yen*; the defendant then appealed to the Koso In at Osaka, where the judgment of the Kobe Chiho Saibansho was quashed on a point of law; and the case was then re-tried by the Osaka Chiho Saibansho, which confirmed the judgment of the Kobe Chiho Saibansho and again ordered the defendant to pay a fine of 30 *yen*. It is against this last judgment that appeal is now being made.

The *Echo de Chine* prints the following interesting letter from M. Bonin, the explorer, dated the 20th of September last at Kanchou, a city in the far north of Kansu, just within the Great Wall:—"I am peacefully continuing my travels in this province, which is admirably calm; only the Mahomedans are taking advantage of the departure of the troops for Peking to make a little trouble. They have only succeeded so far in killing the magistrate of Haichêng; but everything would be spoilt if, as is reported, the present Viceroy were replaced. Tao-huang (? Tao Mu) is a man of wide mind, active, who understands European methods, beloved of the people for his justice, and hated by the *literati* for his intelligence. His replacement, doubtless by a Manchu, would be a misfortune for Kansu. I have come back from the banks of the Kokonor after an excellent but difficult journey across the eternal snows of the Nanshan mountains, which bound Tibet on this side. I am now about to visit the Lobnor across Gobi on camel back; thence I shall reach Russian Turkestan, where I expect to find myself at the end of the year, if all goes well."

CHINA NOTES.

Shanghai experienced wet weather on Christmas Day, a phenomenon unknown since 1883.

It is stated that a Belgian syndicate has recently petitioned the Bureau of Mines and Railways at Peking for permission to construct a railway from T'ungchou, near Peking, to Kalgan, the object being to facilitate the transport of brick tea to Siberia.

A fire of unknown origin broke out at four a.m. on Jan. 2nd in a cook house on the upper storey of Nos. A 103 and 104 Broadway, between the Woochang and Astor Roads, Shanghai. The premises were used as a tavern and went by the name of "The Naval Club." The upper storey was badly burnt and the adjacent houses Nos. A 102 and 105 were considerably damaged by water. The buildings were insured in the Royal for Tls. 500. The contents of the tavern were insured for Tls. 3,000 in the China Fire Insurance Co. and No. A 105, a compradore's store, for Tls. 7,000. The latter, however, sustained minor damage. The cold was so intense that the water froze as it fell.

News has been received of the death in England of an old and most popular resident of Shanghai, Mr. Edward W. Batt, who was about 65 years of age. He came out to Shanghai at the end of the fifties or beginning of the sixties as silk inspector to Messrs. Jardine, Matheson, and Co., and in 1870 became a partner in George Barnet and Co., afterwards Dyce and Co., going home some 20 years ago to join the London firm of Elias and Co. He was a very prominent member of Shanghai society in the sixties and seventies. He largely helped to lay out the present cricket ground, was for many years one of the pillars of the Rowing Club, and was a most valuable member of the old Philharmonic Society and the Amateur Dramatic Club. His wife, to whom he was deeply attached, deed before him. They had no children.

The *China Mail*, in its account of the recent great fire at West Point, Hongkong, says:—It is roughly estimated that damage to over one million dollars has been done. The different insurance offices are not yet able to ascertain the extent of their losses, as the stock was of the nature classed as "floating." As far as we can learn, however, the following companies hold lines on the contents:—Commercial $55,000; North German $10,000; Transatlantic $10,000; Sun Insurance $10,000; South British $43,000; Union Assurance Society; $10,000; Tung On, $110,000; Messrs. Butterfield & Swire's agencies, $80,000; China Fire, $30,000 (on block and contents); Hongkong Fire, $10,000; North British $10,000; Messrs. Reuter, Brockleman's agencies, $9,000; Messrs. Carlowitz & Co.'s agencies, $4,000; Chun On $30,000; Yee On, $20,000.

Following upon the footsteps of their co-nationals in the United States, the Straits Settlements and Java, the Chinese in Siam have, it appears, lately also sent a petition by wire to the Tsungli Yamên praying the Empress Dowager to restore the reins of government to his Majesty Kuang Hsü "as this is the dearest wish of all loyal Chinese not only throughout the Chinese Empire but also of those trading in the myriad Kingdoms of the earth." The petition was signed by a special Committee of four of the richest Chinese merchants of Siam "on behalf of over 32,000 of his Majesty's most faithful subjects." That the telegram will be suppressed by the Tsungli Yamên goes without saying, remarks the *N.-C. Daily News*, for when they presented the petition of the merchants of San Francisco, Singapore and Java, they proved such bitter pills for the Empress Dowager that her Ministers trembled lest her wrath would fall upon some one near her.

Say the *N.-C. Daily News*—The local mandarins received on the 24th December a telegram from Ningpo announcing the sudden death, on the afternoon of the day before, from apoplexy, of H. E. Baron Li Kuang-chin, Provincial Judge and Generalissimo of the Chêkiang Army of Defence, at *headquarters* camp, near Chinhai. The unexpected death of Baron Li will be a great loss to the Chinese Government, as he possessed the confidence of his troops, had seen active service both in Tonkin and Manchuria against the French and Japanese, and was considered one of the best General officers at the disposal of the Imperial Government. The deceased official was a native of Hunan, and will be remembered as Taotai of Shanghai for a short time last year when he came as successor to Tsai Taotai, although already destined for a much higher post, which he accepted within three months, after being installed in the Taotai's *yamên* in the native city.

The following Peking telegram, says a Shanghai contemporary, was received on Dec. 28, by a high Chinese official:—It having come to the knowledge of the Empress Dowager that a deep-seated dissatisfaction exists among high civil and military officials and the masses throughout the country who claim to be of Chinese descent, with regard to her recent policy of transferring all civil and military power to men of Manchu descent, Her Majesty has been constrained to send for H.E. Viceroy Liu K'un-yi of Nanking, as the most widely-known and best respected official of Chinese descent in the Empire, one who also has had the largest experience of active military service; [H.E. Liu received his first baptism of fire during the Taiping rebellion] to come up to Peking with all haste in order that she may learn from his own lips how matters actually stand, and whether this dissatisfaction is true or not. Should it actually exist within the knowledge of Viceroy Liu, the chances may be that H. E. will be retained in the North at present as Coadjutor to Jung Lu, the Generalissimo of the Grand Army of the North. This move, it is presumed, will remove the idea of the Chinese throughout the empire that the Empress Dowager specially favours Manchus to the detriment of Chinese, for, as she never fails to say, 'Manchus and Chinese—all alike are my subjects and all equally beloved and trusted by me."

H.B.M.'S COURT FOR JAPAN.

TUESDAY, January 9th.

Before His Honour Judge WILKINSON.

A KOBE WILL CASE.

RE THE WILL OF JAMES JOSEPH ENSLIE, LATE OF HIOGO.

(Trustee's petition.)

This was a petition by Harold Catmur Brushfield, of Kobe, trustee of the will of the late James Joseph Enslie, formerly of H.B.M. Consulate at Kobe, for direction as to the disposal of the trust under the will. The respondents were Kozawa Tori, of Tokyo, and Elizabeth Harriet Enslie and Lydia Mariani Enslie, of The Hague, Holland.

Mr. Litchfield appeared for the trustee, and Mr. Walford for the respondent Kozawa Tori.

Mr. Litchfield read the Trustee's petition, which was as follows:—

In H.B.M. Court for Japan, Kanagawa, the 13th day of July, 1899.

In the matter of the goods of James Joseph Enslie, late of Hiogo, deceased, and in the matter of the trust of the will of the said James Joseph Enslie, and in the matter of the Trustee Act, 1893.

The petition of Harold Catmur Brushfield, of Kobe, Japan, shows as follows:—

1. James Joseph Enslie (hereinafter referred to as the testator), formerly of Her Britannic Majesty's Consulate at Kobe, Japan, died on the 14th day of June, 1896, having first made his will, dated the 25th of May, 1896, by which he appointed William Devine, of Nagasaki, Ernest Alfred Griffiths, of Her Britannic Majesty's Consular Service for Japan, and Harold Catmur Brushfield, of No. 16, Concession, Kobe, to be the trustees and executors of the said will.

2. The said will was proved and registered in Her Britannic Majesty's Court for Hiogo and Osaka, Japan, on the first of July, 1896, and administration of the personal estate of the testator was granted Harold Catmur Brushfield aforesaid, one of the said trustees and executors, power being reserved of making the like grant to William Henry Divine and to Ernest Alfred Griffiths, the other executors.

3. The testator by his said will, after the bequest of certain legacies (which have been paid), bequeathed the residue of his estate and effects to his trustees upon trust for conversion thereof and directed the payment thereout of a sum not exceeding three thousand dollars to one Kozawa Tori (which sum has been paid to her) and further directed as follows, that is to say: "The principal sum of six thousand dollars together with interest at the rate of five per cent per annum due by me to the said Kozawa Tori and confirmed by my note of hand dated the 11th day of January, 1892, shall be paid to the said Kozawa Tori as a debt due by my estate, and I request that my trustee will conform to my wishes expressed in the said note of hand."

4. By the said note of hand (a copy of which is appended) the testator stated his intention, and the wish of the said Kozawa Tori "that unless paid sooner, the principal sum with accruing interest having been paid as a debt due by my estate, these monies shall be dealt with by my trustees in manner similar as monies under the Trust in my will."

5. After the foregoing directions the testator directed the trustees to invest the residue of the said monies or any other monies forming part of the trust estate under the said will and to pay out of the income therefrom 1,500 dollars a year to the said Kozawa Tori during her life. And the testator further directed that during the continuance of the trust his trustees should each retain from and out of the income of the trust estate or otherwise the said trust estate and funds the sum of 250 dollars annually as some compensation for their trouble.

6. The testator further directed that after the death of the said Kozawa Tori his trustees should pay the whole of the corpus of the trust estate to his sisters Elizabeth Harriet Enslie and Lydia Marian Enslie of Beerkade, The Hague, in the Kingdom of Holland.

7. The income arising from the residence of the estate of the said testator is insufficient to pay the annual sum of 1,500 dollars to Kozawa Tori and the annual sum of 250 dollars to each of the trustees.

Your petitioner therefore prays that this Honourable Court may direct:—

1. In what manner the sum of six thousand dollars is to be paid to the said Kozawa Tori.

2. What amount of interest, if any, is to be added to the said principal sum of six thousand dollars.

3. Whether the gift of the said sum of six thousand dollars and interest is an absolute gift or otherwise.

4. In what order and out of what fund the annual sums of 1,500 dollars to the said Kozawa Tori and the sums of 250 dollars each to said trustees are to be paid.

5. In what manner the costs of this petition shall be paid.

The respondents to this petition are Kozawa Tori, of Tokyo, Japan, Elizabeth Harriet Enslie, and Lydia Maran Enslie, of Beerkade, The Hague, Holland.

NOTE OF HAND REFERRED TO IN THE FOREGOING PETITION.

Out of love and affection I, on the first day of January, one thousand eight hundred and eighty four, gave Kozawa Tori, my housekeeper, for her sole use and benefit the sum of six thousand Mexican dollars, but at her earnest request I have, for the better safety of the same, retained the said sum of money in my possession, it being understood, and I do promise to pay interest from date of gift at the rate of five per cent. per annum. On the above date no acknowledgment was given, but I now place on record the gift, and also my intention and the wish of Kozawa Tori that, unless paid sooner, the principal sum with accruing interest having been paid as a debt due by my Estate these monies shall be dealt with by the Trustees in manner similar as monies under the trust in my will— J. J. Enslie.

Kobe, January 11, 1892.

On the request of the Judge the will was produced and handed into Court.

Mr. Litchfield said he had prepared an affidavit as to the accounts of the estate and other matters, but that Mr. Walford had suggested a doubt as to whether it was admissible to receive them in that petition. He (Mr. Litchfield) had therefore decided not to tender them, but he could state that the net value of the estate was over 35,000 *yen*. The exact amount was 35,768 *yen*.

His Honour—The annuity of 1,500 *yen* has been paid out of this?

Mr. Walford—We have not received the full annuity. There is a capital sum which is not affected by these payments out of interest, which amounts to something above 35,000 *yen*.

His Honour—The annuity of 1,500 *yen* has been paid in part.

Mr. Walford—Yes, leaving a deficiency for each year.

His Honour—Out of interest?

Mr. Litchfield—Yes, out of income.

His Honour—The income is about how much?

Mr. Litchfield—The capital sum bears interest at the rate of only three per cent. per annum. Since the beginning of 1898 it has been invested with the Hongkong and Shanghai Banking Corporation. Up to that time the income produced by the investments amounted to 2861 *yen*. From January, 1898, to 31st December, 1899, the interest received by the petitioner amounted to 1496 *yen* or 748 *yen* per annum.

His Honour—You say it is deposited in the Hongkong Bank. What interest does the Bank allow?

Mr. Litchfield—It is deposited on six months deposit, I suppose in order that the interest may be paid half-yearly as directed in the will.

His Honour—What is the maximum interest the Bank gives?

Mr. Letchfield—Three per cent.

His Honour—No, it does not. We all know better than that.

Mr. Litchfield—Three per cent.

His Honour—No, no.

Mr. Litchfield—That is what the executors have received.

His Honour—No, no. The money is in a Bank that gives more than three per cent. What does that Bank give?

Mr. Litchfield—It gives 5 per cent. per annum if the money is deposited for more than six months.

His Honour—Then you tell me that the estate can not raise 1,500 *yen*. That is wrong. You can deposit it for 12 months. If you can get five per cent. for the year from the very same people on the same security with the exception that you deposit for 12 months instead of six months it seems to me you ought to get it, and that that particular difficulty you come here to get cured does not exist.

Mr. Litchfield was understood to point out that if the 6,000 *yen* had to be deducted from the 35,000 *yen* there would be a difficulty.

His Honour—That is not what your petition states. It simply states that you can't raise 1,500 *yen* a year and 250 *yen* a year and it appears to me from your own statements that that is exactly what you can raise. Look at paragraph 7 of the petition (His Honour read the paragraph). There is only one trustee acting, is there not?

Mr. Litchfield—Yes.

His Honour said he took it then that this trustee would henceforward invest this 35,000 *yen* in such a manner as to produce the higher rate of interest. Was he to understand that the sum would be insufficient to raise the stated income if the sum of 6,000 *yen* were deducted from it?

Mr. Litchfield—Yes.

His Honour—Then I want the petition made right. We have in a matter of this kind to get our documents very accurate. I quite accept your statement that the income is at the present moment insufficient.

Mr. Litchfield—I have advised the Trustee that the income ought to be more.

His Honour—That is very good advice.

Mr. Litchfield said the trustee had made him some explanation that he had invested the money on six months deposit in order to guard himself.

His Honour—Have you any list of the investments?

Mr. Litchfield—Of the present investments no. It is all deposited in the Hongkong and Shanghai Bank on six months deposit.

His Honour—I should like you to procure a list of the investments.

Mr. Litchfield asked for leave to amend the petition as suggested by his Honour, and this was agreed to.

Mr. Walford stated for the information of His Honour that there was 450 *yen* in hand at the present time in addition to the capital sum.

After the discussion of some other more or less technical points the amendment of the documents was left over till after adjournment, the case proceeding on the assumption that they had been amended.

In answer to His Honour Mr. Litchfield said part of the annuity had been paid to Kozawa, but not the whole. No part of the allowance to the Trustees had been paid. The difficulty the trustee found himself in arose out of the interpretation put upon the direction in the will of the testator to pay to Kozawa Tori 6,000 dollars and accumulated interest. The direction as contained in the will was clear enough up to a certain point. The testator directed that the principal sum, together with the interest, should be paid as a debt due from his estate. If he had stopped there it would have been clear that there was a confirmation of the so-called debt, or it would be a direction to the trustees to treat what he admitted as a debt in the light of a legacy and direction to pay the sum to the absolute use of Kozawa Tori. But the testator further stated that he requested that his trustees would "conform to his wish," thereby, he (Mr. Litchfield) submitted, raising a difficulty of interpretation as to the meaning of the words in the note of hand: "I now place on record this gift and also my intention and the wish of Kozawa Tori that, unless paid sooner, the principal sum with accruing interest having been paid as a debt due by my estate, these monies shall be dealt with by the Trustees in manner similar as monies under the trust in my will." The directions in the will were conflicting. There was first a direction to pay absolutely; then a direction incorporated in the note of hand that this money should be dealt with in a manner similar to that adopted in the lifetime of the testator, viz., that the interest on the sum should be a first charge on the residuum and that the capital should remain in the possession of the trustees, as it had remained in the possession of the testator during his lifetime.

Mr. Walford—My instructions are that no interest was paid during the lifetime of the testator.

Mr. Litchfield—I am instructed not. I am instructed that nothing further was done in the matter than expressed in the note of hand. The money was not actually handed over. The document seemed to be of a peculiar nature, but the Court might take it that it had been confirmed by the will, so that there was no necessity for discussing what the effect of such a document would be in the presence of opposing creditors. It was either an absolute gift of the money and arrears of interest or a direction to the trustees to deal with it in the same way as the testator dealt with it in his lifetime—as a gift of annual income. The difficulty of interpretation had been increased by the fact that the testator's direction as to the payment of the sum came before the direction for the investment of the residuum, so that he (Mr. Litchfield) failed to find any direct authority for his proposed interpretation of the two documents taken together. It was an interpretation to be given on the words themselves—that was to say, if the trustees were to conform to the wishes expressed in the note of hand they were to deal with the sum of money as part of the residuum. As to the point of the petition which asked for direction as to the amount of interest to be added to the principal he submitted that if interest was to be allowed it should be from the date of the note of hand, 1892, and not from the date of gift, 1884. The reply to the other questions must

Digitized by Google Original from CORNELL UNIVERSITY

depend on the directions given on the first point. It was obvious from the state of the account that at present there was a sufficient capital to produce an income capable of paying 1,500 *yen* as well as the allowance to the trustees, if, that was to say, the sum of 6,000 *yen* remained part of the trust. If it did not there would be an insufficiency of income. In that case he submitted that the acting executor had a right of retainer to his annuity.

His Honour—I take it that the absent parties have no interest whatever in the distribution of the balance of the income if it is less than 1,500 *yen*.

Mr. Walford—I think it lies entirely between my client (Kozawa Tori) and the petitioner.

Mr. Litchfield said he should claim priority for the trustee in case of the insufficiency of the fund.

His Honour enquired of Mr. Walford what would be the points of his argument.

Mr. Walford said with regard to the first point he contended that upon the words of the will this sum was to be paid to her as a debt due from the testator. He also contended that the existence of the debt was evidenced by the document of 11th January, 1892, which was in fact a declaration of trust. To the second point regarding interest he replied that this should be paid from January, 1884, at the rate of 5 per cent., and also that, this being trust money, they were entitled to compound interest. The note of 1892 dated back the trust to 1884 and made the interest payable from that date. The note also contained an express promise to pay from January 1st, 1884, and that promise was confirmed by the will. Was the gift of the sum of 6,000 *yen* an absolute gift or otherwise? He (Mr. Walford) said that so far as the will operated at all it was an absolute gift, but that the money belonged to Kozawa Tori independently of the will under the declaration of trust. In reply to the fourth question he said that the annuity of 1500 *yen* was a first charge on the annual income of the estate and that if necessary the assets should be marshalled in such a way as to make it a first charge. As to costs he should argue that they were payable out of the general estate and not out of the particular fund.

The Court then adjourned for tiffin.

On resuming Mr. Walford proceeded to elaborate his arguments at great length. He contended that the note of hand was a declaration of trust, and quoted several cases in support of this contention.

His Honour pointed out that in all these cases particular funds had been set aside by the persons forming the trust. In the present case, His Honour took it, this was not the fact. Could Mr. Walford quote any case parallel to the present one?

Mr. Walford said he could not at the moment. He quite saw that the point was of importance in a case where there were creditors claiming in competition with the beneficiary. In that case the beneficiary would be on the same footing as the creditors. But in this case there was no such consideration.

His Honour, referring to a case quoted by Mr. Walford, said he thought as far as it went it was favourable to his contention.

Mr. Walford proceeded with his argument that the testator had occupied the position of a trustee from 1884, and that interest on the trust fund was due from that date. With regard to the other point, that the sum of 6 000 *yen* was an absolute gift, he claimed that his client could if she wished have claimed the 6,000 *yen* from the testator in his lifetime or after his death. He also argued that interest was due from 1884, and that compound interest should be paid for some period at any rate.

His Honour did not treat the latter argument very sympathetically, as also the argument in favour of marshalling the assets so as to make the annuity of 1500 *yen* a first charge.

Mr. Walford also argued that the costs should be borne by the residuary estate.

The case was adjourned to next Wednesday.

GREAT BRITAIN'S COVETOUSNESS.

The following extract from a speech recently delivered by Mr. A. Balfour deserves to be studied by the slanderers of England :—

I am told by the same class of critics as those on whom I have already animadverted that we have been moved to adopt this military and aggressive policy by the influence of South African capitalists. I do not understand this distinction between capitalists and workmen. If anything we are doing is for the interest of the South African capitalists, it is also for the benefit of the South African workmen, chiefly men of English blood, English descent, English language, and English nationality.—(Hear, hear.) But with regard to those who make these charges, whether it be that we are influenced by the employers or by the employed, have they reflected how serious is the charge against the Transvaal Government which this accusation against us implies? For please mark this. The critics tell us that we are making this war to please the owners of the South African goldfields. Those owners, by the very fact that there is war, have seen their property threatened, their mines shut up for an indefinite period, and they have been told in language as plain as one of the greatest masters of plain language could speak—I mean the Chancellor of the Exchequer (cheers)—they have been told in perfectly plain language by him that, when the war is concluded, the mines, in common with other forms of property in the Transvaal State, will undoubtedly be burdened with some of the charges connected with the war.—(Cheers.) Therefore the accusation against the Transvaal Government, not against us, comes to this, that the Government is so bad, it has so iniquitously used its powers to strangle a legitimate industry, that it pays the industry and is for the advantage of the industry that for the time being its workers should be swept to the four winds of Heaven, that its mines should be shut up, and that it should be finally saddled with a heavy charge in consequence of the war—(cheers): and, after submitting to all those charges, it pays them because there is some chance of their being put under a good administration instead of the administration under which they have so long groaned.—(cheers.) I cannot imagine a more severe commentary upon the Transvaal Government than this argument which is entirely used, so far I know, by those whose boast it is that they support that Government.

The race of huge feeders has not entirely died out, for Hans Kessler, of Munich, exercises the profession of "Modern Gargantua." Recently Kessler ate 300 fried sausages in an hour and forty minutes. before a crowd of spectators who had assembled to see him perform the feat for a wager.

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Shanghai, January 5.

General French's artillery forces the enemy to keep concealed among the hills.

The Boers have occupied Molteno and Cyphersgap, but retired subsequently on Gatacre's advancing, after some fighting.

Typhoid and scurvy are increasing in Kimberley.

Thornicraft's horse yesterday reconnoitred towards Springfield. They saw a large Boer force, and retired. The Boers maintained their fire until the British camp was reached. It is reported that a lieutenant and five men have not returned.

Later.

At Frere yesterday the Boers' trenches were shelled and smashed with lyddite. The enemy shifted their position.

Germany has protested against the seizure of the *Bundesrath*, and negotiations with regard to the incident are proceeding in London.

Reinforcements have been sent to General French from De Aar Junction.

A German mail steamer is detained at Aden and is being searched.

A Boer despatch says that six horsemen have escaped from Ladysmith. They are believed to include Colonel Rhodes and Dr. Jameson.

Some natives have been caught at the Modder River signalling information to the Boers from the British lines.

Shanghai, January 6.

The Boers retired from Molteno on Gatacre's advance with the Cape Mounted Infantry and Artillery.

An Army Order directs the embodiment of sixteen additional battalions of militia.

President Steyn has issued a proclamation making every white man in the Orange Free State liable for military service, irrespective of nationality.

A despatch from Renesberg, dated the 4th, says that the enemy unexpectedly attacked French's right wing that morning and were repulsed. They then occupied the hills on the north, but were eventually driven thence by shelling. Nevertheless they still hold the hills immediately surrounding the town, thus checking the British advance. The Boers lost about a hundred.

Later.

A despatch from Mafeking dated the 26th Dec. says that a British storming party of 80 desperately attacked an impregnable fort and were repulsed, losing 21 killed and 33 wounded.

Major Harvey, of the 10th Hussars, has been killed at Colesberg and Major Alexander wounded. By special request from General French, the Household Cavalry, a field battery, and the first battalion of the Essex Regiment have been despatched to him temporarily.

The feeling in Germany is increasing with regard to the *Bundesrath*.

Mr. Waldorf Astor has contributed £5,000 towards the equipment of the London City Corps.

Shanghai, Jan. 7.

A despatch from General White dated the 6th instant says that the enemy attacked Caesar's Camp, south of Ladysmith, that morning in considerable force. They

Digitized by Google Original from CORNELL UNIVERSITY

were everywhere repulsed, but fighting continues.

The authorities at Aden have renounced further search of the German mail steamer.

The Bourses are flat owing to a semi-official announcement in Saint Petersburg that the authorities view the recent reports as alarming with regard to the situation in Afghanistan.

(Note.—This part of the telegram is obscure. It does not show whether the "semi-official" announcement comes from Saint Petersburg or London.—Ed. *J.M.*)

Russia has sent troops from Tiflis via Baku and Krasnovodsk by rail to Kuskh Province.

(Note.—Krasnovodsk Bay is opposite Baku on the Caspian, and Kuskh is to the north of Herat.—Ed. *J.M.*)

There is a possibility that these troops may be the van guard of an Army Corps reaching Kuskh from the Caucasus in eight days.

Saigon, Jan. 6.

A Decree of the French Government places the territory of Kwang-chou-wan under the authority of the Governor-General of Indo-China.

The Boers occupied and then abandoned Molteno.

The situation at Colesberg remains uncharged.

M.M. Buffet and Déroulède, condemned to ten years' banishment, were conducted this morning to the Belgian frontier. M. Guerin will undergo his punishment in France.

Saigon, January 7.

A violent combat recommenced in the morning around Colesberg.

(*We imagine* that this refers to the action on the morning of the 4th, already reported by Reuter.—Ed. *J.M.*)

Shanghai, Jan. 8.

White heliographed yesterday that the attack was renewed and that he is very hard pressed. The Boers are now in great number. Buller sent all available troops yesterday to demonstrate at Colenso, where the enemy occupied all the trenches.

Reuter telegraphs from Lorenzo Marques that Pretoria reports that the police at Kuruman have surrendered. One hundred and twenty prisoners were taken, including 12 officers, besides 70 natives and stores and ammunition.

French reports that the situation at Colesberg is much the same, but that a serious accident has befallen the 1st Suffolks. Four companies attacked a low hill about one mile from the camp. Colonel Watson ordered a charge, and was immediately wounded. The order for retirement was given, it is said by the enemy. Three-quarters of the troops retired to the camp. The remainder held their ground until overpowered, and then surrendered. There were 70 prisoners, including seven officers.

The German steamer *Herzog*, having a Belgian Ambulance for the Transvaal on board, has been seized and brought to Durban by a British warship.

Shanghai, Jan. 9.

General White heliographs under date of the 7th at two o'clock in the afternoon that the Boers' attack continued until 7.30 p.m. on the evening of the 6th. The enemy were in great force. They were repulsed everywhere with very heavy loss.

Later.

General White says that the enemy pushed the attack with the greatest courage and energy. Some of the British entrenchments were thrice captured and retaken. At one point the British position was occupied by the enemy for the whole day, but they were driven out at dusk by a gallant bayonet charge of the Devons. Earl Ava was dangerously wounded. The casualties in the Suffolks were 7 officers and thirty men killed. About 50 Boer prisoners were taken.

Shanghai, Jan. 10.

The Transvaal has refused to allow the American Consul at Pretoria to represent British interests.

The Eighth Division begins sailing on the 11th inst.

[Note.—The telegram is quite distinct as to the word "Eighth," but we hitherto supposed that it was the Seventh Division that was to start on the 11th.—Ed. *J.M.*]

Twelve additional batteries of artillery will leave before the end of the month. The Government has decided to raise six new batteries immediately, but not necessarily for service in South Africa. There will be a further increase later.

The London Scottish will furnish a detachment to serve with the Gordons.

The Committee of the Imperial Yeomanry has received a gift of £50,000 from Wernher and Beit.

The Vickers and Maxim Company have received orders to manufacture 47 6in. quick-firers continuously.

Reuter telegraphs from the Modder River that the Boers are still strengthening their works at Maggersfontein, but they are reported to be withdrawing a portion of their men to reinforce the Boer force at Colesberg.

The casualties to the Suffolks on the 6th instant at Colesberg were :—

KILLED.

Col. Watson, Lieuts. Wilkins, White, and Carey.

MISSING.

Captains Brett, Thomson, and Brown, Lieuts. Allen, Wood-Martin, and Butler.

24 men killed, 26 wounded, and 107 missing.

French's casualties from the 1st to the 4th were: Lieut. West of the Berkshires and 11 men killed and 14 wounded.

Great Britain has replied to the German note protesting against the seizure of ships, but the purport of the reply is unknown.

Shanghai, Jan., 11.

The German steamer *Herzog* (which was seized in Delagoa Bay by a British man-of-war and conducted to Durban as having on board contraband of war in the shape of ambulance apparatus from Belgium for the Boers) has been released at Durban.

Gatacre has reconnoitred the Boers' position at Stormberg where the enemy is in strength. After a few shots had been exchanged the reconnoissance withdrew.

Lord Roberts and Lord Kitchener have arrived at Cape Town.

There were 23 deaths from enteric fever last week at Ladysmith.

It is stated that the British reply to Germany maintains the legality of searching vessels plying to neutral ports.

(Telegrams Received at the Legation of France in Tokyo.)

Saigon, January 5.

The High Court has rendered its judgment in the affair of the conspiracy. M. M. Buffet and Déroulède are condemned to ten years' banishment; M. de Lur-Saluces receives the same sentence for contumacy, and M. Guérin is condemned to ten years' detention in a fortified place. All the others are acquitted.

Saigon, Jan. 8.

Twelve hundred aggressors, belonging to Insalah, attacked the Flamant Mission in the oasis of Tidikelt. They were repulsed with a loss of 50 killed and 64 prisoners. Insalah has submitted.

Saigon, Jan. 10.

The re-opening of the Chambers has been effected without incident.

News from London is to the effect that a fierce combat took place around Ladysmith on Saturday. Many entrenchments were taken and retaken. The Boers were finally repulsed. Both sides lost heavily.

(From the "N.-C. Daily News.")

On Sunday the "Boxers" murdered Mr. S. M. Brooke, an Anglican missionary belonging to the S.P.G., at a place fifty miles south-west of Chinanfu.

(From the "N.-C. Daily News" ex the "Hongkong Volunteer Gazette.")

Hongkong, Dec. 24.

Three Chinese godowns at West Point were burnt on Friday night, and there were several severe explosions. The damage amounts to one million dollars. The China Fire is interested to the extent of $30,000, the Hongkong Fire $10,000, and home offices largely.

Hongkong, December 26.

General H. R. H. the Duke of Connaught renewed his application to be allowed to go to the front and obtained the consent of Lord Roberts to join his staff, but the Government refused their approval.

The Boers' official account of the battle at Tugela River puts their loss at thirty killed and wounded.

Colonel Villebois and Colonel Braun, the French and German military attachés who were present at the battle, declare that European armies could not have done better.

Belated accounts of the battle show that the artillery fought for two hours exposed to a withering fire. They only abandoned the guns when the ammunitton was exhausted and most of the officers had fallen.

The Boer defences were most scientific; even the drifts (fords) were filled with submerged barbed wire.

Both Lord Methuen and General Gatacre have ordered the prosecution of severe measures to exclude spies from the vicinity of their camps.

Hongkong, Dec. 29.

The Boers have mounted guns on Inlwawe Hill, from which they may annoy the British camp at Chieveley.

[Inlawe Hill is far out of range of Chieveley, even with 110-ton guns.—Ed. *J.M.*]

It is reported that they have constructed a wooden bridge near Pieters to facilitate their passage to and fro.

Meanwhile they are strengthening their positions north of the Tugela River enormously, and constructing a bomb-proof tunnel from their position to the Ladysmith Road.

The Boers at Modder River are entrenching night and day, and constructing works which will enable a comparatively small force to hold the position, sheltered access to all parts being provided.

The *Times* states that Armstrongs are making in hot haste a battery of twelve new-pattern fifteen-pounders.

An Army order has been issued making provision for exceptional enlistment into the army, especially the re-enlistment of discharged soldiers.

Digitized by Google Original from CORNELL UNIVERSITY

The *London Gazette* contains a proclamation warning British subjects against in any way aiding or abetting the enemy.

(From the "China Mail.")

Colombo, December 29.

A British cruiser has brought into Port Elizabeth another American steamer laden with stores for the Boer Governments.

Six Marconi telegraph instruments intended for the Boers have been seized by the British authorities at Cape Town.

Commandant de Meillon, one of the Boer prisoners, escaped from custody at Cape Town, intending to return to the Boer army, but was re-captured in the suburbs of the town the same evening.

Mr. Winston Churchill, who was more successful in escaping from Pretoria, in the State School of which he had been confined with Captain Haldane and other officers, gives an interesting account of his escape. He climbed the wall of his prison, and walked along the railway track towards Delegoa Bay for six nights. Finally, he hid under some sacks in the truck of a goods train, and was thus enabled to escape the vigilance of the Boer troops on the frontier.

(From the "China Gazette.")

Colombo, Jan. 3.

General French's programme worked without a hitch. The British continued to keep the enemy moving on Saturday and Sunday. Then the cavalry, artillery, and infantry, the last-named in waggons, started a night march, arriving at daybreak within striking distance. The infantry and field batteries feinted a frontal attack while the cavalry and horse artillery got round the enemy's right flank. The Boers, utterly surprised, fled eastward, leaving Colesberg in our hands. In the Scout affair Milford was cut off owing to an incorrect report, but was rescued by Captains Goldsworthy and Montmorency. When the ammunition was failing the Boers tried the white flag with Milford, the usual volley following, but we killed two, including the bearer of the flag.

H.M.S. *Barfleur* has been ordered South unexpectedly. It is supposed she has gone to assist in the suppression of Mat Salleh.

London, Jan. 3

The British captured a laager at West Belmont, forty Boers being taken prisoners. Douglas has been reoccupied.

Enteric fever at Ladysmith is greatly increasing.

Colombo, Jan. 5.

The military prisoners in the hands of the Boers at Pretoria are considerately treated by their captors. But the South African Irregulars at Pretoria are lodged in the ordinary gaol and are only fed with the diet prescribed for criminals.

Surgeon-Major Daly and forty-one men of the Army Medical Corps who had to be left behind in Dundee in October to take care of the wounded (including the late General Symons) after the British evacuated that position, have just been released from Pretoria by the Boer Government.

Ninety-five volunteers have been enrolled for the Ceylon Company of Imperial Yeomanry (for service in South Africa) 125 are wanted.

A theft of an extraordinary character is reported by the Kobe police. On Thursday morning Mr. Takai Kakutaro, of the Banri Bank, Himeji, took 10,000 yen to be deposited with the Mitsui Bank in Sakae-machi. Removing 7,000 yen from his pocket he handed the notes to the Bank, tying the balance in a silk handkerchief with the view of taking it to Osaka, whither he was to proceed. He left the packet on the counter at his side for a short time and when he turned to remove it the handkerchief, notes, and all were missing. The cash had apparently been stolen. The *Kobe Herald* says no trace of the thief had been found up to Thursday evening.

CHESS.

All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 52, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 453.

With regard to problem 453, we agree with "East Anglia" that it is essentially a bad composition, as the following solution shows:—

WHITE.	BLACK.
1—Q to K B 4 ch	1—If K takes Q

Then mate at once by Kt to Q 3.

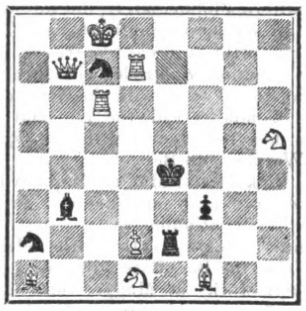
Therefore	1—K to Q 5.(forced)

There are now two methods of effecting the mate, viz:—

2—P to K 5 ch	2—B interposes
3—Q takes B mate or	
2—K to Q sq ch	2—Kt interposes
3—Q takes Kt mate	

PROBLEM No. 456.

BLACK.



WHITE.

White mates in two moves.

NOTE.

There is not much in the game to criticise. Black has somewhat the inferior position, which he necessarily should have with the P to K B 4 defence. Dr Tarrasch, who was tempted to try it against Steinitz in the Hastings Tournament, said he never tried it before, and never will try it again. Black might have played 8...Kt to K 5 to prevent the advance of the K P. Afterwards nothing noteworthy occurred till 17...Kt to Kt sq. He should have played first 17...B to Kt 5; 18—K R moves, then Kt to Kt sq. White was enabled to capture a Pawn in consequence of this omission, and, changing pieces after having broken up Black's Pawns, he thought of remaining with an ending that should be won easily, instead of which it turned out to be a remarkable drawn position, had Black played correctly, so the interesting part really commences after Black's 41st move. It is an instructive ending, Mason playing right enough till 55...K to Kt sq, which is the losing move, whereas 55...P takes P; 56—P takes P, K to Kt sq would have drawn. If 57—K to B 5, then 57—K to B 2; 58—P to Kt 6 ch, K to B sq; 59—K to K 6, K to Kt sq and draws.

GAME No. 583.

The following game, from Mr. Blackburne's "Games of Chess," is interesting from the fact that on this occasion originated the beautiful variation of leaving a Rook *en prise* for the attack. Tchigorin is very fond of this variation, and played it successfully on various occasions notably at the Hastings Tournament against Pillsbury:—

KING'S GAMBIT DECLINED.

White—Blackburne.		Black—Anderssen.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	22 PxP	RPxP

21 Kt K2	P Kt4	42 Q K8ch	Resigns

NOTE.

Mr. Blackburne says that the variation commencing with 10—Q to Kt 3 occurred to him on the spur of the moment, and took Professor Andressen by surprise. He did not venture upon Kt takes P ch and Kt takes R, as he naturally assumed Mr. Blackburne had sprung upon him a variation well considered beforehand. The capture of the Rook, however, is not an unalloyed pleasure either, as Black is subjected to a most violent attack, in which White can temporarily disregard the absence of the Queen's Rook. Black had a good enough game afterwards, but he compromised it with the advance of the K Kt and Q Kt Pawns, and White manœuvred very skilfully against his formidable opponent. The latter part of the game, commencing with 28—Q to R 7, is well worth careful study. He cleverly pinned Black's Kt at K sq, drew off Black's Queen from the defence by threatening 36—B to Kt 5 ch, and brought his Bishop into play by force after 37—Q to R 8. The game was then easily won.

NOTES.

In addition to the cable match, England *v.* America, for the Newnes trophy, there is likely to be another contest shortly between the English and American colleges, by telegraph, for Professor Rice's trophy, which it will be remembered, was won by Oxford and Cambridge last April.

The championship Tournament, City of London Chess Club, has produced some remarkably interesting contests. Mr. T. F. Lawrence, who has usually been successful in recent years, has four clear wins. Mr. Harold Jacobs has four wins and one loss to his account. Other good scores are:—Mr. T. Physick, three wins, one draw, one loss; Mr. Ward, three wins and one loss; Mr. Loman, two wins and one loss; Mr. E. O. Jones, two wins and two draws; Mr. Herbert Jacobs, two wins and two losses.

A Reuter telegram from St. Petersburg states that the celebrated Russian chess-player, M. Schiffers, has just been sent to the St. Nicholas

Digitized by Google Original from CORNELL UNIVERSITY

Asylum for the Insane at St. Petersburg. He was engaged in a Tournament at Moscow, where he won the second prize, and it was after the conclusion of the contest that the first distressing symptoms manifested themselves. While M Schiffers was travelling to St. Petersburg from Moscow the malady assumed a violent type.

It will be remembered that Steinitz also went mad after his match with Lasker in Moscow; so chess-players may take it as a warning that if they wish to preserve their mental equilibrium they should give the place a wide berth.

Is genius required to produce a Chess-master? To become a Morphy, a Zukertort, or a Lasker one must be "born," as the Germans say; but there are others; a most notable example being Dr. Siegbert Tarrasch, of Nuremberg. Were acquired knowledge the dominant factor in the game Dr. Tarrasch would be the greatest player that ever lived. In positions that have been handled by the books he is supreme; but let something arise wherein native wit is required, and it is almost a dollar to ninety odd cents that either Lasker, Blackburne, or Janowski would outwit him. Pillsbury has been known to do it in a comparatively simple end-game. There is no doubt that this consciousness of inherent lack of Chess wit has resolved the big Doctor not to tempt "Chess fortune" again.—*The Times*, Philadelphia.

The Russian National Tourney at Moscow resulted, as was, of course, expected, in the first prize going to M. Tchigorin, who lost only one game, to M. Lebedew, of St. Petersburg. M. Schiffers came in second, and M. Levitzky was close behind him as third prize-winner. As a result of the closeness of their scores, a match between them s about to take place at Moscow. The fourth prize went to M. Lebedew, who distinguished himself by winning his game with M. Tchigorin, and was only half a point behind M. Levitzky. Next below the prize-winners, at again half a point distance, was M. Jankovitch, of Rostoff-on-the-Don, who adopted the tourney name of "Alexewjew." We append the scores:—

	Wins.
M. Tchigorin (1st prize, £40)	10
M. Schiffers (2nd prize, £30)	7½
M. Lewitzky (3rd prize, £20)	7
M. Lebedew (4th prize, £10)	6½

The game of chess is constantly being improved, each section of the chess world doing its allotted work in its own way. The professional players of the effete East are elaborating and refini g the splendidly dull openings of P to Q4 and the Knight's game of Luy Lopez. But the West, the glorious, the wild and woolly West, produces novelties of a more startling kind. Not long ago Dr. Philips of Chicago electrified Pillsbury and others with his Razzle-Dazzle Gambit (1—P to K4, P to K4; 2—Kt to KB3, Kt to QB3; 3—Kt takes P), and beat the champion with it in a simultaneous performance. Now Charles Reed of Puget Sound (at present a guest of the Franklin Club) has brought another novelty with him in the gambit openings, the Siwash Gambit, called after a tribe of Indians, next door neigh bours of Mr. Reed's home.

The moves of the new gambit run.: 1—P to K4, P to K4; 2—P to KB4, P takes P; 3—K to B2. This is the key move to the new gambit. The idea is to gain a speedy development through Black's probable checks. We will pursue the idea for some moves: Q to R5 ch; 4—P to Kt 3. P takes P ch; 5—K to Kt2, Q takes KP ch; 6—Kt to B3, P to Q4; 7—P takes P, B to KKt 5; 8—B to K2. Giving an outline of the opening, which is not strictly sound, but forms, nevertheless, an agreeable (?) variety in the way of opening the game.—*Philadelphia Times.*

PASSENGERS.

ARRIVED.

Per Japanese steamer *Yamashiro Maru*, from Shanghai via ports:—Dr. Harbere, Mr. Donovan, Mr. G. Wallace, Mr. and Mrs. Davis, Mr. Schnale, Mr. F. Vovweck, Capt. and Mrs. Yagi, Mr. Tojio, Mr. A. Becker, Mrs. Donovan, Mr. C. Kipp, Mr. A. Pellessan, Miss Jossey, Miss Lewis, and Mr. Muragaki, in cabin, Mr. Sawai, Mr. Asai, Mr. Hakata, Mr. K. Yatsui, and Mr. Ching Pang, in second class; thirty-three, in steerage.

Per Japanese steamer *America Maru*, from San Francisco via Honolulu:—Mr. M. Yamaguchi, Mr. H. Mizuta, Mr. H. Matsui, Mr. B. W. Chang, Miss M. E. Phillips, Mr. A. Hope Doeg, Mr. H. Schleifenbaum, Mr. P. S. King, and Mr. W. J. Treat in cabin. For Hongkong:—Miss R. Schallenberger, Mr. Dickson, Mrs. H. H. Sargeant, Mrs. M. F. Steele, Mr. N. G. Van Sant, Mr. G. Van Sant, Mrs. C. Goodman, and Mr. T. S. Holt in cabin.

Per German steamer *Karlsruhe*, from Bremen via ports:—Mr. E. C. Ogden, Mr. Mumejiro Kimura, Mr. and Mrs. W. T. Church, Miss G.

Digitized by Google Original from CORNELL UNIVERSITY

Esdale, Mr. W. H. Dullau, Mr. Kistermacher, Mr. Vehling, and Mr. E. Hasche, in cabin.

Per British steamer *Belgian King*, from San Diego:—Mrs. W. H. Beck and maid, and Master Claude Proctor, in cabin; 38 Chinese, in steerage.

Per French steamer *Salazie*, from Marseilles via ports:—Mr. J. Cohen, Mrs. Ba, Mr. Loo Yan Chee and servant, Mr. Pon Tuk Mon, Mr. Man Fook, Mr. Chan M. Kok, Mrs. Oyon and 2 children, Mr. Shutte, Mr. S. Donnenberg, Mr. Yasutomi, Mr. Dentici, Mr. Martinolich, Mr. Wassiliel, Miss Joubert, and Mr. J. Israel in cabin.

DEPARTED.

Per French steamer *Caledonien*, for Marseilles via ports:—Mr. Foukouba, Mr. Paul Lefizelier, Mr. N. Hagura, Mr. H. Oita, Mr. T. Shinkai, Mr. George A. Adams, Mr. Mayor, Mr. Pavlow and boy, Mr. and Mrs. G. Tauson, 3 daughters and 5 boys, Mr. S. U. Sheung, Mr. Lo, Mr. Loo, Mr. Pot Men, Miss R. Correa, Mr. Moriya, Mr. Cheong, Mr. Wongkai Fun, Mr. Wong Shi Lo, Mr. Lee, Mr. Sup Chee, and Mr. Chan Ning Cum and boy, in cabin.

Per British steamer *Rohilla*, for Hongkong via ports:—Mr. and Mrs. Tedlie, Mr. Geo. Holden, Mr. S. Bean, Mr. Wm. Taplin, Mr. O. Cashman, Mr. W. Ware, Mr. R. Joycey, Mr. R. Jeffries, Mr. Lean Kai Tean, and Master Chan Chue Ko, in cabin; 9 Chinese and child, and 1 Indian, in steerage.

Per Japanese steamer *Yamashiro Maru*, for Shanghai via ports:—Mr. C. F. Pope, Mr. Lantsu Liu, Chinese Legation, Mr. Chang Yem Yam, Mr. Wong Chut, Mr. Ch. Downs, Mr. F. Burtons, and Mr. Richter, in cabin; 19 in steerage.

EXPECTED.

Per Japanese steamer *Wakasa Marn*, from London via ports:—Mr. Shiokichi Okuda, Mr. B. H. Chamberlain, Mr. Tsunejiro Shima, Mr. Tsunego Fukushima, and Dr. Ukuchi Ozaki, in cabin.

Per German steamer *Sachsen*, from Bremen via ports:—Mr. G. Werckmeister, Miss Louise Amor, Miss Rebecca McCormac, Dr. N. B. Ariga, Prof. Dr. K. Florenz, Mr. R. B. Coke, and Mr. E. C. Ogden, in cabin.

CARGO.

Per British steamer *Monmouthshire*, for Portland, Oregon:—

Cuticura SOAP

For the Complexion

To purify and beautify the skin and prevent pimples, blotches, blackheads, redness, roughness, yellow, oily, mothy skin, chapping, tan, sunburn, and many other forms of skin blemishes, no other skin or complexion soap is for a moment to be compared with CUTICURA SOAP, because no other soap reaches the cause, VIZ., *the clogged, irritated, or inflamed* condition of the PORES.

For Red Rough Hands

SOAK the hands, on retiring, in strong, hot lather of CUTICURA SOAP. Dry thoroughly, and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear during the night, old, loose kid gloves. For red, rough, chapped hands, dry, fissured, itching, feverish palms, shapeless nails with painful finger ends, this one night treatment is simply wonderful.

For Hair and Scalp

SHAMPOO with CUTICURA SOAP, rinse with warm water, dry, and apply a light dressing of CUTICURA, purest of emollients, gently rubbed into the scalp. This simple, refreshing, and inexpensive treatment will soothe irritated and itching surfaces, stimulate the hair follicles, clear the scalp and hair of crusts, scales, and dandruff, supply the roots with energy and nourishment, and make the hair grow, when all else fails.

For Sanative Uses

Its remarkable emollient, cleansing, purifying properties, derived from CUTICURA, the great skin cure, warrant the use of CUTICURA SOAP, in the form of baths for annoying irritations, inflammations, and chafings, for too free or offensive perspiration, and also in the form of internal washes and solutions for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially to mothers. The use of CUTICURA Ointment with CUTICURA SOAP will also suggest itself in the severer cases.

INSTANT RELIEF
SPEEDY CURE
FOR EVERY HUMOUR

Warm baths with CUTICURA SOAP to cleanse the skin and scalp, gentle anointings with CUTICURA to heal the skin, and mild doses of CUTICURA RESOLVENT to cool the blood, will afford instant relief, permit rest and sleep, and point to a speedy, permanent, and economical cure, when all else fails.

Sold everywhere. Price, THE SET, 6s.; or, CUTICURA SOAP, 1s.; OINTMENT, 2s. 6d.; RESOLVENT, 2s. 6d., of F. NEWBERY & SONS, London, E. C. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

YOKOHAMA: SATURDAY, JAN. 20TH, 1900.

DEATH.

On the 13th inst., at 4 a.m., Miss FUSA, elder daughter of Mr. Tamamura Kozaburo.

SUMMARY OF NEWS.

MILLER was executed in Tokyo on the 15th inst.

GENERAL WOOD has entered the Orange Free State, crossing the Orange river.

THE news of the Pest near Osaka and neighbourhood is more hopeful this week.

THE New Zealanders at the Cape are winning high commendation for their fighting qualities.

THE Imperial Yeomanry now being raised in England and the Colonies seems a very popular movement.

LORD STRATHCONA'S offer to equip and maintain in the field 400 mounted Canadians has been accepted.

SIR CHAS. WARREN has been given the command of the Irregular Forces and Volunteers in South Africa.

A LIGHTER belonging to the *Chuo Kaisoten*, having on board 24 tons of coal, for the U. S. Transport *Grant*, capsized at 4 p.m. on Sunday owing to the heavy swell. The men in the lighter, three in number, swam to the launch which was towing them, and were rescued.

GREAT BRITAIN has to release the German steamer *Bundesrath*, seized at Durban, and pay an indemnity.

THE *Daily News* understands that the details for the composition of another infantry division have been completed.

DOWN to the 28th December, a sum of $3,878 had been collected in Manila for the Transvaal War Relief Fund.

REAR ADMIRAL BRUCE, Rear-Admiral Fitzgerald's relief, arrived in Hongkong on Dec. 23rd by the P. & O. steamer *Massilia*.

PRESIDENT KRUGER, in a stirring speech, has declared that Providence is on the side of the Burghers and that they must win.

KING HUMBERT has invited the German Emperor and Queen Victoria to meet in Rome next April, and both are said to have promised to go to Italy.

YOKOHAMA amateurs are busy rehearsing "Dandy Dick," Pinero's comedy. The Choral Society will shortly put in practice the "Ballad of Carmilhan."

THE correspondent of the *Globe* at the Modder River states that the last words of General Wauchope were, "For God's sake, men, don't blame me for this."

IF the trials of H.M.S. *Glory* prove satisfactory, that vessel is expected to arrive in Hongkong about the end of March to relieve the *Centurion* on this station.

NEWS from South Africa is very meagre. Fighting continues at Ladysmith and some skirmishes have occurred at Colesberg. Mafeking was safe at the end of the year.

A FIRE occurred on Monday at 1.10 p.m. at No. 81, 9 chome, Hanazakicho, Yokohama. It originated at the house of a straw mat dealer, and 16 houses were destroyed before the flames were finally extinguished.

A VERY successful entertainment was given at the Public Hall on Tuesday in aid of the funds now being raised on behalf of the widows and orphans of men who may fall in South Africa. Some 1 500 *yen* were realised.

EMIGRANTS for Honolulu to the number of 600 left on the 13th by the Toyo Kisen Kaisha steamer *Nippon Maru*. They were despatched by the Kumamoto, Fukushima, and Morioka Emigration Companies.

UCHIDA UCHIZO, who tried to commit murder and arson on the 4th at the house of Enomoto Kanekichi, who had eloped with his (Uchida's) wife, hanged himself on the night of the 12th, with his *obi*, taking advantage of the changing of the prison guards.

THERE are eighteen transports now lying in Manila harbour, waiting to convey troops from that port to San Francisco, and more ships are to follow. The majority will, on their arrival in America, be returned to the various shipping lines from whence they have been drawn.

JUDGE BABA, Mr. K. Kosaka, a Chief Procurator, and Mr. Nakashoje who have been in London, inquiring on behalf of Japan into the administration of the English law, were interviewed by a Press representative. Mr. Kosaka said that he thought there was no serious danger of a conflict between Russia and Japan. Russia, he thought, was obviously in the wrong in the latest Korean difficulty. Mr. Kosaka says Japan will not stand meekly by if Russia attempts to take the land by force.

THE U.S. transport *Thomas*, with the body of the late General Lawton on board, left Nagasaki on Thursday for San Francisco. The funeral will take place at Arlington Cemetery, Washington, D.C., and will probably be of a public character.

THE British Government has decided that food-stuffs carried by neutral vessels and destined for neutral ports are not liable to seizure as contraband of war unless there is reason to believe that they are intended for the enemy's troops.

THE Mitsu Bishi Shipbuilding Yard, Nagasaki, will commence work on the construction of two sister ships, each of 6,000 tons, one at the end of this month and the other in June next. The vessels have been ordered by the Nippon Yusen Kaisha for its American line and will cost more than one million *yen* each.

AT 1.20 a.m. on Friday two robbers entered the house of a sugar merchant, No. 13, Suyeyoshicho, Nichome, kept by one Yoshikawa Benjiro. They broke though a skylight, and one, armed with a dagger, threatened the inmates. The men obtained some clothing, 2 portmanteau, and two silver watches, in all valued at some *yen* 50. They are still at large.

THE Higher Marine Court has quashed the judgment against Capt. Young, of the *Saikio Maru*, who was on Sept. 18th, considered guilty of culpable negligence in reference to a collision between his steamer and a fishing boat, and had his certificate suspended for one month. An appeal was made, and the result is that the judgment is reversed and the captain pronounced free from any blame.

THE thieves who broke into the house of the Compradore of the P. & O. S. S. Co. at No. 185 Settlement, on the night of the 13th inst., and stole jewellery and other articles valued at *yen* 120 and *yen* 15 in cash, were arrested on Monday morning by the Kagacho Police. They were two Chinese named Tong Sai and San Chow, aged 13 and 23 respectively. All the articles were recovered, but the cash had been spent in dissipation.

SPORT in Peking has received an impetus this winter from the establishment of a Sports Club the object of the Club being to raise funds and make general arrangements for gymkhanas, paper hunts, point-to point races, football, ice hockey, &c. The new Club has received the warmest support from the sporting community in the Capital, and within three weeks from the date of formation of the Club, over 60 members had been enrolled. A point-to-point race and Gymkana have already been held.

UPWARDS of 40 school children were drowned on December 22nd, in an ice accident at Frelinghem, Belgium, near the French frontier. The school children of the district had been given a holiday, with permission to play on the frozen River Lys. When the merriment was at its full height, the ice broke suddenly, and the children disappeared. A few were rescued half dead, but the majority were drowned. Thirty-six bodies have been recovered. The catastrophe spread consternation through the town, where nearly every family suffered loss.

SOUTH AFRICA.

Saturday, Jan. 13.

Detailed news by the last American mail seems to show that we correctly read the telegrams about the intentions of the War Office on receipt of the news of the disasters at Maggersfontein and Colenso. The idea was to form at once a mounted infantry corps, by taking one company from each battalion in the field; to replace these companies by volunteers from England, and further to organize a body of Imperial Yeomanry. It still remains uncertain, however, whether the total strength of the mounted troops thus organized will be ten thousand, or whether it will be ten thousand plus the companies taken from the battalions in the field. The telegrams further say that General Buller, before he started from South Africa, placed on record his opinion that a large body of mounted infantry was essential to success in South Africa. That is easily comprehended when we remember that the Boers are all provided with horses, and that, so soon as they find themselves unable to hold a position, they retire to their horses, mount and ride away so rapidly that the enemy, unless he happens to be extraordinarily strong in cavalry, can not turn his victory to full account. Strong in cavalry, however, is just what the British Divisions are not. They are, on the contrary, lamentably weak, and we wait impatiently to hear that the organization of the new corps, whether ten thousand or fifteen thousand strong, has been accomplished. Of course an army consisting entirely of mounted men has a point of great weakness: it is very defective for purposes of attack. Splendid manœuvres may be made by rapid changes of positions, tending to disturb the enemy's order of attack, or to cut him up piece-meal. Take the case of an affair like that of the Suffoks under Colonel Watson at Colesberg. They attacked a hill, but, finding themselves unexpectedly under fire at close range, had to abandon the attack and retired. One company, however, failed to take part in the retrograde movement, and thus found itself separated from the main body. Had the Boers been infantry, it is probable that the segregated company could have fought its way home, with heavy loss doubtless, but still without surrendering. A foe having the use of horses, however, can easily throw an overwhelming force between such a company and its base, thus rendering prolonged resistance useless. These things have to be remembered when we criticise the conduct of the war by British officers. Over and above the patent fact that our men are obliged to undertake big tasks with inadequate numbers, thus exposing themselves to risks which a cautious strategist would never brave, there is the less apparent fact that they are waging a war under unprecedented conditions — conditions to which the stereotyped rules of strategy and tactics do not apply. But when we say that if some advantages attach to an army composed of mounted men, there are other and very grave disadvantages, our meaning is that such an army will nearly always be found tactically on the defensive. The men learn to rely on their horses, and will not consent to be separated from them in the manner demanded by an advance to the attack. It is obvious that a forward movement on horseback in the face of a vigilant enemy must cease at about 4,500 yards, or, say, 2½ miles. Within that range mounted men would offer a sure target for shrapnel. The Boer, then, if he wants to attack, must abandon his horse at a distance of 2½ miles, and from the moment that he becomes an infantry soldier, every forward pace that he takes is a pace away from the animal on which he has learned to place his reliance. Fighting at a distance of 2 miles or 2½ miles from his horse, he knows that, if compelled to retreat, there is great danger of never recovering his seat in the saddle of refuge, but being caught on foot and slaughtered. He wants, all the while, to have his horse within easy reach —behind a hill or hidden in a friendly kopje—, and if that can not be managed, his palate for the fight is not keen. If any one considers carefully the operations of this South African war as hitherto reported, he will see that the Boer is in a most anomalous position; strategically he is on the offensive but tactically he is on the defensive. He has invaded British territory, but he never attacks. He simply sits down and waits to be attacked. He defeats an English column sent to attack him, but he never makes any resolute attempt to reap the fruits of his victory. We confess that after the news of Maggersfontein we held our breath. Cronje had the game in his own hands then. He could have converted Methuen's position into a second Ladysmith, and we should have had the pleasant spectacle of the Guards Brigade and the Highland Brigade "held up" by the Boers just as Sir George White's Division is held up beyond the Tugela. But the Boers had become slaves to the necessity of acting on the defensive. They shrank from undertaking a movement which would have placed Methuen almost at their mercy. The feat at Ladysmith did not constitute an exception to the rule. Ladysmith is invested completely. There was not the least apprehension of White's assuming the offensive even if he succeeded in beating back his swarm of assailants. That this anomaly in their military methods will ultimately tell against the Boers, we can not doubt, and if our readers will take the trouble to think out the position at Maggersfontein, they will probably agree that the first serious discomfiture of the Boers will take place there, supposing that they hold their ground a little longer.

Messrs. Wernher and Beit, who have subscribed fifty thousand pounds sterling to the equipment of the Imperial Yeomanry, are both Germans, and thus we are confronted by the pleasant incident that by far the largest contribution to the fund for prosecuting the war has been made by Germans. An ounce of fact is worth a pound of theory. It may be urged, of course, that the material interests of these two gentlemen are at stake; that they have immense investments in South Africa which are directly concerned by the issue of the War. Doubtless that is the case to some extent; but it must not be forgotten that, as Germans, they could reasonably hope not to be the victims of any discrimination which the Transvaal Government might make against British subjects if the war ended unfavourably for Great Britain. Their contribution is therefore to be regarded as an unequivocal evidence of sympathy with England, and it is doubly welcome since it comes at a time when the fortunes of our arms are distinctly clouded. There has been a great deal of bitter writing in the press with reference to this war. Many Germans undoubtedly think that England is in the wrong and that her claims were in excess of her rights. But many more—and to the latter class belong, we think and hope, the best men of the country—are now convinced that for some years there had been a deliberate plan on the part of the Transvaal and the Orange Free State to oust Great Britain from South Africa, and that extensive preparations to that end were steadily and secretly pursued, all the while that England, with the ineffable self-assurance which is the most unlovely and one of the most dangerous traits of her character, was sleeping calmly on the volcano. The critical party, as in the nature of things, makes its voice most loudly heard, but in the end it will doubtless be found that Germany is with us. Certainly the most valuable warnings and hints about the war have come from her military experts, who, had they been ill-disposed, would have held their peace and rejoiced in silence. There have been scathing and unamiable comments also, but they will probably prove wholesome.

Wednesday, Jan. 17.

The news received by last mail still leaves us in some uncertainty about the 8th Division. It is plain, however, that the telegrams have been misleading. What the wires have told us is that the 6th Division sailed on Christmas Day and the 7th Division on the 11th of January. Now we learn from *The Times*, on the authority of the War Office, that four battalions of the 6th Division embarked on Sunday, December 17th, and that the remainder were to embark during the week ending Saturday, 23rd. It is plain, therefore, that the whole of the 6th Division must have reached the Cape by the 13th or 14th of January at latest. The first half of the Division doubtless reached its destination by the 6th, and the second half probably began to arrive on the 10th or 11th. As to the 7th Division, its immediate mobilization had been approved on December 14th, after the news of Methuen's reverse at Maggersfontein, and we incline to the belief that it embarked on January 4th as originally announced. Farther, the strong probability is that when the news of Buller's defeat at the Tugela reached London on the 16th December, orders were at once issued for the mobilization of the 8th Division. If that be so, its embarkation on January 11th, as announced by telegram, would have been within the range of easy possibilities. What is certain, thus, is that since Methuen's reverse at Maggersfontein, two new Divisions—the 5th and 6th—have reached the Cape. What is uncertain is whether two other Divisions, or only one, is now *en route*. If two, then one of them, the 7th, will have disembarked by about the 25th of this month, and the other, the 8th, by about the 31st. But if there be only one Division (the 7th) *en voyage*—which we do not believe—, then it sailed on the 11th instant and will not be at the Cape till the end of the month. At all events, Lord Roberts has now two fresh Divisions, or some 20,000 men, at his command. Methuen had about 14,000 at Maggersfontein, and if we deduct a thousand for

Digitized by Google Original from CORNELL UNIVERSITY

casualties, it results that the total force of regulars available for operations against the south-west of the Orange Free State, independently of the Cavalry Division under French, is 33,000 of all ranks. Evidently Methuen, though not able to drive the Boers from their position at Maggersfontein, can hold them there, and Roberts will therefore be free to move a column of 20,000 men due east from the Modder, turning the Boers' position at Maggersfontein and threatening Bloemfontein. It is possible, of course, that he may prefer to advance from the direction of Colesberg. As to that we have no grounds for expressing a confident opinion, but since the troops can be carried by rail to the Modder, where they will be within a short distance of their objective, that route seems preferable. Of course we do not mean to suggest that Roberts can make an immediate advance. The whole of the 6th Division can not be ready to go to the front before the 20th instant. Our original calculation was the end of the month, but we know now that one half of the Division left England by December 17th, instead of December 25th.

It is evident that Buller must have a very considerable force now under his command. He himself, when last heard from, was at Springfield, which is about 18 miles westward of Chieveley. He had doubtless established his head-quarters there temporarily, pending the completion of arrangements for crossing the Tugela at Potgieter Drift, which we believe to be about 11 miles from Colenso, just above the point where the Little Tugela joins the Tugela itself. Shortly before this western column had occupied the southern *bank of the Tugela*, which happened on the morning of the 11th, General Warren was despatched eastward, with a force of eleven thousand men, his orders being to march by the road which passes through Weenen and crosses the Tugela at a point some 18 miles east of Colenso. Meanwhile General Clery probably commands the central column, which remains at Frere. Warren's men seem to consist mainly of colonials and irregulars. If it be true that he has 11,000 in his column, the total force now engaged in operations for the relief of Ladysmith can not be much short of twenty-six or twenty-seven thousand men, including four thousand re-inforcements from India which recently arrived at Durban. Buller has probably ten thousand at Potgieter's Drift, and Clery has six or seven thousand at Frere. The programme is based on powerful flanking movements. At the moment when the western and eastern columns cross the Tugela, they will be separated by an interval of some 29 miles, but we presume that by the aid of wireless telegraphy they will be able to synchronise their movements, which, thereafter, will begin to converge. The rumours sent across the wires on the 15th instant, to the effect that a battle was raging at three points on the Tugela, were evidently founded on a knowledge of the fact that this scheme of combined operations was in progress, and on an expectation that the Boers would be found in strength at Springfield and Grobler's Kloof. It will be remembered that reconnaissances made some days ago showed the enemy to be in strong occupation of both places, as, indeed, might have been expected if they desired to prevent flanking movements on the part of the British. But they had withdrawn on each side and crossed to the north of the Tugela before the arrival of Buller's eastern and western columns. The state of the river may perhaps account for their retirement, but another hypothesis suggests itself, namely, that they are preparing to withdraw altogether from the neighbourhood of Ladysmith. A very few days must now show some vital developments. The fact that Warren's scouts found Colenso deserted has no special significance, for Colenso lies about a mile to the south of the Tugela, and it does not seem to have been occupied by the Boers in force at any time. We can not conceal from ourselves that this forward movement of widely divided columns, in the face of an enemy so mobile as the Boers, has its perils. But Buller probably reckons on the defect which the Boers have now abundantly displayed, incompetence for purposes of tactical offence. A French or a German army of mounted infantry as numerous as Joubert's forces would never allow two comparatively weak columns to perform flanking movements like those now in progress from the Tugela. It is true that Ladysmith greatly hampers Joubert's freedom. White is watching him intently, and if he attempts to lead twenty thousand men to an attack on either of the flanking columns, his absence will surely be taken advantage of by the vigilant garrison of Ladysmith. On the other hand if he allows the columns to get within easy striking distance, his defeat is tolerably certain. It is not oversanguine to say that the position in Natal has very greatly improved.

PROVINCIAL ZEALOTS AND THE RELIGIONS BILL.

The zealous disciples of the Shin sect in the Hokuriku districts have allowed themselves to be worked up to a state of intense excitement over the Religions Bill, now before the Diet. Monster meetings have been held in Kaga and Etchiu, and resolutions have been passed vehemently supporting the attitude assumed by the Higashi Hongwan Temple. It appears to us that this may almost be called an agitation against the Constitution, for, after all, the Bill does nothing more than translate into the form of legislative enactments the principle of religious liberty enunciated by the Constitution. Of course, we should be greatly wanting in one of the essentials of civilization—intellectual sympathy—if we failed to see that the Hokuriku folks have a point of view. If the British Government had asked Parliament, a century ago, to pass a Bill placing Buddhism, Brahminism, Mohammedanism, &c., on the same footing as Christianity *vis-à-vis* the law, Hyde Park and other places convenient for popular demonstrations would have been kept very busy. There is, in fact, absolute freedom of conscience in England and America, since every body of believers, whatever their creed, are at liberty to have their own place of worship and live in accordance with the tenets of their own faith, and the law extends to them precisely the same protection as it affords to Christians. But English prejudices had to be ground for a long time in the mill of education and enlightenment before they became sufficiently impalpable to permit such liberality. This is one of Japan's hard problems. We sincerely hope that she will be able to solve it calmly and satisfactorily.

Representatives of the Japanese Christians have had a meeting for the purpose of considering the Religions Bill, and have decided that, on the whole, it deserves support. They wish, however, to obtain some relaxation of the veto against religious ministers and teachers taking part in politics. Their view is that the veto should be limited to cases where the teacher or minister is a member of a political party. They also desire that the right of appeal to the Administrative Court should be provided in the event of dissent from a decision of the ordinary Authorities. Finally, they desire to remove the provisions relating to a religious council, and to the religious disability of persons who have been deprived of public rights.

The agitation continues against the Religions Bill. Its opponents are sending deputations to wait upon Ministers of State, and to threaten that, if it is pushed in the Diet, an extensive demonstration will be fomented in the provinces. Meanwhile Count Okuma has been speaking about it to a newspaper representative. He approves of it on the whole, but seems disposed to condemn some of its provisions as tending to carry administrative interference too far. Evidently the Bill is destined to be one of the problems of the time.

PRISON EXPENDITURES.

The *Official Gazette* publishes the newly passed Law, duly approved by the Sovereign, for transferring the Prison Expeditures to the charges of the Treasury. It is a matter for sincere congratulation that this much desired reform has at length been accomplished. One of the very first measures submitted by the Government to the Diet on its opening in 1891 was a Bill in this sense. The Authorities explained that their action, ten years previously, in making each commune pay for the prison in its district, had been necessitated by financial conditions connected with the resumption of specie payments. Theoretically they did not approve of the step, but had been obliged to take it, and they invited the House of Representatives to assist in inaugurating a sounder system now that the Treasury's affairs permitted it. But the House of Representatives, having no thought for anything at that time except the reduction of the land tax, witheld its consent, and although the Government introduced the Bill again session after session, only now in the fourteenth session has it been passed. However, better late than never. Unfortunately the funds at the Government's disposal do not allow it to make up for the lost time by vigorous action now that the prisons are transferred to its care. The new law becomes operative from the 1st of next October, but the means of giving effect to its provisions are not distinctly provided for on the revenue side of the Budget and will have to be found "some how or other." The Government will, therefore, have to go slow, but from next year we may hope that marked improvements will commence.

LAND TENURE IN THE FORMER SETTLEMENTS.

Tuesday, Jan. 16.

It appears that the foreign land-holders of Yokohama are by no means satisfied with the arrangement that has been made for the registration of transactions of sale, mortgage, or transfer. They have decided to hold a meeting for the purpose of considering the question. The difficulty seems to be that the Prefectural Authorities, on being asked to register a transfer, are understood to contend that they must convert the title into a superficies, inasmuch as the law makes no provision for its registration under the form of a perpetual lease. We imagine that there must be some misunderstanding in this matter. It was certainly the intention of the Authorities to get rid of all difficulties by the issue of the recent Ordinance, which removed the function of registration, in the case of these particular leases, from the Local Office to the Prefectural Office, and empowered the latter to register the title as a superficies qualified by the term "perpetual lease" in brackets. That, it is true, seems a somewhat round-about way of accomplishing a simple thing. It may reasonably be contended that if the Authorities were absolutely bound by the terminology of the law as it now stands—in other words, if they were obliged to devise a parenthetical method of differentiating the perpetual leases of foreign land-renters from the perpetual superficies of Japanese superficiaries—, the most satisfactory and straightforward plan would have been to submit to the Diet a new law making special provision for the registration of the Conventional perpetual lease as such. But if we look at the matter a little more closely, the present difficulty assumes very small dimensions. The Conventional land-lease is really a tripartite agreement, the parties being the Japanese Government, the lease-holder, and the Government of the latter's country. The Japanese Government, which owns the land, is bound by international contract—the treaty—to leave the foreign lease-holder in perpetual possession of the land without alteration of the terms of his tenure. Hence any attempt on the part of the Japanese Government to effect an alteration would be a breach of its contract with the foreign Governments. But unless the Japanese Government deliberately makes such an attempt, the foreign lease-holder can never be disturbed. That becomes at once evident if we consider the process that would be required in order to impose any legal restriction upon the perpetual leases. The Japanese Government, in its capacity of owner of the laud, would have to make formal application to a court of law, praying to have the terms of the perpetual lease reconsidered with a view to reducing it from perpetuity to a period not exceeding 50 years. Such application would at once constitute a violation of the Japanese Government's contract with the Government of the lease-holder's nationality, and is, therefore, out of the question. If the owners of the former Settlement lots were private individuals, then there would be a valid objection to registering the titles as "superficies" even with the parenthetical addition of "perpetual lease." But since the Japanese Government is the owner, all danger seems chimerical.

This argument applies equally, we think, to the mortgaging of land. The law provides that, in order to be valid against a third party, a mortgage must be registered. Hence, if a foreign lease-holder desires to obtain money from a bank on the security of his title, the bank may require, for its own protection, that the transaction be duly registered. In that case the land-holder, if we read the Ordinance aright, has only to hand the lease to the Prefectural Authorities, whose business it then becomes to enter the mortgage on the lease, and further to register the fact in the local office. There should be no tampering of any kind with the lease. It remains in its original form—a perpetual lease protected by treaty against all alteration for all time. The special terminology "superficies (perpetual lease)" has been devised, as we understand, simply for the convenience of the local registrars. If it be true, as rumour asserts, that the Prefectural Authorities, when application is made to them, refuse to effect any register unless the nature of the title be changed to "superficies" and the lease re-drafted accordingly, they are undoubtedly acting in violation of the treaties. But we are persuaded that some misunderstanding has arisen, and that the Prefectural Authorities do not intend to advance any such contention.

STATE RAILWAYS.

Tuesday, Jan. 16.

We presume that the question of the state acquisition of private railways will be again brought before the Diet this session. The advocates of the measure are not likely to let the matter rest, since, by the action of the House last session, the Representatives, at all events, stand pledged to the principle of State ownership. It is not easy to perceive the necessity for such a step, except on the single ground that it would be a method of freeing large sums of fixed capital. That the Japanese were destined to find themselves inconvenienced, sooner or later, by the steps they inaugurated some years ago in the matter of railway construction, every thoughtful person must have foreseen. They nevertheless chose the wise course, since the question lay between not having railways at all and having them on terms more or less embarrassing. Cheap foreign capital would have been the convenient alternative, but cheap foreign capital was not procurable, and so there was really no room for choice. If it is now found necessary to restore to circulation a part or the whole of the capital thus fixed, State purchase may be advisable. But the strategical reasons advanced in support of the scheme do not appear to possess much value. Japan has no more occasion than England has to trouble herself about strategical railways. We observe that the *Nichi Nichi Shimbun* strongly advocates a speedy decision, its argument in favour of expedition being that the railway companies, anticipating the transfer of their roads to the State, are deliberately neglecting all repairs, and thus, when the Government takes over the lines, it will find itself committed to a heavy initial outlay for the purpose of getting them into order. Each month of uncertainty that passes evidently increases the difficulty on that account. We do not doubt that the facts are as the *Nichi Nichi* represents them, but surely the Government, in taking over the railways, would have due regard to their condition? It seems to us that the danger foreseen by our contemporary could be obviated by the common-place precaution of examining the object of purchase before fixing the price.

Wednesday, Jan. 17.

There is a movement on foot for the formation of something like a very big trust among the railways of this country, The projectors of the scheme would probably object to have it described in such terms. Thay call it a "mixed organization" (*Kongo soshoku no Dai-tetsudo Kaisha*), and speak of it as a gradual means of realizing the programme for the State purchase of private railways. But to us it seems to resemble a plan for giving a fictitious value to railway shares in the interests of their holders. Briefly stated, the plan is that all the principal private lines in the empire should be at once amalgamated with the Government roads, the purchase price of their shares being fixed definitely with regard to their assessed value. The Government should then undertake to buy up the shares of any share-holder who desired to realise, paying ready money to the extent of the difference between the assessed value and the market value, and giving bonds for the remainder. In this arrangement the State lines would be capitalized, and their shares, similarly assessed, would be placed on the open market. There are other details, but what we have written will suffice to give an idea of the gist of the plan. It has been embodied in a Representation which will come before the House of Representatives in a few days with, it is understood, the support of the Liberals.

WHAT CENTURY?

Quite a keen controversy is being carried on by the vernacular press with reference to the nomenclature of the current century. Is it the nineteenth century or is it the twentieth century? That is the question about which the disputants do not seem able to make up their minds. There must be some solid basis for the contention of those who argue in favour of the twentieth century, but we have never been able to appreciate their point of view. Yet it appears to us that the matter is very simple, and that the demonstration is convincing. We have only to ask ourselves when the first century began. Did it begin with the year "0" or with about the year "1"? There can not be any doubt about the answer. No one ever heard of a year "0." Unquestionably the first century began with the year "1." And when did it end? Obviously with the year "100," for if it ended with the year "99," then the so-called "century" contained only 99 years. The first century, then, ended with the year "100," and the second began with the year "101." Similarly the third begun with the year "201"; the fourth with the year "301," and so on, until we come to the twentieth, which necessarily will begin with the year "1901." To say that the twentieth century begins with the year "1900" is to affirm that some one of the preceding nineteen centuries must have consisted of only 99 years.

THE SILK TRADE DISPUTE.

Saturday, Jan. 13.

The dispute between the Japanese and Foreign silk dealers in Yokohama is attracting some journalistic attention. It now appears that the question of excluding or including a fraction of weight represented by 0.125 of a catty, is only one of the counts in the quarrel. There are seven others, relating to inspection fees, weighing charges and so on, the whole constituting what the Japanese are disposed to regard as tradal abuses which ought to be remedied in connexion with Japan's recovery of her judicial and fiscal autonomy. The foreign merchants have replied to the Japanese communication in the sense that they can not agree to the proposed change in the matter of weights, and have postponed the consideration of the remaining points, but the Japanese want a comprehensive answer, and so there is something very like a deadlock. The *Shogyo Shimpo* laughs at the difficulty about such a bagatelle as 0.125 of a catty, but is disposed to maintain that the methods of conducting the trade need reform. though it deprecates heroic measures For our own part, the procedure of the Japanese seems to us more romantic than practical. It is all a question of charges. Then why not adopt the remedy which they have the power to apply at any moment, raise their selling prices by whatever fraction is necessary to cover the disadvantages under which they now claim to be labouring? Would not that be much wiser than to attempt a sweeping change of methods which have become habitual?

Monday, Jan. 15.

We learn from vernacular newspapers that an agreement has been arrived at by the foreign and Japanese silk-men of Yokohama on the basis of a compromise. Both sides would have suffered severely by anything like a deadlock. The loss to the Japanese in the matter of interest on silk sold but not yet taken delivery of, would have been about 450 *yen* daily, and the foreigners would have been unable to make the shipments contemplated by them.

Tuesday, Jan. 16.

It appears that the foreign merchants of Yokohama are not nearly so excited as the Japanese on the subject of the dispute in the silk trade. A member of the *Japan Mail* staff called yesterday on the representative of one of the chief export firms, and was assured that the matter was of very little real consequence.

"It is true," said the gentleman, "that various little attempts have been made recently to throw small obstacles in the way of trade. But they do not trouble us at all. For example, we have hitherto, in buying waste silk, been accustomed to have an allowance of 5 per cent. for dust and dirt. It is now proposed to discontinue this allowance. What is the result? Say we have hitherto offered 100 *yen* per picul for waste, with a 5 per cent. allowance for dirt and dust. Well, if that allowance is abolished, it will simply mean that we shall offer only 95 *yen* for the same quantity. It will be as broad as it is long.

"It is the same thing with regard to this other question of weights. Up to the present, the scales on which we weigh the silk were graduated to one quarter of a pound English. Say a lot of 248 lbs. of silk turned the scale at 248¼ lbs.; we paid for the extra quarter of a pound. If it scaled slightly under the quarter, we reckoned 248 lbs. Now since the first of January, instead of buying in pounds, and converting the total afterwards into piculs, we weigh it on Japanese scales registering by the catty, and graduated to a quarter of a catty. Now they want us to have fresh scales graduated to the 8th of a catty. Thus on, say, a transaction of 200 catties they would be able to charge us with the 8th of a catty instead of a quarter. It does not really matter two pins, so long as the rest of the trade agrees to it. If they try to squeeze us a little bit in that way, why, we simply offer them a rather smaller price. If we get an order from Europe to buy at 20/- the pound, we have to make allowances here so that we can make a profit at that figure, and that alone regulates the price we can offer, despite all these little attempts to squeeze here and there. It is simply another evidence of the peculiar ingenuity of the Japanese in creating small difficulties and haggling about trifles. It is in no way important."

Wednesday, Jan. 17.

It is reported that a decision has been arrived at with regard to the chief points of the dispute in the silk trade. With regard to the question of loss of weight from moisture the Japanese, it is said, agree to accept the proposal to refund all excess over 2 per cent. of loss in weight in conditioning. It is agreed that paper shall be weighed separately, and that ¾ per cent. shall be allowed for ties, instead of 1 per cent., which the foreign firms at first demanded. The foreigners, however, reserve the right of reopening this question. The question of discounts for cash payments is left open for the present, the Japanese demanding payment on the same terms as hitherto. The proposals as to scales are accepted by both parties, and the foreign firms have agreed to the Japanese demand for the abandonment of the custom of one skein in a picul free of charge. A separate committee of waste silk dealers has been formed to consider the proposed abolition of *gomikin*, or allowance for dirt and dust in waste silk.

LOCAL EXPENDITURES IN TOKYO.

In spite of the announcement that the Tokyo Municipal Authorities have decided to raise the rates of local taxation all round, leaving the Land Rate alone unaltered, since by law it is unalterable, there is a disposition in some quarters to urge the imposition of still higher taxes. The fact is that Tokyo, even after the proposed changes have been made, will still be more lightly taxed than Osaka—which city is beginning to be regarded as its rival—whereas, of the two places, Tokyo stands in much greater need of improvement. The *Shogyo Shimpo* roughly estimates that to accomplish the necessary works of drainage, harbour construction, road-making, and so forth in Tokyo, a sum of a hundred million *yen* would be required. Probably that is an over-liberal figure, but Tokyo has accomplished so little up to the present that one is perplexed to calculate the outlay lying before it, assuming that the citizens resolve to undertake reform in a really resolute spirit. The Municipal Authorities have not yet reached the limits allowed by law. They might take 50 per cent. of the State Income Tax and Business Tax, whereas they propose to take only 40 per cent. We are inclined to suspect that a different system of management would accomplish many of the reforms required without exposing the citizens to any additional levies. There is, of course, the difficulty that the city covers an immense area compared with the density of its population, and that, consequently, a great length of streets has to be kept in order with the taxes levied from a comparatively small number of residents. That is unfortunate, but it is an embarrassment that every year tends to diminish, for the limits of the city do not grow in proportion to the growth of its population: it is becoming more densely peopled every year. Meanwhile an incomparably greater drawback is the fact that the city authorities have not yet recognised the truth of the old proverb, "a stitch in time saves nine." No attempt is ever made to repair a road until an operation equivalent to remaking is necessary. Of course there never can be good roads so long as the present method of making them is adopted. But that is another question. If a regular and competent system of inspection was organized, and if small repairs were made immediately on the appearance of necessity for them, the city would have fairly good streets at a fraction of the present outlay.

TOKYO AND OSAKA.

Osaka is certainly making wonderful strides in the matter of population. Tokyo, also, is increasing very rapidly, but Osaka is at present distancing the northern city. The *Jimmin* publishes the following statistics showing the yearly growths of the two places since 1894:—

	1894.	1895.	1896	1897.
Tokyo.....	28.111	31.011	33.315	38.194
Osaka.....	5.996	16,506	249.635	59.311

The extraordinary figure for Osaka in 1896, a figure representing an increment of more than one-half of the total population in one year, was doubtless attributable to the effects of the war, which were felt much more vividly in Osaka than in Tokyo. The increment for 1897 was not so remarkable, comparatively speaking, but when we remember that the population of Osaka is now only half a million, in round numbers, the fact that it is growing at a rate which would double its total figure in less than nine years is sufficiently striking. There are, indeed, some folk who talk of moving the capital to Osaka, but as yet their suggestion is not seriously taken. It is, however, a matter of simple arithmetic that if each city maintains for 25 years the rate of increase recorded for 1897, both will have populations virtually equal, namely, 2 millions of souls. The *Jimmin*, doubtless with good reason, attributes the comparative slowness of Tokyo's development to want of enterprise on the part of the citizens. Thirteen years have elapsed since Mr. (now Viscount) Yoshikawa, then Governor of Tokyo, caused a Dutch engineer to compile a scheme of harbour improvement, yet to this day it remains uncertain what, if any, plan will be adopted, and in the meanwhile Osaka has progressed far with the building of its harbour, and Kobe is on the threshold of commencing. As for street railways, a crying need, the Municipality will neither permit the citizens to construct them, nor construct them itself. The *Jimmin* may well invoke the spirit of the old *yedokko*. It has, apparently, lost all vitality.

THE MILLER CASE.

Tuesday, Jan. 16.

A writer in the *Nippon*, signing himself "Morning Monkey," severely censures Mr. Takahashi for petitioning the Throne on behalf of the convict Miller. The petition claims, it will be remembered, that due allowance was not made by the law courts for the provocation that Miller doubtless received at the hands of persons so degraded as the two women and the man whom he murdered. "Morning Monkey," being able to read the petition in the original Japanese, does not fall into the error committed by some foreign critics, who, not being equally well informed, inferred that Mr. Takahashi invites the Emperor to commute Miller's sentence on the ground that the lives he took were comparatively worthless. Mr. Takahashi's plain intention is to contend that in intercourse with persons of that class, a man is likely to be excited beyond control, and that the fact should be taken into consideration in estimating the degree of his guilt. The writer in the *Nippon* points out that the principle alleged by Mr. Takahashi is totally unpractical. It would introduce a dangerous element of sentiment into the procedure of law courts. A tribunal of justice has to consider facts, not to speculate on motives. If it applies itself to the latter task, its functions become illimitable. "Morning Monkey" is very severe—rightly severe, we think—upon the other contentions advanced by Mr. Takahashi; especially upon his plea that as this event occurred on the very morn of the operation of the revised treaties, there had not been time for Miller to make himself acquainted with the laws of Japan. Mr. Takahashi advances that plea in a very tentative, half-hearted manner, and well he may. However, without further following the line taken by the writer in the *Nippon*, we desire to enter a protest against a statement made by him incidentally, that it is fruitless to think of the effect of these things on foreign sentiment, since in every case where a foreigner is on his trial, the foreign press is quite sure to pronounce him in the right and the Japanese in the wrong. Now it can not be denied that the writing of a section of the local foreign press warrants a Japanese in arriving at such a conclusion. But on behalf of foreigners in general we emphatically deny its justice. The writer in the *Nippon* is to some extent influenced by the criticism the Kent case evoked. Does he defend the verdict of the Court in the Kent case? Does he pretend for a moment that there was not a gross miscarriage of justice? Racial prejudice is very hard to put aside. We frankly admit that, as between a foreigner and a Japanese, the sympathies of foreign newspapers would, by first impulse, be on the side of their own national. Similarly, the sympathies of the Japanese would be on the side of theirs. But in neither case, we believe, would that racial feeling be suffered to obscure the ultimate verdict between right and wrong. It is not by attributing to foreigners in general the extreme prejudice of which a few are the victims that a broader and more liberal frame of mind can be educated.

Wednesday, Jan. 17.

In connexion with the Miller case an interesting point is raised by Judge Sato. It appears in a letter—seemingly an open letter—addressed by him to Mr. Kodama, Chief Judge of a Section of the Tokyo Court of Appeal. The Court of First Instance, in its judgment at Miller's trial, declared that the murdered woman had been carrying on a clandestine trade in the sale of liquor under the ægis of a foreigner's name, as was constantly done in Yokohama prior to the operation of the Revised Treaties and the abolition of Consular Jurisdiction. The Court of Appeal quashed this part of the finding, on the ground that the lower tribunal had not received any proof of the existence of such a state of affairs. Judge Sato ridicules such an objection. He says that the prevalence of this illicit trade in the Settlements is just as much a notorious fact as the defeat of Kusunoki Masashige at the battle of Minato-gawa or the tenure of the post of Minister President by Marquis Yamagata. Judge Sato is undoubtedly right. The question of licensing publicans pursuing their trade within the limits of the foreign settlement of Yokohama was one of the perennial difficulties of the old system. The very worst kind of abuses were practised in defiance of police authority, because a satisfactory solution of the problem of jurisdiction could not be found. It goes without saying that all foreigners of the better class condemned and regretted this state of affairs, and regarded "Blood Town" as a flagrant disgrace to an otherwise remarkably well conducted community. We trust that, under the new conditions, a more wholesome atmosphere will permeate the sinks of iniquity.

Thursday, Jan. 18.

The murderer Miller was executed on the 16th instant. The intention of the authorities to carry out the sentence of death at half-past nine on the morning of the 16th was not intimated to the Kajibashi House of Detention until half-past three on the afternoon of the 15th. It does not appear to have been expected, but the necessary steps to inform the prisoner and make all preparations were at once made. Miller received the fatal message with composure. He was very speedily visited by the Rev. Mr. Evans, who has attended him frequently since his condemnation. Mr. Evans remained with him a considerable time, praying and exhorting. According to the *Fiji Shimpo's* account, Miller groaned twice between nine and eleven o'clock, but thereafter passed a quiet night. He rose at six in the morning, as usual, and at half-past six, a breakfast of beef-steak, soup, and bread was served to him at the charges of the chief warder. Mr. Evans arrived soon afterwards, and accompanied the convict to Ichigaya Prison, where the execution was to take place. The party arrived there at eight o'clock, and proceeded to a waiting room in the immediate vicinity of the gallows. There the chief warder asked Miller whether he had any last message. Miller replied that he had no complaint to make as to his fate, but that he wished to leave a letter for his younger sister in America. He did not know her address, however, and he therefore begged that Mr. Evans would take charge of the letter and contrive to have it delivered. Writing materials were supplied, and he indited the letter, not without tears. Its text has not been made public, but Miller is understood to have written that, owing to his misdeeds in his own country, he had been long separated from his family and had not seen his sister for years. Now all hope of seeing her in this world was over, but not the hope that after his life of sin he might be born again into another existence and re-united with her and the other members of his family. After writing this letter and entrusting it to Mr. Evans, the unhappy man seemed to become more cheerful. He shook hands earnestly with the chief warder and Mr. Evans, and for a few minutes bore up bravely, but presently the tears that became his softened mood flowed freely. Grasping Mr. Evans' hand he passed to the fatal platform. Exactly at the appointed hour the veil was drawn over his head, and ten minutes later his lifeless body was placed in the shell for conveyance to Setagaya Jail cemetery, where it was interred. He left a sum of 2.07 *yen* to be distributed among the poor, and there is every reason to hope that through the ministrations of Mr. Evans he had been led to repent sincerely of his terrible crimes. It does not appear that the petition presented by Mr. Takahashi reached the Throne. If it did, the Emperor wisely rejected it. An impression had become prevalent that efforts were being made to postpone the execution of Miller's sentence until March, when an amnesty may possibly be proclaimed in connexion with the marriage of the Prince Imperial. In the interests of justice we can not but express satisfaction that the project failed, if, indeed, it was seriously entertained in any quarter.

Friday, Jan., 19.

Judge Sato continues to discuss in newspaper columns the decision of the Court in the Miller case, so far as it was adverse to his own judgment in the lower court. He makes some good points; as, for example, when he traverses the finding of the Appeal Court with reference to the circumstances of Ward's murder. The Yokohama tribunal concluded that Miller first struck Ward as the latter lay asleep, the blows being delivered on the left side of his head; and then, as Ward fell off the couch, further blows were planted on the back of his head. These further blows seemed of much importance in the eyes of the Appeal Court, and it reversed that particular part of the lower tribunal's finding on the ground that no proof had been forthcoming of the delivery of the blows as described. Mr. Sato naturally ridicules such extreme attention to minutiæ, but to us, as onlookers, the whole discussion seems trivial, not to say undignified. There is a tendency, we think, on the part of the Japanese to lose themselves in details; to allow their mental horizon to be narrowed unduly by formalism. Every one is agreed that substantial justice has been done in Miller's case: the petty details are unimportant. We doubt, too, whether the columns of the newspaper press are the best place for conducting judicial controversies, though we do not fail to appreciate the spirit of keen analysis which Japanese judges are evidently bringing to the discharge of their duties. Perhaps, too, these discussions will have a wholesome effect in directing public attention to the procedure of the law courts. One of Japan's greatest administrators, Hideyoshi, the *Taikō*, maintained that a knowledge of the law was superfluous for every-day folks. Only those that applied the laws were required, according to his theory, to know anything

Digitized by Google Original from CORNELL UNIVERSITY

about them. The Tokugawa Government acted on the same principle. It made no attempt to compile an intelligent system of laws, but merely issued edicts, from time to time, containing such vetoes as the needs of the moment dictated. Under those circumstances a Judge had to be guided, for the most part, by the dictates of innate justice and common sense, rather than by the letter of the law, and the general body of the public took no interest whatever in legislative questions. In some respects it was a happy state of affairs, but that it was altogether wholesome can scarcely be maintained. Perhaps Judge Sato wants to awaken his fellow-countrymen from their mood of indifference. If so, we admire his courage, for he must know that his discretion will be seriously questioned.

ICHI-I NO TSUBONE.

It is announced that Lady Nakagawa, generally known at Nii-no-Tsubone, mother of His Majesty the Emperor, is dangerously ill. She was attacked by influenza ten days ago, and in spite of the efforts of several eminent physicians, among them Dr. Baelz, the disease invaded the lungs. On the 15th instant, a gazette appeared raising her to the rank of *Jiuichi-i* (second grade of the first class) and the honour is interpreted to mean that the case is hopeless, if, indeed, it has not already ended fatally. Lady Nakayama is in her sixty-sixth year. She is the second daughter of Marquis Nagayama Tadayoshi, representative of one of the great families of the Court Nobility; a family in which the high office of *Dainagon* was hereditary for many generations.

We are informed that Madame Ichi i no Tsubone did not die, as was generally supposed, on Wednesday in Tokyo. On the contrary, a slight improvement took place in her condition on the 17th instant, though she is not by any means out of danger.

THE JUDICIAL OFFICERS SENT ABROAD

It may be remembered that, some months before the date fixed for the operation of the Revised Treaties, a number of Japanese Judicial officers were sent abroad for the purpose of acquainting themselves with the procedure of foreign tribunals of justice. They visited India, France, Belgium, Italy, and England, and some returned *vâ* the United States. One of these travellers, Mr. Nagamori, Public Procurator, has just reached Tokyo, and the others are expected in a few days. It is understood that they have collected much useful information on their tour.

INTERVENTION.

A telegram, set in doubly leaded type, is published by the *Asahi Shimbun* to the effect that Germany, France, and Italy are showing a disposition to intervene in the South African war, in view of its becoming protracted. There does not appear to be any valid ground for such a rumour. We should certainly have heard about it from other sources had it been upon the tapis.

THE PEST.

Monday, Jan. 15.

The implacable Pest has now attacked the mother of the third physician who fell a victim to the malady. She is a lady 66 years of age, and her chances of recovery are slender. It is further stated that a concubine of the same doctor shows suspicious symptoms. The three physicians, their three wives, the mother and the concubine of one of them, the *jinrikisha*-drawer of another—evidently the disease is not to be checked when once it gains a footing.

Since writing the above, news arrives that the old lady has died of the disease. Thus the three doctor, their three wives, and the mother of one of them have perished. But no fresh cases are reported from Osaka.

Wednesday, Jan. 17.

The Chief of Police in Tokyo has issued instructions to the managers of all the railways within the limits of the *Fu*, in the sense that stringent precautions must be adopted against the advent of the Pest. Very minute regulations accompany the order; regulations which, if carefully observed, ought to prove effective. Meanwhile we are happy to say that no fresh case is reported from Osaka or Kobe.

One of the Japanese physicians engaged in combating the Pest at Newchwang reports a very unusual case. A boy of 15, serving as attendant in the sanitary office, developed a small swelling under the arm. For twenty-four hours he remained entirely without fever or inconvenience of any kind. Then violent fever suddenly declared itself, and he soon died. The *post-mortem* showed bacilli in the swelling, but none in the blood. The exceptional feature of the case is that, under ordinary circumstances, no swelling makes its appearance until after high fever has set in.

Rats sent to the various police stations in Yokohama since the regulations came int force are :—

Bluff Police Station	120
Kotobukicho Police Station	68
Isezakicho Police Station	15
Kagachu Police Station	32
Water Police Station	6
Total	241

Tokyo newspapers are very emphatic in their expressions of gratitude for the benevolent conduct of the Governor-General of Indo-China. We stated in a previous issue that, at the suggestion of His Excellency M. Harmand, the French Representative in Tokyo, the Governor-General had forwarded a considerable quantity of anti-Pest serum for use in Japan. This consignment was made at the expense of the Governor-General himself. Subsequently the Japanese Sanitary Authorities signified their desire to procure a further large quantity of the serum and solicited the good offices of M. Harmand for that purpose. M. Harmand at once telegraphed to Saigon, and received a reply that a considerable quantity of serum was already on its way to Japan; that it had been shipped free of charge to the Japanese, and that all future needs would be supplied on the same generous terms. We congratulate M. Harmand and the Governor-General on the thoughtfulness and sympathy that have marked their action in this matter, and also on the satisfaction they must feel in being able to render substantial assistance at such a crisis.

Thursday, Jan. 18.

Osaka has now had four days without any recurrence of the Pest. Hopes are entertained that the disease has spent its fiercest energy. Dead rats whose carcasses contain the bacillus are still found, however, so that confidence would be premature. Osaka's record since the presence of the plague was definitely recognised has been 42 cases and 41 deaths. We have never previously heard of such a rate of mortality. It is probable that many cases occurred before the diagnosis announced Pest, and that they were attributed by ill-informed local practitioners to acute inflammation of the lungs or some other of the comparatively ordinary maladies.

A report comes from Mito that a suspicious-looking bacillus has been found there in the bodies of dead rats. We are not sufficiently familiar with the subject to be able to estimate the significance of a "suspicious-looking bacillus," but we find it difficult to conceive that the Pest should have made its way so far north as Mito without invading any place *en route*.

THE MITSU BISHI BANK.

The accounts of the Mitsu Bishi for the second half of 1899 show the following figures :—

	Yen.
Gross Profits	825 716
Brought forward from last account	766 874
Total	1,592.590
Expenditure and Losses	668,014
Net Profit	924.576
Dividend	50,000
Carried to next account	874,576

This statement has attracted considerable attention as showing the extraordinarily conservative character of the Bank. With a net profit of 157,702 *yen* for the half year, only 50,000 *yen*, or less than one-third of the total, is taken for dividend, and the remaining 107,702 *yen* is carried over to the next half-year, so that the accumulated profits now aggregate 874,576 *yen*. Such methods can not fail to obtain public confidence, and that they have attained it is shown by the amount of the Bank's deposits as compared with those of any other institution in Japan :—

Deposits.	Yen.
First Bank	1.452,500
Third Bank	3 376 355
Fifteenth Bank	9.109.577
Twentieth Bank	1,177.292
Twenty-seventh Bank	1,044,106
One hundredth Bank	5.208 195
Mitsu Bishi Bank	10.411,688
Mitsui Bank	8 518 010
Yasuda Bank	7.874,692
Imperial Industrial Bank	7,848.772

These figures are made up to the 13th instant. It is noted with regard to the Mitsu Bishi Bank that it has been chosen as the depository of the two million *yen* put up by the American firm interested in the Tobacco Trust of Murai Brothers.

For the convenience of soldiers in South Africa, a "Field Correspondence Book" has been invented by a London Wesleyan minister. It consists of a batch of perforated sheets in card covers, and gummed so as easily to be made up in a letter. The Queen's printers are supplying the books, which have been welcomed by the War Office authorities.

"SOLICITED RELICS OF JAPANESE ART."

The second part of this magnificent publication has now appeared, and will be heartily welcomed by all lovers of Japanese art, or, indeed, of art to whatever nation or clime it belongs. The editor, Mr. Tajima, has changed his plan of procedure, as the following notice shows:—

In the introductory notes to the first volume we stated that in arrangement we should observe the following general order: 1. chromo-xylographs, 2. photographs from statues and paintings of sacred Buddhist subjects, 3. works illustrating the history of Buddhism, 4. portraits and paintings of landscape or natural objects, 5. architecture, mostly from Buddhistic temples. But we now think it better to arrange all the reproductions according to the dates of the originals. As to some of uncertain date we follow the general opinion of connoisseurs. The order in the last 500 copies of the first volume has been altered according to this plan. Purchasers of the earlier copies will receive gratis the new list of contents at the completion of the publication.

Opinions many differ as to the wisdom of this change. Of course, the ideal arrangement would be to have each subject treated separately and chronologically, so as to exhibit its gradual development on independent lines. But we admit that the method now chosen by Mr. Tajima has many advantages, and, at all events, there is no room for criticism in the presence of this beautiful and most attractive volume. It contains 39 full page pictures, five of which are chromo-xylographs and the remainder collotypes. They range from the celebrated mural paintings of Horiuji, to some of the master-pieces of Kano Tanyu and Ito Zyaku-chu. Several works by great Chinese artists are shown. They add much to the interest of the collection and assist the reader to trace the immense, the dominant, influence, that Chinese art exercised in some spheres of Japanese. We observe that Mr. Tajima has no hesitation in tracing the mural paintings of Horiuji to a Korean. That is the tradition, undoubtedly, but it is a tradition that we have never been able to credit in the complete absence of any evidence that works of similar merit were ever executed by Korean artists in their own country. The same readiness to accept tradition has led to a theory that many of the noblest glyptic specimens of the Tempyo and Nara epochs were the work of experts from the neighbouring continent. But is it not difficult to suppose that if Chinese and Korean artists possessed this admirable skill, they never exercised it in their own countries? Before the Chinese painter we bow with all reverence. He had no equal, in some respects, the world over. But why should the only great sculptors that China or Korea ever produced, have come to Japan and bequeathed to this country the unique results of their genius? That is the question we have to answer before we accept the doctrine that the noblest master-pieces of ancient Japan were from foreign hands. When anything comparable is found in China and Korea, there will be less difficulty in applying this doctrine of oversea provenance to the genius that enriched the temples of antique Japan. However, without pursuing that difficult question, we confine ourselves to saying that this volume, which owes, perhaps, as much to the beauties of Mr. Ogawa's photography as to the discriminating choice made by its editor and his excellent descriptions—concise yet full of information—will be a revelation to many whose acquaintance with Japanese art has been confined to the *Ijin-muki-shina* seen in the Settlement marts and to the specimens displayed at the periodical exhibitions of "art industry." We heartily congratulate all those concerned in the work, not forgetting the Tokyo Tsukiji Type Foundry, which has done the printing in admirable style. Some of the English composition of Volume I. was open to criticism, but no fault whatever can be found with Volume II. on that score.

FORMOSA.

Monday, Jan. 15.

Formosa is again unquiet. The telegraph recently reported that a raid had been made by Formosan bandits upon the local office at Mato and that they carried off a sum of over 3,000 *yen*. Their success appears to have inspired imitators, for it is now stated that no less than three localities in the south of the island are in a disturbed condition, and that the authorities contemplate what is called a *dai-sōji*, or big cleansing. There have been many *dai-sōji* already, but the cobwebs of lawlessness and disaffection seem to accumulate almost as rapidly as ever after the operations. There is something amiss. Persons who have a right to be considered competent judges say that the Japanese are attempting an impossible task—impossible, that is to say, unless it is to be consummated by measures of extermination which can not be seriously contemplated. The Japanese are trying to organize an efficient system of government without the cōoperation of the local Chinese. That is certainly not what the British would do had they to deal with similar conditions, and the British have been fairly successful in their methods of colonial government. The Japanese seem determined to discover a new route to salvation, and while we have respect for their ability to solve problems of finance and administration generally, we can not but think that to follow the well-trodden path of precedent would make for the greatest happiness of the greatest number in Formosa.

Thursday, Jan. 18.

The rebels of Formosa have the credit of devising one of the quaintest reasons hitherto advanced in justification of insurrection. They applied to the Japanese Authorities for a loan of 40 rifles, and, on being refused, announced their intention of attacking the local office. They had not carried out their threat at the date of latest advices, but the neighbourhood of Ako, where they have their habitation, is said to be in a very disturbed condition. It is a mixed story, and we strongly suspect that it was the peace-loving section of the people who asked for the rifles to protect themselves against the bandits.

Considerable success seems to be attending the Japanese Government's experiment of enrolling its Formosan subjects for military service. The plan is to take the men in a tentative way at first, and if, after a certain period of trial, they give promise of justifying permanent employment, they will be duly drafted into the corps which has acted as their training school. The first announcement of the project did not elicit much response, but when the time came for closing the list, there was a rush of applicants, and the Authorities had ample latitude of choice. Two hundred and seventy-five have been enrolled, 100 for the First Brigade, 80 for the Second, and 95 for the Third.

KOREA.

Various rumours are circulated about Korean affairs. They are based on the fact that Mr. Kim Jo-il has been despatched on a secret mission to St. Petersburg. Some say that Kim is authorized to ask for a Russian guard of from three thousand to ten thousand troops, who shall be stationed in Korea; others, that all the coast from Hangyondo to Chollado is to be thrown open, Russia receiving two or three ports there; others that a loan is to be sought from Russia, one of the Korean provinces being pledged as security, and so forth and so on. We need scarcely say that none of these tales can be considered worthy of credence.

Another and less sensational statement is to the effect that the Russian local Authorities have been approached with reference to the fishery privileges enjoyed by Japanese subjects in Russian waters. At present a Japanese has to pay 7 roubles for a license which a Russian can procure for 5, and the right of priority is also given to the Russian in all cases. The Japanese Government naturally desires to obtain equal privileges for its people.

It appears that the Minister of Foreign Affairs is to be the object of attack by the Progressists so soon as the Diet opens. A series of questions are to be propounded by the Progressists—what steps are contemplated with regard to the Sōul-Fusan Railway, one half of the time covered by the concession having already expired; what measures are adopted for promoting the interests and protecting the lives and property of the twenty thousand Japanese subjects now in Korea; what is the state of affairs with regard to Masampo: how Japanese fishery rights in Korean waters are guaranteed; what is being done to further the progress of military organization in China; why no steps are taken to assist the development of Japan's newly acquired settlements in China; whether, in view of the activity shown by European Powers in obtaining privileges in China, precautions are adopted to guarantee Japan's interests, and so on. In fact the Progressists seem disposed to open up the whole question of the Cabinet's policy *vis-à-vis* China and Korea. It is supposed, we presume, that some good results will ensue from this process of questioning, but generally the business seems to end in a mere interchange of generalities and bootless protests.

The present idea with regard to the Sōul-Fusan Railway is to get the Government to guarantee 5 per cent. interest on the capital—25 million *yen*—and to raise the money abroad, the Japanese shareholders taking one tenth of the amount by paying up 5 *yen* on each 50-*yen* share. The *Asahi Shimbun* insists that the Treasury would be put to very little expense by this arrangement, as each section of the line would certainly pay immediately on being opened.

The projectors of the Sōul-Fusan Railway, headed by Messrs. Shibusawa Eiichi

Digitized by Google Original from CORNELL UNIVERSITY

and other prominent men, have put up a sum of sixty thousand *yen*, and are resolved to proceed with the preliminary surveys, so that they may have definite bases for an appeal to public opinion in Japan. The Government shows much disinclination to assume any financial responsibility in connexion with the line, and without some sort of guarantee for the Treasury, there is, of course, very little hope of obtaining the necessary capital.

THE KOBE WATER WORKS LOAN.

Vernacular newspapers announce that the efforts of Mr. Yamamoto, President of the Kobe Chamber of Commerce, to effect a compromise in the matter of the loan of one million *yen* contracted for by Mr. J. R. Morse for the use of the Water-works, have proved unsuccessful, and that nothing now remains except to carry the case into Court. We sincerely trust that no such suicidal course will be adopted. The facts of the complication, so far as we are familiar with them—and we have every reason to believe our knowledge accurate—do not leave room for the remotest doubt that right is on the side of Mr. Morse, and that if the question be carried before a legal tribunal, and thus submitted to the verdict of the public, incalculable injury will be done to Japanese credit. We do not mean to suggest for an instant that the Kobe Authorities acted deliberately in bad faith. On the contrary, we are quite persuaded that their intentions throughout were perfectly straightforward and upright. But they made an agreement which they could not obtain official *sanction* to implement, and if they attempt to enforce one side of the covenant after failing to carry out their own, the consequences will be serious for their reputation. We speak without favour or partiality, and of course we do not pretend that our judgment is infallible. But we have no hesitation in saying that the facts as we know them are incontrovertible, and that we should be acting a very unfriendly part to the Japanese if we failed to warn them of the impression that must be produced on foreign opinion by carrying this affair into the law courts.

NOTES ON CURRENT EVENTS.

The Governor of Fukuoka Prefecture telegraphs that a hundred Korean castaways have reached Obama in Wakasa. No other particulars are given.

Two appeals made by foreign merchants of Yokohama against decisions of the Customs Authorities in matters of tariff, have been decided against the appellants by the Finance Department. The first related to the import duty on combs; the second to that on Italian cloth.

There is talk, apparently authentic, of Count Matsukata's making a trip to Europe and America after the Diet rises next month. It is added that His Excellency will conduct investigations into the financial administration of the various Courts of Europe during his tour.

The keen competition that has been carried on for some time between the Osaka Shosen Kwaisha and the Douglas S.S. Company on the Formosa-Amoy line, has terminated in the withdrawal of the Douglas Company. So, at least, Japanese newspapers affirm, and they add that the Douglas Company has offered its steamers for sale to the Osaka firm.

The Welcome Society has issued a beautiful New Year's souvenir in the shape of a miniature desk screen, decorated with chrysanthemums on one leaf and cherries on the other. The drawing and colouring of the pictures are excellent.

Last year, the great Mitsui firm sent abroad ten students to study the commercial conditions existing in China. This year, ten more are to be sent. They must be graduates of a Middle School, or of some institution having a corresponding educational status.

The Directors of the Osaka Shosen Kaisha are about to ask the shareholders' permission to raise the capital of the company to eleven millions of *yen*, and to sanction the raising of 2 millions on debentures. They also propose to establish branch offices in Takow and the Pescadores.

We have received the Calendar of the Alliance Marine and General Assurance Company, which has its head office in Chapel Court, London, was founded in 1824, is represented in Yokohama by Messrs. Samuel Samuel and Company, and has for President the Right Hon. Lord Rothschild.

It is stated that the Budget Committee of the House of Peers has now completed its investigations, and that the House will be advised to pass the Budget in the form of its adoption by the Representatives without any amendments. If so, the Government will be able to congratulate itself on having carried its financial measures with unprecedented ease.

We observe with satisfaction that the *Jiji Shimpo* and the *Chuo Shimbun* combine to inaugurate a vehement campaign against the officials charged with the management of Tokyo's municipal affairs. They call the capital nothing but a huge country village, and declare that its condition is a disgrace—criticisms which no one can deny.

Under the heading "Important Instructions to Mr. Hayashi," the *Japan Herald* publishes what professes to be a verbatim transcript of instructions given to Mr. Hayashi, Japanese Minister to Korea. The story is a pure invention, and we can not but express astonishment that statements which obviously carry their own refutation should have been thus deliberately advanced as genuine.

We are asked to give notice that there will be a slow bicycle run to Ichikawa and back—the round journey making about 20 miles, on Saturday, the 20th. Any lady or gentleman desiring to join is cordially invited. The start will be from No. 8, Tsukiji, at 2 p.m. sharp. On the following Saturday (27th), there will be a run from Yokohama to Tokyo, starting from Yokohama Station at precisely 2 o'clock.

According to Japanese journals the arrangements for the tobacco trust in Kyoto are now complete. The capital is to be 10 million *yen*, of which the American firm puts up one half. Mr. Murai Kichibei will be the head of the concern in Japan, with a salary of thirty thousand *yen* annually, and there will be an American business manager and a Japanese business manager. This is the first example of a big combination between foreigners and Japanese for commercial purposes, and the course of the experiment will be watched very closely.

We learn that Mr. A. R. Brown is on his way out to Japan. The news will be welcome to his many friends. A number of years have passed since he left Japan, and during that time he has acted as the chief agent of the Nippon Yusen Kaisha in England, adding always to the high reputation he already possessed as a competent man of business.

The *Nichi Nichi Shimbun* has a telegram from Söul which says that the Korean Budget for the next financial year shows an expenditure of 6,900,000 *yen* and an income of only 5,200,000 *yen*. There is no apparent means of making good the deficiency, and it has therefore been decided to abandon or suspend all the new undertakings. Korean finance must be very badly managed if only five hundred thousand pound sterling can be obtained annually for the uses of the State. We presume that this deficiency is responsible for the rumours recently circulated as to an application from Söul to St. Petersburg for a loan.

Reports of heavy snow-falls come from Naoyetsu and Iwate. In the former prefecture interruption of railway traffic and the derailing of a train took place on the 15th instant, but there do not appear to have been any accidents to life or limb. In Iwate the date of the fall was the 10th instant. The snow is said to have accumulated to a depth of 4 feet, a fall unprecedented for many years. Roofs were crushed and telegraphs broken. The Governor's message—delayed, doubtless, owing to the latter cause—says that investigations are in progress to ascertain the amount of damage.

We invite our readers' attention to the fact that a charity concert is to be given in the Central Tabernacle, Tokyo, on the evening of the 20th instant, and that the proceeds will be applied to the work of the Tabernacle. We have so often alluded to this institution and the admirable work done by it that no further description is now necessary. From the advertisement which we publish elsewhere, it will be seen that the Meiji Ongakukai furnishes most of the programme, assisted by Mr. Cowan, Mr. Gauntlett, Mr. Nishi of the Imperial Household Department, and others.

According to the *Asahi Shimbun*, there is a strong tendency among the Liberals to reorganise the Party with Marquis Ito for President and Count Itagaki for Vice-President. This idea is said to be favoured alike by Mr. Hoshi Toru and Mr. Hayashi Yuzo; in other words, it has the approval of the rival sections. Very likely it has, but we can not choose but smile at these re-iterated projects for disposing of Marquis Ito. Their details vary in a not uninteresting manner, but their results have a wearisome sameness—Marquis Ito won't.

We learn from the *Jiji Shimpo* that of the 12 Torpedo-destroyers ordered by Japan in accordance with the *post-bellum* programme, six have already joined her navy, and five others will very soon arrive. Among the latter, the *Akebono* has nearly completed her outward voyage; the *Sasa-*

nami, when last heard of, was in the Indian Ocean: the *Kaguro* had reached Perim; the *Oboro* was preparing to leave England, and the *Niji* was almost ready to be handed over to the crew sent to navigate her out. The *Usugumo* alone will be a little delayed.

The *Fiji Shimpo* says that the Russian Authorities have made application to the Foreign Office in Tokyo with the object of ascertaining whether and on what terms Japanese labour could be obtained for the construction of the East China Railway—*i.e.* the line through Manchuria to Port Arthur. The Foreign Office is reported to have replied that there would probably be no difficulty in obtaining labour, but that, as to terms, the best plan will be to ascertain them in the localities whence the labour is drawn. It will be a curious turn of the wheel of fate if the Japanese lend practical assistance to secure Russia in the occupation of the territories from which this country was ousted by the same Russia four years ago.

There appears to be quite a strong agitation against the Government's proposed amendment of the Game Law. A meeting of persons interested in the pursuit and preservation of game was held on the 11th instant in Tokyo, and was attended by representatives from shooting clubs all over the empire. About a thousand were present, and the unanimity of their proceedings amounted to a very pronounced demonstration. They want to have the present game law not only left unaltered but also strictly enforced. We have not heard what is the nature of the changes contemplated by the Government, but we presume that the matter will be re-considered in view of this protest on the part of persons who must be presumed to have an intimate knowledge of the subject.

Interviewed by a representative of the *Kokumin Shimbun*, the Prime Minister states that he has no intention of resigning at present. From the time that he accepted office, he has always been ready to resign at any moment should it appear that he was occupying the post to the exclusion of younger and abler men. But it does not seem that there is any one to-day ready to accept the responsibility of leading the Cabinet, and, until such a person presents himself, the Marquis deems it his duty to discharge the functions entrusted to him by the Sovereign. The legislation successfully carried through the thirteenth session of the Diet was of a nature to place the programmes of Army and Navy Expansion on a sure footing, and it is now the Prime Minister's desire to push the solution of the religions' problem to an equally thorough solution.

The *Mainichi Shimbun* advances a singular statement. It says that the object of the Minister of Education in issuing his celebrated instruction with reference to religious teaching in private schools was to embarrass the schools of the Greek and Protestant Episcopalian persuasions, rather than to put obstacles in the way of the schools of other sects, which, by comparison, are approved. But the practical operation of the instruction has defeated that purpose, for the faculties of the Greek and Protestant Episcopalian institutions have adroitly contrived to evade the veto, by making their religious teaching an individual matter, outside of school hours and courses, whereas the others, more honest—"foolishly honest" is the exact expression—have closed their schools in despair, or are preparing to close them. Where is the rationale of such talk? How can it be imagined that the Minister of Education expected his instruction to have discriminating effects in favour of one sect against another.

It is stated that a machine for making Japanese paper has been invented. The process at present adopted is to dip a sieve into the lye, of which a sufficient thickness is thus detached. The sieve is then dried, and the paper is removed sheet by sheet, hand-labour alone being employed. This is the *tegoshi-kami*, or hand-sieved paper, sold as *hanshi* and *minogami*. The new machine dispenses with hand-labour. It draws a band, 6 sheets in width for *hanshi* and 5 sheets for *mino-gami*, to a length of 360 yards, and the result is a cheapening of manufacture by 25 per cent. The inventors are Mr. Iwade Tosui, a mechanical engineer who has been educated in the United States, and Mr. Hirai Nakakichi, a working artizan. They have taken out patents, and talk of organizing a company with a capital of half a million *yen*.

THE BOOKSHELF.

Out of the Nest; *A Flight of Verses*: by Mary McNeil Fenollosa.

THIS book has given us almost unalloyed pleasure. We do not say absolutely unalloyed pleasure, because Mrs. Fenollosa has two moods, and both are not equally attractive. She sometimes paints word pictures in the style of Swinburne, and sometimes chooses the limpid simplicity of Longfellow. We prefer her greatly in the latter vein. Swinburne is gifted with power to show a gleam of rainbow thought reflected among the threads of a rushing cascade of words, the glory of the idea and the swirl of the language enhancing, not confusing, each other's effects. But even Swinburne is occasionally turgid and not always free from artificiality. We find the same defects in Mrs. Fenollosa's Swinburnian verses. For example:—

"Sing me a song of the human soul,
Bound fast to a rolling year,
The living breath of a baffled death,
The wick of a rimless sphere;
Great memories writ on a fading scroll,
Pale pangs of a nameless need!
Sing me a song of the human soul!"—
I gave him a lotos seed.

We have the torrent of words here, but not the rainbow of thought. At all events, if it be there, the colours escape ordinary observation, for, look as closely as we may, "the wick of a rimless sphere" conveys nothing to our understanding, and we can not but wish that whatever is "writ on the fading scroll" were indited a little more lucidly. Turn, however, to Mrs. Fenollosa in her other mood, and see how delightful she can be:—

ENVY.

They laid her in that narrow, sunken bed,
Fair daughter—sister—bride,
And I—unloving and unwed,
I stood beside.

The piteous cries of those assembled near
But mocked her peace.
I thought, "Alas! were I but lying there,
All tears would cease."

I almost hated her, that she should lie
So mute and still,
Filling a grave she could not crave, that I
So longed to fill.

They left her there, beneath the flowers' perfume,
Hallowed f·rever more.
I crept back to my solitary room,
And locked the door.

As an expression of simple, unaffected pathos this seems to us most effective. The lines have a sound of genuine suffering. And again this, the last poem in the volume:—

THREE WOMEN.

I know three women. One is brave, and strong
To lift calm eyes beside her chosen king.
Upward they toil, nor scornful whispering,
Nor dull indifference, nor suffered wrong.
Can baulk their striving; but, the way is long.
The next is wild and free; and, as a wing
May cleave the azure of a prairie's ring,
Her mateless soul would cleave the rim of song.
The third is gentle, hushed in quiet needs,
A brooding bird among the water-reeds.
Love is her heaven; and, where it mirrored lies,
Lean the blue blossoms of her children's eyes.
"Clear types," you say, "and strangely set apart."
Look deeper, friend, 'tis but one woman's heart.

Do not these verses come straight from the heart? If they are inspired by the mere romance of the singer, she has a wonderful insight and a wonderful power of seeming to take the reader into her confidence.

Apart from its purely poetic merits this little volume has a special interest for us in Japan. Mrs. Fenollosa's sojourn in Tokyo has suggested thoughts which find expression in several of her pages. She gives us a few verses "from the Japanese"—verses deliciously turned though not easily identifiable. Two of them, however, are perfect in their way; true reflections of those swift, delicate little sketches, those fragments of fancy, which constitute the bulk of Japanese poetry:—

PARTING.

(*From the Japanese*)

That night we met, to meet no more,
The very moonbeams listened.
Was it the dew upon her sleeve?
Or tears,—or tears that glistened?

A FRIEND.

(*After the Japanese*)

The drooping plum-tree meekly bears
The snows that mock her coming bloom.
But, ah, her friend, the nightingale,
Leaps to her bough, and sings perfume.

We must confine ourselves to two more quotations from among many pieces of varying beauty:—

TO A JAPANESE LADY OF HIGH RANK.

Fragile waxen dream of woman,
Cold, inscrutable, unhuman;
Ivory skin too dense for veining,
Hair like deepest shade remaining,
Tiny lips gold-tipped with silence,
Sealed to feminine beguilance;

I can dream that men may love thee.
But will all their loving move thee?
Can a heart sincere or tender
Beat beneath that garment's splendor?
Rich with gold the gorgeous sheathing;
Is it warm above thy breathing?

Art thou made of dew, and shimmer
Of the moon where snow crests glimmer?
Wrought of pure and scentless flowers
Stilled in hush of starlit hours;
More than these, the smile mysterious
'Neath the level lids imperious.

THE SAMISEN

Pensive she marks them as they go,
Her mother, sisters,—all
With happy heart and voice to join
The village festival.
Meek were the looks O Kiku wore
At time of starting, when
She plead to stay, that she might play
Her little samisen,
Plink! Plunk!
Her little samisen.

Digitized by Google
Original from CORNELL UNIVERSITY

Alone within the quiet home,
Her samisen on knees,
She bends a tiny listening ear
To tune its vibrant keys.
She sings a lay of chivalry,
Of spring, of flowers, and then
A song of love she breathes above
Her little samisen,
Plink! Plunk!
Her little samisen.

The bamboo fence is thick and tall,
The gates are all of stone.
Besides, how could young Tora know
That she sang there alone?
Yet wondrous are the ways of maids,
And stranger those of men.
In little space, a boyish face
Bends o'er her samisen,
Plink! Plunk!
Her little samisen.

And life holds love in harmony
Until the scrape and clack
Of sandals at the outer door
Proclaim the revellers back.
And, coming in the room, they see,
As modest as a wren,
O Kiku fair, a playing there
Her lonely samisen,
Plink! Plunk!
Her little samisen.

The Nonsense Blue Book; London, *The London Letter* Office.

THE *London Letter* has re-printed, in book form, the "lear-ics" which appeared in its pages from time to time during the past year. The resulting "Nonsense Blue Book" is capital fooling, and that it is appreciated by the British public appears plain from the fact of its having already run through four editions. Of course the fun of the "skits" depends to a considerable extent on the illustrations, but even without seeing the picture of the stolid, imperturbable John Bull, who, seated on a box containing his "policy," is shrieked at, raged at, and stormed at by furious foreigners, one can laugh at such a verse as :—

"There was an old insular sage,"
"Who grew cusseder still in old age;"
"When they shrieked 'Are you dumb?'"
"He only said, 'Hum!'"
"Till they burbled and blithered with rage."

There is a page that our American friends also will appreciate. It represents Uncle Sam performing a *pas seul* on a particularly ricketty chair. He wears a garment made of stars-and-stripes stuff, and a waistcoat on which are embroidered "Cuba, Philippines." Two of the usual Book-of-Nonsense type of individuals are pointing at him wonderingly, and the legend runs :—

"There was a young man of the West,
"Who tried on a colonial vest;
"When they said, 'Does it fit?'
"He replied, 'Wait a bit,
"I guess it ain't had a fair test."

England and China of course find a place in the volume. A daily paper having stated that "British claims at the present day are greeted with roars of laughter by the Tsungli Yamen," the "Nonsense Blue Book" remarks, underneath a picture of Lord Salisbury presenting a copy of the Anglo-Russian Agreement to a crowd of laughing Chinamen :—

"There was an old Downing-street Derry,
"Who loved to see Chinamen merry;
"So he showed them a book
"And with laughter they shook
"At the claims of that Downing-street Derry."

Scenes du Theatre Japonais; Tokyo, Mr. Hasegawa.

DR. KARL FLORENZ, Professor in the Imperial University of Japan, has added another to his many admirable works illustrating the literature and customs of the Japanese nation. He has translated the celebrated drama, *Tera-Koya*. This is probably one of the most harrowing pieces ever put upon the stage. It involves the sacrifice of a child of nine with the consent of his mother in order to save from the same fate the son of Fujiwara no Michizane, and it involves the identification of the little fellow's head by his own father who has planned the sacrifice. Japan saw many inexpressibly cruel events in ancient times, when the terrible system of "comprehensive punishment" prevailed, wives and children suffering the same fate as their husbands and fathers, and when fealty to a liege lord required that a vassal should subject all his natural affections to the stern sense of duty. When one sees the Japanese of our own day, living quiet peaceful lives, busied chiefly with ledgers and factories, and devoted to the study of science and philosophy, it is easy to forget the sufferings and sacrifices they had to endure not so many years ago. We sometimes wonder whether their sympathies were not permanently seared by the often-applied iron of pain, and whether generations of close association with the cruellest trials have not produced a congenital callousness euphemistically termed *sang-froid*. It is not certain whether the incidents represented in the *Tera-Koya* are historical, but every Japanese recognises that they might have occurred, and fidelity to possibilities is all that is required of a drama. Dr. Florenz has done his work as a translator with great skill—if we may be permitted to express an opinion. He has preserved the form of the original without adhering to the idiom, as some translators are irrational enough to do. The result is a simple, forceful, and highly artistic rendering, which, we venture to predict, few will be able to read with dry eyes. The book is beautifully printed and illustrated, and does much credit to the publisher, Mr. Hasegawa. The cover is particularly pleasing, being in the genuine *Kōrin* style of decoration. We strongly recommend the volume to any one interested in the Japanese drama, and who is not?

"The Chillingfield Chronicles," Miss Helène Gingold's latest work, will be published by Mr. Fisher Unwin. It is a presentation of English life during the reign of Queen Anne. The story is told by an English country gentleman of good family, and the record of his life and the lives of those near and dear to him is drawn against a background of the frivolous, fashionable life of the period. The central figure, however, of the story is not the teller of it, but the heroine Dimondo Verulam, whose acquaintance the narrator, Francis Chillingfield, makes when quite a youth. She grows up peerless in beauty and wit; the theme of the story is her various love affairs, or rather the love affairs of those who fall in love with her. Although primarily a character study, the novel, nevertheless, deals copiously in incident and exciting adventure, and is the most complete, as it is the most extensive, effort Miss Gingold has yet accomplished. The volume is to contain a photogravure portrait of the authoress.

IMPERIAL DIET.

MONDAY, JAN. 15TH.

The House of Peers did not meet.

HOUSE OF REPRESENTATIVES.

The House met at the usual time and sat for two and a half hours, but the proceedings were without special interest. A Question having been presented by one of the members with regard to the number of judges of the Administrative Court, the following business was transacted :—

BILLS HANDED TO SPECIAL COMMITTEES.

A Bill for expediting the construction of railways required for strategical purposes.

A Bill (private) for extending the scope of the law relating to Associations of Dealers in principal Staples of Export.

A Bill (Government) for amending the Law relating to Pawnbrokers, in the sense of bringing it into uniformity with the Civil Code.

A Bill (private) for amending the Barristers Law.

A Bill (private) for amending the Law of Election. This Bill is framed in opposition to the Government's proposal that additional representation should be given to urban populations. Mr. Nemoto, the introducer of the Bill, spoke at great length in support of it, but the House paid little, if any, attention to him.

A Bill (sent down from the Upper House) for amending the Law relating to defaulting tax-payers.

A Representation urging that an additional grant of fifty thousand *yen* be made to pay the expenses of merchants and manufacturers visiting the French Exhibition.

BILLS PASSED.

Bill for the Prevention of Contagious Diseases among Cattle.

Representation in favour of increasing the grant made by the Treasury for purposes of riparian works. The grant has hitherto averaged from 2½ to 3½ million *yen* annually, but it has suddenly been cut down to 1½ millions.

Representation in favour of establishing a High School in Shikoku, where, with a population of 3 millions and a large number of lads gradulating every year at Middle Schools, there is not one High School.

On Thursday's proceedings in the Diet were of the tame, uninteresting character which has now become habitual. Various Government Bills relating to amendments of the Postal and Telegraph Regulations, the Drugs Regulations, and Expenditures over and above the Budgetary appropriations for the current fiscal year, were handed to Special Committees. The only measures that provoked any discussion were two Representations, one urging that a grand combination of State and private railways should be made under official control; the other, that a High Commercial School projected by the Government should be established in Osaka, not in Hyogo. The former Representation was handed to a Special Committee, but the latter was rejected by the slender majority of one, 70 voting for it and 71 against it.

YOKOHAMA ENGINE AND IRON WORKS, LTD.

The usual half-yearly meeting of the shareholders of the Yokohama Engine and Iron Works, Ltd., took place on Monday at 3 o'clock in Keil's Building. Mr. J. F. Lowder occupied the chair and there were present, Messrs. F. S. James J. Johnstone, A. Woolley, B. Gillet, C. Braccialini J. Dodds, C. Guissani, G. Philip, E. B. S. Edwards and W. Friedlander, Sec.

The Chairman addressed the meeting, saying that although their regulations did not require it, the accounts had been printed for convenience sake and were laying before them. They would see from the accounts that everything was in a satisfactory condition, and the Directors took great pleasure in declaring an interim dividend of *yen* 10 per share.

No questions being asked, the meeting adjourned.

Lieut. Edward Taylor, 12th U.S. Infantry, died from injuries sustained on the railway at Paniqui on the 25th December. Scared by an approaching train, his horse bolted across the line, and threw him in front of the train. His skull was fractured and his right arm cut off. He leaves a widow and one child.

DEATH AND LIFE.

IT has been asserted by a learned authority that there are creatures which never die. That startling allegation is founded on the fact that death is a destruction of cöordination among the cellular elements. Hence an unicellular organism does not die. There is no cöordination and there can be no destruction of it. The single cell merely divides, after a certain time, into two parts, each of which goes on living, and each of which divides again in due season, so that there are four living cells where there was originally only one, the process being repeated *ad infinitum*. Such was the theory enunciated by Dr. WEISMANN of Friburg. Reason revolts against it, and one is not surprised to find that later authorities condemned it, their view being that the process of division ultimately gives rise to imperfect individuals which are incapable of reproducing themselves, and so the inevitable corpse makes its appearance after all. But this does not disturb the definition of death, namely, that it is a destruction of the cöordination of cellular elements, for even in the case of the unicellular organism, death results from the destruction of the cell's correspondence with the nutritive elements in the surrounding medium. Dr. LEON MEUNIER, who has recently written about these questions, re-adopts the old formula that at death the soul separates from the body. The soul, we gather from his view, is the will, and "death begins with a condition of the organs which renders them incapable of following and manifesting their master's will;" in other words "death becomes definitive when the cellular elements, profoundly altered, are postively unable to obey any longer," But what, then, becomes of the will? And what is the will? Dr. MEUNIER makes no attempt to answer these questions. On the other hand, Professor LOEB, of the University of California, claims to have discovered the way of producing life. He has chemically fertilized the eggs of sea-urchins and has hatched these fertilized eggs. The feat was achieved by subjecting the unfertilized eggs to a solution of sodium and magnesium. It follows that the union of two elements is not necessary for reproduction: any cell may divide and reproduce. In fact, we learn that an immaculate conception is not a miracle at all. Professor LOEB says, "We have drawn a great step nearer to the chemical theory of life, and may already see ahead of us the day when a scientist, experimenting with chemicals in a test-tube, may see them unite and form a substance which shall live and move and reproduce itself. It will be the first protoplasmic cell, the origin of all life, which was produced in the test-tube of nature ages ago by the union, in the course of the world's evolution, of the same chemical substances with which he will have worked." In this theory we lose sight of the soul altogether. It does not come in.

COUNT INOUYE ON ECONOMIC QUESTIONS.

(CONCLUDED).

RAILWAYS, TRANSPORT, AND SPINNING.

The Japanese loan bonds floated on the London market this year amount to 10 million pounds face value, but the actual receipts do not exceed £8,600,000. Of this amount some portions were brought home in cash, some were deposited with the Bank of England and the Specie Bank, some transferred to the Indemnity account some appropriated for the purchase of debentures issued by the Treasury of England, and the remainder reserved for future calls with regards to warships. From these facts I may infer that a balance of about three million *yen* may remain available for domestic use. Under these circumstances how is the basis of national economy to be consolidated? How is the credit of the nation to be placed on a sounder basis? In the present condition of affairs the bankers are engaged in lending money on security rather than in the legitimate functions of their profession. Yet the circumstances justify their conduct, for commerce is not in a position at present to command credit. The mortgage of public loan bonds and industrial shares is thus made absolutely necessary. Even these are liable to fluctuation. Railway dividends are extremely irregular, the rate varying from 4 to 10 per cent., and there is no guarantee of steadiness from year to year. An increase of public confidence in commercial shares is a matter of great moment. Facilities of transport must be improved. There is no proper connection at present between land and sea. Look at Yokohama and Kobe. The former indeed has a railway near the harbour, but any cargo landed at the Customs House has to be transported to the station by means of *jinrikisha* or drays. Neither is there storage room at the station. Such cargo takes almost two weeks after it is landed to reach Tokyo. The inconvenience is much more serious in Kobe. From 1897 to the autumn of 1899 losses incurred in connexion with landing goods (especially cotton). through fire, gale, or flood, have, I was informed at Kobe, amounted to no less than 2 million *yen* in value. Again, in transporting raw cotton from Kobe to Osaka, the same is inspected at the Custom House, stored in warehouses, and then shipped to Osaka. The expenses resulting from these tedious processes of transport are estimated to be from 45 *sen* to 50 *sen* for each bale of three piculs. With reference to Osaka it is also to be noticed that the price of coal is extremely high, owing probably to excessive rates of of freight. The freights from Moji or Wakamatsu to Osaka are the same as those to Hongkong and Singapore. Why? After I inspected the harbour building works in progress, I proceeded to the upper Ajikawa, where I was surprised at finding a large number of ships on both sides. On enquiry I was informed these ships were all laden with coal. I was reminded that Osaka does not possess a coal depot, and is compelled to use ships instead. Vessels carrying coal from Moji or Wakamatsu must therefore spend forty days on the average before they return to the ports mentioned, and about ten days are sacrificed in performing duty as a coal depot. The prices of commodities can not be lowered while facilities of transport remain as imperfect as at present. Now as to spinning: it is not altogether improbable that an American Trust will establish a factory somewhere in Chefoo. How will it be possible to export Japanese cottons to China in face of this competition? The introduction of foreign capital and the assistance of the Government can only effect this object.

CHINA.

Attention to the Chinese markets is also as necessary as the adjustment of domestic industrial conditions. Japanese business men are very little in evidence in China. This is not because of the inefficiency of our diplomacy, but to the want of enterprise on the part of our commercial classes. The merchants in China are unworthy to be called merchants; their transactions are petty. In the case of England, the efforts of merchants precede action by the Government. Representations are made to the Government by business men or corporations, such as the Hongkong and Shanghai Bank, or the China Association, or Jardine, Matheson & Co., urging the Government to secure railway and mining, concessions, &c. The English Government then gives instructions to its representative in Peking to open negotiations with the Chinese Government for attaining the object in view. But in the case of the Japanese no such representations have ever been forwarded. If Japan wishes to keep pace with other nations her business community must prove more alive to its opportunities.

INTRODUCTION OF FOREIGN CAPITAL.

The idea was formerly entertained that the revision of the treaties and the opening of the country to mixed residence would have the effect of inducing foreigners to come to Japan to engage in various industrial enterprises and to buy land. Yet since the revised treaties came into operation no single instance of the purchase of land by foreigners has come to our notice. It was expected also that foreign money would flow into the country. The fact, however, has proved the contrary. Specie needed in the interior has had to be borrowed from abroad. The recent loan amounted to 100 million *yen*, for which 4 per cent. interest has to be paid annually. Four million *yen* in the form of such interest is therefore destined to go abroad irrespective of the balance of trade. There are, besides, consols and war bonds aggregating 43 millions of *yen*. on which interest to the amount of no less than 6 millions must also flow out of the country in specie every year. While such is the case views are still expressed by a majority condemning the foreign ownership of land and shares as detrimental to the interests of the country. The narrow-mindedness of the Japanese has prevented foreigners from investing their capital in industrial enterprises with any sense of surety; their disinclination to invest seems to be owing to their inability to acquire full rights over land in this country. The only way of introducing foreign capital therefore in the present condition of affairs, is by a loan. The abolition of extraterritoriality has really militated against the inflow of foreign funds. The interests of Japan demand that efforts should be made to secure intimate relations between the government and business community with a view to allowing foreigners to engage in any enterprise in the interior with the utmost confidence and safety. Unless such an arrangement be made in future, native capital alone can not achieve much. The Russian Minister of Finance, at a recent meeting of the Cabinet, showed in his speech that conditions in parts of Russia are somewhat analagous to those in which Japan is now placed. In the Caucasus territory, which is noted for the abundant production of petroleum, English capital is invested to a considerable amount. With unfriendly feelings towards the English some of the Russian Ministers attempted to put restrictions upon them with a view to preventing them engaging in any enterprise whatever. These steps, however, were vehemently opposed by Mr. de Witte, who insisted that Russia could not develope herself without having recourse to foreign capital. Sometime ago a certain Englishman wished to establish a factory in Nagoya for refining sugar cane from Formosa but he was deterred from doing so by his inability to acquire a superficies. If this factory had been established, Japan would have benefited to the extent of the outlay incurred in connexion with it, and the employment it afforded to labour. So long as

Digitized by Google Original from CORNELL UNIVERSITY

the only means of introducing foreign capital is by obtaining a loan, it is hardly possible to strengthen the foundations of the national economy or to secure the systematic development of commerce and industry. The adoption of a more liberal policy is absolutely indispensible.

CORRESPONDENCE.

THE PLAGUE OF 1665-79 AND OF 1899-1900.

To the Editor of the "Japan Mail."

Sir,—Now that visits from Sanitary Inspectors are quite the order of the day in Tokyo, Yokohama, and the towns to the southward, it is interesting to turn up Defoe's wonderfully realistic "Journal of the Plague in London"—the Great Plague, the remembrance of which will never fade from the thoughts of Englishmen. Of course, it has now been fairly well established that the plague of Carolean times was similar to the dreadful Black Death of 1348, which wrought such havoc in England—carrying away half the population, it is computed—and the scars of which can be traced to this day in the names of some of the more ancient streets of hoary East Anglian towns. One thorough-fare in Ipswich to this day carries down a story of those dreadful days which all who run may read. For in it every one died, man, woman, and child, and when the visitation had passed, there were none to lay claim to either houses or chattels. So the worthy Port Reeve renamed the street as a remembrance, calling it Silent Street, by which name it is known even in this year of grace. Pest House Lane also bears witness to the plague in the same old town.

But the lessons taught by the Edwardian experiences had almost been forgotten by the time of Charles II., and for a little while the greatest panic prevailed in London. Then the *Lord Mayor* and Aldermen, as is their immemorial wont, bravely came to the front, and on July 21st, 1665, issued an admirable series of Sanitary Regulations which, at this time, read curiously in advance of the medical knowledge of the day, in their practical common-sense. After providing for Examiners, Searchers, Nurse-keepers, Watchmen, and Chirurgeons, it was enacted:—

> For better assistance of the searchers, forasmuch as there has been heretofore great abuse in misreporting the disease, to the further spreading of the infection, it is therefore ordered that there be chosen and appointed able and discreet chirurgeons besides those that do already belong to the pesthouse * * * and forasmuch as the said chirurgeons are to be sequestrated from all other cures, and kept only to this disease of the infection, it is ordered that every of the said chirurgeons shall have twelve-pence a body searched by them, etc.

It was further ordered that notice of the sickness must be reported by the master of a house within *two* hours; that the sick should be sequestrated from the healthy; but *not removed* from the house where they were taken ill; that all goods and apparel which should have come in contact with them be well-aired by *fire* before use again; and if possible entirely burnt; and that the dead should not be burned until after sun-setting. We know, too, that all infected houses were immediately shut up and their inhabitants were confined within, while on the doors was painted a red cross, a foot long, with the words, "Lord have mercy upon us," printed above. The surgeons and search parties all had to announce their official standing by carrying a red wand, three feet long, in their hands, as in Japan to-day visiting sanitary officials are wearing a yellow band around the arm or hat.

The orders for street cleansing were very stringent, every householder being obliged to cause "the street to be daily prepared before his door, and so to keep it clean swept all the week long." Every day these "rakings" were removed beyond the city limits. Public feasts and entertainments were entirely prohibited, and "no wandering beggars" were "suffered in the streets of this city in any fashion whatsoever." For some time, too, huge fires, some of coal, others of resinous or other perfumed woods, were lighted in the principal streets to further assist in the work of fumigation.

Defoe, quoting from contemporary records, speaks of similar cases to those which have recently occurred in Osaka, and which have so startled Japan. He writes:—

> Here, also, I ought to leave a further remark for the use of posterity, concerning the manner of people's infecting one another; namely, that it was not the sick people only from whom the plague was immediately received by others that were sound, but the well. . . . By the well I mean such as had received the contagion, and had it really upon them and in their blood, yet did not show the consequences of it in their countenances; nay, even were not sensible of it themselves, as many were not for several days. These *breathed* death in every place, and upon everybody that came near them. . . . These were the people that so often dropped down and fainted in the streets; for oftentimes they would go about the streets to the last, till on a sudden they would sweat, grow faint, sit down by a door, and die. It is true, finding themselves thus, they would struggle hard to get home to their own doors, or, at other times, would be just able to go into their houses and die instantly; other times they would go about till they had the very tokens come out upon them and yet not know it, and would die in an hour or two after they came home. . . . .These were the dangerous people.

The first manner of the plague's coming to London, to follow Defoe's quaint English, "was by goods brought over from Holland, and brought thither from the Levant." In the first house stricken died four persons. A visitor, hearing of the illness of the mistress of the house, called to see her, was infected, and died, as did all her household. "A Minister called in to pray with the first sick person in the second house sickened immediately and died, with several more in his house." And in Osaka at the present day history is repeating itself.

I cannot encroach further on your kindness, though the temptation to continue quotations is very strong, so I will close by recalling a remark of my father's, a widely travelled man, who was out in China, principally near Canton, in the early forties. He was confident that he then saw cases of plague among the sick in the city prisons, and used to quote Defoe's descriptions of the discolorations and swellings of the dead as being precisely similar to the marks he noticed on various dead Chinamen. How true his observation was, has been borne out by the visitations which Hongkong has suffered in recent years. I can only pray that his great fear may not be realised—the fear that the plague (again striking southern Europe in the countries bordering on the Mediterranean) will from thence spread to our dear England.

Yours truly, GYPPESWYK,

Yokohama, January 14.

HOUSE TAX IN THE FOREIGN CONCESSION.

(To the Editor of the "Japan Mail.")

Sir,—A concrete example will help to make plain this puzzling question. However, a few words on the method of making estimates.

All houses in Tokyo are divided into 12 classes; and these 12 classes contain 115 grades. This is a great mystery,—the way these 115 grades are obtained. For example, Class No. 8 contains grades from 71 to 80. Houses in Tsukiji come in this 8th Class.

But how are the taxes estimated? I shall use a concrete case as an example and cut off fractions of figures to simplify matters. Here is a house which covers 133 *tsubo* ground floor. The up-stairs floor has 65 *tsubo*. For taxation the up-stairs is estimated 1 *tsubo*=$\frac{7}{10}$ of the down-stairs *tsubo*. This makes the up-stairs 65 *tsubo*=44 *tsubo* down-stairs. Add this 44 *tsubo* to 133 *tsubo*, and we get the whole number of taxable *tsubo*=177 *tsubo* for the house. *But this is not the real tsubo.*

There are 8 Classes, and 115 grades, as I have said. In the region of the Bank of Japan the 1st Class is located. There 1 *tsubo* for house tax must be counted as 5$\frac{1}{2}$ *tsubo*; 10 *tsubo*, as 55 *tsubo*. In Tsukiji (8th Class, and 72 grade) 1 *tsubo* for taxation must be counted as 3$\frac{4}{5}$ *tsubo*. The *rationale* of this I have not heard. According to this the Tsukiji house of 177 *tsubo* up-stairs and down-stairs is estimated as 672 *tsubo* for taxation. This is 3$\frac{4}{5}$ times the size of the house!

I shall now try to calculate the tax on this house for 5 months,—the period from the operation of the treaties to the end of the first six months' period for which the tax is collected.

	Yen.
Local Tax (School, Police, Hygienic), per *tsubo* .0.098×672 *tsubo*=	6.586
City Tax, per *tsubo* .038×672=	21 28
Special Tax, (Improvement of City), per *tsubo*=.00392×672	2.195
Ward Tax, per *tsubo* .00.345×672=	1.932
Expenses of Collections, per *tsubo* .001×672=(minus 1 month).....	.56
	32.553

This is the House Tax for only 5 months on a house covering 133 *tsubo* in Tsukiji, Tokyo. For one year, at the same rate, this tax will amount to *yen* 78,128; or .5.874 *sen* for every *tsubo* the house covers; or .153 *sen* on each *tsubo* of the lot (511 *tsubo*).

Now, remember that the land tax, or rent, in the Concession of Tsukiji is .28 *sen* a *tsubo*. This lot of 511 *tsubo* is taxed according to treaty 142 *yen* a year. Keep this in mind till I can explain the land tax. Just across the canal outside the Concession in Odawara-cho No. 10 is a lot of 913 *tsubo*. The land tax is as follows for one year:

	Yen.
Imperial Gov. Tax=	42.824
Local Tax, $\frac{1}{4}$ of $\frac{1}{3}$ of Imp. Tax Gov. (42.824)=	7.137
City Tax, 15 per cent of $\frac{1}{3}$ of Imp. Gov. Tax (42.824)	3.211
Special Tax, $\frac{1}{3}$ of Imp. Gov.Tax (42.824)=	21.412
	74.584

This makes the land tax just outside the Concession a fraction over .08 *sen* a *tsubo*; while inside the Concession the foreign residents must pay .28 *sen* a *tsubo* on the land, and an additional, .153 *sen* a *tsubo* for the house. This makes a total of .433 *sen* a *tsubo* on the Concession land; while just beyond the treaty limits it is but little more than $\frac{1}{2}$ as much.

If this House Tax is imposed upon residents inside the Concession, there is urgent need for a revision of the treaties; for certainly it is unfair and oppressive for such inequality to exist. If the taxes outside the Concession (but contiguous) had been excessively high, while the taxes in the Concession had been exceedingly low, the same necessity for a revision of the treaty would have existed.

It might be replied that a comparison between the Concession and Odawara-cho is not just. Then we should like to know on what ground the classifications are made. Certainly the Concession to-day is quite a different place from what it was when not a foreign house existed in it. We understand that the house tax is estimated according to the Class (one of the 8 Classes), and these Classes are valued according to the estimated value of the land. If so, it would appear that this House Tax is assessed on the land value. We are not, however, contending against a house tax; but against the amount of this house tax. It is out of proportion.

Very truly, E. SNODGRASS.

Tokyo, Jan. 9, 1900.

[Without disputing Mr. Snodgrass' conclusions, we desire to point out that his manner of using decimals is quite novel. A tax of 28 *yen* per 100 *tsubo* means 28 *sen*, not .28 *sen* per *tsubo* and the Odawara-cho land pays not .08 *sen*, but 8 *sen*, per *tsubo*.—Ed. *J.M.*]

A LIBERAL OFFER.

To the Editor of the "Japan Mail."

Sir,—Enclosed I beg to hand you a cheque for *yen* 100, and, with your approval, I propose to send you a similar amount each mouth, so long as there shall be war in South Africa.

I offer this donation as a monthly addition to your account, my object being to enable you to supply the community with extra telegrams during the war.

The sum is in itself small, but I have reason to believe there are others willing to follow my example.

You are at liberty to mention the donation but not the name of the donor.

I am, yours faithfully,

SUBSCRIBER.

Yokohama, Jan. 16th. 1900.

[We desire to complete some inquiries before definitely replying to this most generous offer.—Ed. *J.M.*]

IS THE GOVERNMENT TO BE BLAMED FOR THE PRESENT SITUATION IN SOUTH AFRICA?

To the Editor of the "Japan Mail."

Sir,—In your issue of the 23rd ult., you quote a paragraph from the *Japan Times* in which the editor says that England might have been saved her present humiliation if her rulers had proceeded with more prudence and foresight. In reply to this I would ask the editor whence he derived the notion that England feels humiliated. Careful reading of the London papers is enough to convince any one that England considers it no disgrace to be defeated when fighting under such diverse disadvantages as those under which she has laboured up to the present. The victories she has won have abundantly shown of what her troops are capable under anything like favourable circumstances. I deny that England feels humiliated, or that she has cause to feel humiliated.

As regards the action of the English Government it was next to impossible for them to proceed otherwise than they did, circumstanced as they were. They could have forced the situation at any moment and sent out a large body of troops. But by so doing they would have exposed themselves to the charge of having precipitated war. They would have given the Opposition a splendid chance of making out a formidable case against them, and would have rendered themselves liable to be misunderstood on the Continent. The patience with which the Boers were treated, the refusal to accuse them of treachery and of harbouring sinister designs until they had declared themselves in their true colours in the most unmistakable manner, had the effect of enlisting for the English Government the sympathy of the whole English people and of all impartial judges of the situation in foreign countries. The editor of the *Japan Times* does not seem to realise that no English Government can make war in these days unless it is backed by public opinion. As the *Saturday Review* puts it: "Had the Government despatched the Army Corps in the summer, the feeling in the country would have been against not for it, and we should have presented the dangerous spectacle of a divided nation. The desire to avoid this was not a cowardly fear of the Opposition, but a recognition of the conditions of modern statecraft." It is very doubtful whether a divided England could deal with the present grave crisis. But it is the belief of most Englishmen that a united England could surmount far greater difficulties than confront her in South Africa. It was expected by the nation that the Boers should be treated with patience and consideration as though they were a civilised people, and thus they were treated till the impudent ultimatum put an end to the farce. It is correct to say that no war that Great Britain has ever waged has been more popular than the present South African Campaign. Hence it is that an almost unlimited amount of money and number of men are placed at the disposal of the Government. It is England's way not to be in a hurry to appeal to the sword. The English Government hoped up to the last that war might be avoided, not knowing then what they know now, that the Boers meant to fight anyhow if they were forbidden to treat Englishmen as inferiors. England will lose nothing in the long run by having proceeded with such extraordinary deliberation.

I am, yours, &c. W. D.

Dec. 28th, 1899.

THE RIKU-GUN CHIU-SA.

(A romance of the Koyo-kwan.)

Let me summon my Muse
(Who will try to excuse
My readers' attempts to abuse her)
To tell how a *Geisha*
Whose name was Acacia,
Once married a Riku-gun Chiu-sa.

Miss Acacia was fair,
But her beautiful hair
Resembled the poppy in hue, Sir,
And Dame Nature's blunder
Excited to wonder
A rollicking Riku-gun Chiu-sa.

Their first time of meeting
Was whilst he was eating
And wishing his waistcoat was looser;
At raw fish, rice, saké,
Beer, daikon, and baccy,
Few vied with this Riku-gun Chiu-sa.

A sigh of repletion
Now nearing completion
Extended the jaws of our booser,
When an eye-scorching view
Of Acacia's cheveux
Quite sobered the Riku-gun Chiu-sa.

With his mouth opened wide,
With his sigh but half-sighed,
He gazed at this modern Medusa,
Whilst the maid for her part
Treasured up in her heart
The sigh of the Riku-gun Chiu-sa.

He supposed it must be
An attack of D. T.
And vainly endeavoured to lose her;
But it entered her head
That she wanted to wed
This good-looking Riku-gun Chiu-sa.

So the "san-san ku-do"
She suggests to her beau
Who doesn't know how to refuse her;
And that's how a *Geisha*,
The red-haired Acacia,
Became Mrs. Riku-gun Chiu-sa!

WATAKUSHI.

THE PATRIOTIC CONCERT.

There could be no mistaking the strong British savour that permeated the entertainment given in the Public Hall on Tuesday evening in aid of the funds now being collected almost everywhere throughout the world—at any rate everywhere where two or three Britons are gathered together—in aid of the widows and orphans of those who may unfortunately fall in the service of the Queen in South Africa. And it was only seemly that it should be so. Patriotism was the order of the evening from start to finish, intensifying in its glow as the long programme proceeded. The "meteor flag of England" waved over the stage, was festooned over doorways, and draped around two handsome medallions of Britannia and St. George. Nor were other signs wanting to emphasize the fact that the evening was organized by the Overseas Men of Great, and Greater, Britain in a worthy attempt to add to the funds so sadly needed in the dear Home Land.

A small but efficient chorus conducted by Mr. J. T. Griffin (with Mr. W. Karl Vincent at the piano) led off with the National Anthem—using Sir Michael Costa's setting—the last verse of which was taken up by the packed house with rousing effect. Then Miss Lloyd Thomas sang with exquisite feeling, the pathetic Irish melody "The Last Rose of Summer," and followed on with "Home, Sweet Home." She was in excellent voice. After a dainty cello solo by Mr. E. C. Davis, a rousing soldier-song—"Guard the dear Old Flag"—was given by Mr. Somerton and was encored, the vocalist responding with "Tommy Atkins," the chorus of which the house took up lustily. Next Mrs E. W. Maitland made her *debût* on the local concert stage with Clay's beautiful song—"She wandered down." Tender feeling, allied with graceful delivery and a pure-toned voice, rendered this item one of the gems of the evening. Mr. Brady's recitation—"The Midnight Charge"—was given with all the fervour which the piece demanded; indeed, it was one of his best performances among this community. Mr. W. Karl Vincent's musical accompaniment (his own composition) was most appropriate. Two dances, one a Sailor's Horn-pipe by Master Ewan Steele, whose performance was so excellent that he was called on for a repetition, and the other the Highland Fling by Master Hutchison, (also capitally done and rewarded with an encore) brought the first part of the programme to a close. Both dances, it should be added, were in costume.

After the interval Miss Helena Page led off with a spirited rendering on the violin of the "March of the Men of Harlech," and was rapturously applauded. The song and chorus, "Hearts of Oak," was well rendered; while Mrs. Irwine's selections, "Kathleen Mavourneen," and "Caller Herrin," drew all hearts. Kipling's now famous ballad, "The Absent-Minded Beggar," roused great enthusiasm, losing nothing of its dramatic qualities in the hands of Mr. H. J. Sharp. "The Deathless Army" was finely given by Mr. E. W. Maitland and was encored, as was also Mrs. W. T. Payne's song—"Now Thou art Mine." Then Mr. G. G. Brady appeared in character and gave with inimitable gusto "When I was a boy at School," with the inevitable result. Next came the chorus, "God Bless the Prince of Wales," which should have brought a highly successful evening to a close, but the audience loudly demanded "Rule Britannia," the first verse of which Mr. Townley very kindly sang. Cheers for the Queen and the Home Land were given ere the audience dispersed.

YOKOHAMA LITERARY SOCIETY.

The first meeting in the New Year of the Yokohama Literary Society took place on Friday evening at the Van Schaick Hall, when there was a fair attendance of members and friends. Mr. W. B. Mason's essay on "Two Ancient Japanese Monasteries," Kinkwa-zan and Mitsumine-san, proved most delightful and was greatly appreciated. It dealt with the past glories of these ancient fanes and their associations, so strangely contrasted with their present day decadence. But if these houses of prayer and contemplation erected by human hands have by human neglect and change of fashion fallen so sadly into decrepitude and almost desolation, the natural beauty of their incomparable sites remains as lovely as ever. Mr. Mason has keen eyes for the beauties of nature and happily a special art of conveying to home-staying folks some of the impressions which flooded his mind when visiting these old-world monasteries, that lie so comparatively near and yet so far from the heart of modern Japan. After the paper the following musical programme was gone through:—

Piano Solo .....(a) "Melody" .....Paderewski.
(b) "Arabesque" ..... McGowan.
Miss Moulton.
Vocal Solo....."Berceuse".....Godard.
Mrs. E. C. Irwine; violin obligato, Mr. H. A. Poole.
Violin Trio... "3rd Divertissement" ..... Franz.
The Misses Page.
Song ....."Echo"..Lord Henry Somerset.
Mrs. E. C. Irwine.

ANNUAL MEETING OF THE ASIATIC SOCIETY.

The annual meeting of the Asiatic Society of Japan was held at the Parish Buildings No. 54, Tsukiji, on Wednesday, December 13th, 1899, at 3.30 p.m. Dr. E. C. Greene, Vice-President of the Society, was in the chair.

The minutes of the previous meeting were taken as read.

It was decided to dispose of the business of the annual meeting before proceeding with Mr. Lloyd's lecture on "Buddhist Anthropology." The Recording Secretary read the Report of the Council for the past year, and the Hon. Treasurer read the Treasurer's Report, both being approved.

NEW COMMITTEE.

The following gentlemen were elected members of the Committee for the ensuing year:—

President:	Sir ERNEST SATOW, K.C.M.G.
Vice President	Dr. E. C. GREENE,
,,	J. F. LOWDER, Esq. (Yokohama)
Treasurer:	J. McD. GARDINER, Esq.,
Librarian:	Prof. E W. CLEMENT,
Record. Sec:	ARTHUR HYDE LAY, Esq.,
,,	Rev. EUGENE BOOTH (Yokohama)

Members of Council:
Prof. CLAY MCCAULEY,
Rev. A. LLOYD.
RANSFORD S. MILLER, Esq,
W. B. MASON, Esq.,
B. H. CHAMBERLAIN, Esq,
R. J. KIRBY, Esq.,
R. MASUJIMA, Esq.,
Dr. H. WEIPERT,
H. G. PARLETT, Esq.,
Rev. W. J. WHITE.

The Chairman reported that the delays in the printing of the Society's Transactions, which had caused so much complaint in the past, no longer occurred, and that the work of printing *was well up to date.*

The Rev. A. LLOYD then gave an interesting lecture on "Buddhist Anthropology" which was the substance of a paper prepared by him for the German Asiatic Society.

The lecture was mainly an analysis of a book entitled *Bukkyō Jinsei ron*, published in book form by Mr. Takada Dōen, a priest of the Sō ō Sect, about the end of 1898, though it had appeared some years before, as a series of magazine articles, in a journal entitled *Tsūzoku Bukkyō*. The book is written throughout in the popular language, with a very plentiful use of *kana*; it is catechetical in form, though toward the end the answers extend themselves into very long sermons. It is based almost entirely on the Buddhist Scriptures, quotations being found on every page, and a great part of the book consisting of commentaries from these quotations which are extracted from 121 books.

Buddhism, says the writer, is almost entirely taken up with the doctrine of the life of man. Man is the centre of the Universe to Buddhism—man, not as he was or will be, but man as he is. Buddhism does not trouble itself much with theories of creation, nor yet with Gods. It is neither monotheistic, polytheistic, pantheistic nor atheistic. It knows of a great mind behind all theological speculations, but it is not practical wisdom to discuss these points.

Buddhism claims therefore to be a religion of man,—but the very term religion implies the supernatural. Has Buddhism, the religion of man, nothing of the supernatural? Yes, but not as Christianity. In the latter miracles are relative—the operations of certain laws beyond our ken for the time being, which cease to be miraculous as knowledge grows. In Buddhism, the miracle is absolute—the whole thing is one great miracle, and the knowledge by which we reach to the miraculous is in itself miraculous.

It has been objected to Buddhism that it is pessimistic. The writer asserts that not only is Buddhism pessimistic, but that pessimism is the necessary basis of all religion or progress. We must feel that things are very bad before we want salvation or improvement, or care to enquire about means of salvation.

In working out for us a scheme of the means of salvation, Buddhism presents us with two forms of teaching—the *seken-kyō* or cosmology, and the *shusseshakkyō*, or soteriology.

The former establishes the fact of the three worlds—the world of desire (or matter), the world of form (or thought), and the formless world which lies in the abstract region beyond our thought. Of this third world we can affirm nothing, but of the two lower worlds we know that the one is the abode of pure beings who are free from desire, and that the latter is peopled with beings more or less material who are all of them under the influence of desire.

This lower world is divided into six spheres, 1 Heaven. 2. Man. 3. Violent devils, 4 Hungry devils, 5 Beasts, 6. Hell. None of these are permanent states, and the soul (if the term is allowable) may spend one existence in the highest heaven, and be after a few more existences a denizen of the coldest hell. There are some very unscientific passages in some of the Buddhist Scriptures—passages which speak of men who reach to the height of 75 feet, and attain to an average age of 200 years,—and the writer has to tread softly in commenting on these passages.

Through all these spheres of existence, life is always rising and falling in the struggle for existence. Nothing is at rest, except the *Is-shin*, the one great mind, which is at the back of all thought and all existence. As we consider this *one mind* we see that it too is capable of division. It presents itself to us as thought, emotion, synthesis, and analysis. Creation begins at the other end:—first analysis, then synthesis, then emotion, then thought; and these four compose existence.

The rise and fall of the individual soul is regulated by the law of Karma. Karma is a "resultant of forces": all the acts of former existences, modified by the acts of the life that is, form the Karma which regulates the life of the world to come. Death is analysis: when a man dies he is analysed into his component parts. Life is synthesis: when a man comes to birth, it is a putting together of the disintegrated faculties. Between life and death, and again between death and life are two intermediate states, which are really states of transition.

In these intermediate states, the soul in which desire is extinct passes from the world of desire into the world of thought, and thus comes no more amongst men: the soul in which desire reigns yearns for a new birth and seeks for itself parent and a body. As soon as it unites itself with flesh in the womb of its mother, the soul loses its former likeness, the flesh acts as a veil which shuts out all remembrance of the past, as well all fore-knowledge of the future. As soon as the child comes to the birth life is consummated, but in that moment death begins to work; disease, &c., make their appearance from the moment of birth and special mention is made of a passage from the Nehankyo which speaks of the countless insects (*mushi*—bacteria?) that infest the human body.

In the meantime the soul in which desire has ceased passes into what is known as Nirvana. Is Nirvana a state of consciousness or not? The author does not decide. Nirvana is a state about which nothing can be affirmed, not even the fact that nothing can be affirmed.

The practical value of the book lies in the author's exhaustive treatment of Karma. Without a careful consideration of Karma education is valueless; a just estimate of character is impossible. Karma is not heredity, though heredity is a part of Karma. We do inherit from our parents, because their Karma must have fitted them to have us as their children. But at the same time our Karma fitted us to have them as our parents, and this Karma is quite independent of heredity. Many pages are devoted to describing the signs by which we may know what this Karma has been in any particular man. "If you see a pair of turtle doves cooing, you may know, says the book, that in a former existence they were married people whose conjugal relations were not very harmonious!"

Dr. GREENE thanked Mr. Lloyd for his instructive lecture and regretted the absence of the President who would no doubt have been able to contribute some valuable remarks on the subject of "Buddhist Anthropology." It would be interesting if the lecturer could make up his mind how far the "Jinseiron" of Mr. Takada Dosu was influenced by Western thought. He (the Chairman) was increasingly impressed with the westernizing influence operating upon the people of Japan. It was a very great mistake to imagine that the Japanese were merely superficially influenced by Western methods of thought as casual observers believed. The deep seated change which had taken place was impressed upon his mind every day.

ANNUAL REPORT OF THE COUNCIL OF THE ASIATIC SOCIETY.

The past session compares favourably with many of its predecessors. An increased interest has been shown in the proceedings and the number of papers contributed to the Society has been much larger than during the previous session. Eight papers were read at general meetings, two of them being given by the President Sir Ernest Satow. Other papers were contributed by Messrs. Chamberlain, MacCauley, Aston, Clement, Gubbins and Florenz.

20 new names have been added to the list of members; 4 members have resigned; and 2 have died.

The finances of the Society are in a flourishing condition as will be seen from the Treasurer's report. In the library, Transactions in Stock number 9,758 vols. Gen. Index 1607.

THE SEAMAN'S MISSION.

ANNUAL REPORT FOR THE YEAR ENDING DECEMBER 31ST, 1899.

Early in the year the Chaplain accepted the very kind invitation of Captain King-Hall, R.N., to be his guest on the homeward voyage of H.M.S. *Narcissus* to pay off out of commission, arrangements having been made, with the full approval of the Bishop of the diocese, for Mr. Mark Finch to act as his *locum tenens*. The Chaplain left by the s.s. *Moyune*, Captain Conradi, transferring at Hongkong to the *Narcissus*, and, after a pleasant voyage, landed at

Original from CORNELL UNIVERSITY

Portsmouth on the 26th of May. Leaving England on the 9th, of October on the German Mail steamer *Kônig Albert*, he, with his wife and family, arrived safely back at Yokohama on the 27th of November.

Mr. Finch, who had proved to be a most efficient and acceptable worker among the seamen during Mr. Austen's absence, returned to England by the same steamer *Kônig Albert*, taking with him a testimonial, signed by a large number of the residents of Yokohama, bearing witness to the faithfulness with which he had discharged the duties he had voluntarily assumed as the acting chaplain of the Seamen's Mission for a period of nine months.

During the summer months a number of American army-transports, conveying thousands of soldiers, visited the port. The American ladies of the community gave the troops a very hospitable welcome and did a great deal in the way of ministering to their temporal needs. A number of the American missionaries kindly assisted Mr. Finch in ministering to their spiritual wants, holding meetings for them at the Mission rooms, as well as on board the vessels, where they had very large attendances. The soldiers were very grateful for the privileges thus afforded them and many were the bright testimonies given of work done for the Master while in heathen lands.

On Christmas day a dinner was provided in the Mission at one o'clock for eight poor men, who work principally on the steamers tallying cargo. At six o'clock our annual Christmas dinner was provided for the seamen in port, covers being laid for sixty-four. After dinner various round games were played, and at the close of the evening Christmas hymns were sung in the prettily decorated chapel of the Mission, the men returning to their ships between ten and eleven o'clock on the mission-launch *Gleaner*. The Chaplain and his wife visited the two naval hospitals on Christmas morning and distributed Christmas gifts to thirty-eight patients.

On New Year's Eve the usual watch-night service was held at the Mission.

On Thursday, the 4th of January, 1900, a meat-supper and Christmas-tree, bearing a gift for each one, were provided for the seamen from the balance remaining over from the Christmas Fund. Forty-six were present and thoroughly enjoyed the entertainment, the *Gleaner* conveying all back to their vessels safely.

Our best thanks are very heartily given to all the subscribers to the Mission funds, also to the proprietors of the various magazines and newspapers that have been donated free, and, last but not least, to the ladies and others who have so kindly assisted at the various services and meetings held at the Mission.

NEWS OF THE WEEK.

Aguinaldo's engineer corps arrived in Manila on the 18 h December, and surrendered with their horses and equipment.

The Young Men's Photographic Club, which was burnt out last summer, has secured new premises at Yoshida-machi, Nichome. Started two years ago, the Club is now a flourishing concern and has two or three foreign members.

About half-past six on the evening of the 15th inst. fire broke out in Nakano, Tsukui District, Kanagawa Prefecture. Some thirty houses were destroyed. Mr. Kuroiwa, Chief of Police, and Mr, Kobomura have left for the scene of the fire.

The four armed robbers who entered the house of a *sake* merchant in Tobe on the night of 8th inst., and stole watches, clocks, etc., were arrested on the evening of the 12th at a house of ill-fame by the Isezakicho Police. They were in the midst of a debauch. Their names are Suzuki Kentaro, age 18, Kimura Eitaro 18, Mizuno Tanejiro 17, and Takeuchi Kumejiro 16.

The steamer *Pakhoi*, Capt. Williams, which arrived in port on Sunday afternoon, picked up on Jan. 13, a junk dismantled and flying flags of distress, when off Toba harbour. The *Pakhoi* rescued three men. It appears that the junk belongs to Akimoto Yoshimatsu of Shinshu.

The Italian flagship *Carlo Alberto*, with Rear-Admiral Grenet on board, arrived at Nagasaki on Jan. 8th, from Shanghai. The flagship will undergo repairs at the local Mitsu Bishi Dockyard, and will thence proceed to Yokohama by way of Kobe.

The decision of the Court of Inquiry which was appointed to investigate into the wreck of the U.S. cruiser *Charleston*, has been rendered. The captain and officers are exonerated from blame. The court recommends, however, that several men who gave evidence at the enquiry, be tried for perjury.

A suggestion has been mooted—and meets with great approval—that a Saturday Smoking Concert should be organized in Yokohama in aid of the Widows and Orphans of British Soldiers and Sailors who may fall in South Africa, the programme of which should consist entirely of British patriotic airs, songs, ballads, and recitations.

Mr. W. W. Till, in taking stock of wines in his cellar on the 14th inst., missed 5 cases of champagne and four cases of hock, port, etc., valued in all at *yen* 270 *yen*. He at once reported the matter to the Bluff Police, and the culprit was arrested on Tuesday. His name is Nishimaki Tsuneju, age 28. He was in Mr. Till's employ some time ago, and had been stealing the wines since October, disposing of them to various retail wine stores. The wines have been recovered.

The Accountant of the Hongkong and Shanghai Banking Corporation in Yokohama writes:—We have received a wire from Hongkong office, informing us of the result of half-year ending 31st December, 1899. Subject to audit it will be as follows:—

Dividend	30/- per share.
Added to Reserve	$5 lacs.
Carried forward	$965,000
Bonus to Shareholders	10/-

Inaga Inosuke a coolie, while walking in Chitose-cho, Yokohama, on Sunday night was struck on the back of the head, with a blunt instrument, by one of a party of volunteers from the transport *Grant*. Four volunteers named Hill, Roberts, Cotton and Geder, were arrested and taken to the Kotobukicho Police Station, but were eventually released. The coolie's wound is severe. Several cases of petty theft by coloured volunteers are reported.

According to the *Hochi*, a Commercial Samples Museum under the name of *Teikoku Gonikwai*, is shortly to be establisbod with a capital of one million *yen*. The promoters of the scheme are mostly members of the *Gonikwai* Association, presided over by Mr. Mayeda Masana. The *Gonikwai* was organised some years ago with the object of raising the level of commercial morality. The institution now under contemplation has for its object an exhibition of articles produced by the members of the *Gonikwai* and other industrial corporations, each article being labelled with the name of the manufacturer as a guarantee of good quality.

The *Kobe Herald* learns that the Northern Pacific Company's agents have received intelligence that their chartered steamer, the *Energia*, has gone aground at a point in the Obree Channel about 50 miles from Nagasaki. Capt. Carew was in charge as pilot. It is learned that the vessel is somewhat badly ashore, her forehold being full of water. The steamer was on her way to Hongkong via Nagasaki from Kobe, and she was about to finish her charter with the N P. Company. Assistance in the way of pumps, &c., has been sent from Nagasaki, but the exact prospects of salving ship or cargo are not known here yet. Capt. Chaplin is master of the vessel, which has a register tonnage of 2,064. She left Kobe on the 12th instant.

We have received from the publishers, Messrs. Witherby and Co., 326, High Holborn, *The Royal Navy List Diary and Naval Handbook for 1900*, which is issued in conjunction with Lean's very admirable *Royal Navy List*. The work should be in the hands of every Naval man and others interested in the senior branch of Her Majesty's service. It contains historical and statistical information respecting the Royal Navy, its administration, strength, stations, and cost, and other statistical abstracts of all matters concerning the service; astronomical notes and tables, with an account of the astronomical phenomena of the year; tables of tides and tidal constants; calendar, and complete obituary of the year, besides a great deal of other useful information. It costs 3 shillings.

The barque *Silicon* recently arrived at New York from the Arctic regions. Her commander, Captain Jansen, reports finding a deserted Russian ship of old-fashioned pattern floating aimlessly about. He and some of the members of the crew of the *Silicon* boarded the ship and found the hatches battened down and the doors fastened. They forced an entry and discovered that the vessel had a cargo of furs in fine condition, while the log and letters on board stated that the vessel had been abandoned in 1848. The supposition is that the vessel had reached high latitudes, and, having been frozen in by the icebergs ever since, had only just thawed out. Captain Jansen possesses many interesting relics brought from the vessel.

The Nippon Yusen Kaisha has received a telegram to the effect that the *Tamba Maru*, which left London for Japan on the 9th inst., collided with a Norwegian steamer on the 10th. No longitude is mentioned, but the affair took place in the Channel. The sailing of the *Tamba* will be delayed three weeks. There are no details as to the damage done. The *Tamba Maru* is a singularly unfortunate vessel. She was engined at the time of the great strike, and much of the work was carried out by apprentice labour in a fashion which made a large expenditure in renewals and alterations necessary on her arrival in Japan. She broke down twice on her first voyage to Japan, and there was rather serious trouble with the crew, culminating in wholesale arrests at Hongkong. The name of the vessel has latterly been brought into unpleasant prominance by the Kent case.

CHINA NOTES.

An attempt is being made to float in Shanghai the China Steam Laundry, a limited joint stock company, organized under German law. The capital is Tls. 20,000, of which one-half is offered for subscription in shares of Tls. 100 each, and the necessary buildings are to be completed before the end of March next.

A sad accident occurred on H.M.S. *Barfleur* at Shanghai the other day. A bluejacket named Rodwell was aloft engaged in the Christmas preparations, when he lost his hold and fell to the deck, the fall proving fatal. In consequence of this accident, which threw a gloom over the ship's company, the decorations were abandoned.

The *N.-C. Daily News* gives publicity to the statement that the Tsungli Yamên has sent a circular dispatch to the various high provincial authorities, authorising them to send abroad a large number of students for the purpose of studying one of three professions, *viz*:—Scientific Agriculture, Mechanics, or Commercial Affairs. Six years are to be allowed each student to complete his studies, and the expenses are to be defrayed by the Imperial Government. The student who wishes to take advantage of these conditions must first apply to his own local authorities who,

Digitized by Google Original from CORNELL UNIVERSITY

in turn, will petition the Viceroy or Governor of the province, the latter to report the matter to the Throne for approval before sending the student a broad. Proclamations in regard to the above will soon be posted in the various Treaty ports, prefectural cities, and towns, and it is estimated that before the end of 1900 some 1,000 to 1,200 students can be thus sent abroad to the various countries of Europe and America.

The *Kuo-wen-pao* publishes some extraordinary statements (which remain to be confirmed) in connection with German railway construction at Tsimo. Its correspondent states that the Germans are only paying half the proper price for land, and are forcing the villagers to work on the line without pay, etc. The same paper announces two railway concessions to the Belgian Syndicate. The one represents a branch line from Lu-kao-chow to the west of Peking (which gate is not decided), and the other a line from Kai-fong in Honan, to Ho-nan-fu with the right of ultimate extension to Signan. This is the first railway running due west through Honan into Shense which has been granted, and forms a branch of the Luhan line running parallel with the Yellow River and South of it. It commands practically the only mountain pass for a great distance either north or south, and if carried to Signan will be brought in contact at that point with a network of trade routes radiating in all directions. The line, moreover, completely encloses the coal districts of Shanse, in which so much interest has been centred.

Referring to the disturbances in northern China, the Tientsin paper says:—In the Chih-ping and Kao-t'aug districts there are no converts that have not been pillaged. The Governor pays no heed to the missionaries' representations, and the local officials following his lead ignore their demands for protection. The former with a great flourish sent out troops a couple of weeks ago, giving the rioters five days to scatter. They not only did not scatter but went on pillaging. Their contempt for the soldiers is shown by their looting one small encampment and stealing all their guns. The courage of the rioters, however, is not proof against a resolute defence. The Catholics at Han Chuang gathered together all their force with such native weapons of offence and defence as they had, old Chinese fowling guns, etc., and gave the Big Sword people a warm reception, causing them to retire with a loss of twenty-three men. At another place a leader of the small band of soldiers started in on his own account to settle a score he had with the Big Sword Society and killed thirty of them. But such sporadic attempts at resistance will mean nothing unless they are sustained, and with such an invertebrate Governor they will not be sustained. He is so much in sympathy with the rioters that he would like to see their object accomplished, if it can be without too much loss of official prestige and money.

A storm of devilry, says the *Peking and Tientsin Times*, has been sweeping over two districts adjacent to Lin ching on the east and making sad havoc among the scattered members. The idea that all followers of the "foreign teaching" may be raided with impunity has been adopted very widely and with brilliant success. Officials and neighbours have remained passive, the latter usually protesting against the firing of houses lest their own should be burnt, but being quite willing to act as middlemen over the question of the amount of ransom money to be paid. The district officials have in several instances affirmed their inability to protect either Christian helpers or members. The Hsia chin official has been visited by several hundred of the Boxers who asked him for a flag with their motto, Hsing-ch'ing Mieh Tang—"Up with the ch'ing (dynasty) and down with the foreigner." He asked them how they were going to carry out their programme and they answered by giving him a performance showing how they were able to stab themselves without injury, in fine, that they were quite immortal. It appears, however, that remnants of mortality still survive among them and if we are rightly informed, this same official, though he did not bestow a flag, did send to the temple which they are occupying 200 catties of bread and 70 strings of cash. Probably all the district officials are obliged to humour these hungry assemblies, as they all thus far, so far as we can learn, are without instructions from Chi-nan. We are glad to learn that the Lin-ching official has received notice of the arrest of the head of their Immortal Chu Hung-teng. He is said to be a young man, a native of the province. He is an ex-soldier.

THE BUSINESS TAX.

It is well known to everyone that a consequence of treaty-revision is that the taxes paid by Japanese are now leviable on all foreign residents, and a brief summary of the various laws and ordinances may be found useful. With regard to the Business Tax, which will affect foreigners greatly, this impost is an annual tax which comes into operation so far as they are concerned from the beginning of this year. As this is the first time that foreigners have been subjected to Japanese taxation the Yokohama Revenue Administration Bureau has compiled in book form an English translation of the various Japanese tax laws and has distributed copies to the different foreign public and private corporations. Any person can obtain a copy of the book from the same Bureau on payment of the cost of printing. A person under obligation to pay the business tax is required to send a statement of his basis of assessment to the Yokohama Taxation Office on or before the 31st inst. There is no fixed rule as to the forms of reporting such basis of assessment, but for the sake of convenience printed forms are provided in the Taxation Office, copies of which may be obtained on application. Still further, any explanation required in regard to various national taxes will also be given by the Revenue Officials. As to the report of the basis of assessment forwarded by tax-payers, the authorities will observe the utmost secrecy, and there is no apprehension of anything being divulged.

Persons carrying on business falling under some of the following heads are liable to business tax:—

SALE OF GOODS.—Any person who sells goods by wholesale or retail for an amount exceeding a thousand *yen* ($1,000) during the previous year must report the place of business, amount of goods sold, rental value of buildings, and persons engaged in the business, and also any branch establishments.

BANKING.—Any person who carries on the business of banking must report the amount of capital, rental value of buildings, and persons engaged in the business. Provided that in the case of persons who have main or branch offices in foreign countries the estimated amount of capital employed during the previous year at the Yokohama Office only is to be reported.

INSURANCE.—Any person who carries on an insurance business must report the amount of capital, rental value of buildings, and persons engaged in the business. Provided that in the case of persons who have main or branch offices in foreign countries, they shall report the estimated amount of capital employed in the previous year at the Yokohama office only.

MONEY LENDING.—Any person who has carried on the business of money lending with a capital of over five hundred *yen* ($500) in the previous year must report the amount of capital and rental value of buildings; and shall, when he has separate offices among which the capital is divided, report separately, but if it is not so divided he should report collectively.

LETTING OF GOODS.—Any person who has carried on the business of letting of goods with a capital of over five hundred *yen* ($500) in the previous year shall report the amount of capital, rental value of buildings, and persons engaged in the business, but shall, when he has separate offices among which the capital is divided, report separately, but if not so divided report collectively.

WAREHOUSING.—Any person who receives warehousing fees or any kind of compensation for storage, where established, warehouse, and goods to be received, shall report the amount of capital, rental value of buildings, and persons engaged in business, but shall, when he has several places of business among which the capital is divided, report separately, but if is not so divided report collectively.

MANUFACTURING.—Any person who has established a place of manufacture and employed workmen in manufacturing or partly manufacturing goods which he sells or which he receives fees, and has also a capital of over fine hundred *yen* ($500) and has employed more than two workmen in the previous year, shall report the amount of capital rental value of buildings and persons engaged in the business, but shall, when he have several places of manufacture among which the capital is divided, report collectively.

PRINTING.—Any person who carries on a printing business and has employed more than two workmen in the previous year, shall report the amount of capital, rental value of buildings, and persons engaged in business, but shall, when he has several places of business among which the capital is divided, report separately, but if it is not so divided report collectively.

PHOTOGRAPHING.—Any person carrying on the trade of a photographer, who has employed more than two workmen in the previous year, shall report the amount of capital, rental value of buildings, and persons engaged in business, but shall, when he has several offices among which the capital is divided, report separately, but if the capital in not so divided report collectively.

DRAYAGE.—Any person who receives freight or fees for conveying passengers or forwarding them, and has employed more than two men in the previous year, shall report the amount of capital and persons engaged in business. Provided that if he have main or branch offices or stores in foreign countries, he shall report the estimated amount of capital used in the Yokohama office only.

CANAL TRANSPORT.—Any person who receives passage money or fees from vessels which pass through a canal constructed by him shall report the amount of capital and persons engaged in the business.

LANDING PLACES.—Any person who receives passage money or fees from persons passing over, or goods which will be discharged or shipped from or at a pier constructed by himself, shall report the amount of capital and persons engaged in business.

DOCKS.—Any person who receives fees for repairing vessels at a dock established by him shall report the amount of capital and persons engaged in business.

MOORING SHIPS.—Any person receiving payment for the mooring of ships, the fees being based on the cargo capacity; or for dredging inside or outside a harbour, must report the amount of capital employed and the persons engaged in the business.

WHARFS FOR LANDING GOODS.—Any person who receives fees according to the quantity or number of goods landed on reclaimed land inside or outside a harbour shall report the amount of capital employed and the persons engaged in the business.

BUILDING CONTRACTORS.—Any person who carries on the business of a building contractor where the amount of the contracts is more than one thousand *yen* ($1,000) during the previous year, shall report the amount of the contracts and the persons engaged in the business at each office or place of business he has under his orders.

LABOUR CONTRACTORS.—Any person who has carried on the business of contractor for the supply of labourers, and whose contracts have exceeded one thousand *yen* (*yen* 1,000) must report the amount of contracts and persons engaged in the business at each office or place of business.

LETTING OF ROOMS FOR SPECIAL OCCASIONS.—Persons who receive rent or any kind of remuneration for letting rooms for guests, or as meeting places, and whose rental has been more than 50 *yen* in the previous year, must report the rental value of the building and the persons employed.

RESTAURANT KEEPERS.—Persons engaged in this business, and who have employed more than 3 persons, or have let rooms to guests and sell drink on food, must report the rental value of buildings and the persons engaged in the business.

INN KEEPERS.—The same regulation as quoted above applies to Inn-keepers.

Oyakenaru Shusengyo (PUBLIC INFORMATION OFFICES).—Any person who keeps a public place of business and receives commission for the discharge of any business for others must report the amount of commission and persons engaged in the business; separately, when places of business are situated apart.

D ibengyo (AGENCY),—Any person who receives commission under the name of agency or any kind of remuneration for transacting commercial business for others must report the amount of commission and the persons engaged in the business; separately when the office of business are separately established.

Nakadachigyo (INTERMEDIARIES)—Any person who receives commission for transacting commercial business for others, or for acting as a middleman between parties, must report the amount of commission and the persons engaged in the business; separately if there are branch establishments.

Digitized by Google Original from CORNELL UNIVERSITY

Nakagaigyo (BROKERAGE).—Any person who receives commission for transacting commercial business for others in his own name shall report the amount of commission and the persons engaged on the business; separately when there are different branch offices.

N. B.—Every person engaged in the businesses enumerated above must be reported, whether permanently or separately engaged, or living in the premises (the family of the proprietor excepted.)

H.B.M.'S COURT FOR JAPAN.

WEDNESDAY, 17th Jan.

Before His Honour Judge WILKINSON.

THE ENSLIE WILL CASE.

Re the will of the late J. J. Enslie, of H.M. Consulate, Kobe.

The hearing of this case, in which the executor, Mr. H. C. Brushfield, petitioned the Court for directions as to the disposal of the property under the trust, was resumed.

Mr. H. C. Litchfield appeared for the Trustee, Mr. H. C. Brushfield; Mr. A. B. Walford represented Kozawa Tori, the chief beneficiary under the will.

His Honour remarked that at the last hearing Mr. Walford had concluded his argument. Since then an amended petition had been put in; did Mr. Walford propose to speak to the amended petition?

Mr. Walford:—I should like to call attention to one or two cases.

His Honour directed that the amended petition should be served on the two sisters of the deceased, who were joined to the cause as respondents, but said the case might proceed as if the petition had originally been presented as amended.

Mr. Walford then continued his argument at great length, citing cases to show that the annuity of 1500 yen to his client should be a first charge on the income, and that if the income proved insufficient, it should be a charge on the corpus of the estate. It had been held in cases which he quoted that an annuity which was directed to be paid out of income was held to be a charge either on the continuing income after the death of the annuitant or upon the body of the estate during *the annuitant's life.*

His Honour said he had not yet come to a decision on the matter, but his present inclination was that the annuity to Kozawa Tori was not in any sense to be paid out of capital but out of income.

The argument which was of a highly technical character and of little interest to non-legal readers, occupied the whole of the morning, and the case was eventually adjourned to to-day for Mr. Litchfield's reply to the arguments submitted for the respondent.

THURSDAY, Jan. 18th.

Mr. Litchfied represented the Trustee (Mr. H. C. Brushfield) and Mr. Walford appeared for Kozawa Tori, the principal beneficiary under the will.

Mr. Litchfield entered into a lengthy argument to show that the 6,000 *yen* mentioned in the testator's note of hand was a voluntary gift not completed in the testator's lifetime, and that it was his intention that it should continue part of the trust fund, which would be dealt by his will, the beneficiary having only a life interest in the profits of the fund. As to the payment of the annuity bequeathed to Kozawa Tori, he contended that it was payable out of capital.

His Honour asked Mr. Litchfield if he had any remarks to make upon the direction on the will that the annuity should be paid each half year in advance.

Mr. Litchfield—No, I have nothing particularly to say on that subject. It seems to be a mode of directing that the annuity should be paid immediately on the death of the testator.

His Honour—Before there was any possibility of income.

Mr. Litchfield—It would look as if it was so. Before there was any possibility of income from the investments made by the trustees.

His Honour—What would it be paid out of?

Mr. Litchfield—There would be no fund to pay it out of; the direction was that it was to be paid out of income and not out of capital, so there would be no fund. Possibly the trustees might have power to pay the money, but no trustee is bound to do so.

His Honour—No trustee is bound to do the impossible. Does it not appear by the will that the testator intended that there should be always 1,500 *yen* a year which could be and ought to be paid over to Kozawa Tori?

Mr. Litchfield—Yes, I certainly think he expected there should be so. He considered his estate would be sufficient to meet that, and the direction for payment in advance would confirm that view, at the same precluding the idea that there should be any arrears of income payable after the death of Kozawa Tori.

His Honour—There is nothing further, I think. I have the case before me.

Mr. Walford presented a case he had found since the previous day which he regarded as supporting his argument, and the case was then adjourned to the 31st January.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

Shanghai, Jan. 12.

It is officially notified that Colonel Watson marched the Suffolks in close column to the top of a hill at midnight and was addressing the officers at daybreak when the enemy volleyed at 30 paces distance. The Suffolks scarcely fired a shot. The other details already telegraphed are confirmed.

A message from Frere Camp on Monday says that an irregular cannonade from the Boers' positions at Ladysmith commenced that morning and still continues.

It is stated that Lord Methuen's health is completely broken down.

A Transvaal telegram gives the enemy's loss at Ladysmith on the 6th, as 4 killed and 15 wounded, after admitting that they endured a withering fire from 6 masked batteries aad were defeated at all points.

The natives assert that the loss in one commando alone was 150 killed and wagon-loads of wounded. The heaviest loss is reported to have been among the Free Staters, whom the Transvaalers forced into dangerous places.

Later.

Parliament meets on the 30th instant.

The Government has decided that foodstuffs carried by neutral vessels and destined for neutral ports are not liable to seizure as contraband of war unless there is reason to believe that they are intended for the enemy's troops.

Shanghai, Jan. 13.

The *Daily Mail* learns that in the fight at Ladysmith on Saturday, White lost 14 officers killed, 34 wounded, and 300 men killed and wounded.

It is stated that Lord Methuen injured his spine falling from his horse when wounded.

Buller occupied the south bank of the Tugela at Potgeiter Drift yesterday morning.

Later.

An official statement has been issued that White's losses on the 6th instant at Ladysmith were 135 men killed and 244 wounded. The following were killed:—

Colonel Dick-Cunynghame of the Gordons.

Major Bowen of the Rifles.

Major Mackworth of the West Surreys.

Major Miller-Walnutt of the Gordons.

Captain Lafone of the Devons.

Lieut. Hill of the Fifth Lancers.

Lieutenants Adams and Pakeman of the Imperial Horse.

Lieutenants Jones and Dennis of the Engineers.

Lieuts. Walker, Somerset, and Raikes of the Rifles.

Lieutenant Hall of the Rifles Brigade.

Another officer whose name is undecipherable (15 officers in all.)

It is reported that the Earl of Ava has died of his wounds.

Buller telegraphs from Springfield, under date of the 11th instant, that he has occupied the south bank of the Tugela at Potgeiters Drift and seized the pont. The river is in flood and the enemy is strongly entrenched 4½ miles to the north.

Shanghai, Jan. 14.

The news of the death of the Earl of Ava is confirmed.

Lord Strathcona's offer to equip and maintain in the field 400 mounted Canadians has been accepted.

Krupp has been requested to desist from any intended dispatch of shells to England, since it would be incompatible with Germany's strict neutrality.

Shanghai, January 15.

The Tzar's Rescript to Count Muravieff warmly thanks him for his ability and devotion in realizing the Czar's aim to secure the benefits of a real durable peace for all peoples. The Rescript alludes to His Majesty's satisfaction at the arrangements concluded with China and the understanding with Great Britain and Japan.

The first detachment of the London City Imperial Volunteers has left London amid a scene of indescribable enthusiasm. The streets were blocked with surging thousands.

The undecipherable name of an officer killed in the recent action at Ladysmith, was that of Lieutenant Tod of the Scottish Rifles.

Later.

The Lord Mayor and Corporation of London went to Southampton to say farewell to the City Regiment.

Digitized by Google Original from CORNELL UNIVERSITY

There are reports that a battle is raging at three points on the Tugela.

All was quiet at Ladysmith on the 12th instant.

The embargo (upon the import of provisions) *viâ* Delagoa Bay is the question of the hour with the Burghers. It is declared that, if unremoved, it will have an injurious effect on the prisoners in Pretoria.

President Kruger, in a stirring speech, has declared that Providence is on the side of the Burghers and that they must win.

Reuter telegraphs from the Modder River under date of the 11th, that General Babington made a two days' reconnoissance about 20 miles into the Free State towards Jacobsdal, and did not encounter any of the enemy.

It is stated in Pretoria that the position of the Boers in Colesberg is favourable, but that the British are concentrating for large operations.

Shanghai, Jan. 16.

All was well at Mafeking on the 28th December.

The *Daily Mail* has a telegram from Pietermaritzburg dated the 12th, which says that General Warren, with 11,000 men, marched Eastward from Frere via Weenan. His scouts found no signs of the enemy at Groblerskloof, and also ascertained that Colenso is deserted.

All the Colonial and Irregular forces have been placed under Warren's command.

General Wood, with a force of all arms, established a post at Zoutpansdrift, on the north of the Orange River in the Free State, on the 6th inst., and has made pontoon bridges.

Later.

The Times has a telegram from Pietermaritzburg dated the 13th inst., which says that the heliograph from Ladysmith announces that it was strongly bombarded (?) all that day. It is reported that the Boers since their repulse on the 6th inst. have been removing their guns from the south of Ladysmith.

[NOTE.—This telegram is somewhat perplexing, owing to the omission of a word which we have supplied as "bombarded."—ED *J.M.*]

Shanghai, Jan. 17.

The bombardment of Mafeking was resumed on the 12th of January.

Nothing authentic has been received about the operations on the Tugela. Reuter cables from Capetown, under date of the 13th instant, that there is good reason to believe in the correctness of the information that a movement has been made to the eastward with a column of eleven thousand, and that important news may be shortly expected.

It is understood that General Carrington has received high command at the Cape.

Later,

Reuter's agent telegraphs from Rensberg, under date of the 15th instant, that the Boers that morning attempted to capture a hill held by a company of the Yorkshires and the New Zealand Contingent. The Boers were repulsed at the point of the bayonet. They had 21 killed and about 50 wounded.

Boer despatches from Ladysmith, dated the 13th instant, say that there was an ominous calm there and along the Tugela. The despatches added that Ladysmith appeared to be in some straits, and that there was consequently great activity among the British who have three great camps on the south of the Tugela which are constantly increasing.

The Premier of New South Wales has wired the Admiral on the Station that there is a feeling in Sydney that it would be advisable to guard the transports owing to the activity of the Boers.

Shanghai, Jan. 18.

Portugal has declared that she will neither sell, cede nor lease any of her colonial possessions.

Sir Alfred Milner has proclaimed martial law in the districts of Philipstown and Hopetown.

Very heavy firing was heard in the direction of Springfield on the 15th instant.

There are various reports that the Free-Staters desire to end the war. It is alleged that at a council recently held in Bloemfontein a declaration was made that if the British did not attack (in Natal) before the 17th instant, the Free-Staters would return home.

Later.

The steamship *Bundesrath* is to be released immediately. Great Britain will have to pay a heavy indemnity, besides deeply irritating Germany.

The Sydney Contingent has sailed amid boundless enthusiasm.

The losses at Rensberg on the 15th instant (when the Boers attacked an outpost of French's column) were seven killed and six wounded. Captain Orr, of the Yorkshires, was dangerously wounded.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, Jan. 13.

News from London says that General Buller, telegraphing from Springfield on the 11th of January, announces that he occupied the south bank of the Tugela at Potgeiters Drift that morning, and that he gained possession of the bridge. The enemy is strongly entrenched at a place about 4 miles to the north.

Saigon, January 15.

It is telegraphed from Durban under date of the 11th instant, that a combat has commenced at three points near Potgeiter Drift.

Saigon, Jan. 16.

It is telegraphed from Durban under date of the 12th that according to rumour General Wood has crossed the Tugela, but there is no official confirmation of the news.

Saigon, January 17.

It is cabled from London that news of Buller is anxiously awaited in England. The only certain information to hand is that Ladysmith was still holding out on the 13th instant.

Saigon, Jan. 18.

It is affirmed in London that Lord Methuen has been recalled.

An attack made by the Boers on an advanced post of General French's column was repulsed, the Boers having 20 killed and the English, 6.

The War Office announces that the only news received from General Buller relates to the reconnaissance made by him on the 15th inst., when he had one man wounded.

(FROM THE "HONGKONG VOLUNTEER GAZETTE" SPECIALLY WIRED TO THE "JAPAN MAIL" FROM NAGASAKI.)

London, January 9.

The correspondent of the *Globe* at the Modder River states that the last words of General Wauchope were, "For God's sake men don't blame me for this."

The Military Authorities have authorized the formation of a mounted corps of gentlemen to form part of the Imperial Yeomanry.

The report concerning the wounding of Lord Edward Cecil and of Cavendish Bentinck at Malopo outside Mafeking is unfounded.

The *Daily News* understands that the details for the composition of another infantry division have been completed.

It is reported that two large guns and six Maxims were seized on board a steamer in the Thames.

Holland has made representations with regard to the Dutch ambulance seized on the *Herzog*.

THE SHINZO-CARREW CASE AT KOBE

(FROM OUR OWN CORRESPONENCE.)

Kobe, Jan. 16.

Judgment was given this morning by the Chiho Saibansho in the matter of Okada Shinzo's claim against Captain Carrew. The Court rejected the claim, giving costs against plaintiff. (The claim was for the surrender of a plot of ground held on lease by Captain Carrew, whom the plaintiff, who had lately purchased the lot, wished to eject. Plaintiff claimed that the agreement under which Captain Carrew held the land was not a valid lease.)

CHESS.

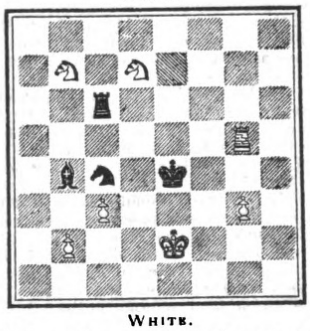
PROBLEM No. 457.

By E S CAMPLING.

BLACK.



WHITE.

White to play and mate in three moves.

GAME No. 584.

A BLINDFOLD GEM

Mr. Pillsbury has been giving another extraordinary blindfold simultaneous séance of ten games at the Newark (N.J.) Chess Club.

Digitized by Google Original from CORNELL UNIVERSITY

On this occasion he won eight games, drew two, and lost none.

The annexed partie, although with P to Q 4, was the star brilliant of the occasion:—

White—Pillsbury.	Black—Amateur.
1—P to Q 4	P to Q 4
2—P to Q B 4	P to K 3
3—Q Kt to B 3	P to Q B 3
4—Kt to B 3	B to Q 3
5—P to K 4	Kt to K 2
6—B to Q 3	Castles

Black's defence, hitherto defective on second and fourth move, now becomes a downright loss, which Mr. Pillsbury demonstrates in his happiest vein.

7—P to K 5	B to B 2
8—B takes P ch	K takes B

It would have been a shade better to play K to R sq. This would, however, have been a loss equally, as White would have proceeded with Kt to Kt 5, P to K Kt 3 best, Q to B 3, etc.

9—Kt to Kt 5 ch	K to Kt 3

On K to Kt sq, follows the familiar Q to R 5, although Black can hold out for some time by R to K sq.

10—Q to Kt 4	P to K B 4
11—Q to Kt 3	Q to Q 2

12—Q to R 4 and wins, as with this move Mr. Pillsbury electrified the assembled players by announcing mate in eight moves The modus operandi in seven moves is as follows after Black as his last reply plays B takes K P.

13—P takes B	R to Kt sq
14—Q takes R	P to B 5
15—Q to R 7 ch	K takes Kt
16—P to R 4 ch	K to Kt 5
17—Q takes P ch	Kt to Kt 3
18—Q takes Kt mate.	

The only imperfection in the announcement was that it is susceptible of demonstration in one move less, as above given. Instead of 17 Q takes P ch, Mr. Pillsbury had probably in his mind's eye 17 P to B 3 ch, which would have made the eight moves.—Score and Comments from *The Times*, Philadelphia.

GAME No. 585.

A CONSULTATION GAME.

PLAYED IN MOSCOW BETWEEN M. TSCHIGORIN AND ALLIES

Vienna Opening.

White—Tschigorin. Black—Allies.

WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	11 Kt B3	Q Q2
2 Kt QB3	Kt K B3	12 P QR3	Castles (QR)
3 P B4	P Q4	13 P x B	B Q4
4 P Q3	P x BP	14 Q K2	Q R K sq
5 B x P	B Q Kt 5	15 B K3	B x Kt
6 P K5	P Q5	16 Q x B	Kt Q5
7 P x Kt	P x Kt	17 Q B2	R x Bch
8 Q K2ch	B K3	18 K Q sq	Q Kt 5ch
9 P Q Kt3	P x P	19 K B sq	Q B5
10 Q K4	Kt B3	20 Resigns.	

This game is worth studying as showing the weakness of the "Vienna."

THE GRAND HOTEL, LIMITED.

Report of the Directors, to be submitted at the twenty-first semi-annual ordinary general meeting of shareholders, to be held at the Grand Hotel, Yokohama, on Tuesday, the 23rd day of January, 1900.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half year ended December 31st, 1899, accompany this report.

	Yen
The net profit for the half year, including balance brought forward from June 30th 1899, after writing off yen 14,718.16, and after providing for general expenses, Directors' and Auditor's fees, bonus to Manager, and interest, amounts to .... which it is proposed to apply as follows:	48,382.84
In payment of a dividend of 10 per cent. for the half year	25 000.00
Balance to be carried to new account...	23,382.84
	48,382.84

On this large balance carried forward, consisting wholly of liquid assets (wines, provisions, cigars, general expenses in stock, and cash after cancellation of sundry debtors and creditors), a considerable part has been reserved for the discharge of obligations incurred, or in contemplation, on account of repair and improvements.

To conform with the requirements of Art. 90 and 130 of the Articles of Association, two directors and an auditor must be elected at this meeting, and the amount of the Directors' fees for the current year decided. Messrs. Martin and Howard retire by rotation, but offer themselves for re-election.

Mr. James Walter having resigned his seat as a Director, Mr. M. Kaufmann, of the firm of Simon, Evers & Co., Yokohama, was appointed by the Board to fill the casual vacancy.

The Directors have much pleasure in recommending the re-election of Mr. F. J. Hall as Auditor for the current year.

It is proposed that the dividend shall be payable on the 24th day of January, when warrants will be issued.

Yokohama, 8th January, 1900.

STILL INCREASING

Are the sales of Liebig Company's Extract, and likely to increase more than ever as cooks learn that dainty nourishing gravies and entrees can be so much more easily and economically prepared by its use, than when all the Stock had to be made in the kitchen. For handiness, flavour and wholesomeness, there is nothing to equal the original

LIEBIG COMPANY'S EXTRACT

Supplied to

Liebig

Note the Signature in BLUE on every Jar.

AVOID INFERIOR SUBSTITUTES.

FOR RED ROUGH HANDS ITCHING BURNING PALMS

FOR PAINFUL FINGER ENDS

One Night Treatment. Soak the hands on retiring in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear, during the night, old, loose kid gloves, with the finger ends cut off and air holes cut in the palms. For red, rough, chapped hands, dry, fissured, itching, feverish palms, with shapeless nails and painful finger ends, this treatment is simply wonderful.

HOW TO CURE TORTURING, DISFIGURING HUMOURS.

Bathe the affected parts with HOT WATER and CUTICURA SOAP, to remove the crusts and scales, and soften the inflamed, cracked, bleeding, or thickened cuticle. Next apply CUTICURA Ointment, the great skin cure and purest of emollients, to allay itching, irritation, and inflammation, and soothe and heal. Lastly, take a full dose of CUTICURA RESOLVENT, to cool and cleanse the blood, and expel HUMOUR GERMS.

This single treatment affords instant relief, permits rest and sleep and points to a speedy, permanent, and economical cure of the most torturing, disfiguring, itching, burning, and scaly skin and scalp humours, rashes, and irritations, with loss of hair, when all other remedies, and even the best physicians fail.

Sold throughout the world. British depot: F. NEWBERY & SONS, London. French depot: L. MIDY, Paris. Australian depot: R. TOWNS & Co., Sydney. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 27TH, 1900.

SUMMARY OF NEWS.

THE weather has turned bitterly cold the last few days.

TWELVE case of plague are reported to have occurred in one street in Manila.

A TERRIBLE affair has happened in Owari, where 30 factory girls have been burned to death.

IT is reported that Pretoria is much perturbed and bitterly disappointed at the apparent apathy of the Continental Powers.

THROUGHOUT the week there has been fierce fighting among the hills near Ladysmith. Sir Charles Warren's force is winning its way, ridge by ridge. The siege of Kimberley continues as strong as ever.

THE Buddhists of the Eastern Hongwanji are vigorously urging their opposition to the Religions Bill by public meeting and otherwise.

AMONG the deaths reported from London this week are those of John Ruskin, R.D. Blackmore, and G. W. Steevens, the war correspondent.

H.M.S. *Pelorus* has seized the German barque *Marie* in Delagoa Bay, laden with flour for the Transvaal Government, and has conveyed her to Durban.

MR. FITZPATRICK'S book "The Transvaal from Within" has been selling as if it were a novel. Twenty thousand copies have almost gone already.

A CHINESE named To Sei was arrested on Thursday, by a detective of the Kagacho Police, while in the act of smoking opium at his residence 191, Settlement.

HENCEFORTH all rats sent to the Police Stations or to the sanitary offices situated in Yokohama will be paid for at the rate of five cents per head dead or alive.

GENERAL BULLER has issued a spirited appeal to the troops telling them that they are going to relieve their comrades in Ladysmith and that there will be no turning back.

THE second contingent of the New Zealand Volunteers has left Wellington. The Premier in his speech said that if the occasion arose every man in New Zealand capable of bearing arms would volunteer.

AT 4 o'clock on Wednesday morning, a robber entered the residence of a lodging house-keeper named Miita Kichigoro at Kanagawa. He tied both the man's arms and then extracted from the cash-box some 6 *yen*.

THE number of police doctors attached to the various stations in Yokohama are:—Bluff Police, 8; Kotobukicho Police Station, 40; Isezakicho Police Station, 15; Kagacho Police Station, 6; Water Police Station, 4; Quarantine, 2.

SPEAKING in the Reichstag M. de Bülow said that he had addressed serious remonstrances to England on account of the seizure of German ships. England will pay an indemnity for the *Bundesrath*, and has expressed her regrets.

THE French Minister of Finance will submit to the Chamber in the course of the week a project of law imposing the maximum tariff on colonial products of countries which do not accord most-favoured-nation treatment to France.

MR. JOSEPH Pulitzer's magnificent mansion on Fifth Avenue, New York, was completely destroyed by fire on Jan. 9. All the inmates were saved except two domestics, who perished in the flames. The contents of the house were not saved.

THE Nagasaki Police are searching for seven men belonging to H.M.S. *Victorious*, who were left behind when the vessel sailed a week ago. Nothing has yet been heard of them and it is supposed that they joined an American transport for San Francisco.

AT 5 o'clock on Wednesday, a man was seen to jump into the canal from Yamabuki bridge. A *sendo* passing by jumped in and rescued him, and he was found to be named Tanaka Takejiro, a native of Osaka. The man was in despair owing to an acute attack of opthalmia.

THE concert organised in Tokyo, in aid of the funds now being collected on behalf of the widows and orphans of soldiers that may fall during the South African war, took place on Wednesday at the British Legation, and was a pronounced success.

IN the Yokohama Chiho Saibansho on the 20th inst., before Judge Fujise, judgment was given in favour of the defendant in the case brought by Mr. Toyama against Mr. Ribeino for non-delivery of indigo valued at 15,000 *yen*. The plaintiff was ordered to pay costs of the court.

CAPTAIN Sealby, late of the O. and O. steamer *Coptic*, running between Hongkong and San Francisco, is to assume command of the *Persic*, to run between San Francisco and Australia. The *Persic* is rapidly approaching completion at Harland and Wolff's shipbuilding yard in Belfast.

ON the 19th inst., at 9.30 p.m. a man entered a *geisha* house in Sumiyoshicho, Sanchome. After tying up the two inmates with a rope, he threatened the mistress of the house, who was sick in bed, with a dagger, and ordered her to hand over clothing, money, etc. He got, however, only one *yen* in small change and a Japanese woman's overcoat.

AT one o'clock on the morning of the 19th inst. two robbers entered the house of Hasegawa Matsusaburo, a cloth-dealer in Iseri-gun, Chigara-mura, Kanagawa Prefecture. After tying the proprietor with a rope, and threatening his wife with a sword, the men got off with eight pieces of cloth, valued at 87 *yen*, and *yen* 15 in cash. The robbers are still at large.

AT 9 p.m. on the 20th inst. fire was discovered in a bed at the back of a bath house at 147, Settlement. Fortunately, before any serious damage could be done, the fire was extinguished by the police and the neighbours. Some Chinese boys, it appears, had been smoking cigarettes in the street during the daytime and then threw the smouldering ends among the shavings.

ON the 28th December Lieut. C. H. Sleeper, Collector of Internal Revenue, sold by auction in one lot at his office, No. 23. Calle Anloague, all the Filipino postage, provisional postage, newspaper stamps, surcharged stamps, and postal cards on hand in his Hacienda Publica of Manila consisting of 30,000,000 stamps, (more or less) of various denominations and years of issue; and 100,000 postal cards (more or less). There was some spirited bidding until $50,400 was reached, and, this being the highest price offered, they were knocked down to the bidders, Messrs. Koller and Co.

WITH regard to the statement of Lord Methuen that the Modder River fight was one of the hardest and most trying in the annals of the British army, a correspondent writes in *The Times* showing that the British forces lost only 7¼ per cent. in killed and wounded compared with 9 per cent. at Alma in 1854, 31 per cent. at Inkermann; 13 per cent. at Salamanca, 1812, and Sobraon, 1846; 15 per cent. at Ferozeshah, 1845, and Chillianwallah, 1849; 20 per cent at Quatre Bras, 1815; 27 per cent at Barossa, 1811; 29 per cent at Waterloo, 1815; 30 per cent at Talavera, 1809; and 41 per cent at Albuera in 1811.

LAND QUESTION IN YOKOHAMA.

Monday, Jan. 22.

It is rightly observed by the *Kokumin Shimbun* that the difficulty about registering the titles of foreign land-holders in Yokohama is wholly a question of terminology. The Japanese Government have not the remotest intention of interfering with titles which are guaranteed by treaty and whose validity stands above all query. But unfortunately the laws of Japan do not include any provision for such titles. The nearest legal equivalent is "perpetual superficies," and it can not be denied that the "perpetual superficies" of the Civil Code is a different thing from the "perpetual lease" of the treaties, since the former is liable to be made terminable by a decree of a law court, whereas the latter is secured against all such interference. The Japanese Government's idea was to solve the problem without any alteration of the law, by providing that the titles should be registered as "perpetual superficies" qualified by the parenthetical addition of "perpetual lease." In the face of a special entry of that kind, and in the face of the fact that any attempt to alter the title must be initiated by an appeal to the law courts by the Japanese Government themselves in their quality of owners, it was thought that the foreign land-holder might feel quite easy. But the foreign land-holder is not satisfied. He does not see why there should be any circumlocution whatever. He possesses by treaty a certain kind of title, and while he has perfect confidence in the good faith of the Japanese Government, he maintains, as a business man, that the title "perpetual superficies" is not as good *per se* as the title "perpetual lease," and that his financial transactions in connexion with the land are inconveniently hampered by the substitution of the former term for the latter. If he has occasion to mortgage his land, he does not want to have any element of uncertainty or obscurity whatsoever in the nature of the title he can offer to a bank or a capitalist. It can not be denied, we think, that strict right is on the side of the foreigner in this matter. The treaty gives him a certain privilege, and he should not be required to make any concessions whatever, or consent to the introduction of any factor of doubt, in his enjoyment of the privilege. The Japanese Government have probably been influenced in this matter by a sense of the inexpediency of asking the legislature to intervene at a time when public opinion is just beginning to turn towards a more liberal policy in the matter of foreign ownership of land. They perhaps think that a project of law, if introduced in the Diet, might give rise to a discussion in which the conservatives would again find an opportunity to ventilate their views. That is only our own conjecture, but it may be taken for granted that all who desire to see Japan adopt an entirely enlightened policy as to land ownership would prefer not to ventilate any correlated question just at present. The country's international obligations, however, must be carried out literally. More than six months have elapsed since the revised treaties went into operation, and during that long interval there has been an almost complete block in all transactions relating to Settlement lands. It is a great hardship. The meeting held by foreign land-renters in Yokohama on the 19th instant evinced, we think, a remarkably moderate disposition under the circumstances, and we venture to urge the advisability of paying immediate attention to the representations that will doubtless be made in the sequel of the meeting. One comment we can not choose but make. It is that there seems to be still an unbridged gulf between the foreign community and the Japanese Authorities. Why should it have been necessary to hold a public meeting? Surely there should have been no insuperable difficulty in determining long ago whether the proposed arrangement as to parenthetical leases would satisfy this community. The concession in this matter has to be entirely on the side of the foreign land-lessees. Would it not have been reasonable to ascertain whether they were willing to make such and such a concession before taking any definite official action? It is not our business to conjecture where the responsibility for this state of things rests, but we can scarcely imagine that the Japanese Authorities rashly embodied their idea of parenthetical leases in an Ordinance without previously obtaining some kind of assurance that the device was likely to prove satisfactory. It is very disappointing to find that the days of public meetings and public protests are not yet at an end.

Tuesday, Jan. 23.

The usual attempt is made, we observe, to misrepresent this journal and to falsely attribute to us an attitude of opposition to the wishes of the community. Dr. Lönholm is also dragged into the question though he has had nothing whatever to do with it. It is in connexion with the Land-renters' meeting of Friday last that this dishonest perversion of facts is published. "The opinions expressed at the meeting," writes the *Japan Herald*, "were practically unanimous, and proved that the sophistries of the *Japan Mail*, and the explanations in favour of the superficies arrangement, urged with so much assiduity by Dr. Lonholm, have had no effect whatever upon public opinion beyond that of making it more resolute in opposition." As to our so-called "sophistries," what we have done is merely to point out that, so long as the Japanese Government observes its treaty obligations, the proposed method of registering perpetual leases as "perpetual superficies" is perfectly safe, for the perpetuity of the superficies can never be disturbed unless the Japanese Government, in its capacity of owner of the land, applies to a law court to have a period fixed. That fact is absolutely undeniable. Nevertheless, if the foreign lessee desires to have the terminology of the register in exact conformity with that of the treaty, he is entitled to have his wish satisfied. As to the "explanations in favour of the superficies arrangement, urged with so much assiduity by Dr. Lönholm," we are not aware that Dr. Lönholm has publicly expressed any opinion whatever on this subject. He did, indeed, help in the past to enlighten the community as to the true value of the title called "superficies," and he exposed the singular misapprehensions put forward by Kobe and Yokohama journals on this subject; but with regard to the registration of perpetual leases as "perpetual superficies" with the word "perpetual leases" in brackets—which is a wholly independent problem—he has not made any statement. We have only to repeat what we have often said, that there can never be anything like really amicable relations between the foreign community and the Government so long as every incident that occurs is made an occasion for misrepresentation and recrimination. Every endeavour was made by the promoters of Friday's meeting to deprive it of all acrimonious features, and to show clearly that the friendly character of the Japanese Government's intentions was understood and appreciated, yet the *Japan Herald* now speaks of "the contest between the land-renters and the Government," charges the latter with "an attempt to set aside" the land-renters' rights," and declares that "the Government, for some inscrutable purpose or another, has departed from the peaceful and appropriate line of action laid down."

SUCCESSFUL COMPANIES.

A great deal of attention has been attracted by the published result of the working of four enterprises during the second half of last year. The first of these was the *Naigai Menka Kaisha* (home and foreign cotton company), which, with a paid up capital of only 350,000 *yen*, realized a net profit of 310,000 *yen*, paid a dividend of 80 per cent., and decided to raise its capital to 1,200,000 *yen*. The second was the Kerosene Company of Echigo. Its paid up capital is 300,000 *yen*, and it realized profits aggregating 120,000; thus paying a dividend of 40 per cent., and deciding to double its *nominal* capital of 600,000 *yen*. Then came the 100th Bank, which cleared 876,000 *yen*, against a capital of 4 millions, and paid a dividend of 20 per cent., raising its reserves to 876,000 *yen*. Finally, the Mitsu Bishi Bank, with a capital of a million *yen*, made a net profit of 157,000 *yen*, but paid a dividend of only 5 per cent., carrying all the rest to its reserves Such figures are tantalizing. They show what extraordinary opportunities for money-making Japan offers.

COUNT ITAGAKI AND MR. HOSHI TORU.

It is noticeable that whereas, at the recent convivial meeting held by the Liberals in the Maple Club, Mr. Hoshi Toru's speech was chiefly marked by a prediction that the Party has come within measurable distance of achieving its long cherished purpose—the grasping of administrative power—, Count Itagaki made not the smallest allusion to anything of the kind, but confined himself entirely to discussing the social problem. He thinks that Japan will soon be confronted by that problem in a troublesome form—strikes, trades' unions, and so forth—and that wise legislators will make their preparations accordingly. He would begin by enacting laws for the protection of the working classes, and he asked his audience to lend their assistance. It may be claimed, perhaps, that the two speeches were correlated, since one leader spoke of the acquisition of administrative power, and the other indicated the use to be made of it when acquired, but the connexion is too subtle to have suggested itself readily to an audiencet at a dinner party.

SOUTH AFRICA.

Saturday, Jan. 20.

The telegrams received yesterday at the French Legation conflict somewhat with the news forwarded by Reuter, but the disagreement is probably a mere matter of transmission. It appears to us that what has happened is this:—On the 10th instant, a force of mounted infantry under the command of Dundonald, made a long flank march to the westward of Potgeiter's Drift, crossed the Tugela at a point several miles higher up, and then came down the river to attack the Boers outposts from the west, surprising them and driving them in. On what day this happened it is difficult to make out. Reuter's telegram tells us that Dundonald's men moved westward on the 10th, but says nothing about the time of their attacking the Boers. The French telegram speaks of the 18th, but that is apparently erroneous: the operation must have been prior to the 16th. At all events, the outposts having been driven in, the infantry of the Division to which Dundonald is attached, crossed the Tugela on the evening of the same day, and doubtless occupied the heights from which the Boers had been dislodged. Meanwhile, Warren's Division had advanced on the east by the Weenen road, and reaching the Tugela at Wagon's Drift, crossed in the face of a heavy fire, and succeeded in taking up a good position two miles on the north of the river. He was able to carry all arms over the river, infantry, cavalry, and artillery; from which it follows that there was a bridge available and *indeed the* French Legation telegram *speaks* of a bridge having been constructed. Reuter does not say whether the Division on the left flank—where Buller himself seems to be directing operations—was able to get its artillery across, but the French telegram speaks of one battery having passed the river, and where one went the rest doubtless followed. Lyttleton's Brigade remains to be accounted for. We are told that it crossed on the 16th. But where? Buller has two Divisions and a Brigade, so far as we can ascertain, besides irregular troops. It would seem that the Brigade is Lyttleton's, in which case its point of crossing was probably between Potgeiter's Drift and Wagon's Drift; whether near or far from Colenso we can not say, but, at all events, at a central point. The sum of the matter is that Buller's forces have crossed the Tugela, and that the plan of operations is heavy flank attacks on the right and left, each delivered by a Division, and a frontal attack by a Brigade.

Potgieter's Drift seems to be about 15 miles distant from Ladysmith as the crow flies. The river there has a gently sloping bank on the southern side, but the northern bank rises abruptly to a high bluff. This bluff Buller now holds, and if he desires to use heavy artillery, he can find a position for his howitzers within effective range of the enemy's trenches. Between him and Ladysmith there is no commanding ground except the range of hills some five or six miles from the town, on the west, where the Boers have planted some of their seige artillery. Wagon's Drift, where Warren's Division has crossed, appears to be some 25 miles distant from Ladysmith on the east. He, also, has no hilly country to negotiate until he reaches the heights, about 10 miles from the town, where the eastern seige batteries of the Boers are situated. Of the central attack we need not speak, as it is obviously subordinate.

Apart from the contingency of our troops being driven back, which we do not anticipate, the probable result of these operations is either that the Boers will retire, with comparatively little loss, or that they will stand their ground, in which case they may suffer a heavy disaster, for with two strong columns on their flanks, a Brigade in front and the Ladysmith garrison in their rear, their position will be strategically very dangerous. But in such a country as that around Ladysmith, every yard, every inch, of which must now be perfectly familiar to the Boers, it would be rash to forecast anything. We can only hope. It is a very great point that our troops have crossed the river without heavy loss, and the inference is that the defence of the Boers has weakened.

Monday, Jan. 22.

It is now apparent that the rumours circulated about the march of Warren's Division viâ Weenen to turn the left flank of the Boers at Ladysmith, were entirely erroneous. There may have been a reconnaissance in the direction of Weenen, and scouts may have been pushed as far as the bank of the Tugela ten or fifteen miles eastward of Colenso and as far as Colenso itself. That would have been a very natural step in order to pursuade the enemy that an advance was to be made on the east. At all events, most circumstantial accounts were published. It was even stated that Grobler's Kloof had been found without an occupying force, that there were no Boers in Colenso, and that the trenches in that quarter were not held. Officially, however, strict silence was maintained, and it now appears that while Warren's Division was supposed to be making a long and dangerous detour which would have carried it across the Tugela at a point about 25 miles eastward of Colenso, it was really preparing to cross the Tugela at a point some 20 miles to the west of Colenso. What seems to have actually happened is this:—On the 11th, Dundonald's Mounted Infantry seized Zwarts Kop, a hill 14 miles westward of Colenso, overlooking the Tugela, from which it is about a mile distant. If the Boers had an outpost at this position, or near the Tugela on the northern bank, they apparently retired without fighting, and Dundonald was able to seize Potgieter's Drift and the bridge, such as it is. Having thus secured a crossing place, Buller moved a large part of his forces to the River, and having completed his preparations, passed the columns over on the 16th. During these operations one Brigade under Lyttleton acted as a covering force. It held Zwarts Kop, and thus commanded the bluffs on the north bank of the Tugela, while the crossing was in progess; and it moved over the river and took a position guarding the right flank after the crossing had been completed. Meanwhile Warren's Division had pushed further west, and was the last to effect a crossing at a place called Wagon's Drift, which seems to be five or six miles up stream (*i.e.* westward) from Potgieter's Drift. There must have been a Boer outpost on the north bank of the River where Warren crossed, for the telegrams tell us that he had to effect the passage in the face of a hot fire. The crossing at Potgieter's Drift would doubtless have been similarly opposed had not Zwarts Kop being crowned with British artillery. It will be seen that Warren's Division, after negotiating the Tugela, found itself some five or six miles distant from the left wing of Buller's main body. The task before Warren was to turn the enemy's right flank, in which operation he was to be assisted by Dundonald's mounted Brigade, Buller meanwhile holding the Boers. Warren marched direct for Acton Homes, which lies on the road leading to Ladysmith *vid* Dewdrop. Acton Homes is 22 miles from Ladysmith and 15 miles from Dewdrop, to which point (7 miles from Ladysmith) the Ladysmith garrison made a strong sortie in the early days of the siege. Warren is moving with tolerable rapidity. From the point where he crossed the Tugela to Acton Homes, the distance is 7 miles. He crossed on the 16th (Tuesday) and on the 17th his advance guard assisted Dundonald's Brigade to capture Acton Homes, the Boer outpost evidently making a very poor defence, since, while losing 21 killed and 15 prisoners, with probably 50 or 60 wounded, they only succeeded in killing 2 and wounding 2 of their assailants. Warren doubtless adopted one of two courses after capturing Acton Homes. He either moved direct upon Dewdrop, or he pushed a portion of his Division further north so as to strike the telegraph road from Van Reenan's Pass to Ladysmith. If the latter was his route, he doubtless made Blaauwbank his objective point. Blaauwbank is 12 miles from Acton Homes and 11 miles from Ladysmith. Advancing simultaneously by the Blaauwbank and Dewdrop routes, Warren would not only completely turn the Boers' position, but also place himself across their lines of communication with the Free State *vid* Van Reenan's Pass. We incline to think, however, that he moved direct upon Dewdrop, and that his arrival there was the signal for a general attack upon the Boers' westerly position from the Tugela towards Ladysmith. If Dundonald's Horse found Dewdrop only lightly occupied, then Warren may have attacked the place on the 18th after a forced march of 12 miles—a difficult march, for there are no roads. The probability, is, however, that he did not reach Dewdrop until the 19th. It may even be possible that his orders are not to push on so far, but to hold his Division between Acton Homes and Dewdrop, so as to participate in the general attack. Thus far the operations have been very successful. Of course it will occur to our readers that Boer outposts have never hitherto made a strong resistance, and that no inference is yet warrantable. That is true, but certainly the Boers should not have allowed Warren's Division to place itself where it is.

Wednesday, Jan. 24.

Sir Charles Warren's Division, having crossed the Tugela 26 miles to the west of Colenso, had subsequently to turn eastward and direct its march towards Ladysmith. Before swinging round to the east, however, it had to move due north until it struck the Acton Homes Road, which leads to Ladysmith *vid* Dewdrop, the general direction of the road being approximately parallel to that of the Tugela. In short, Buller's advance to

Digitized by Google Original from CORNELL UNIVERSITY

relieve Ladysmith is taking place in the space bounded on the north by the Acton-Homes-Dewdrop road, and on the south by the Tugela. On commencing his eastward advance, Warren found himself in front of a range of steep bluffs, at the foot of which runs the Venter Spruit River. The Venter Spruit rises in the Drakensberg range and flows towards the Tugela nearly at right angles, and since Warren crossed the Tugela to the west of the place where it receives the waters of the Venter Spruit, he found the latter right across his front when he commenced his advance eastward. His task on Saturday last was to force the passage of the Venter Spruit, and climb the bluffs on its eastern bank. These bluffs are very steep. They seem to run back, ridge after ridge, for a distance of about 5 miles. But when the summit is reached, the country thence to Ladysmith is comparatively level. On the Ladysmith side of Dewdrop there is a small river called the Dewdrop Spruit, and between it and Ladysmith another somewhat larger stream, the Flagstone Spruit. Both of these run at the foot of bluffs rising to the Ladysmith plateau, but they are comparatively trifling obstacles. The Venter-Spruit bluffs are Warren's great difficulty. Once he surmounts them, his advance will be very much easier. The rest of Buller's forces crossed the Tugela at a point on the east of the Venter Spruit and its bluffs, so that they have only to wait until Warren swings round, when the general advance will begin. These remarks will explain the report made by General Buller that the ground in front of Warren is very difficult, and that, since the fighting is all uphill, no definite statement can be made as to the success achieved. We need scarcely say that the telegram published in Yokohama to the effect that the relief of Ladysmith is imminent must be taken with the greatest reserve. Up to Sunday night, Buller had not begun to move his right and centre towards Ladysmith. He was simply waiting until his left, under Warren, should fight its way up the bluffs, and swing into line. Thereafter there will still be a distance of some twenty miles to traverse. The Boers are plainly making a stout stand in the hills above Acton Homes, and even when they are beaten back from that position of vantage there is plenty of room for them to offer renewed resistance. It may be assumed, however, that, so soon as Warren surmounts the Venter-Spruit bluffs, he will not give the enemy time to construct any new entrenchments, unless he should himself be too exhausted to push on immediately. He fought throughout the whole of Saturday and Sunday, and doubtless had to continue the operation on Monday.

Friday, Jan. 26.

The Regulars now shut up in Ladysmith are four regiments of cavalry, six batteries of field artillery, and nine battalions of infantry, or about 8,000 men of all arms. We do not, of course, include in this reckoning the battery of mountain artillery, or the 1st Battalion of the Royal Irish Fusiliers and the 1st Battalion of the Gloucesters, which surrendered at Nicholson's Nek. Neither are we making any allowance for casualties. White's force must have been greatly weakened by death on the field or in hospital and by wounds. Even including the local levies and the naval brigade, he can not have more than from seven thousand to eight thousand men fit for action. It is surprising that the Boer attack, made on the 6th instant, did not succeed, for they must have launched at last sixteen or seventeen thousand men to the assault.

PILOTS IN JAPANESE WATERS.

When the Pilots Bill was found to contain a clause limiting to Japanese subjects the privilege of obtaining a pilot's license, much adverse criticism was heard among foreigners. To us it seemed that the provision was not unnatural, for in waters like those at some vital parts of the Japanese coasts, it might at any moment become undesirable that foreigners should have knowledge of obstructions laid for purposes of defence. The Bill did not interfere, of course, with pilots already licensed. They were to continue the pursuit of their profession undisturbed. Moreover, in view of the fact that a sufficient number of Japanese subjects to become pilots could not be immediately obtained, the operation of the limiting clause was to be postponed for five years. Since the time of the Bill's passing, two years ago, it does not seem that Japanese subjects are likely to become available in larger numbers. The pilots now working in the Inland Sea are 16, of whom only 2 are Japanese. There used to be 4 Japanese, but 2 have died, and others have not replaced them. The fact is that the demand for Japanese pilots will not be felt for many years to come. They do not enjoy the confidence of foreign shipmasters. Whether they deserve to enjoy it or not is another question. Theoretically their competence may be admitted by many, but when it comes to the practical test of entrusting such a valuable thing as a ship to the pilotage of a Japanese in preference to a foreigner, there will be no hesitation on the part of a ship-owner or ship-master. The Department of Communications has just nominated a committee representing the Pilots' Association. It consists of one Japanese, Mr. Koya Yosuke, and two foreigners, Mr. H. J. Carrew, an Englishman, and Mr. F. Bischoff, a German.

MR. OISHI AND JAPAN'S FOREIGN POLICY.

Wenesday, Jan. 24.

We have not thought it expedient to devote large portions of our limited space to reports of the Diet's proceedings during the present session, for there has been little, if anything, of general interest. A few important questions will soon come up for discussion, but in the meanwhile the proceedings are tame and humdrum. In Monday's session of the Lower House —the Upper did not meet,—a great deal of the time was taken up by a speech from Mr. Oishi Masami, formerly Japanese Representative in Söul—where he distinguished himself by endeavouring to give practical effect to his stalwart foreign policy,—and subsequently Minister of Agriculture and Commerce. Mr. Masami is undoubtedly a man of much ability, and it is therefore inconceivable that he can have placed much faith in his own indictment of the Cabinet, as formulated at great length on Monday under the familiar pretext of asking questions. The position taken by him reduces itself to this, that he would have the Government assume the initiate in all enterprises. We must really object to England's being held up as a model for such a policy. England's action is precisely of the opposite character. She does not officially concern herself about any enterprise until her people have first intimated a desire to carry it on. Mr. Oishi wants to know whether the Government of Japan has opened negotiations for the purpose of obtaining railway concessions from China as the Governments of England, Russia, Germany, Italy and Belgium have done, and for the purpose of obtaining mining concessions. The British Government has not done anything of the kind. What it has done has been to present to the Chinese Government proposals made by British subjects for undertaking the construction of certain railways and the working of certain mines. Have any Japanese subjects come forward similarly? The Formosan Railways were left in the hands of Japanese subjects. We know the result. The Söul-Fusan Railway is in the hands of Japanese subjects. We already begin to see the result. The Japanese Government would only bring ridicule on its nationals if it applied to China for railway and mining concessions which would be left, year after year, unutilized. The case is much the same with the special settlements obtained in China under the Shimonoseki Treaty. We do not think that private individuals can be expected to construct roads and drains in the new settlements, but still less do we think that the Japanese Government ought to take such measures in the absence of any evidence that the Settlements will be occupied after large sums of public money have been spent preparing them.

Thursday, Jan. 25.

Mr. Oishi Masami gets a cruel roasting from the *Nichi Nichi Shimbun*; a roasting all the more effective in that it is done so suavily, and scientifically. The *Nichi Nichi* admires Mr. Oishi's *exposé* of foreign policy. It is pleased to find him advocating positive lines of procedure instead of clinging to the negative lines followed by his Party, and it trusts that he will be prepared to grant funds for the measures he advocates although he associates himself with politicians who agitate for large reductions of State expenditures. But, after all, it is not long since Mr, Oishi himself was a member of a cabinet headed by the leader of his own political party. How did it happen that none of the steps he now declares so vital was then undertaken? If they are necessary now, they were necessary then. Eighteen months has not changed the face of Oriental politics. Mr. Oishi is in the position of having left undone the things he himself declares ought to have been done, and of now urging that they should be done, though he himself votes for cutting down the appropriations necessary for doing of them. Mr. Oishi will probably reply:—"A fig for consistency. Men in opposition are not required to be consistent."

The *Weekblad* of Amsterdam has just published a pleasant caricature. It is entitled "English Tactics in South Africa," and depicts John Bull, with a Bible in his hand, directing a soldier, who is firing from cover, to aim at a Red Cross ambulance.

THE RELIGIOUS AGITATION.

Monday, Jan. 22.

Count Otani, Chief Prelate of the Eastern Hongwan-ji, seems to have been driven almost to desperation by the opposition he is encountering among his own subordinates under the leadership of the now famous Mr. Ishikawa. He has held a meeting of hierarchs in Kyoto, and has informed them of his desire to abdicate the position of *Hossu* in favour of his son, Mr. Otani Koyen. Prominence was given in his speech to the financial embarrassments under which the huge temple has laboured ever since its construction, but it will be well understood that difficulties connected with the agitation against the Religions Bill are the real cause of the proposal to resign. The public has heard a good deal about the finances of the Higashi Hongwan-ji. Millions were expended upon the building; donations of grand timbers and magnificent metal work came from all parts of the country; money poured in, and hundreds of women cut off their tresses to make cables for hauling the huge stones and baulks. It must have occurred to any spectator of these proceedings that little faith can be placed in the often repeated contention that the people of Japan lack the religious instinct. However, in spite of the generous fervour of believers, a considerable balance is said to have appeared on the wrong side of the account when the great temple was stripped of its scaffolding, and the priests have had an arduous struggle ever since. But they knew the extent of their trouble fully five years ago, and it is not conceivable that *the Bussu is now* heirding beneath an unendurable load of financial liabilities. The agitation fomented by Mr. Ishikawa and the *Zoku-bosu* (worldy priests) is the real dilemma. Prince Komatsu, says Count Otani and other men of note urged him to support the Religions Bill, and he has employed all his strength for the purpose, but since he can not control his own subordinates the time has come to step aside.

In connexion with this affair of the Religions Bill and the agitation against it, the *Jiji Shimpo* has a remarkable article—remarkable for two reasons; first, because the *Jiji Shimpo* is the most influential journal in Japan; secondly, because the language it uses against the Buddhist priests is quite astounding. If the priests deserve the abuse—we can not call it criticism—showered upon their heads by the *Jiji Shimpo*, their moral plight must be miserable. Briefly summarized, what the *Jiji* says is that the priests do not care a row of pins about religion, or its status, or its control; all that concerns them is their own luxury. They welcome this Bill; they delight in its appearance; the longer they can keep the question in abeyance the better they will be pleased; for the whole incident furnishes an unique opportunity to obtain "costs of movement" (*undo-hi*) from their pious and befooled parishioners. They pretend to be anxious for State recognition of Buddhism. Nothing of the kind. They are thoroughly crafty men, fully versed in politics and all other mundane affairs, and they know perfectly well (who better?) that State recognition of Buddhism or of any religion is totally out of the question. But the cry affords a fine excuse to exploit the pockets of the faithful, and so they have raised it and are maintaining it vehemently. Eating, drinking, self-indulgence and debauchery of all kinds, these are the sole aims of priestly endeavour. The Government is merely playing into their hands when it directs any attention to their doings. They are quite unworthy of notice. If the Diet rejects the Bill *in toto* and replaces it by a measure abolishing all official guardianship of temples or temple treasures, and all official solicitude on account of Buddhist affairs, the *Jiji* would heartily welcome such legislation.

We have not conveyed, not nearly conveyed, the full force of our contemporary's writing. Our readers must take a great deal for granted. But we have said enough to convey an idea of the strangeness of such an incident. Conceive anything of the kind happening in England. Conceive the London *Times* filling its leading columns with a similar tirade against the clergy of the Church of England or the Church of Rome. The thing is quite inconceivable. Yet the *Jiji Shimpo* is not a violent journal. It is eminently sober, and its long record shows that it never speaks without good warrant for what it says. The inference is plain.

Tuesday, Jan. 23.

The Buddhists held a big meeting on Sunday in Tokyo, for the purpose of protesting against the Religions Bill. They had hired the Nakamura-ro for the purpose, but they overflowed into the Ibumura-ro. It is stated that they numbered five thousand, and that their ardour was not damped by the thickly falling snow. They called themselves the Buddhists of all Japan, but in reality they consisted of only the Otani section and priests from the Nichiren sect. Marquis Kuga was expected to attend, but indisposition prevented him from doing so, and he sent his son in his stead. The meeting unanimously passed a resolution condemning the Bill, on the ground, first, that it proposed to place all religions on the same footing, and not to extend State recognition to any; secondly, that its operation would disturb the relations between the principal temples and other branches. With cheers for the Emperor and for Buddhism the meeting dispersed. The only member of the Lower House who associated himself openly with the demonstration was Mr. Hayakawa Riosuke, but it is alleged that the well-known Mr. Kono Hironaka was seen among those attending.

The Kyoto Buddhists also seem to be very resolute. Even in the Eastern Hongwan-ji they have broken away from the control of their Chief Prelate, Count Otani, and have passed resolutions in favour of supporting the extreme policy of Mr. Ishikawa.

Thursday, Jan. 25.

The Shin sect of Buddhism meets us constantly in the pages of Japanese history. From the earliest days of its existence it seems to have been endowed with a particularly truculent disposition. Its phalanx of halberdiers was a terror even to military men in mediæval days. Ota Nobunaga had to employ all his great strength to subdue these warlike monks, and Iyeyasu turned to them for help in his struggle against the Osaka party. Thus they are only maintaining the continuity of their tradition when they now stand forward and foment a violent agitation against the Government's Bill for placing all religions on an equal footing, and thus consummating the intention of the Constitution. The interesting question is, what is the objective of the priests' attack. Are they, as many critics seem disposed to conclude, animated by hostility to Christianity, and disturbed by a dread that if the alien faith obtains a legally recognised status, it will sweep all other creeds out of its path; or are they swayed by some more mundane motive? Gradually facts are coming to light which help us to answer these questions. That the chief Vicar Ishikawa and his various supporters, among them Marquis Kuga and the notorious ex-Major Okamoto Rinsuke—who has now attained the distinction of having his portrait published by a leading Tokyo Journal—have made adroit use of the anti-Christian cry is plain enough, and we have no right to deny that some of them are sincerely solicitous for the safety of their own faith. But Japanese newspapers publish statements which impart a distinctly non-religious aspect to the agitation. The great temple, Higashi-Hongwan-ji, has no less than 9,600 subordinate temples, small and large, from all of which it receives contributions, and it has also property of various kinds, valued at five million *yen*. Nevertheless its financial affairs are in a disordered condition. It owes eight hundred thousand *yen* to the Kitahama Bank and it found itself under the necessity, two years ago, of hypothecating to the Bank the greater part of the revenue derived from its branch temples. The assets were ample to pay interest and sinking fund, but it is evident that their continued inflow is a matter of vital importance. This is where the proposed Bill presents its first obnoxious feature. Its effect would be so to lessen the bonds binding together principal and branch temples that not only would the Eastern Hongwan-ji's power of raising funds from its provincial parishioners be greatly impaired, but there would also be imminent danger that three thousand of its subordinate temples would transfer their alligiance to its great rival, the Western Hongwan-ji. It is therefore, almost a matter of life or death to the Eastern Hongwan-ji that the Bill should not become law, and many people allege that the real motive of the agitation must be sought in that phase of the affair. Hitherto we have been accustomed to hear chiefly of dissensions among the various factions of the Shinshu followers—the Atsumi faction, the Ishikawa faction, the Hokuriku faction, the Kwanto faction, and the Kiushiu faction—but now the parties seem to have ranged up on two sides only, the Otani and the Ishikawa. Very remarkable is the fact that among the secular newspapers not one has raised its voice on behalf of the Ishikawa agitation. We have already told our readers what the *Jiji Shimpo* thinks of the matter, and we have described the kind of language used by the leading Japanese journal about Buddhist priests and their methods. The *Mainichi Shimbun* now writes in almost equally strong terms, but while ridiculing the ignorance and bigotry of the priests, it declares that the blame rests primarily with the Government, which has allowed the education of the country to be moulded by a narrow-minded, conservative clique like that headed by Professor Inouye Tetsujiro. The Professor, who occupies a prominent and influential position in the Imperial University, believes,

Digitized by Google Original from CORNELL UNIVERSITY

and avows his belief, that mixed residence would be a catastrophe since it would involve a struggle for survival between the Occidental and the Japanese, and the result would be the latter's extermination. In short, not to mince matters, Professor Inouye is credited with believing that his own nationals belong to an inferior race which could not hope to survive in a contest with the people of the West. He and his fellow-thinkers have succeeded in procuring currency for that craven creed in educational circles—or, rather in a section of the educational circle—and it is thus that the youth of the country are brought up to think thoughts which create a sympathetic audience for the present Buddhist agitation. Incidentally the *Mainichi* blames the Government in connexion with the *Shokonsha* celebrations. It does not object to paying reverence to the spirits of the departed, but it does object to having the spirits of assassins included in the category. We do not follow this line of argument, for we are not aware that any deceased assassins are among the dead whose memorial rites are performed at the *Shokonsha*. But probably the *Mainichi* alludes to the fact that the Authorities never adopted any peremptory measures to check the burning of incense and the reciting of prayers at the tombs of men like Nishino Buntaro. At all events it alleges that this perverted morality has borne fruit in such criminals as Shimada Ichiro, Count Okubo's murderer; Aibara Shokei, Count Itagaki's assailant; Nishino Buntaro, who stabbed Viscount Mori to death; and Kurushima Tsuneki, who shattered Count Okuma's leg. The inference suggested by all these comments is that the Buddhists, whatever be the fate of their agitation, have succeeded in administering to public opinion a tonic which does not seem likely to benefit their cause or that of bigotry in general.

Friday, Jan. 26.

Count Otani, the High Preate of the Eastern Hongwan-ji, has consented to reconsider his resignation. It is said that he has been induced to take this step chiefly by the remonstrances of his relative Prince Komatsu, and the earnest advice of his son, who would be his successor. The commotion in the ranks of Buddhism is curious and interesting. Three hundred years ago it would have been a case of swords and halberts, and of the invasion of the Imperial capital by a crowd of monks escorting the sacred cars, and offering a strong demonstration of piety and ferocity. But the times have changed.

THE IDEOGRAPH PROBLEM.

Japan is now beginning to grapple in earnest with the ideograph problem. The pioneers of a reform seldom succeed. They are generally in advance of their time, and the seed sown by them must be left to germinate before tangible results are attained. Eighteen years have passed since the Romaji-kai was organized. It held a great meeting in the chief hall of the former Imperial Engineering College, and if any deduction might have been drawn from the quality of the meeting, the character of the speeches delivered, and the standing of the speakers, one might fairly have concluded that the movement was already within measurable distance of success. Then followed the publication of the *Romaji Zasshi*. The little periodical showed much ability. Its editors, Professor Toyama and the late Professor Yatabe, made their work a labour of love, and it was always a liberal education as well as a pleasure to read their weekly sheet. They committed, we venture to think, one error. Instead of trying to limit their phraseology to words that did not expose the difficulties of the system they were endeavouring to inaugurate, they allowed their pens to travel over the full range of Chinese derivatives newly added to the language during the *Meiji* epoch, and since it is in helping to decipher the meaning of such expressions that the ideograph plays its most useful part, the embarrassments likely to result from its abolition were illustrated rather than concealed by the pages of the *Romaji Zasshi*. Perhaps that had something to do with the failure of the magazine, but the main reason, undoubtedly, was that the time had not yet ripened for such a venture. When we say "failure," however, we speak in a qualified sense. The *Romaji Zasshi* and the strongly sustained, patiently supported movement of which it was an instrument, can not be said to have altogether failed. They certainly exercised an influence which has never ceased to be felt, and to which may be directly attributed the revival of the project by the Educational Society. Last year, the Diet was asked to grant a paltry appropriation for the purpose of conducting investigations into this most important subject. But the Diet refused. The members showed no hesitation about voting a large increase of their own salaries, but with their habitual blindness to the true interests of their country, they declined to assist an absolutely vital reform. For without pausing to set forth the often discussed fact that Japanese youths are hopelessly handicapped in the race of life when they have to waste years in acquiring a cumbrous and brain-bewildering script, we can say with absolute confidence that this country, so long as it continues to use the ideographs, will remain outside the comity of Western nations. Many of the old barriers have been removed; above all, the treaties have been revised, and Japan, by recovering her judicial and tariff autonomy, has obtained recognition as one of the really independent States of the world. But the ideographs ostracise her. They make her a nation apart. They conceal her from the peoples of the Occident as effectually as though she had no literature, no political aspirations, no philosophical impulses. Since, then, this script is a fatal barrier to Japan's progress, and since our faith in the permanence of her progress is so absolute, we believe that the ideograph will go. But it must be confessed that the immediate outlook for its departure is not bright. The Government, by some manœuvering which ought to make the Diet blush, if anything could achieve that result, has contrived to appropriate a small sum for the purposes of the movement. That is something. Unfortunately, however, the committee appointed by the Educational Society to devise a substitute for the ideographic script, seems to be very divided in its views. Some, of whom the well-known conservative, Professor Inouye Tetsushiro, is understood to be the leader, advocate the manufacture of a new script! The thing is scarcely credible, but rumour is quite positive about it. Others are in favour of limiting the number of ideographs employed; a reform which would lighten the labour of the rising generation, but which, while depriving the ideograph of its sole merit as a wonderfully fecund machine for verbal manufacture, would do nothing towards removing the veil that hides Japan from the Occident. Others advocate recourse to the *kana* syllabary, apparently ignoring the fact that, in the routine of civilized progress, a syllabary is as far behind an alphabet as ordinary long-hand is behind stenography. Finally, there is a party headed by Prof. Toyama, who, as usual, is found in the really enlightened camp. They insist that the only sound course is to abolish the ideogram altogether and substitute the Roman alphabet. This last plan has everything to commend it. But will it carry the day, or must there be another long interval of waiting before the nation awakes to the terrible disadvantages under which it labours? It is very disheartening to find that, while the patient is so very sick, the physicians still differ about a remedy.

CHINESE CHARACTERISTICS.

Mr. Yano, who recently represented Japan in Peking, delivered an interesting address at the last meeting of the Nippon Club on the subject of Chinese characteristics. He denied that the Chinaman resents Manchurian rule in any way, o regards the wearing of the pig-tail as a humiliation. Whatever that method of dressing the hair may have signified originally, it has now come to be considered ornamental, and Chinamen often remark that the Japanese would look much better if they adopted the same style. Another point insisted on by Mr. Yano is that the Chinaman is not in any sense a craven. His signal break-down as a fighter in the war with Japan has been construed as an evidence of innate pusillanimity, but, on the other side, Mr. Yano points to the calm resolution with which a Chinaman invites death rather than live disgraced. Men who do such things can not be called cowards. It is simply a question of disliking to fight; or, to put the thing in another way, a question of loving peace. Mr. Yano's audience evinced must interest in his address, which is not surprising. But the explanation he offers of the Chinaman's worthlessness as a fighting machine seems very partial. There is no evidence to show that the Chinaman's disposition is abnormally pacific. He engages in about as many squabbles and brawls at home as any other national does, and he shows a marked propensity to slaughter foreigners, organise riots against them, and wreck their houses. In the days of Japan's "barbarian expelling" mood, individual *samurai*, or very small bands of *samurai*—men whose profession was the sword—committed outrages against the persons of aliens, but never once was there an example of mob violence, whereas a turbulent, murderous, and devastating mob is quite characteristic of China. As between the two peoples, this phase of their careers unquestionably goes to demonstrate that the Chinaman has more stomach for fighting than the Japanese. Then again, look at the condition of China. Scarcely a month passes without an insurrection or other turbulent demonstration in some part of the empire. The time of the Government's troops is occu-

Digitized by Google Original from CORNELL UNIVERSITY

pied struggling against bandits or rebels. How can such a people be justly called peace-loving? We do not agree with Mr. Yano. In so far as concerns his assertion that the Chinese are not wanting in physical courage, no one will question his accuracy. There has not been anything to deprive them of that elementary virtue. But their weakness as fighting machines can not, we think, be ascribed to any aversion for battle. Indeed, a rooted dislike of fighting is only another name for pusillanimity. A dog may be euphemistically said to dislike fighting when he puts his tail between his legs and runs away. Mr. Yano's defence of the Chinese is therefore very equivocal. The fact is that they would probably make splendid soldiers if they were properly organized and properly led—above all things, properly led. The great advantage enjoyed by Japan is that she possesses ideal material for the manufacture of officers. The Japanese *Samurai* has all the required qualifications—high courage, absorbing devotion to his profession, frugality, and a strong sense of discipline. If China had similiar officers, and if her Government were sufficiently wise and patriotic to organise her army and navy in accordance with modern principles, she would indeed be a formidable Power.

QUESTIONS IN THE DIET.

A Tokyo contemporary (the *Nippon*) has compiled a list of the Questions submitted to the Government in the House of Representatives session by session, and publishes the figures as a kind of test of the manner in which the Government has discharged its duty of giving information. To us the list looks more like an evidence of the success that has attended the attempts of members to badger the Cabinet. Nine out of every ten of these questions were utterly frivolous, and had no purpose excepts to furnish to their propounders an opportunity to get up and abuse the Government roundly. Here is the list.

Session.	Number of Questions.	Questions not Answered.
I...	... 21	1

EMIGRATION TO HAWAII.

We read in the *Nichi Nichi Shimbun* that since the restrictions were removed with regard to Japanese emigration to Hawaii, there has been a brisk exodus in that direction. Between March and December, 1899, no less than 3,000 free labourers crossed to the islands, and 9,000 contract labourers. The free labourers are said to have found some difficulty in obtaining employment, and it is anticipated that there will be trouble in disposing of them. Our contemporary adds that nearly one-half of the population of Hawaii is now Japanese.

FRACAS IN AMOY.

Tuesday, Jan. 23.

There seems to have been quite a serious disturbance in Amoy on New Year's Day. According to Japanese reports, some ninety sailors went ashore on leave from the *Suma*, which had reached the place on the 31st of December. They were unarmed, none of them carrying even so much as a pocket knife. Having been regaled by their countrymen, residents of the Settlement, with food and *sake*, some of them proceeded to visit the Chinese town to see the sights. They got into a disreputable quarter, and the roughs of the place, taking advantage of the sailors' unarmed condition, first insulted and then attacked them. It is said that there is much anti-Japanese feeling in Amoy, and that, ever since the disturbance last fall, violent placards have been posted here and there. Thus, the moment that a quarrel arose between the sailors and the roughs, the latter received ready assistance from the citizens, and extreme measures were adopted, bamboo poles being called into service and tiles showered from the roofs. Meanwhile the remainder of the liberty-men, learning that their comrades were beset, hastened to the place and the dimensions of the fracas grew, until 4 Japanese and 2 Chinese were wounded, 25 houses were partically wrecked and one house took fire. The Japanese Consul lost no time in repairing to the scene, but his efforts to restore order proved futile, though strongly seconded by those of the Japanese gentleman who is employed in the Customs. Finally a party of 40 armed men had to be landed from the *Suma*, to rescue the Japanese sailors, and quell the riot. What the local authorities were doing all the while, we do not learn.

Friday, Jan. 26.

Japanese newspapers are beginning to write about the necessity of Japan's acquiring the right of policing Amoy. They point to the repeated evidences recently furnished of anti-Japanese feeling in that place. It is true that the officer commanding the *Suma* has telegraphed that the fracas between a number of his men and the citizens did not assume a character calling for international representations, but there is no mistaking the object lesson it furnishes. Amoy is in a disturbed condition, and the Chinese police are evidently quite unable to preserve peace and good order. Germany has obtained the right of policing a part of Shantung. Russia is invested with power to maintain order in the districts where she is building railways. But the question of good government in Amoy is even more important to Japan, for it is impossible for her to administer Formosa satisfactorily unless the unruly elements in Amoy are controlled. Some limits might be set to her exercise of police authority, but that it ought to be obtained, and that its scope should extend to the whole of Amoy, the *Asahi* and the *Jimmin* strongly insist. We (*Japan Mail*) have long expected something of this kind. The more Japan's points of contact with China are multiplied, the more inevitable is it that friction should be developed, and that remedies which Western States have found necessary under similar circumstances should be resorted to by Japan.

SHOCKING DISASTER IN OWARI.

From Nagoya comes a telegram telling of a shocking accident. A fire broke out at 3.30 a.m. on the 23rd inst. in a spinning mill at Koryo-mura in Owari. Two buildings were destroyed and some thirty factory girls were burned to death. The *Jiji Shimpo* puts the figures at 31 killed, 6 badly injured, and a great number slightly injured. Other journals speak of 30, but we presume that the *Jiji* is the most accurate. It is an awful occurrence, suggesting that the arrangements made for the accommodation of the unfortunate women must have been strangely defective.

Further particulars from Nagoya with reference to the shocking catastrophe at Komyo-mura, show that the factory women, 37 in number, were all sleeping in the upper storey of one of those flimsy wooden structures which do duty for residences among the lower orders in Japan. The fire broke out downstairs. It was caused by the upsetting of a *kotatsu* (bed-brazier). The burning embers came into contact with kerosene oil in some form or other, and in a moment the whole building was enveloped in flames. As the accident occurred some three hours before sunrise, the unfortunate women were sleeping soundly, and probably most of them were asphyxiated before they could discover their peril. It is alleged, however, that owing to the extraordinary fierceness and rapidity of the flames all means of egress from the upper storey were cut off, except by leaping from the windows. Six adopted that resource and escaped with more or less serious injuries, but thirty-one were burned to death. The scene is said to have been appalling. The owner of the factory where the conflagration occurred has lost his reason.

KOREA.

Korea is keeping up its reputation as the seed-plot of sensations. The latest is to the effect that the Korean Government, acting on the secret suggestion of a certain Power, has despatched a hundred soldiers to Uensan to prevent the commencement of mining operations by Mr. Morgan's men. On the 22nd, the telegram said that 50 miners had set out from Sōul to inaugurate the works, and now comes this news of a hundred soldiers following. We do not believe anything of the kind.

A pleasanter report is that the whaling company organized by Mr. Kawakita Kanshichi, a member of the House of Representatives, has obtained the permission of the Korean Government to carry on operations along the coasts opposite Japan—rather a vague description. This company gives a very rosy forecast of its enterprise. It has a capital of a hundred thousand *yen*, and it expects to capture 200 whales annually, valued at 2,000 *yen* each. A two thousand *yen* whale is an uncommon monster. We note that the expert engaged by the Company to shoot the whales is a foreigner, hitherto in Russian service.

According to telegraphic news received by the *Jiji Shimpo* from Sōul, the Korean Government has definitely refused to grant mining privileges to Mr. Pritchard Morgan at Uensan. There appears to be some question as to the Government's previous utterances. It gave permission to pro-

Digitized by Google Original from CORNELL UNIVERSITY

spect, but now claims that the permit did not include the right of actually mining. Since, however, all arrangements have been made for commencing work on the strength of the Government's original leave, it is anticipated that the present attitude of opposition will be modified.

FOREIGN ENTERPRISE IN JAPAN.

A vernacular contemporary notes that foreigners are beginning to take an active part in industrial enterprises in Japan. The tobacco trust of Murai Brothers was the beginning. It has brought American capitalists into the field. The Tokyo Beer Brewing Company is the next example. It numbers several foreigners among its shareholders, and one of them has been elected on the board of directors. Then the Standard Oil company is interesting itself very keenly in the kerosene of Echigo. There is talk of laying a delivery pipe from Tokyo to Nagaoka, a distance of over 160 miles. Finally, a Russian has acquired a large tract of land in Hokkaido, and is about to undertake agricultural enterprise on a big scale. These beginnings are only a small earnest of what we shall see by and by. Unless some untoward incidents occur to destroy foreign confidence and deter effort, capital will come to this country from the West without any interference on the part of the State, or any such heroic remedy as the nationalizing of all the private railways. The Japanese have only to adopt a thoroughly liberal attitude. Above all, let them abolish the restrictions upon the tenure of land by foreigners. We do not, for our own part, attach much practical importance to those restrictions. They have been factitiously brought into a place of prominence which does not properly belong to them. But precisely because of the commotion that has been raised about them, their removal would produce a good effect, and they are absolutely valueless from a Japanese point of view.

CONCERT IN TOKYO.

In spite of the extreme cold of Wednesday evening—the coldest night this winter—the concert at the British Legation in behalf of the widows and orphans of soldiers killed in the South-African war was largely attended, and it need scarcely be said that the attendance was not a full index of the number of tickets sold. The affair owed its initiative to American ladies—Mrs. Perry, we believe, was the original promoter—, and practically the whole of the American and British communities of Tokyo were present. Other nationalities were also represented and some were conspicuous by their total absence. We refrain from greater precision, but we can assure those who showed their sympathy by attending that their act is remembered with gratitude. The concert itself proved a great treat. All the numbers were excellently rendered. The concerted pieces evinced conscientious study, and Professor Junker's violin was as usual a delightful feature. But the chief honours fell to the share of Mrs. Payne, whose beautiful contralto gave intense pleasure, and of Mr. Brady, whose recitations moved the audience to both tears and laughter. Dr. Crusen showed himself a pianist of no little skill; Mr. Davis' solo on the violoncello was heartily applauded, and the Misses Perry played with all their accustomed accuracy and feeling. During the interval, refreshments, provided by Her Majesty's Minister, were served, and at the close of the concert the audience sang "God gave the Queen" in lusty fashion. The following is the programme:—

PART I.

1—Trio, in C Minor, for Violin, Violoncello and Piano .....Brahms
Misses Perry and Miss Le Viseur.

2—Alto Solo, with viola obligato, "Longing at rest" .....Brahms
Mrs. Payne.

3—Violin Solo, Andante from the "Concerto".....Mendelssohn

4—Piano Soli.
(a) Air from suite "Aus Holberg's Zeit" .....E. Grieg
(b) "An den Frühling"..... "
(c) "Norwegischer Brautzug im Vorüberziehen..... "
Dr. Crusen.

5—Violoncello Solo .....Popper
Mr. E. C. Davis.

PART II.

1—Recitation..."The Midnight Charge"..... Clement Scott.
Mr. Brady.

2—Alto Solo....."May Night".....Brahms
Mrs. Payne.

3—Violin Soli...(a) "Le Cygne" ...Saint-Saens.
(b) "Gavotte" .....Bach.
Prof. Aug. Junker.

4—Trio, for Violin, Violoncello and Piano (first movement.....Beethoven.
Miss Perry and Dr. Crusen.

THE NAVAL MANŒUVRES.

The approaching Japanese naval manœuvres will be on an unprecedented scale. Forty ships are expected to take part in them, independently of torpedo craft, the squadrons of Yokosuka, Saseho, and Kure contributing their quotas to swell the strength of the standing squadron. In addition to the line-of-battle ships *Fuji* and *Yashima*, it is hoped that the *Shikishima*, which left England on the 25th instant, will be able to take her place in the manœuvres. This may be called Japan's first *post bellum* display. The date has not yet been fixed, but it will probably be some time between March 25 and April 10th.

LOCAL GOVERNORS.

The following changes of Local Governors have been gazetted:—

Mr. Okubo Toshitake (Chief the Prison Bureau in the Home Department) to be Governor of Tottori.

Mr. Kubota Kwanichi (Governor of Tottori) to be Chief of the Prison Bureau in the Home Department.

Mr. Chikami Kyoomi (Governor of Miyagi) to be Governor of Niigata.

Mr. Takasaki Chikaakira (Governor of Okayama) to be Governor of Miyagi.

Mr. Higaki Chukuyu (Governor of Fukushima) to be Governor of Toyama.

Mr. Watanabe Toru to be Governor of Kochi.

Mr. Yoshiwara Saburo (Governor of Kagawa) to be Governor of Okayama.

Mr. Arakawa Yoshitaro (Governor of Kagawa) to be Governor of Okayama.

Mr. Kano Ryogen (Governor of Toyama) relieved of his office.

Mr. Katsumada Nen (Governor of Niigata) relieved of his office.

Mr. Tanikawa Shochu (Governor of Kochi) relieved of his office.

JOHN RUSKIN.

(COMMUNICATED)

The life-work of John Ruskin had closed so long that the news of his death is of no great significance. It interrupts no career in the making, disappoints no expectations, robs the world at large of nothing. Just as Gladstone, after making history for half a century, played for three or four years before his death the role of a garrulous country gentleman with a rooted dislike for the Turk and his methods, so Ruskin, for years after he ceased to be a power in letters, served but to invest Coniston with some additional interest to the intelligent tripper as the haunt of the recluse of Brantwood. Indeed, it may not be too much to say that the author had almost outlived his own reputation; or, at the least, that he had survived long enough to find the circle of his admirers considerably narrowed.

Ruskin was the son of a London merchant, and was born in the Metropolis in 1819. He was educated privately, and at Christ Church, Oxford. He devoted himself to painting, but it soon became apparent that his powers were critical rather than creative. His audacious departure from the conventions of the day, and the storm of hostility his views evoked, soon attracted wide attention, and by the time of the appearance of the earlier volumes of his "Modern Painters" it was evident that as an art critic he had no equal and no second. His earnestness, his thoroughness, his exquisite taste, the indescribable charm of the limpid and stately prose in which he clothed his thoughts, combined to raise art criticism to a level it had never before occupied in England. Ruskin became in his own line a dictator. What he declared mean, tawdry, or meretricious could not be admired by any professor of taste. What he dubbed beautiful must, despite any inward convictions to the contrary, be received with enthusiasm. No doubt the mass of his judgments were right, for he had an unerring eye for good and conscientious work, a soul large enough to recognise genius whatever fantastic form it assumed, and an infallible scent for flashiness and insincerity, even in the highest places. But at the same time he was distinctly "faddy," and doubtless he did injustice to some whose methods and ideals aroused his prejudice. On the whole, however, we have never had in England his equal as a critic.

Ruskin's other claims to fame are open to a greater variety of opinion. He did not by any means confine himself to Gothic cathedrals and pre-Raphaelite pictures, Etruscan vases and Greek friezes. He rambled in an incidental manner over the whole area of modern political and and social life, and succeeded in persuading quite a large number of intelligent people that he was a philosopher, a political economist, and a master of social science. Clever youngsters in their teens and educated ladies of all ages delighted not only in his magnificent style—a worthy source of enjoyment—but also in that large bundle of vigorously expressed prejudices which he probably regarded as views on questions of the day. With men of mature age, experienced in the hard matter-of-fact school of the world, even the force of his rhetoric hardly sufficed to hide the weakness of his argument. It is no matter for wonder that Ruskin

Digitized by Google Original from CORNELL UNIVERSITY

was so great a favourite with women, for he himself was eminently feminine. His very style, charged with adjectives, and of sweet and varied melody, lacked the grip, the fibre, the stern vigour of a strong masculine mind. His vehemence was the vehemence of an excited woman; indignation with him took the form rather of a petulant shriek than a deep growl. His likes and dislikes were founded on nothing better than woman's reasons. He didn't like railways, because railways were nasty horrid things, bringing all kinds of low people down to the Lakes. Steamboats were also contrivances of the devil, because their discordant whistles broke the echoes of the mountains around Keswick and Windermere. A water supply for Manchester's millions was a damnable scheme if it necessitated patent pumping works that would make hideous some small part of the shores of Thirlmere. And for these good and sufficient reasons Ruskin penned page after page of beautiful English, charging steam industry with all the evils of modern times, bemoaning the happier days when coaches took a week to crawl from London to Edinburgh, and when nine-tenths of the population of Great Britain lived in a style which would now be considered semi-starvation. Ruskin disliked the idea of man's evolution from a lower race, and therefore he dismissed Darwin with a tremendous anathema (I quote from memory):—"Because it is every man's duty to know what he is, and not to consider the embryo that he was, nor the skeleton that he shall be. And furthermore because Darwin has a mortal fascination for all idly curious and foolishly *speculative* persons, and has gathered *together* in the train of him every impudent imbecility in Europe, like a dim comet, wagging its tail of phosphorescent nothingness across the steadfast stars." Which probably delighted all the literary Vicars' daughters in England, as the last word to be said on the subject. There are many impassioned and beautifully poised sentences scattered through Ruskin's works denouncing even such harmless things as a London omnibus, a cab, a lift, or a bicycle. Did Mr. Ruskin really mean that it was better for a London clerk to have to walk every morning from Fulham or Buckhurst Hill to Throgmorton-street, with the alternative, perhaps, of living in an unwholesome den in central London, than that he should have the means of cheap and easy transit to and from his work? Not at all. Ruskin meant that clerk no harm. He simply did not consider him. His argument was merely this: "I, being a man of refined and sensitive taste, consider a London bus an object repulsive to the sight and irritating to the nerves. Therefore a London bus is the invention of the devil, and God knows how many of the ills under which mankind groans are due to London busses. London has more busses than any city in the world. That is indisputable. London has also more poverty and degradation than any other city in the world. That also is indisputable. The inference is clear. Do away with busses, and you do away with poverty and degradation." Ruskin would have put the matter far more eloquently. He would have cursed the busses so handsomely that the delighted reader, like the Duke in "Midsummer Night's Dream" would have cried, "Let him curse again; let him curse again." He would have invoked heaven and the eternal verities like a ladylike Carlyle. But there would have been no more logic in it all than I have supplied. Southey was another melancholy instance of an artist in words straying into practical questions. As Macaulay points out in his delicious review of the "Colloquies on Society," the great point of Southey's denunciation of manufacturing industry was that the mechanics lived in a row of hideous brick-built cottages, while the peasants resided in picturesque, thatch-built huts whose walls were adorned with "weather stains."

As to Ruskin's ideas of social reform and the betterment of the masses, only one thing was wanted to secure their perfect working, and that was a mere detail. Nothing more than the eradication of human nature from man. There being, unfortunately, a good deal of human nature still in man, we are not likely to get much further forward *viâ* the Ruskin route to the Millennium. Usury was the subject of many sublime denunciations on the part of the seer of Brantwood; but as systems of credit have been known in every civilised country since the dawn of history, and become more extended and complex in direct ratio with the progress of civilisation, it can hardly be said that the crusade was a profitable one. So with most of what some people call the philosophy of Ruskin. I remember a sublime passage—I believe it is in the "Crown of Wild Olive,"—in which the author addresses an appeal to the women. They possess the key to man's heart, their influence can make him a higher, nobler, better creature; and if they use that influence aright then there will be an end to crime, vice, battle, murder, and—but I don't think this last is included—sudden death. It is an exquisite passage, truly, and I have no doubt all the vicars' daughters were delighted with it. But here again is a slight element of impracticability. If women were an entirely superior race of beings there might be some chance of man's salvation through them. But the warmest admirer of the sex must admit that they have their fair share of vice, rather more than their fair share of folly, and if anything more pettiness, small malice, and levity than men. Their degree of enlightenment, their moral code, their position in society are fixed for them by men. They are more likely to aspire to man's standard than men to theirs. In an age or country where men are, as a majority, coarse and licentious, the women become fit helpmeets for husbands who set no value on refinement and modesty. In an age or country where there is a high standard of rectitude and serious purpose among men, there is a correspondingly elevated level of female virtue and intelligence. Individual cases, of course, occur in opposition to the general rule, but it is a rule nevertheless, and Mr. Ruskin's most gorgeous adjectives and most polished periods cannot reverse it.

If Ruskin, apart from his special studies, lives long, it will be owing chiefly to his matchless style. Perhaps a hundred years hence there will still be many who, smiling in wondering pity at his extraordinary whims and delusions, will confess that at any rate one writer of exquisite prose lived in the time when Mr. Kipling was regarded as a literary master. The writers of to-day, though many of them abound in excellent matter, show so complete a disregard for form, sometimes even for mere grammatical accuracy, that it is a positive pleasure to turn from them to the melodious and dignified current of Ruskin's limpid sentences. As a prose writer Ruskin had no contemporary master.

With the passing of Richard Doddridge Blackmore, the English world of letters sustains a second great loss within a week. His most famous and perhaps his best work was "Lorna Doone," written in 1860, but it was not until 1871 that it had anything of a sale. Just then the principal topic of the hour was the marriage of Princess Louise to the Marquis of Lorne, and the similarity of the names led the curious public to take up the book in the hope of finding something dealing with the distinguished pair. It was but another of life's little ironies, yet it enabled Blackmore to reach his public, and, having once obtained a hearing, he had little difficulty in maintaining a foremost place among English novelists. A barrister by calling, Blackmore's passion was for market-gardening, and it is said that he had much success in it. The writing of charming books and the raising of prize cauliflowers seem rather an incongruous mixture.

REGISTERED LETTERS.

It is stated that the Government has drafted, and will shortly submit to the Diet, a Bill providing that official responsibility shall be recognised for all registered letters. In short, a system of insuring letters that contain valuables will be introduced. There was some discussion as to whether letters containing registered bonds need be included in the category, seeing that such documents would not be of any use if they fell into alien hands. But the final decision has been that no attempt should be made to discriminate.

THE PEST.

There is now fair reason to hope that the Pest has been successfully checked in Japan. No fresh case has occurred in Kobe since the 13th of December, nor any in Osaka since the 13th of Jauuary. In Kobe the total number of cases was 19 and in Osaka 52. Japan may count herself exceedingly fortunate if she has escaped so easily and the Sanitary Authorities will deserve the gratitude of the nation.

NOTES ON CURRENT EVENTS.

Asamayama omitted most ominous sounds on the morning of the 22nd, and thereafter a shower of ashes fell in the Urawa district. Ashes fell also in Chiba, Saitama, and part of Tokyo, and doubtless the two phenomena were connected.

A Bill now awaiting discussion in the House of Representatives will, if passed, add greatly to the facilities for obtaining postal orders. At present it is not possible to transmit more than 50 *yen* by post-office order to the same place in 24 hours, but it is now proposed to omit such restrictions from the text of the law and leave the matter to be dealt with by Departmental Ordinance.

The Yokohama police have arrested three of the men who engaged in the robbery of clothing and money from the lug-

Digitized by Google — Original from CORNELL UNIVERSITY

gage of a lady-passenger of the Toyo Kisen Kaisha's S.S. *Nippon Maru*. The theft took place while the ship was lying in Yokohama harbour, preparatory to commencing her outward voyage. A quantity of clothing was taken as well as a sum of 1,000 *yen*. Two of the men are said to have fled to Hawaii.

The Liberals are evidently once more a happy family. They have held a convivial meeting at the Maple Club, and as Count Itagaki was present, there can be no doubt that recent differences have been adjusted. Mr. Hoshi addressed the meeting, and, amid considerable applause, made the significant announcement that the day was not far distant when the Party would achieve its long cherished design. Doubtless he meant to indicate that the administrative power would soon be entrusted to the Liberals.

The Oriental Association has postponed its general meeting until the 8th of next month, when, according to the present programme, Marquis Ito and Sir Ernest Satow will deliver addresses. It is expected Marquis Ito will give a clear exposition of his views as to the Far-Eastern situation. The Association has hitherto confined its membership to Japanese and Chinese, but the door is now to be opened to foreigners of all nationalities.

Rumour still points to Baron Hayashi as the probable successor of Mr. Kato as Japanese Representative at the Court of St. James. It is expected that Mr. Komura, now Minister in Washington, will replace Baron Hayashi at St. Petersburg. The *Chiuo Shimbun* says that Mr. Komura is averse to the change, as by travelling round the principal cities in the United States he has just succeeded in familiarizing himself with the conditions of the country.

A telegram from Peking, published by the *Fiji Shimpo*, says that the Chinese Government has decided to establish a military section in the Peking Imperial College, and that Japanese instructors are likely to be employed. Certainly China never allows herself to be hurried. Her past history stretches back to such an immense length that she has learned to measure her imperial future by thousands of years. Her leisurely ways have at least the merit of dignity, but one is disposed to fear that she will be thrown into a horrible hurry one of these days.

The Osaka Shosen Kaisha has held its half-yearly meeting and passed the following accounts:—

	Yen.
Gross Profits	358,381
Brought over from last account	2,873
Total	361,254
To Reserve	18,000
Rewards to Officers	18,000
Dividend (9 per cent)	247,500
To next account	77,754
Total	361,254

Subsequently it was decided to raise the Company's capital from 5½ million *yen* to 11 millions.

This flourishing concern has now some twenty-two foreign shareholders, according to Japanese journals. At its last half-yearly meeting, it declared a dividend of 8 per cent., and elected a foreigner, Mr. C. K. Marshall Martin, to be one of the Directors. Mr. Martin made a speech in the Japanese language expressing thanks for the honour conferred on him, and promising to work hard in the company's interests. His command of the vernacular is said to have been greatly admired by his audience. The meeting decided that the Company's head office should be removed from Hodogaya to No. 1 Hon-Hatcho-bori Nichome, in the Kyobashi District of Tokyo.

The following figures, showing the capitals of the various Banks in Japan and the number of Banks at the close of 1899, have been officially published:—

Description of Bank.		Number.	Capital. Yen.
Nippon Ginko...		1	30,000,000
Shokin Ginko...		1	24,000,000
Industrial		1	10,000,000
Agricultural ...		45	27,820,000
Formosa		1	5 000,000
Savings	Home	349	35 965,300
	Abroad	1	1,250,000
Joint Stock	Home	1,345	272,392,115
	Abroad	6	2,964.450
Gomei Ginko ...		50	10,606,900
Goshi Ginko ...		132	10,045,184
Private.....		100	8,145.520
Totals		2,032	438,189,469

Japan will soon be in possession of one of the monster iron-clads ordered by her after the conclusion of the war with China. The *Shikishima* has received her armament, undergone all her trials with perfect success, and will leave England on the 25th instant. Japan already possesses two line-of-battle ships—the *Fuji* and the *Yashima*, of 12,300 tons each,—but the *Shikishima* is a much more powerful vessel. She was laid down at the Thames Ironworks in March 1897 and launched on Nov. 1st, 1898. Her displacement is 14,850 tons; her indicated horse power, 14,500; and her speed 18½ knots. Her armament includes four 12-in. guns in barbettes and fourteen 6-in. guns in casemates.

Mr. J. R. Morse has instituted proceedings in the Yokohama Local Court against the Directors of the Kobe Water Works, to obtain the restitution of a sum of 460,000 *yen* lent by him, and also to recover damages for breach of contract. We should have thought that such a case must have been instituted in Kobe. Meanwhile the Directors of the Water Works are said to be about to commence suit on their side, in order to obtain a decree obliging Mr. Morse to implement his contract. It is remarkable that a case of such magnitude should have come up for trial in Japanese Courts so soon after the operation of the revised treaties. We trust, however, that the case will be settled out of court, for its hearing will have injurious effects, unless we are much mistaken.

Mr. Okura Kihachiro's commercial school will probably be opened for the admission of pupils next September. The building is now rapidly approaching completion, and will be handed over to the committee of management in June or July, according to present plans. It will be remembered that Mr. Okura pledged himself to subscribe a sum of five hundred thousand *yen* on account of this enterprise. He began to pay the money in 1898, at the rate of a hundred thousand *yen* annually. In the first year, nearly ninety thousand *yen* was expended upon the purchase of land and the erection of the buildings, but the accounts for 1899 have not yet been published by the Committee. The probability is that the school will start with a clear endowment fund of three hundred thousand *yen*. It ought to prove a very successful institution.

The London *Daily Mail* has preferred a strange charge against Reuter's agency; namely, that the Boers have purchased it, and that it will henceforth be run in their interests. A telegram has reached Japan on the subject, and it is added that Reuter's failure to make any distinct denial, in the face of the *Daily Mail's* assertion that it possesses clear proof of what it alleges, is exciting some surprise. Considering the standing of the *Daily Mail*, Reuter's agency would, perhaps, be well advised did it publish same contradiction, but in this case the good old adage applies, "the proof of the pudding is in the eating." When we find that Reuter's excellent service of telegrams begins to show signs of partiality for the Boers, it will be time enough to credit suchimprobable charges.

The record of the Tokyo Clearing House shows a steady increase of business. During the latter half of 1899, the volume of transactions was 225¼ million *yen* greater than the corresponding figure for 1898. That result was partly due to activity in business circles, but partly also to a steadily increasing appreciation of the advantages of the system. The return for the seven months from July were as follow:—

MONTH	SECOND HALF OF 1899. Yen.	DAILY AVERAGE. Yen.
7th month ...	90.384,090.....	3.476,311
8th month ...	103 482,026.....	3,832,667
9th month ...	99,398.455.....	3.975.938
10th month ...	111,423.875.....	4.456.955
11th month ...	119,863.102.....	4.994.295
12th month ...	137.446,226.....	5.090.600
Totals.....	661,997,774.....	4,298,686

Untrustworthy as are the details of the statements published from time to time in Tokyo newspapers about the doings of political parties, they now concur so completely in their account of the Liberals' doings that we shall probably be justified in regarding them as correct. The gist of the story is that the Kwanto and Tosa sections of the Liberals have composed their differences, at the instance of Baron Suyematsu, and have decided not to make any attempt to disturb the Cabinet during the present session of the Diet. On the other hand, Marquis Yamagata, waited on by a deputation of the Party's leaders, is said to have stated that he is quite ready to hand over the reins of State, after the Diet rises, to any one willing and competent to take them. It is further alleged that the Liberals will make every effort to induce Marquis Ito to assume the leadership of the Party, and failing that consummation, will offer him their support should he decide to form a Cabinet. Such is the tenor of the statements circulated.

At the Ballinrobe District Council recently one Mr. Regan, supported by other Irishmen of the same kidney, proposed a resolution, of which the following is an extract:—"We, the Ballinrobe District Council, have heard with pleasure of the bold fight President Kruger is making against the British tyrants and grabbers, and we trust that God may enable him to drive these renegade British out of the Transvaal."

Digitized by Google Original from CORNELL UNIVERSITY

THE WAR IN SOUTH AFRICA AND THE WAR OFFICE.

AFTER the South African war is over there will certainly be a season of close questioning and keen scrutiny. It is not the disposition of the English people to cry aloud while the fight is actually in progress, but when the business of giving and taking hard blows has been concluded, ugly queries will begin to be posed. Looking at the leading columns of London journals, one finds everywhere readiness to acknowledge frankly that Her Majesty's Government could not possibly have provided against being taken at a disadvantage when the war broke out. To have shipped twenty or thirty thousand men and sent them over sea to a distance of six thousand miles while negotiations for a peaceful settlement were still progressing would have been to substitute menace for diplomacy. Moreover, the Boers would never have awaited their arrival. They would have struck at once, and the handful of British troops in Africa would have had to face precisely the situation which is now complained of. In short, reverses at the outset had to be accepted as inevitable. But the point which will assuredly be made is that, war having commenced, the Government should have been able to pour troops into Africa in much greater numbers and with *much greater* rapidity than was actually the case. A correspondent who has the best possible opportunities of obtaining information, writes to us from London, under date of December 14th:—"We are waiting breathlessly to-day for news of Buller's operations in Natal. If he fails to relieve Ladysmith, and suffers a reverse like GATACRE and METHUEN, we shall be in a tighter place than we have been ever since the Mutiny. The way in which the ruling clique at the War Office have ignored the whole mass of information accumulated by their own Intelligence Department, as well as by the Colonial Authorities, on the military resources of the Boers is simply incredible—incredibly scandalous." That seems to be the rising cry; a cry that will probably swell to very large volume by-and-by. Out here, many people have asked with astonishment what the Intelligence Department can have been doing, but at home the blame is laid, not on the Intelligence Department, but on the War Office, which paid no attention to the information in its hands. Is that just, we wonder? Let any one of our readers look back three months and recall the expressions of opinion that were current at that time. Was not the prevailing sentiment one of unbounded astonishment at the magnitude of the preparations that the British Government were making? Do we not all remember what was said when news came that the militia had been called out and that vigorous steps were being taken to increase the strength and efficiency of the Navy? Did not foreign critics sneer and ask whether England regarded the Transvaal as a Great Power, and was not the public bewildered to know what it all meant? Yet now the cry is that the Government did not do nearly enough! However, we frankly admit that these reminiscences do not cover the whole ground. There remains the hard fact that HER MAJESTY'S Ministry never did contemplate the possibility of being obliged to take the steps they are now taking. They imagined that one Army Corps from England and a Brigade from India, or some thirty-five thousand men, together with the ten thousand already in South Africa and the local levies—say sixty thousand in all—would suffice, whereas experience shows that at least twice that number is necessary. We shall know by-and-by whether the Intelligence Department's information justified the Government's conclusion. The matter turns chiefly upon the number of men that the Boers could put into the field. As to their armament, there never can have been much doubt. Judging by mere statistics of population, and assuming that the limits of age would be 20 and 45, the fighting forces of the two Republics should not have exceeded thirty-five thousand of all arms and ranks. But they have put at least sixty thousand into field, so far as we know, and they claim to have put a hundred thousand. Whence have they obtained the remainder? Some are accounted for by the fact that the limits of age were extended in both directions, from 17 to 50. The rest appear to be French and German adventurers and disaffected colonists. Did the Intelligence Department predict anything of that kind?

THE "BUNDESRATH."

WE are at a loss to understand what REUTER'S agent in London means when he says, with regard to the release of the *Bundesrath*, that "Great Britain will have to pay a heavy indemnity besides deeply irritating Germany." Such language seems comical. If any side is to be "deeply irritated" it should be Great Britain, not Germany. There can not be the smallest moral doubt that the German officers and men who travelled by the *Bundesrath* to Delagoa Bay were about to join the Transvaal and fight against England. Already hundreds, if not thousands, of German subjects are assisting the Boers in the field. Englishmen are not particularly disposed to complain of that. It has been their own habit to lend their services to any State engaged in struggling against a potential enemy of their country. If other nationals adopt a similar course on the present occasion, they have the justification of English precedent. But their action admits of only one interpretation, namely, that they regard Great Britain in the light of an enemy. We hope and believe that the best classes of Germans do not so regard England, but there can be no question that a large section of the German nation is in that mood, and whatever may be the Englishman's *sang-froid*, he can not choose but feel some irritation. Let the worst possible construction be put on England's South-African policy; let it be called a purely imperial policy; a policy of aggression; a policy of land grab—is any one so extremely verdant as to suppose that either Germany or France would have adopted a different policy under the circumstances? Of course not. We presume that German and French statesmen know a great deal too much about the fundamental rules of statecraft to tamely accept a situation which would be nothing short of national humiliation. The train of events by which the situation was created—events dating many years back—may have had their roots in impulses which can not be reconciled with the finest precepts of Christian charity, but the situation itself has to be sternly dealt with if England is to retain her place as a first-class Power. The Germans and French appreciate all that perfectly well. They are not one whit more moral than other peoples in their international dealings. They do not claim to be more moral. They can not even plead that the results of their aggressions in distant regions are justified by the subsequent adoption of a thoroughly liberal policy—equal rights and equal privileges for all nationals—such as England invariably adopts. What, then, are the motives of their hostility to Great Britain in connexion with this South-African war? We shall not attempt to analyse their motives. All that we desire to insist here is that like begets like, and that to talk of Germany's being "deeply irritated" because England endeavours to prevent a party of Germans from consummating their purpose to actively assist England's enemies in the field is to reverse the natural order of sentiments. Had the *Bundesrath* been proceeding to a Boer port, there would not have been the smallest question about the legality of her seizure. But she happened to be proceeding towards a so-called "neutral port." There was the whole difficulty. Delagoa Bay is not really a neutral port. Nominally it enjoys that status, but practically the Portugese seem quite incompetent to enforce the observance of neutrality within their territories, and the result is that German and French sympathisers with the Boers are abusing Portugal's weakness in the interests of the Transvaal and against the interests of Great Britain. International law is a very fine thing. It embodies some very pretty precepts

Digitized by Google Original from CORNELL UNIVERSITY

about the rights of belligerents and the rights of neutrals. But there is something much finer and much higher than international law—justice. In this case the paltry subterfuges of international law are deliberately employed to defeat the dictates of justice, and we are gravely told that one of the nations resorting to such methods feels "deeply irritated" because England ventures to protect herself against this treatment. It would be interesting to know what Europe would say if England attempted to hold Portugal accountable for her breaches of neutrality. That will be the finale, we suspect. But in truth these things are not serious incidents. England can afford to suffer a little for the sake of good-fellowship. As to the *Bundesrath*, it is well to remember that whatever course England adopts is taken by the advice of the Law Officers of the Crown. They have decided that international law does not warrant the confiscation of the ship. Therefore, and not because of German representations, she has been released. There is no doubt that German representations have received, and will always receive, most friendly consideration from the British Government, but neither is there any doubt that if the Law Officers of the British Crown had declared the seizure of the *Bundesrath* legal, she would never have been released.

THE SILK BUSINESS.

MR. H. BENT deserves public thanks for taking the trouble to explain, through the columns of the press, the main points of recent discussion between the Japanese and the foreign silk-men. His very lucid and moderate letter is most opportune. Men of affairs, whose time is fully occupied with their own concerns, can scarcely be expected to compile such letters for newspaper publication; but there is a special reason for their compilation in this country, namely, that they effectually remove misunderstandings which are a constant source of trouble between foreigners and Japanese. Judging from the writing in the vernacular press alone, one would have been led to suppose that the recent dispute represented a legitimate attempt on the part of the Japanese merchants of Yokohama to put an end to abuses which, inuring to the sole advantage of the foreign merchant, had been arbitrarily inaugurated and were obstinately maintained by him. There was certainly no intemperate writing in the columns of our Japanese contemporaries, but their statements conveyed the impression that this was a struggle to recover rights which never ought to have been disputed. Mr. BENT'S letter makes it quite clear, however, that the main count in the controversy turned on an unequivocally just position taken by the foreign merchant, and further hows that the Japanese merchants have shown their sense of right by recognising and giving effect to the foreign arguments. These facts would have remained obscure had not Mr. BENT written to the press, and the impression would have survived that another struggle had occurred between foreign masterfulness on the one side and Japanese remonstrances on the other.

IMPERIAL DIET.

The House of Peers met on the 20th instant after the New Year's Recess, and passed the Budget and all the correlated Bills exactly in the form given to them by the House of Representatives. The sitting lasted from 11 a.m. till 3.25 p.m., when the House was counted out. Mr. Nishimura Ryōkichi made a long and able speech, contending that the country's expenditure was not regulated by prudential considerations; that no provision was made for a rainy day, and that a Committee should be appointed for the purpose of conferring with the Government as to the possibility of reducing the expenditures by 20 million *yen*. Only three members supported the motion. Mr. Kubota Yuzuru asked a great many questions, and Viscount Aoki and Count Kabayama replied to some. Viscount Aoki said that the special settlements acquired by Japan in China did not as yet contain more than 50 residents in all. He attributed the failure to utilize them to want of commercial enterprise on the part of the people, who had not the same conception as foreigners had of the importance of working with combined capital. His Excellency admitted that the Government had not taken any steps in the sense of making roads or drains. They had been deterred, he said, by the magnitude of the work but the matter would be considered Count Kabayama, referring to educational development, said that unfortunately the resources available did not suffice for anything more extensive than the establishment of one additional High School in Okayama Prefecture, one new Normal School, and the increase of facilities at the Yamaguchi High School so as to accommodate 500 pupils instead of 300 as at present. The Department over which he presided greatly regretted the insufficiency of ordinary school-teachers, and was adopting measure to obtain a larger number of graduates from the Normal Schools. With the exception of Mr. Kubota's questions the passing of the Budget was effected uneventfully, and the House rose after having handed to special committees a Bill (sent up from the Representatives) relating to drainage, and a Fisheries Bill of much the same import as that introduced by the Government last session.

The House of Peers met on the 23rd instant, but sat for only fifty minutes. It passed a Government Bill for including the armament construction funds of the Naval Department in a special account, and it committed several other Bills, among them being three sent up from the Lower; namely; namely, one relating to lunatic asylums; one for supplementing the Civil Code in the sense of allowing cheques to be signed by substitutes for persons unable to write, provided that the latter affixed their seals; and one for preventing the use of tobacco by youths under 20 years of ago. With reference to the proxy-signature Bill, the Government Delegate said that the Government could not consent to it; and with reference to the tobacco-smoking veto, that its enforcement would be very difficult.

The House of Peers sat yesterday (25th) forenoon, but its proceedings were almost without interest. Two budgets were passed, and a Bill for increasing the allowance made by the Treasury on account of Elementary School teachers was carried to its Second Reading. Mr. Mizuno Jun introduced a Representation urging that a sum of a million *yen* should be gradually appropriated for purposes of road-making and drainage in the special Settlements acquired in China under the Shimonoseki Treaty. He declared that the Government, by failing to carry out these works, placed itself in the position of a man who invites guests to dinner but does not provide any viands for them The House passed the Representation by a large majority.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

What has hitherto been known as a Roman Catholic Magazine, the *Tenchijin*, has entirely changed its character and now seems to figure as a political organ, apparently connected with the Tosa section of the Jiyutō, if we may judge from its contents. But it is only fair to state that the editor denies this and alleges that the magazine is working with the Dōki Club in promoting the reform of customs and ways of society generally. There is no denying, however, that the *Tenchijin* has entered the arena of politics in a very pronounced manner. Recent contributors to the magazine are for the most part well-known politicians like Count Itagaki, Messrs. Kaneko Kentarō, Nemoto Sei, Takenouchi Tsuna, and Oye Taku, and the subjects they treat are political. From what the editor says we gather that he hopes to further the cause of religion and education by making the magazine the mouth-piece of practical politicians. He observes in a recent leader that the discussion of theories has been carried to excess in Japan, and that a religious organ will best fulfil its purpose by identifying itself with practical objects.

* * *

As a piece of extreme writing on the subject of religion it would be hard to beat the utterances of Professor Naitō Chisō in the *Sokoku*. He contends that since the religions of the world undermine ancestor worship, filial piety, and loyalty, they are to be regarded as the greatest evils the world contains. (*Shūkyō hodo osorubeki daigaiwo nasu mono wa nashi.*) *Shintō* can never be looked upon as a religion and its non-religious quality is its greatest element of strength. Professor Naitō can see nothing in Christianity but clever devices for deceiving mankind, and he predicts that a thousand years hence men will be too far advanced to allow of their accepting any of the prevailing creeds of the world.

On somewhat different lines Mr. Sugiura Jugō contributes to the *Sokoku* an article of a very conservative type entitled "Revive the ancient worship of Confucius." He gives a minute history of the practice of worshipping Confucius as carried on in this country since the days of the Emperor Mommu (A.D. 697—707); from which we gather that the ceremonies performed in honour of the Sage differed considerably from age to age and were specified from time to time by the reigning emperors or their ministers. During the Ashikaga rule the festivals were not held, but they were revived under the Tokugawa Shōguns and have continued to this day. Mr. Sugiura re-

Digitized by Google Original from CORNELL UNIVERSITY

gards these festivals as a most important means of showing to Western nations what is the pervading element of Oriental civilisation.

* * *

In a magazine called the 革新 *Kaku-Shin* Mr. Shimada Saburō discusses the effects of Mr. Fukuzawa's teaching on his numerous disciples. The gist of Mr. Shimada's article is that though Mr. Fukuzawa himself is a man whose views and character have attained a very high level, the use which has been made of his principal doctrines by his pupils is not to be commended. They have, according to Mr. Shimada, vulgarised his teaching so as to make it serve materialistic ends In the advocacy of radical reforms Mr. Fukuzawa has frequently made use of extreme language for the sake of creating a deeper impression on his readers. This language has often been misunderstood and misapplied by his followers. The doctrines preached by the Keiōgijikū School of writers are the urgency of money-making, and the right of individuals to spend the money they make just as they please. The notion of individual liberty of action being restrained by any such knightly ideal as that displayed by men like Kusunoki Masashige is scorned by these leaders of thought. To them Kusunoki seems to rank no higher than Gonsuke. They may be correctly styled a set of money-grubbers. Mr. Fukuzawa himself is altogether a remarkable personality. Without rank or title, glorying in the fact that he is an ordinary plebeian, his life and his language are refined and elevated. There is *nothing* common, sordid, or grovelling about him. Throughout all the changes of thought that the Meiji era has witnessed practical common-sense has always guided him. Among European writers the position he has occupied in this country resembles that filled by Voltaire in France, says Mr. Shimada. In both cases powerful characters were moulded by the ages in which they lived and their general environment. Voltaire figures as a destructionist, as a vigorous anti-Christian writer, as the scourge which at that time France specially needed and from which she derived many benefits. Fukuzawa, having made up his mind that Occidental civilisation was superior to that known in the East, set himself to attack all the ramifications of Oriental thought. He commenced by translating an American Class Book in easy semi-colloquial Japanese. He subsequently poured forth volume after volume, all of which preached in one way or other the "more excellent way" than that known to most of his contemporaries and all his ancestors. He effectually broke the spell of antiquity and tradition throughout the country. Though his language for elegance and power cannot be compared to that of Voltaire, in the use he makes of satire, in directness and boldness of declamation he resembles to a large extent his great French prototype. As a destroyer of the bulwarks of conservatism Mr. Fukuzawa has done good work. But his disciples have not followed up this work by reconstruction. They cannot be classed with the sage himself, and they have yet to make a name for themselves in the world.

* * *

Dr. Inoue Tetsujirō's lecture entitled "My View of the Future of Religion" has appeared in the *Tetsugaku Zasshi*. Its extreme length makes it quite impossible for us to deal with it satisfactorily in this summary, but as the lecture has given rise to much discussion and forms the subject of numerous articles in religious magazines it seems desirable to state as briefly as possible the main conclusions reached by Dr. Inoue, under the headings given in the report of the lecture. I. The *disagreement between different religions* arises from their not acknowledging the same authority. Whether it is possible to get over this difficulty in Japan is the question that is discussed in the lecture. II. *The state of existing religions.* (1) *Confucianism*, so prosperous in Tokugawa days, is now only represented by a few noted scholars, who have no worthy successors among the younger generation. The creed may be said to be in a dying state. (2) *Buddhism* exists only in form. It deteriorated in Tokugawa days and has been entirely eclipsed since the beginning of the Meiji era. There is no one in Buddhist ranks who can restore what has been lost, (3) *Christianity* at one time showed great vigour in this country, but of late years it has lost its influence and been relegated to obscure corners. It is marked by internal dissensions, by scepticism and superstition. This backward movement of Christianity is likely to continue, with the world situated as it is. (4) As for *Shintō*, that part of it which is religious is doomed by its superstitious elements to oblivion. That national part of the Cult, which consists principally of ancestor worship, displays considerable recuperative power. But those who support it in this capacity are anxious to divest it of all religious elements and thus save it from disintegration. III. *The connection of religion and education.* There is no doubt that what is most desirable is that religion and education should be kept quite separate. In ancient times they went hand in hand. Education relied on the authority of religion to enforce its precepts. But now that that authority is questioned in every direction, it is rightly considered that it can no longer be relied on as a basis for ethical teaching. At the same time there is no denying that education has suffered from the removal of the religious basis for moral teaching. In the West, with the exception of France and Switzerland, Christianity is the basis of ethical teaching. Japan has adopted the intellectual system of Europe and America, but has not accepted Occidental ethics nor its basis, Christianity. Having given up her own old basis of ethics and not adopted a new one, she is, as it were, between two stools. Is there no way out of this difficulty? IV. *All existing religions have their merits and demerits.* Buddhism has for over a thousand years been a Japanese religion. It is characterised by great rationality and is eminently philosophical, notwithstanding the fact that it appeals to miracles. These are its chief merits. On the other side we have to put unintelligibility, pessimism, and a certain unnaturalness in its teaching on the subject of the gratification of desires. Buddhism aims at destroying human nature rather than developing it. It is afraid to try and regulate desires, so it attempts to extinguish them altogether. Christianity has the advantage of being the religion that is attached to Occidental civilisation and of being easy to understand. It is more pessimistic than Judaism, but it does not suppress desires like Buddhism, but teaches that they should seek lawful gratification. Its drawbacks are that it believes in a personal God that can interfere with the affairs of men, a conception that is opposed to modern science. Japanese have great difficulty in accepting a religion that does violence to their traditional notions respecting the worship due to their ancestors by the stringent manner in which it insists on there being only one God. The merits of Confucianism consist in its avoidance of the miraculous and in its secularity and matter-of-factness. Its demerits are the absence of a true conception of the State, and the neglect to explain the principles that are necessary to true social development. These defects are showing themselves in the disorganisation which exists in the neighbouring continent. Confucianism, moreover, gives no encouragement whatever to scientific investigation. V. Religions differ from each other to a large extent, but they are all founded on *actually existing ideas* (實在 and 觀念 *Jitsuzai Kwannen*). These ideas as they exist in the minds of men are very similar. It is when the attempt is made to express them in words that great diversity commences. These ideas are conveyed from one mind to another without the use of language. This is a case of what the Buddhist Zen sect calls 以心傳心 *iishin denshin*, (communication from heart to heart). These original notions that lie at the basis of all religion may be said to be three in number. One attributes personality to the supreme power in the Universe. Another conceives of this power as omnipresent. A third sees in action a moral quality called right or wrong. In entertaining the first two notions, personality (in some form or other) and omnipresence, all religions agree. But in the meaning given to the term personality there is wide difference. That there is some kind of mysterious connection between man and the deity all religions teach. The Bible perpetually speaks of God dwelling in the hearts of men. Confucianism teaches that Heaven and man are inseparable, that man's heart is the tabernacle of Heaven, that Heaven and Man's heart are part and parcel of each other. Shintō, Buddhism, and Brahmanism teach the same doctrine. VI. If we come to ask what is essential to effective ethics, the answer is that ethics are not to be regarded as concerned chiefly with knowledge; they have rather to do with practice. A system of ethics must embrace some means of strengthening the will. Most of the existing non-religious systems of ethics concern themselves with theories rather than with practice, and that is why they are so ineffective as compared with religious ethics. Religious ethics derive their force from the belief in the unchangeable nature of the precepts they teach and of its transcendental and sacred character. It is absolutely necessary that the system of ethics on which we base our education should supply the element which religion used to furnish. VII. In endeavouring to find a new basis for ethics, it is quite impossible to adopt any one of the existing religions, as they all have characteristics to which scientists and philosophers alike object. They all have a person or persons which are worshipped. What it is desirable to do is to take the fundamental principles that lie at the basis of all religions, exclude all supposed supernaturalism and blend

Digitized by Google Original from CORNELL UNIVERSITY

them afresh with a view to their becoming a stimulus to the will and a general ethical basis. All existing religions have their historical connections, which render them unsuitable for universal adoption. The attempts at rendering local religions universal cannot be said to have been successful. Religion divides men's hearts instead of uniting them. The chief function of religion being to furnish a standard for conduct, there is no reason why those parts of it which have a special bearing on actual conduct and about the importance of which there is little difference of opinion among learned men should not in this country be formed into a system. This system might be called "Ethical Religion," or "Religious Ethics," it matters little which. The term religion is usually employed in a very narrow sense, but there is no objection to widening its meaning so as to make it include all that is sublime, sacred, and spiritual. To a religion thus broadly based there could be no objection among our leading men. It would be capable of universal application. VIII. *This Religion of the future and Nationalism.* Would there be no danger of this new form of religion coming into conflict with the nationalistic spirit? In my opinion none whatever. The object of the nationalists is to preserve Japanese individuality, and the principles which would constitute the new system would further rather than hinder the realisation of this aim. IX. *Conclusion.* The teaching of Shaka, Confucius, and Christ are all founded on their transcendental innermost feelings. The intellectual superstructure erected by their followers has had the effect of blinding men's eyes to the importance of these feelings. The essence of religion consists in feeling. The foundation of ethics lies in this. Talk about men's rights and their duties savours of Law and should not be mixed up with religion pure and simple. For a long time I found it difficult to determine exactly in what religion consists, and in order to satisfy myself I have spent some years in investigating the subject. My lecture today has given the results of my inquiry.

* * *

To the *Shinseiki* Dr. De Forest contributes an article entitled *Sekaiteki shūkyō*, in which he contends that Christianity is best suited to the needs of various countries and is thoroughly cosmopolitan in spirit. Dr. De Forest says that among the teachers of some 400 High Schools and among the Presidents of Universities in America there is no one who despises religion. Referring to the numerous eminent men in Japan who take the view that religion is only wanted by the ignorant, Dr. De Forest argues that they fail to realise the dignity of mankind. Mr. Fukuzawa compares man to a maggot and represents him to be a mere nail in the mechanism of the Universe. Though he argues in his *Ukiyodan* that polygamy is disgraceful, he does not seem to perceive the real reason of its objectionableness. Dr. Katō again in the plainest language represents belief in one true God as a superstition which no scholar can accept. He entirely fails to see what alone can put new life into society. Marquis Ito has declared that such as he have no need of religion. Is it not astounding that such an eminent politician should make such a statement? These voices, says Dr. De Forest, sound like a re-echo of the opinions expressed by the Romans two thousand years ago. The world has outgrown these views. They are most misleading. There can be no time in the future when religion will become superfluous. Those who love their country and place a high value on a pure domestic life ought to realise this . . . Japan, which has given such a warm welcome to Occidental civilisation, will surely welcome the religion that gave this civilisation to European nations.

* * *

The magazine of which we wrote some months ago, the *Sangan* (Three Eyes, Shintō, Buddhism, and Confucianism) still continues to play the role of an accuser of its Christian brethren. Under the title of *Sō no ko Yaso no Shimobe*, "The son of a Priest and the Servant of Christ," Mr. Kashiwagi Giyen is furiously attacked for stamping under foot the altar of his forefathers. It seems that Mr. Kashiwagi was intended to succeed his father as priest of a certain temple when he committed the crime of embracing Christianity. Another article entitled, "A record of the irregularities of professing Christians" pretends to give an account of the doings of American soldiers in the Philippines. Mr. Schlosser is next dealt with. A Greek Church convert is held up to scorn as being unfaithful to his country, &c., &c. Count Okuma's views are given in one of the numbers before us. He is made to utter somewhat anti-Christian sentiments in a passage in which he is reported to have said that the pro-Western feeling has been so strong among the Japanese that they have shown little discernment in their choice of things to adopt. The good and the bad have come into the country together, and among the things introduced was Christianity. As Count Okuma has so often made speeches in favour of Christianity it may be well to state the words put into his mouth by the writer in the *Sangan*. Here they are: *Yukei, mukei, gwaikoku no koto to saye iwaba, yoshi ashi wo yerabu itoma naku shikiri ni ware ni utsusan to hosshi; zen-aku kongō shite kore wo mukae taru ga yuye, Yesukyō no gotoki mo mata sono aida ni jōjite iri-kitari, futa-tabi tsubasa wo furū ni itaru.* "Whether in things material or spiritual, if they were only pronounced to be foreign, so great was our desire to adopt them that no time was allowed for distinguishing between what was good and bad; things were welcomed by us without respect to their quality. Making use of this opportunity, Christianity entered, and the second time (in our history) made its influence felt among us."

It is said, observes Count Okuma, that a politician needs to be a philosopher, and since philosophy and religion are connected with each other, a politician ought to be acquainted with religion. The reason why our politicians as a rule know nothing of religion is to be sought in the teaching of Confucius with which our whole system of thought is imbued.

* * *

The following books are all on religious or moral subjects. Mr. Matsumura Kaiseki is the author of a book called the 修養錄 *Shūyōroku*, which treats of rules of conduct and mental culture. The *Mainichi Shimbun* writes in terms of high praise of the work in the following strain:—Mr. Matsumura is known to be a very sincere and a very earnest man. In this book he speaks with great decision and power, so that the work should prove of great use as an arouser of the careless. The author's mind is reflected in the pages he has written to a remarkable degree, and the whole book is decidedly fascinating. But, continues the *Mainichi*, there is one chapter that seems to us incomplete—that is the one on marriage and married life. Mr. Matsumura dwells on the importance of selecting a suitable wife, but he fails to inform young men of the evils of marriage in the case of those who are physically unfit for wedded life. Certainly imbeciles, diseased persons, and people who have no prospect of a livelihood should remain single. This is a doctrine that needs to be preached in this country. Hundreds of young men are rushing into matiomony without sufficient forethought. The Shūyōroku is published by the Keiseisha, Uneme-chō, Kyōbashi, Tōkyō, and sells at 40 *sen* per copy.

Published by the same Company and selling at the same price as the abovementioned work, is the *Shukyō Kenkyū* (Investigation of Religion) by Mr. Kishimoto Nobuta, who has made a special study of comparative religion. The work treats of the various religions of the world, their historical origin, and doctrinal differences, and discusses the question of religious evolution.

The *Hihan teki Nihon Bukkyōshi* by Mr. Adachi Ritsuyen is a critical work on Japanese Buddhism which goes into the subject of the mixture of Buddhist and Shintō teaching and discusses the connection of Buddhism with politics. The work sells at 50 *sen* at the Keiseisha.

The 迷信の日本, *Meishin no Nihon* (Superstitious Japan) gives a very minute account of the various forms of religious belief prevalent in Japan. It divides the country up into provinces and treats them separately and gives a great deal of information on divination and the peculiarities of folk-lore. Messrs. Kishimoto and Anezaki think highly of the work, and their opinion on the subjects treated is quoted in the opening pages. The book sells at 25 *sen* per copy at the Keiseisha.

* * *

The *Kirisutokyō Shimbun* is to assume a new form and a new name from the beginning of the year. It is to be called the 東京毎周新誌 *Tōkyō Maishū Shinshi*, and will be a magazine. The present paper dates from 1883, when it was called the *Tōkyō Maishū Shimpō*, and was edited by Messrs. Uemura, Ukita, and Kosaki. In the course of years it underwent several changes to suit the times, and now it purposes enlarging its scope so as to include the discussion of politics, education, literature, family life and other subjects bearing on the welfare of society. It is to cover about 24 pages and to sell at four cents and a half per copy, including postage. The paper will then lose its distinctively religious character and enter into competition with the already crowded list of ordinary magazines.

* * *

The Roman Catholic newspaper, the *Koye*, gives the following advice to Christians who are perplexed as to how they should act when asked to contribute to local festivals of a wholly religious or semi-religious character. If they refuse to contribute they give grave offence to their neighbours. If they contribute they offend their own consciences and seem to be breaking the commandment to worship

Digitized by Google Original from CORNELL UNIVERSITY

one God only. The counsel proffered by the *Koye* is that in all cases a clear distinction is to be made between festivals that are religious in character and those which though they had a religious origin, are now mere harmless customs. In the case of the former the Christian must be firm. Under no circumstances must he countenance or help forward in any way the worship of idols or strange gods. But there are not a few festivals, like the one held in honour of soldiers killed in battle, that are quite harmless from a Christian standpoint and to which it is desirable that Christians should contribute. In cases where the festival is of a mixed character, partly religious and partly commemorative only, it is well that Christian subscribers, when giving their money, should specify the object for which it is given.

* * *

The editor of the *Seikyō Shimpō*, commenting on the general state of Japan at the close of the nineteenth century, writes in the following terms. Among all the events that during the past 30 years have contributed towards making Japan better known in the Western World her war with China ranks first. But the results of this war have been very much over-estimated. In the first place the war itself was an accident—an occasion of distinguishing ourselves that is not likely to occur often. In the next place the general sentiment of civilized nations is opposed to war, which is deemed a remnant of barbarism. What are the gifts that the war has bestowed on us, regarded with impartial eyes? Let us sum up the items. There are the bones of the unfortunates who perished on the field of battle or died from wounds received. There is the bumptiousness of the conquerors. There is the galling recollection of foreign interference in the hour of victory. There is the burden of Formosa. There is the obligation to increase our armaments and the consequent loading on of taxes. There is the prevalence of extravagant habits among the people, which it will take years to cure. In the meanwhile all higher culture and education are either neglected altogether or inadequately supported. There is a superficiality about our civilisation which no amount of varnishing can hide. What have we done to make ourselves a name in the world besides fighting a few successful battles? Are there any books on ethics or philosophy that are sufficiently original to give our authors a place among foreign investigators. What is our religion? Only the shadow of the real thing. We mourn over the want of independence among our converts and talk as though it was all a matter of money, whereas it has more to do with faith than money. Our converts are lukewarm believers, and that is why they effect so little. Is it not a fact that persons who have been baptised on the slightest pretence throw up their religion and go back to the world? What would be the use of granting an endowment fund to such Christians? Like the prodigal son they would soon spend the money to no purpose. Ask those who have real faith whether the mass of our Christians are fit to be rendered independent. They will say, no. Nothing good can be expected from such weaklings as these. To me this appears to be the real state of affairs at the close of the Nineteenth Century. Weeping the tears of honest, painful confession, I cross the barrier that divides the centuries.*

DEATH OF MR. G. W. STEEVENS.

The cable announces the death from enteric fever of Mr. G. W. Steevens, correspondent of the *Daily Mail* at Ladysmith. This is a sad end to what promised to be a career of exceptional brilliance. Mr. Steevens was quite a young man, having been born in 1869. He was educated at the City of London School and at Balliol. He entered journalism early, and joined the editorial staff of the *Pall Mall Gazette* in 1893. He transferred his services to the *Daily Mail* shortly after the starting of that popular half-penny paper, and it was in the capacity of war and special correspondent that he earned more than the usual credit attaching to a clever newspaper writer. He went through the Greek war, and his accounts of some of the chief scenes in that tragi-comedy were esteemed the most dramatic penned by any of the correspondents. In 1898 he was despatched with Kitchener's force to the Soudan, and was present at the Battle of Omdurman. Here, again, his brilliant descriptions of scenes and incidents, and his vivid word-pictures of personalities gained a great deal of notice both for the writer and the journal by which he was employed. Even papers like the *Spectator* admitted that Mr. Steevens always rose above the level of ordinary journalism and not infrequently attained the dignity of literature. A tour through India gave him still further opportunity of exhibiting his descriptive talents, and his articles—very interesting and entertaining articles, though marred here and there by that slight affectation and turgidity which are regarded as merits on the type of journal for which Mr. Steevens laboured—were republished recently under the title of "India." The Dreyfus trial also occupied his attention, and of much wearisome stuff that was written about it Steevens's contributions were among the least wearisome. During the present war he has done good service for his paper, though the censorship has been unfavourable to the development of literary embroidery of hard facts. Among other more or less ephemeral publications of the deceased correspondent are "Monologues of the Dead," published in 1896, and "The Land of the Dollar," 1897. It is hardly probable that Mr. Steevens' untimely death has robbed the world of a literary light of any great magnitude. That he had the stuff in him to make an accomplished man of letters is probable, but unhappily the tendency of the day is to fritter away talent in work that hardly survives the hour of its birth. The potential Turner becomes a magazine illustrator, for it pays best; the potential Hogarth, a caricaturist, for there is money in it; and a man who might win a permanent place in literature becomes a sensational writer, and prides himself on his ability to turn out two columns on any subject in an equal number of hours. Had poor Steevens survived we should probably have had from him an infinitude of hasty, flashy, unbalanced, intelligent work, sufficiently good to make a thoughtful reader sigh that the author had ever come under the spell of the *Daily Mail's* cashier. As a war correspondent Steevens belonged to the newest school of impressionism. In reading his despatches one gathered little of the disposition of the troops, the effect of this or that tactical movement, but much of the hurtling of shells, the whistling of bullets, the smashing of limbs, and the personal feelings of Mr. Steevens among all these sights and sounds. It was very clever, but probably the style of the older and more matter-of-fact school is more satisfying to a reader who does not care about being thrilled, but who does want to know what happened.

* The writer is evidently of opinion that the twentieth century begins on January 1st, 1900.

ODE TO CHUZENJI.

There's a paradise aquatic
Where (unless they're too rheumatic)
All the Colleagues Diplomatic
Seek repose;
Where the view is so extensive
That it makes one feel quite pensive,
And there's nothing that's offensive
To the nose.

Baron, Count, or Excellency,
Up from Nikko to Chuzenji
On a ten or fifteen yen gee
You must ride,
For a kago drives one frantic,
And it's not a bit romantic
When a foreigner gigantic
Sits inside.

Jealous friends may crab the weather,
Say the journey lasts for ever,
And your summer plans endeavour
To upset;
When they praise with all their power
Waterless Karuizawa,
The Chuzenji grapes are sour
You may bet!

Others say the nerves are calmer
For a view of Fujiyama,
And declare the silk pyjama
Rather toney,
And the greatest pains are taken
That your purpose may be shaken
And Chuzenji be forsaken
For Hakone.

But I'll stake my reputation
That there isn't in Creation
Any greater compensation
For the ills
That our exiled flesh is heir to,
Than, forsaking all our care, to
Pack a kori and repair to
Nikko's hills.

MORAL.

Should the climate Asiatic
Make you feverish, asthmatic,
Nervous, N.B.
If "in corpore *in* sano"
Still a "sana mens" remain, Oh!
Take the first train from Uyeno
To Chuzenji!

WATAKUSHI.

TEA AND SILK.

According to investigations made by the Department of Agriculture and Commerce, and published in the *Tokyo Keizai Zasshi*, the area of mulberry and tea farms throughout the empire for the past seven years has been as follows:—

	Mulberry farm. Cho.	Tea farm. Cho.
32nd year of *Meiji* ...	307,084	57,883
31st ,, ...	304.312	58,648
30th ,, ...	298,203	58,892
29th ,, ...	288.937	59.479
28th ,, ...	266,164	57,728
27th ,, ...	253,889	59.000
26th ,, ...	243,358	60,669

From the above it may be perceived that, although mulberry plantations are increasing year by year, those for tea are steadily decreasing. The cause is the serious decline in the tea trade during the past few years. Classified according to prefectures, Fukushima stands highest with 28,969 *cho* of mulberry farms; next comes Gumma with 28,108 *cho*; and Nagano, Saitama, and Yamanashi with 25,708, 22,140, and 16,058 respectively. Below these are Yamagata with 13,279; Niigata with 12.514; Ibaraki with 11,981, and Ishikawa with 10,394. There are eleven other prefectures containing mulberry farms varying in extent from 9.890 to 5,060 *cho*. As to tea farms, Shizuoka enjoys first rank with an area of 16,021 *cho*. Next comes Omiye with 3.510, and then Kyoto, Ibaragi, and Kumamoto with 3,022, 2.681, and 2,472 respectively. There are ten other prominent districts containing tea farms ranging in area from 1.300 to 1,932 *cho*.

THE LAND QUESTION.

IMPORTANT MEETING.

PERPETUAL LEASE AND SUPERFICIES.

A meeting of land-renters in the former Settlement of Yokohama was held on Friday afternoon at Keil's Building, Mr. Holm, chairman of the International Committee, presided over a large and representative meeting. Among others present were: Messrs. J. F. Lowder, W. B. Walter, J. Dodds, W. W. Till, J. Witkowski, P. Sarda, Captain Swain, Messrs. Harlow, Gargan, Von Hemert, Mathews, Giusanni, Mees, F. H. Bull, Diack, J. Curtis, Gordon, Helm, F. W. Mitchell, Hutchinson, W. T. Payne, J. L. O. Eyton, Allcock, Tom Thomas, J. W. Hall, D. Jackson, M. Russell, Gibbons, V. Blad, B. C. Howard, C. V. Sale, Rev. E. S. Booth, Messrs. Lines, F. Adet, G. C. Wilson, J. H. Brooke, Grauert, Wylie, Townley, E. B. Jones, Alcott, Coe, Strome, F. Staniland, B. Gillett, Manuel, E. J. Moss, C. D. Moss, P. Colomb, Pors, Kaufmann, Tegner, F. S. James, C. R. M. Morton, Hartland, A. O. Gay, &c., &c.

In opening the meeting the CHAIRMAN said:—As Chairman of the International Committee, at whose instance this meeting has been called, I beg to offer a few remarks with regard to the object we had in view in inviting you here today. Among the many momentous questions which have presented themselves in connection with the inauguration of the new *régime* one of the most important is the one dealing with the registration and transfer of our landed property and the law of succession and of mortgages. Immediately upon the coming into operation of the present treaties it was found that the necessary machinery of law for registering and transferring our perpetual leases, was not provided in the Japanese law as it then stood. Everything being new to foreigners as well as to the Japanese it was generally believed that things would right themselves by and bye, and beyond some individual movements and a general report to the foreign Consuls and Ministers, or to some of them, no concerted action was taken for several months. Towards the end of last year, when the grievous consequences of the non-settlement of this question made themselves more and more apparent, the International Committee took it upon themselves to address His Excellency the Minister of State for Foreign Affairs, Viscount Aoki, on this subject and to solicit his good offices on our behalf. In one letter it was pointed out that in the treaties the confirmation of our perpetual leases is guaranteed and that through the delay already occasion in the settlement of the question our property was continuously and adversely affected. The terms of the letter to His Excellency were as follows:—

INTERNATIONAL COMMITTEE.

23rd December.

To his Excellency Viscount AOKI SHUZO,
Minister of State for Foreign
Affairs, Tokyo.

Your Excellency,—The International Committee of Foreign Residents of Yokohama beg to submit to Your Excellency that although the new Treaties between Japan and foreign countries provide that:—

> "existing leases in perpetuity under which property is now held in the foreign settlement shall be confirmed and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property," ("les baux à perpetuité en vertu desquels les étrangers possedent actuellement des propriétés dans les quartiers seront confirmés, et les propriétés de cette nature ne donneront lieu à aucuns impôts, taxes, charges, contributions ou conditions quelconques autres que ceux expressément stipulés dans les baux en question")

yet no such confirmation has hitherto been made; also that no means have been provided for the registration of transfers, mortgages, or successions of the above property since the treaties came into operation some five months ago.

The Japanese Courts where leases under "superficies" can be registered take no cognizance of Settlement perpetual leases, and only offer to register these as "superficies." Further, a charge of two-and-a-half per cent. on the values of properties sold has been claimed, though under the old system of transfer at the Kencho transfers have been effected free of any tax.

Consequent upon the above difficulties, the values of property in the former foreign Settlements have been greatly unsettled, and a general feeling of distrust and uncertainty has been created, which has a very injurious effect, tending to prevent the farther introduction of foreign capital into Japan and rendering former Settlement property unsaleable at present.

Such a result, after treaty revision, is, we feel sure, not in accordance with the wishes of the Imperial Japanese Government, for we had the assurance of His Excellency the Minister President of State on the 4th of August last "that the foreign residents would not suffer any inconvenience under the new conditions," as well as that of Your Excellency on the 10th of April last "that the foreign residents could entrust with confidence their persons and property to the safe guarding of the Japanese authorities."

I take the liberty of addressing Your Excellency on this subject, which is one of the greatest interest to the foreign community, in view of the invitations which you have on several occasions given us to communicate with Your Excellency direct, and the Committee look with confidence to Your Excellency for the removal of the grievances which I have now ventured to bring before your notice.

I have the honour to remain Your Excellency's most Obedient Servant,

H. J. HOLM.

Shortly afterwards, I believe on the 27th of December, an Imperial Ordinance was issued which, accordingly to the opinion of His Excellency the Minister should prove satisfactory to the members of the foreign community, and he accompanied this by a verbal assurance that the Imperial Government never intended to in any way encroach upon Treaty rights, and that the delay was due to some difficulty in connection with determining form only. I avail myself of this opportunity of recording our thanks for this courteous assurance, and I think I may add that never anyone of us has harboured a fear that the Imperial Japanese Government would not always rigorously adhere to Treaty agreements. At the same time it must not be lost sight of that the officials of the Courts of Law, where these matters have to be dealt with in the first instance, have only the law as it reads to guide them and that they are apt to ignore treaty stipulations, as is shown by the judgment of the Chiho Saibansho in what is commonly known as the Healing case, of which a report is found in the papers of the end of December (Mr. Holm here recited the material points of the case from the newspaper reports). As I said before, I feel pursuaded that no injustice is intended by the Imperial Authorities and that on appeal or otherwise such Treaty stipulations as may apply will be finally given full weight (hear, hear). Now, as for the Imperial Ordinance of December last, which it was hoped would put an end to our troubles. The same has been given full consideration; and I very much regret to say that the general consensus of opinion appears to be that the situation has not been much improved by it. The only difference as compared with the state of things existing previously is that instead of one we have now two kinds of superficies—one a superficies pure and simple and another one with "perpetual lease" in brackets attached to it. I learn that in some quarters it is advanced that the superficies as now offered us is, if anything, even better than our former perpetual lease. I don't propose to pass an opinion on a question of this kind, about which even law students have so far been unable to agree, but I cannot but share the fear that this double kind of superficies in the future may give rise to mistakes and confusion and great insecurity, which could easily be avoided if the whole matter was once for all put in indisputable language. The wording of the Treaties themselves is perfectly clear and precise on this point, namely, "Existing leases in perpetuity under which property is now held in the foreign settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property." In addition to this it strikes me as only reasonable that people should prefer the old accustomed perpetual leases, which have given satisfaction and security for now upwards of 40 years, to something new and as yet untried, the more so as the acceptance of superficies in any shape or form would practically mean an amendment of the Treaties as just read. I think there can be no doubt about this. I am very glad to see the representatives of the Press here, as this will be an additional guarantee that no misconception can be formed with regard to the holding of this meeting. Transactions in property have now been suspended for six months or more and it goes without saying that this cannot be suffered to continue. At the same time we have met here in a perfectly friendly spirit, and I trust that the Imperial Japanese Government will be disposed to deal with the matter in a manner no less conciliatory, and that it will be understood that we do not wish to ask for anything but what we believe to have been promised us by Treaty. If our trouble is again placed before the Imperial Japanese Government in this form I feel sure that they will put matters again on a confidence-inspiring and working basis without further delay. With regard to our Consuls and representatives in Tokyo I may say that this matter is understood to have all their attention, and I think they will gladly welcome an expression of opinion on this matter by such a representative meeting as this. This, gentlemen, is how the matter now stands. The International Committee has thought it proper to call this meeting of land-renters as they are the parties primarily and directly interested and as, moreover, some of the largest lease-holders are not among the supporters of this Committee. With these remarks I now leave the question to the meeting. We shall be grateful for any further information that any of the gentlemen present may be in possession of, and I am also ready to answer any questions that may be asked to the best of my ability.—(Applause.)

MR. W. B. WALTER called attention to the wording of the Treaties on the question of leases in perpetuity and said the opinion of that meeting probably agreed with that of the International Committee, namely, that the form of lease which it was proposed they should accept, viz. superficies, was not the tenure on which they had held their land hitherto; and as the Treaty expressly called for the confirmation of the existing leases the foreign land-renters would like to see that confirmation given as quickly as possible in order that they should feel the same confidence in their existing leases as they had felt hitherto. (Hear, hear). There was another matter which they might perhaps think trivial, but which he still thought merited attention. The Japanese legal authorities had proposed to levy on the buildings which were situated on their land certain municipal and local taxes. Included in these taxes were the cost of maintaining roads and drains. In connection with that matter he begged to read to the meeting the following extract from the Land Regulations of Kanagawa for August, 1860, which he believed were the earliest regulations on the subject:—

> The proprietorship of the soil being vested in the Japanese Government the streets, roads, and ditches will at all times be kept in thorough order and repair and sewers or drains will be made when necessary by the Japanese Government and no tax will be levied on renters in the foreign quarter for this purpose

They knew perfectly well, continued Mr Walter, that in these taxes were included certain expenses connected with roads and drains.

Digitized by Google Original from CORNELL UNIVERSITY

It was evident from these regulations that, however liable foreign rent-holders might be for other taxes, the amount for roads and drains should be deducted. Into the larger question, as to whether any tax should be levied on buildings or land in the former foreign Settlements, he preferred not to enter at the present time. Probably others present at the meeting would have a good deal to say on these subjects, and as a guide to the discussion he should move the following resolutions :—

It is resolved by this meeting of land-renters of the former Foreign Settlement of Yokohama that the following facts be brought to the notice of the Imperial Japanese Government :—

1. That although the revised treaties provide that the existing Government leases in perpetuity of foreign settlement property shall be confirmed, steps have not yet been taken by the Government to confirm them, and the laws of Japan appear to contemplate their compulsory conversion into a new and different kind of right, which is called "superficies."

2. That under existing laws the right of perpetual lease is not recognised, and since the coming into operation of the revised treaties the holders of such leases have been unable to sell or mortgage their land except on the terms of allowing the leasehold interest to be registered as a "superficies," which they have been and are unwilling to do.

3. That the non-recognition of what foreigners conceive to be a right plainly secured to them by their title deeds and by treaty, has resulted in a general feeling of insecurity, and is stopping all sales and mortgages of former foreign settlement property and is threatening such property with a very serious depreciation in value.

4 That in order to remedy the evils of the situation and to restore confidence it is most *desirable that the* Imperial Japanese Government shall at once confirm the aforesaid leases in perpetuity and make all necessary provisions for their recognition by law, and for the registration of them under a separate designation.

5. That properties held by foreigners in the former foreign settlements have been made subject to new conditions and taxes and charges from which in the opinion of this meeting, the revised treaties were intended to exempt them.

And it is further resolved that copies of the foregoing resolutions be forwarded to His Imperial Japanese Majesty's Minister for Foreign Affairs through the usual channels."

Mr. WYLIE seconded the resolution without comment.

The Rev. E. S. BOOTH—May I offer an amendment something to this effect :—"That these resolutions be presented or brought to the attention of the Foreign Office of the Imperial Government through the Ministers represented in the foreign Concession." As the resolution stands it sends the resolutions from this meeting directly to the Foreign Office. It seems to me it would meet the purpose better if it came through our natural authorised representatives. They may be able to give us some light on the intent and meaning of the Treaty or the Treaties between various Governments and Japan. It may be assuming a little for us to pass judgment upon the Treaties whatever the Treaties are. I think that every one will concede that the Treaties stand above the national law and if the plain English in the Treaties have the ordinary meaning of English the resolutions presented by Mr. Walter are well taken and will no doubt be properly considered by the authorized representatives of our nationalities. I simply make this amendment that in place of the last clause that the resolutions be sent to the Foreign Office we insert that they be sent to the ministers.

The CHAIRMAN—I think that is a question which might be discussed.

Mr. WALTER—Possibly Mr. Booth will allow me to say a word. I have only suggested that the resolutions should be forwarded; I have not said anything as to the way in which they should be forwarded. The opinion of the meeting will naturally direct the mode of communication with His Excellency—(hear, hear)

The CHAIRMAN—Would it agree with your intention, Mr. Walter, to include this in your resolution.

Mr. WALTER — Certainly. I would add that copies of this resolution shall be forwarded through the usual channels—(hear, hear).

After some further discussion Mr. Till proposed :—"That the report of this meeting be forwarded to leading newspapers in Europe and America for publication in order that land-renters absent from Japan may become acquainted with the condition of property in this country held by aliens"—(loud applause).

Mr. PARSONS—I second that.

Mr. TILL—Perhaps it would be as well to add to that, after newspapers, "and Chambers of Commerce."

The CHAIRMAN then read the resolution to the meeting.

Mr. LINDSLEY—I would suggest that there be added also "the American Asiatic Association and the China Association."

Rev. E. S. BOOTH—I would call for the reading of the previous question *seriatim*.

The CHAIRMAN then read Mr. Walter's resolution again.

After some few immaterial remarks the motion was put and carried amid applause.

The CHAIRMAN—Next we come to Mr. Till's motion, seconded by Mr. Parsons.

Mr. SALE—I think that that needs a little consideration. It is a proposition which implies a little irritation—a sort of showing up of the Japanese. They tried to meet us in this matter, and they might try to meet us again. I think we ought to wait until we know what are the results of these resolutions brought forward by Mr. Walter.

The CHAIRMAN—Do you bring that forward as an amendment.

Mr. SALE—I do.

The Rev. E. S BOOTH—I beg to second that. I have a similar feeling that it may be misconstrued by those who are not here to see that this meeting is in every sense a friendly one to the Government under whose laws we are at present, and those who are separated from the discussions which have led up to the calling of this meeting would, I fear, put a wrong construction upon a measure looking for so wide a publicity. If these resolutions going forward fail to meet the difficulty there is yet time to give publicity, and it will have a clincher to go with it which will be found of more effect than to send it forth prematurely.

Mr. HARTLAND thought there was a misapprehension. The gentlemen who had just spoken did not apparently quite grasp the reason for sending this report to the papers at home. It was not to say that there was any feeling of irritation (hear, hear), but in order to give land renters who were not present in Japan an opportunity of seeing what was being done—(hear, hear).

The CHAIRMAN—It has been proposed as an amendment that action be postponed until an answer has been received to the proposition made by Mr. Walter already passed. I will now put the amendment.

The amendment was then put and was defeated by a large majority.

Mr. Till's motion was then submitted and the CHAIRMAN declared it carried by an overwhelming majority.

Mr. TILL—You may mention that there were three against it. That makes a considerable difference—(loud laughter).

The CHAIRMAN—Now these resolutions have been passed the question comes who is to forward them. The International Committee has been going on investigating the matter, but as I said before many of the land renters and some of the largest leaseholders are not members of this Committee, and I think it therefore only right that the members among themselves should elect a sub-Committee for the purpose of further dealing with this question. I shall be pleased to hear the opinion of the meeting.

Mr. WALTER—I beg to propose that you as Chairman of this meeting forward the copies of this resolution, and that as regards any further steps that require to be taken by the different nationalities that each nationality should form its own Committee, but that as regards the presentation of the resolutions themselves you as Chairman should sign and forward them—(hear, hear).

The CHAIRMAN—Don't you think that this would be an opportunity for the land renters—as a great many are present—to select a general committee; because it is all very well that every nationality is invited to form a sub-committee, but I think that in the long run it would not work, because the interests we are discussing here are the general interests, we are all in the same position and I think a general committee would be able to do more than if you split it into quite a number. All nationalities are represented here and perhaps each will mention the name of one of their number and in this way we may arrive at a representative committee of all nationalities.

Mr. TILL—Before Mr. Walter's resolution is put I would ask whether if the terms of the resolution are carried out, and the Japanese Foreign Minister is addressed through the different Ministers in Tokyo, those Ministers would receive a resolution from an International Committee. Would the British Minister receive a communication addressed to him by an international meeting. I think that is a question.

The CHAIRMAN—It is a pertinent question. The Ministers so far have not recognised the International Committee in any official way. But that may perhaps be overcome by forming a General Committee with each nationality contributing one or more members, each member forwarding the resolutions to his own minister. If the resolutions are forwarded, say, by a British subject only the British Minister will receive them.

The Rev. E. S. BOOTH—It appears to me that the position of the Chairman is well taken and I would move that the Chairman appoint an International Committee.

The CHAIRMAN—I think that would be rather a difficult task for me. I should like to leave that to the meeting.

Mr. LINDSLEY—I move that each nationality sends the resolutions forward and that as many signatures as possible be obtained among its nationals.

Mr. WATKER—I beg to propose as a nucleus of this committee that Mr. Holm be elected for the German Community; that Mr. Till be elected for the English; Mr. Lindsley for the American; other gentlemen will kindly propose their members for other nationalities, and I think we shall arrive at a solution of the difficulty.

Mr. TILL proposed that the British elect their own representative, the Germans their own, and so on.

The CHAIRMAN—I quite agree.

Mr. DODDS, referring to Mr. Lindsley's suggestion of obtaining signatures, said he did not agree with this part of the proposal. It would weaken the effect of the resolutions passed that day. He did not think any signatures could add to the weight of that meeting, which was the largest he had even attended in Yokohama (applause).

The Rev. E. S. BOOTH—I beg as an American citizen to nominate Mr. Lindsley. May I put that to the meeting, Mr. Chairman?

The CHAIRMAN assented, and the motion was adopted.

Mr. WALTER—proposed Mr. Till to represent the British community.

Mr. TILL—But my resolution has not yet been passed. I propose that the members of each nationality here present elect a representative to forward the resolutions previously agreed upon to their respectives ministers.

Mr. JACKSON seconded.

Mr. LINDSLEY—Then I withdraw my motion.

Mr. TILL's resolution was carried.

The CHAIRMAN—Then we may now take Mr. Mr. Booth's proposition.

Digitized by Google Original from CORNELL UNIVERSITY

Finally, after some discussion of minor points, the following were elected :—

British—Mr. Till.
American—Mr. Lindsley.
German—Mr. Pors.
French—Mr. Sarda.
Italian—Mr. Giusanni.
Dutch—Mr. Klingen.
Swiss—Mr. Colomb.
Danish—Mr. Blad.

The CHAIRMAN—I take it, then, that these gentlemen will see that these resolutions are sent to their respective Ministers.

Mr. MITCHELL—I would like to call attention to one point, and that is the necessity of obtaining legal assistance with regard to this question. I believe that up to the present the onus of doing so has fallen upon a certain number of property owners in the former settlements and it is no doubt necessary that the matter, which has been so far taken up, should be continued. I would suggest that the gentlemen who are here present this afternoon should add their names to the list of those that have already subscribed to bear the necessary expense. It will not be a very large sum if it is distributed among so many and I think that in such circumstances all who are interested in property will be quite willing to contribute their share. There are some of course who are large holders of property and others who own only very small lots and I would suggest that some arrangement be made whereby these expenses should be contributed *prō rata*, that is to say, taking the value of the year's rental.

Mr. JOHNSTONE seconded.

Mr. MITCHELL—Perhaps ground rent would be better than the rental, as it would be fixed, whereas the other is liable to variation.

Mr. LINDSLEY asked if there was any idea of what the expenses would be. What had they been so far?

Mr. MITCHELL—Up to the present time the services of Mr. Walford have been engaged in this matter I don't know the exact number who have contributed. There are several. I have no list at present. As to what the ultimate expenses may be it could be difficult for me to say. I would suggest that any future arrangements that may be made may be left to the Committee, which has been elected from each nationality—(hear, hear).

Mr. LINDSLEY—Is it not possible to know approximately the amount incurred?

Mr. MITCHELL—I don't think any account has been rendered.

Mr. LINDSLEY—Would we be committed to any indefinite amount by passing this resolution?

Mr. MITCHELL—Well, it would certainly be difficult to define any particular sum at the present time as I said, the expenses divided among so many would be a trifle.

Mr. WYLIE—I would suggest that Kobe and Nagasaki be invited to join us.

Mr. LINDSLEY—I have heard the sum of 20,000 *yen* mentioned as expenses to date. I should like to know if there is any authority for that.

Mr. MITCHELL—There has been no such sum as that incurred to date.

Mr. LINDSLEY—Nothing like it?

Mr. MITCHELL—No, nothing like it.

After some further explanations, Mr. TILL asked if Mr. Mitchell would include in his resolution the expenses already incurred.

Mr. MITCHELL—If the meeting agrees.

Mr. TILL—So far they have been incurred by a few men, but they have all been incurred for the benefit of property owners generally.

The CHAIRMAN—The resolution now reads :—"That land renters of the former foreign concessions of the Empire of Japan present at the meeting be invited to contribute to the legal expenses which may be incurred in connection with the subject, and that the amount required be divided *pro rata* on the basis of ground rents paid by each proprietor; that Kobe, Tokyo, and Nagasaki be invited to join; that expenses already incurred may be included at the discretion of the Committee as elected."

Mr. KAUFMANN remarked that with regard to Kobe he had been informed that they were going to call a similar meeting, and he believed that if they wanted legal advice they would procure it themselves, and would not join with Yokohama.

The CHAIRMAN—The resolution does not commit us to anything. It simply says they will be invited.

Mr. MACARTHUR said with regard to these legal expenses it was true that they had been incurred up to the present by individuals for their particular and private benefit, but all the land-renters would reap the benefit also, and the meeting should consider that point and include all expenses in those to be borne by the meeting.

The CHAIRMAN—This is a matter that may be left to the discretion of the Committee elected.

Mr. TILL—This meeting is the outcome of what has already been done.

The motion was carried.

Mr. MITCHELL—I would suggest that those gentlemen who are willing to contribute put their names on the list.

The meeting ended with a vote of thanks to the Chairman.

CORRESPONDENCE.

MILLER'S LAST DAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you permit me to trespass upon your space and the time of your readers, to present two points in connection with the last days of the late Robert Miller, now passed beyond the reach of human praise or blame. First of all, let me preface my remarks by the statement that I am fully persuaded of the justness of the sentence and the fairness of his trial. But I feel that there was a side to his character, as shown since he came to Tokyo, that few have known of, and which, in common justice, ought to be made known to those who were alienated from him by the hideousness of his crime and his early conduct. Since about October 1st, I have visited him almost weekly, and as you know, I was with him at the last. I noted a marked change in his demeanour; and I do not advance my own unsupported testimony to this fact, for one in my position might have been deceived. The prison officials will corroborate what I say in this regard, for I continually asked of them concerning his conduct. For a man whose life had been stained by almost every sin (though I believe never before by murder in act), and for one who had never known the meaning of religion, the sentiments uttered by him in the later days of his life seem to me to show a great measure of repentance, with a true sorrow for his sins. This too is shown by the writing committed to my charge, which was mostly composed before the last day, and not, as erroneously stated in your report, on the morning of the execution. It was handed to me (all but the last sheet) the night before. His last words were of thanks to all who had in any way befriended him, especially the officials of the prison, and of prayer for forgiveness.

In addition to these words concerning himself, I desire to say a very few about the kindness of the officials, both to him and to me in the discharge of my duties in connection with the prisoner. They have been most uniformly courteous, and desirous of assisting me in every way. Mr. Fujisawa, the Superintendent of the Kajibashi House of Detention, gave much of his personal attention to the case, and is deserving of the highest praise, as well as cordial recognition by the foreign community. The charge was a troublesome one, because of the novelty of it, as well as the difficulty of understanding on both sides. The officials felt this themselves, and expressed many times their regret that they could not always do what they desired. I take great pleasure in thus bearing my testimony.

Yours truly, CHAS. H. EVANS.

Tokyo, January 19th, 1900.

PATRIOTIC ENTERTAINMENT.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—On behalf of our Societies we beg to convey to you our thanks for your kindness in inserting the advertisements for the entertainment in aid of our soldiers' widows and orphans, free of charge.

You will be gratified to know that the entertainment was a complete financial success, as, thanks to the generosity of the community, we have been able to pay in the total receipts, viz. 1,513 *yen*, to the credit of the Fund.

We are, dear Sir, Yours obediently,

H. A. STEWART.
Hon. Sec., St. Andrew's Society.
HARRY J. SHARP.
Hon. Sec., St. George's Society.

Yokohama, Jan. 20.

CONDITIONING OF RAW SILK.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I enclose copy of a letter I wrote on the 20th inst. to the *Japan Times* in reference to an article which appeared in that paper on the 18th inst. As the explanation contained is of general interest to the Silk Trade, you may perhaps think well of giving it a place in the *Mail*.

Yours truly, H. BENT.

TO THE EDITOR OF THE "JAPAN TIMES," TOKYO.

DEAR SIR :—With reference to the article in your issue of the 18th instant relative to the recent discussions between the silk merchants of Yokohama, the following details may perhaps serve to remove the doubt which appears to exist in the minds of the Japanese merchants on the important question of allowance for moisture.

Raw silk is an article peculiarly susceptible of absorbing and retaining moisture, and it is by the process called "conditioning" that the quantity of moisture contained in the silk is determined. For this purpose, conditioning houses have been established in almost all the principal silk centres of the world, and it is the conditioned weights obtained from these establishments which form the recognized basis for transactions on those markets. That is to say that in New York, Lyons, Milan, Bâle, Crefeld, Zürich, Canton, etc., a buyer of silk can, before finally settling, demand that his purchase shall pass through the local conditioning house. He is enabled thereby to securely protect himself against an undue amount of moisture in the silk which he intends purchasing, for, if the condition tests show that the moisture present is in excess of the recognized admissible percentage, the buyer can in every case insist that such excess be made good to him by the seller. On the other hand, if the moisture is shown to be less than the recognized percentage, the seller cannot claim the difference, unless the sale has been made on actual conditioned weight.

This protection for the buyer holds good on every market where a conditioning house exists, with the sole exception of Yokohama. Although this market boasts a well-arranged and perfectly appointed Conditioning House, which was opened under Government control on the 5th of August, 1896, the said establishment affords not the slightest protection to foreign merchants against surcharge of moisture, for the simple reason that, although silk may be conditioned and shown to contain an undue proportion of moisture, the Japanese sellers refuse to make good such excess.

The proportion to moisture recognized on all the home markets as admissible in Japan silk is a maximum of 2 per cent. over and above the legal conditioned weight.

The position of the foreign merchant in Yokohama is consequently this—that he is obliged to purchase his silk at a price fixed irrespectively of the amount of moisture contained, and he has to sell the goods at home with a guarantee

Digitized by Google Original from CORNELL UNIVERSITY

that such moisture shall not exceed 2 per cent. over and above the legal conditioned weight In other words, supposing he buys a parcel of silk which is afterwards shown by the Yokohama Conditioning House to contain 3 per cent. of moisture over and above the conditioned weight, he has a clear loss of 1 per cent. by water paid for at the value of the silk.

There is no reason why Japan silk, if properly cared for, shou d contain more than the accepted 2 per cent. of water. It is, however, frequently stored in damp moist godowns, and moreover the practice of "watering" the silk is not by any means unheard of. These abuses, if not too apparent, have been winked at in the past, owing to certain corresponding advantages allowed to foreign merchants by old custom of the trade.

The Japanese, however, having initiated a movement to suppress everything tending to favour foreign buyers, the latter have been compelled in self-defence to put forward certain counter-claims, of which the most important is that relating to moisture, viz: "If silk bought "appears to be too damp, the percentage of "moisture may, at buyer's option, be determin-"ed by the Conditioning House, and any excess "over 2 per cent. shall be refunded to the "buyers by the sellers."

This Rule, which is designed to place Yokohama on the same level as all other markets, has been accepted by the Japanese Silk Guild, and it is mutually agreed that it shall come into force with the new season on the 1st of July next. It is curious that the Japanese merchants, who have been so long connected with the foreign silk trade and who have moreover had a Conditioning House in their midst for the last three years, should know so little about the important process of conditioning. Such, however, appears to be the fact, and if you can afford a little more of your valuable space a few words may suffice to make the matter clear.

It should be understood at the outset that the amount of atmospheric moisture naturally absorbed by and contained in raw silk under normal conditions is eleven per centum (11 per cent.) We then take the following case of a bale sent to the Conditioning House, and weighing on arrival there

Gross.....	Kin 60 00
Less Tare of Bag, Ropes, Papers, String, etc.	1.50
Net weight	Kin 58.50

A certain number of skeins are then drawn from the bale, and after careful weighing are heated in a special apparatus at a temperature of about 120 degrees centigrade for half an hour, when every vestige of moisture has disappeared and the skeins are reduced to their absolute weight. They are then carefully re-weighed and the absolute weight of the bale is calculated according to that result.

We will now suppose we have obtained for the bale an absolute weight of.....	Kin 51.10
To this must be added 11 per cent. for natural atmospheric moisture ...	5.62
	Kin 56.72

which is the legal or conditioned weight of the bale.

On this result, the difference between the net and the conditioned weights shows that the bale contains 3.04 per cent. of moisture. As stated above, a margin of 2 per cent. is allowed on Japan silk over and above the conditioned weight. The excess on surcharge of moisture in this bale is therefore 1.04 per cent., and it is that excess which, under the foregoing Rule, shall be refunded by the Japanese Merchants to the foreign buyers.

I am, Yours faithfully, H. BENT.
Chairman of the Foreign Silk Committee.

Yokohama, Jan. 20th, 1900.

"DEATH AND LIFE."

To the Editor of the "Japan Mail."

Sir,—Your article in yesterday's issue entitled "Death and Life" seems to me a fresh illustration of the old adage "A little knowledge is a dangerous thing." In the first place Professor Weismann's theory is by no means such as you have stated it to be. His "Essays on Heredity" were an attempt to give an account, not of immortality, but of the entrance of natural death into the world; and the fact against which you say "reason revolts," viz, that among the lowest forms of life, the Amoeba, reproduction takes place not by fertilization but by fission, the cell, *i.e.*, of the unicellular organism, dividing to form two other cells, each of which contains a portion of the original germ plasm, and these again in like manner dividing to form others, and so on *ad infinitum*, possessing thus in themselves a potential immortality, is a fact of scientific observation. Death only occurs when, owing probably to environment, a dissimilarity appears in the previously homogeneous cells. It and they become divided into reproductive, and what are called somatic cells. It is among these latter that death first occurs. With regard to the former they possess a power of infinite reproduction and so—as I have said—a potential immortality In Weismann's own words "Each individual of any such unicellular species living on earth to-day, is far older than mankind, and almost as old as life itself." It is not to these facts of simple observation, but to cer ain other deductions, founded on the fact of the permanence of the germ plasm in these cells, and relating to the heredity of acquired Characteristics, made by Weismann, that exception is made.

Again with regard to Professeer Loeb's experiments in which he claims to have fertilized the eggs of sea urchins by a chemical process. His conclusion will, I think, need a great deal of verification before it is accepted. But even if true the question of the origin of life does not seem to be much, if at all, affected. The origin of life in this planet has been shown to be in unicellular organisms, and its method of reproduction not by the sexual process of fertilization, but by that of fission. In any case the fertilization of an already potentially living organism is a very different thing to the production of life itself by chemical or other process.

It is difficult also to accept the somewhat triumphant conclusion founded on this slender hypothesis that, in the light of this discovery, there is no place left for a belief in the existence of the human soul. I do not know of anyone, theologian or other, who has ever gone to the length of attributing souls to such bodies as the eggs of a sea-urchin; and man is what he is quite independently of his origin and evolution. He has in one way or another become possessed of a personality, which differentiates him from, and lifts him immeasurably above all lower forms of life; and this personality is the proper seat of his immortality.

I can well remember the crass materialistic thought of a quarter of a century ago, and the triumphant attitude it held towards poor benighted theology, and there can be no more strong instance of radical change than that which has taken place in the world of scientific thought in this very subject. It is more and more the tendency of science to see, behind all the phenomena of nature, and in the ultimate analysis of matter, the action, not of blind chemical or other force, but of a guiding and controlling mind. I doubt whether the theory that the universe has been built up by the action of blind chance or force is now accepted by any great scientific thinker. Such a theory is not only incredible but unthinkable.

Certainly the religious theory, that the gradual evolution of life in the universe, culminating in a being, self-conscious, possessed of a moral, spiritual, and intellectual nature, and capable of an infinite progress, has been brought about through the design of a divine absolute mind is a more worthy and for us a more helpful idea. A. C. S.

Tokyo, Jan. 18th, 1900.

[Our correspondent does not seem to have read the most recent discussion of this subject. In the first place, Professor Weismann's words, as quoted by Dr. Meunier, writing in *Cosmos* (Paris) of Nov. 16th, are:—"There are animals that never die; for instance, infusoria and rhizopods and in general all unicellular organisms. An amoeba divides into two almost equal parts, each of which continues to live and later divides again, so that there is never any corpse." Our rendering of this was quite accurate, so far we can see. In the second place, our correspondent claims that this verdict of Weismann's is "a fact of scientific observation." But Dr. Ferrand, a French scientist, has now declared Weismann's view to be an error of observation. M. Meunier thus summarizes Dr. Ferrand's view:—"M. Maupas, in his investigation of the multiplication of the ciliated infusoria by fission, has shown that the reproduction of these organisms by fission, extended though it may seem to be, has its limits; sooner or later it gives rise only to imperfect individuals which are incapable of perpetuating themselves without recourse to a process comparable to that of fecundation among pluricellular beings, and Delbœuf, who has discussed these facts in the *Revue Philosophique*, has shown how little value must be attached to them." These quotations will suffice to show A.C.S. that our article was an accurate representation of recent views, whatever may be the value of those views. We quite agree with our correspondent's observations about Professor Loeb's experiments, but we desire to say that he has altogether misread our reference to the human soul. Our words were not triumphant: they were "writ sarcastic," their intention being to indicate the dilemma in which these various theories land their authors.—Ed. *J.M.*]

THE POPULATION OF OSAKA.

To the Editor of the "Japan Mail."

Sir,—There is something very odd about the large print article on the relative increase of population in Tokyo and Osaka in your issue of to-day. The increase of a quarter of a million in Osaka in 1896 is accounted for by the city boundaries being extended in the course of that year so as to include the manufacturing villages which in the course of the past few years had grown up on the outskirts of the city. By that increase the population of Osaka rose to three-quarters of a million, and the last returns show upwards of 820,000 inhabitants, whereas the article says that "the population of Osaka is now only half a million in round numbers."

Yours, W. A.

Jan. 16th, 1900.

[Is not our correspondent speaking of the population of the *Fu*, not of the city proper, the *Shi*? At any rate, his point about 1896 is incontrovertible and we acknowledge the error.—Ed. *J.M.*]

THE 20TH CENTURY.

To the Editor of the "Japan Mail."

Sir,—It may aid some of the disputants in arriving at a clear solution of this question if they will read the accompanying statement.

Yours truly, X.

A century has one hundred years. A year has 365 days. Transpose the figures. Suppose a century composed of 365 years and a year of 100 days. The proposition that the 20th century commences with the year 1900 is as preposterous as to claim that the year 1900 commenced on the 365th day of 1899, or that New Year's Day should be December 31st instead of January, 1st; or that the 1st day of the 33rd year of Meiji commenced with the last day of the 32nd year of the Era. 100 years completes a century. The new century commences with the year 1 of that century. 1900 and 1901 stand related as do Dec. 31st and January 1st; 1900 the final, 1901 the commencement.

A MINOR POET'S PLAINT.

To the Editor of the "Japan Mail."

Sir,—I am a poet in a small way. Yes, I regret to say, for the credit of human nature, in a very small way. I possess talent and energy enough to fill the *Times* all the year round with productions of epic splendour. But, owing to the villainy of mankind I am restrained; the wings of my muse are clipped; and, whereas I would be soaring into the seventh heaven, I have, as a matter-of-fact, to live in an attic. Let you and your readers judge of this injustice. When the war broke out, knowing that there would be a rush on poetry, I sat down and wrote two epoch-making productions. The first I intended for the *Daily Chronicle*, and it was of a very pro-Boer complexion. The second I destined for the *Daily Mail*, and I intended it to be a downright denunciation of Kruger and all his ways. A little inconsistent, you think? Not at all, my dear sir. The true poet cares nothing for consistency, which was made for slaves; his bright eyes roll in a fine frenzy towards a far brighter object—the dollar. I calculated on at least £1-1, per line for each, and that is the reason why, with such consummate art, I have made two lines serve for one as often as it was possible. The first poem is, I think, admirable in form, and the capital letters are noble. With regard to the second I must explain that I meant something very hot and strong and fiery, but on reflection I thought it better to follow the lines of a Great Master, and make it a little cryptic. You know that at least one London editor took "The Old Issue" to refer to the Dreyfus case, and, judging from this, I thought the patriotic school of readers would appreciate something they could not fathom. In that respect my work, I claim, exceeds even that of the Master to whom I have referred.

Now I come to the painful part of the story. Both my poems have been *rejected*! Yes, rejected. To the eternal shame of England be it said. But I have every confidence that your superior judgment and that of your readers will be with me, and in that hope I am sustained. I enclose the two master-pieces.

Yours, &c. ATTIC.

Britain's Infamy.

O Sun, whose Car through Pathless Tracks of Space
Makest good practice; and O Moon,
Whose limpid Orb smil'st on Mankind
And lovingly pour'st forth thy lambent Rays
On Lovers and Tom cats;
And ye, O Stars, who in your circulation
Surpass the puny efforts of Stonecutter-street[1];
And ye, O bright Arc Lamps, that on Thames Front
Make the drear sleep-time bright as 3 p.m.
Behold, I say, behold!
And weep, O weep, for Britain's Infamy!
I know not truly if Lachrymal Glands
Figure as part of your Anatomy,
But 'tis no matter, weep!
England, whose glorious tale, as Hist'ry shows
(Observe my erudition, an you please)
Touches such episodes as Runnymede,
Naseby, the Bishops' Trial, and Lord knows what;
England, who numbers Me among her sons,
Ah me, that England now invokes the aid
Of Grim Bellona to destroy the rights,
To curb the liberties, and wreck the homes
Of Burghers rightly struggling to be free;
Of simple-minded peasants, free from guile,
Honest and virtuous, pious, God-fearing, just,
Kindly and generous.
O, shall Dragoons and dastard Fusiliers—
Not to add Maxims and 4·7 inch guns—
Be marshalled like Grim Genii to destroy
A God-ruled State, whose sole reliance is
In Providence—and p'raps, for aught I know,
A gun or two beside.

[1] This is a happy allusion to the London *Star* office.

Weep, Sun! Weep, Moon!
And weep, ye gleaming Stars!
And weep, Electric Light!
For Britain's Infamy!

The Issue.

In this little poem reason shows no sign;
But it fetches easy one pound one per line.
Here is naught unproven, here is nothing wrong;
For the public reads you if you pitch it strong.
All ye have and treasure, all ye say or know,
Mr. Kipling taught you, long and long ago.
"Silent, secret, savage, sullen, uncontrolled;"
Of the last edition fifty thousand sold.
There is no connection, but it's all the same,
Suffer not the Old King under any name,
When you reach the Orange and Tugela's Ford,
Trust the wild Bus Horses, the horses of the Lord,[2]
A simple-minded beggar, yet I know my cue
Patriotic pidgin—that's the thing to do.
What's the final object of this soulful jaw?
Leave to live by no man's leave underneath the Law.
'Tis of Mr. Kruger and his sins I sing
Stewards of the Judgment, come and take your fling!

[2] This is a masterly allusion to the London bus horses commandeered by the Government. I tried hard to bring in a rhyme with London Road Car Company or London General Omnibus Company, but neither the full titles nor the initials L. R. C. C. and L. G. O. C. would fit in. Then I had a distinct inspiration, and stuck in "horses of the Lord." It doesn't mean anything, but it sounds fine.

[3] I thought it best to add this verse, so that there should be no repetition of the Dreyfus error. Besides, if the Editor had had the taste to insert it it would have been another two guineas. It may be objected to the poem as a whole that it doesn't mean anything, and doesn't hang together well—neither trumps nor follows suit, so to speak. But, as I said, I have followed in the wake of a great Master. The public likes that kind of poetry just now.

AMERICAN LOCOMOTIVES IN ENGLAND.

To the Editor of the "Japan Mail."

Sir,—The enclosed clipping from the Nov. 17th issue of the *Railway Age*, published in Chicago, deals with a slightly misleading paragraph which had space in your journal in October. As it is a matter of some importance, you will, doubtless, be pleased to give now "the other side." Your journal has always shown itself fair and impartial when dealing with such subjects, and I am sure there will be no exception to this rule on this occasion.

As additional evidence that the paragraph referred to does not represent the opinion of English Engineers, I might state, that the same number of the *Railway Age* as contains the article which follows, publishes the news of the arrival in America of an order for 32 locomotives for Canada and 7 locomotives for South Wales.

Yours, FAIRPLAY

Nagasaki, January 19th, 1900.

Kobe, Japan, Oct. 18, 1899

The following paragraph taken from the *Daily Mail* has been published with apparent delight by a number of English journals in China and Japan, and in the *Japan Mail*, the leading English journal in Japan, it is given considerable prominence.

The chairman of the Midland Railway Company was able yesterday (August 11) to make the highly satisfactory announcement that the American engines which were purchased by that company do not compare at all well with British-made locomotives. As we have often had to draw attention to the inroads which the United States are making upon our trade, it affords us pleasure to give prominence to this evidence. This is probably the first occasion on which American engines have been fairly tested against British ones upon a high class road, and the world, we hope, will note the result!"

The purchase of 60 American locomotives for English roads must have disturbed the placid serenity of our English cousins to some degree, and we can not blame them for taking pleasure in the above little item—but what we Americans in the East would like to hear is the other side of the story—is it a fact that the Chairman of the Midland Railway made the announcement that the American engines "do not compare at all well with British-made locomotives?" We trust that the "world" will not fall over itself with haste to to "note the result" until a little more definite information on the subject is produced. Please help us out.

J. W. D. Austin.

[It does not require even an artistic manipulator of the truth to make a statement convey a meaning opposite to that intended if he is allowed liberty to remove qualifying clauses. What the Chairman did say, as reported at the time and accepted by English papers since, and as the locomotive superintendent of the Midland Railway has elsewhere been quoted as saying, was that "Although the first ten American locomotives were by no means equal in finish to any English locomotives, they were doing their work satisfactorily." He further stated that it was the company's custom to run engines a thousand miles and then to overhaul them, charging any defects to the makers. The same rule would be applied to American locomotives, and the company would then be better able to form a reliable opinion of their merits.

Even the word "finish" is not understood to be used as relating to the quality of the workmanship, but rather in the sense embraced in the following extract from *Transport*—a London paper which may be assumed not to have any undue prejudice in favour of American productions. Referring to these same engines, *Transport* says:—

As to appearance, up to 15 or 20 years ago American locomotives were gorgeous with paint and ornamental work; red funnels, wheels, and pilots, green boilers, etc., and a profusion of bright brass work and gilt striping. All this is now done away with, and the engines are uniformly black, relieved only by letters, numbers, and a minimum of striping in gold or aluminum. Even the bright planished steel boiler covering is giving way to painted iron. The engines are more business like in appearance and less difficult to keep in good condition, while all the working parts are finished to a high degree of excellence, which is not surpassed in English engines, owing to the more modern machine tool equipment of American locomotive shops.

The assistant locomotive superintendent of the Midland Railway says of these englnes over his own signature: "They steam well, ride steadily and haul good loads," and in reference to the matter of "finish," he adds: "The American builders go in for less showy locomotives than we have grown accustomed to in England. They are satisfied with what is good enough, and do not expend time and labour on more highly finished workmanship than they think is requisite for all practical purposes."

As Sir Ernest Paget's report was based on the reports made to him by the locomotive superintendent, our Japan correspondent may rely upon the fact that in their undistorted form his words are favourable rather than otherwise to the American locomotives. Results that are better worth noting may be available a year hence.—Ed.]

THE BOOKSHELF.

Unwin's Chapbook 1899-1900.

The character of this publication is indicated on the title page:—

This chapbook is a book for chaps,
And women, too, and girls (perhaps)
This chapbook's not a "homely tract"
To make you go to sleep; in fact
This chapbook staves off idle naps.
For it a Town of Books was sacked.

In brief the "Chapbook" is a collection of all kinds of odds and ends, quotations, engravings, talks about authors, interviews, and what not—chiefly with reference to the year's publications of Mr. Fisher Unwin. It is interesting, but in the nature of things in a volume so discursive and elusive there is little that the reviewer can seize on for special comment. The *pot pourri*, however, is in every way excellent. Being journalists, we may be pardoned if we refer to an interview with Sir Edward Russell, the veteran newspaper man, who has been connected with the Press since 1856, as one of the most interesting features of the book. Sir

Digitized by Google Original from CORNELL UNIVERSITY

Edward's complaints of the "snippety" tendencies of much modern journalism are, we fear, but too true, and it is regrettable that such frivolous sheets attract as they do :—

"What would you say were the special excellencies of the old style of daily paper—as, say, represented by the *Morning Star*—in comparison with the new journalism?"

"It is perhaps presuming and old-fogeyish to complain of changes. I think the *Times*, except in a lack of distinction in its leaders, is as good as ever, and most of the daily newspapers are conducted with high principle and firm grip on affairs. There is, however, a tendency in some quarters to angle for popularity by doing things frivolously and cutting everything up into snippets; while among serious newspapers there have arisen two very bad faults of taste—first, that of continually quoting themselves to show how wonderfully right they have been; and secondly, that of speaking of themselves as participators in rather than as commentators on current events, often so mixing up their 'we's' in such confusion that one hardly knows whether they represent the editor, or the party, or the public, or the country, or the Government."

Sir Edward Russell's remarks on the modern drama are not uninteresting :—

"What do you think is the great fault of plays written for the English public?"

"I don't think they have any very special fault, but I lament the tendency of dramatists such as Mr. Pinero and Mr. Henry Arthur Jones to fall away from their own standards in the belief that the public for the time prefer productions of inferior intellectual and moral quality."

"And the faults of the actors?"

"Want of finish and very unreal by-play. Let me give an instance—the great French actor, Lafont, as a banker sitting at his desk opening his morning letters, was the very man, every action was to all seeming real. Almost any English actor would have betrayed that he was acting. So again of Regnier in 'La Joie Fait Peur' dusting the room; and so also of the young French girl who played the artist's boy cleaning the paint-brushes in 'La Tosca,' not to mention Madame Réjane's ironing in 'Madame Sans Gene,'"

The P. and O. Handbook.

The Peninsular and Oriental Steamship Company is to be congratulated on this very artistic and interesting production. The get-up is extremely tasteful, the binding is first-class, the letterpress and paper are admirable, and the photogravures of the Company's vessels and of picturesque spots on the Far Eastern route are beautifully done. Indeed, a more useful book of reference, and at the same time a more pleasing souvenir of a voyage, could hardly be imagined. The new work is to a great extent a replica of the old one, but the descriptive articles have been revised by their respective authors, and the information for the guidance of travellers has been generally re-written, and brought up to date. Among the contents, are a set of admirably clear maps, a short history of the Company, a plan of tours available over the P. and O. and connected routes, extracts from the stringent regulations for the safe and efficient navigation of the company's ships, a description of principal ports on the line of route, an essay in French on the Suez Canal by Count Charles de Lesseps, a chapter on Egypt by Mr. Stanley Lane Poole, "Notes on a Tour through India," by Sir Edwin Arnold, a paper on China by Sir Thomas Wade, another on Japan by Mr. H. W. Lucy, the "Toby M. P." of *Punch*, and another on an Australasian trip by Mr. Hume Nisbet. Then there are tables of time, railway and sea distances, marine measurements, weights and measures in metric and English systems, coinage tables, British Empire statistics, navies of Great Powers, merchant navies of the world, British trade figures, &c., &c Some capital plates of naval and merchant flags and a space for memoranda to be made on a voyage are among other admirable features. Among the mass of interesting information concerning the P. and O. Company we extract the following :—

The shipbuilding operations of the Company during the last sixty years might be considered M typical of the development of the Mercantile asarine of this country. The service commenced with two or three very small steamers, of which, one, the *William Fawcett*, was of only 206 tons, and the size of the ships has gradually expanded until the recent steamers exceed 8,000 tons. The Company's fleet to-day consists of steamers aggregating about 300,000 tons; the original cost of these ships has amounted to £7,000,000 sterling. The experience of the last thirty years has proved that, in order to maintain a business of this kind on a fairly profitable level, every ship must be replaced by a new and improved vessel in less than twenty years. This is not due to decay in the material of the ships, as, for example, it, may be pointed out that H.M. Troop Ship *Himalaya*, which was built by this Company in 1852, only ceased work three or four years ago. But the progress of shipbuilding and engineering has been so rapid, and the carrying power and economy of the newest ships is so remarkable, that it is only by owning ships of the latest and most advanced type that shipowners can maintain their position successfully. It will be easily understood what a heavy charge on the working of a business of this kind is the annual reserve, or sinking fund, which must be set aside in order to maintain the Company in a state of efficiency.

There can hardly be a more interesting chapter in the annals of industrial progress during the last fifty years than that appertaining to the history of Steam Navigation. Probably the P. & O. Company was the first Company to adopt the screw in lieu of the paddle, at all events on a large scale. Their first screw vessel was built in 1851, and no paddle ships were subsequently added to the fleet, except two or three intended for special service. All the earlier screw steamers were fitted with what were called geared engines, which occupied considerable space, but were fairly economical. The introduction of the direct-acting engine effected a great economy in the space occupied, but was attended with an increased consumption of fuel. The principle of surface condensation, which was first applied some time about 1859, enabled a higher pressure of steam to be carried, and by the use of fresh water in the boilers effected a great economy, but unfortunately with disastrous results in some cases to the boilers, as a destructive chemical action was set up, through the continuous return of the same water to and from the condenser. The use of superheated steam followed that of surface condensation, and higher pressure became the object of ambition, with the result that the high and low pressure engine soon came into vogue. This compound engine was by no means a new idea, for a patent had been taken out for the principle early in the century. The first essay of the P. & O. Company in this direction was in a steamer called the *Mooltan*, which was built in 1860; and this appeared so far successful that, between 1860 and 1864, several steamers were constructed with these new and costly engines. But the result was a grave disappointment. The economy was undoubted; but the machinery, although it had been fitted by one of the most eminent firms in the country, regardless of cost, was found to be unreliable. The accidents were numerous, and although comparatively slight, they occurred so frequently that the efficiency of the mail service was in danger of being impaired. The result was that several of the ships thus fitted had these engines replaced by less complex machinery, involving the Company in serious loss. The *Mooltan*, already mentioned, was an example of a vessel fitted with appliances in advance of the age. Not only were her engines of the new type, but she was likewise fitted with hydraulic steering gear, and refrigerating machinery; and all these appliances had eventually to be removed, because they could not be relied on to work satisfactorily throughout a long voyage. It was not until 1869 that the Company succeeded in building a steamer with high and low pressure machinery which could be considered thoroughly successful. From that date onwards progress towards economy of fuel has been most rapid. Steam pressures have been raised from 50 lbs. which was the first tentative departure in connection with the compound engine, to 200 lbs. in the triple and quadruple engine, and it may be said that to-day a pound of coal does as much work as four or five pounds did thirty years ago. The use of steel in those parts of the machinery where the strains are most severely felt has reduced the risk of accident almost to an imperceptible point, and the safety of life at sea has been assured to a remarkable degree by the improvements which have been effected in the construction of marine engines.

The tonnage afloat at present has already been stated as aggregating about 300 000 tons. Several of the larger ships are under engagement with the Admiralty as cruisers, and the extent of the Transport work carried out by the Company, from the Crimean days downwards, is too well known to require comment. Last year the mileage performed by the Fleet was almost exactly 3,000,000 miles. The coal consumption was 625,000 tons. The wages paid to officers and crews amounted to £362,000, while the dues to the Suez Canal Company exceeded £272,000.

One lays down the book with a feeling of pride that this British Company which has been to so large an extent the pioneer of ocean steam navigation, which wields so efficiently a power undreamed of by our fathers, and which has contributed so much to the development of Occidental civilisation in the Far East, is a company flying the Union Jack.

We should add that a limited number of the Pocket Book can be obtained at the local office of the P. and O. for 3s. per copy. The book is well worth this small sum.

CHINA NOTES.

The total number of reported plague cases in Hongkong in 1899 was 1,486, and the deaths 1,428.

Our Tientsien contemporary says that the downfall of Viceroy Tan of Canton was partly due to British disgust with his apathy as regarded piracy.

Quite recently a British bluejacket of the *Tweed* was severely wounded in a fight with pirates on the West River. Two of the pirates are known to have been killed.

A fatal boat accident occurred recently at Wuhu. One of the coasting steamers had finished loading for the South and the coolies left the vessel in a native boat. They had not proceeded far when a snow-squall struck them and the boat, which was grossly overcrowded, turned turtle. All, numbering some twenty-odd men, were drowned.

A telegram from Singapore to the *North China Daily News*, under date of Jan. 16, gives some account of the expedition sent out to capture or destroy Mat Salleh. It says :—The North Borneo police expedition which is operating against Mat Salleh has captured two forts. Mat Salleh himself is strongly posted in a fort with thirteen hundred men armed with Snider rifles.

Dr. Mackenzie, who arrived in Shanghai on the 1st of June, 1860, to join the English Presbyterian Mission in Amoy, has died at Swatow full of years and honours. In 1898 he was unanimously elected Moderator of the Synod of the Presbyterian Church of England. The honorary degree of Doctor of Divinity was conferred upon him in 1898 by the University of Aberdeen, of which he was a graduate.

A Chinese paper states that H.E. Shêng, Director-General of the Lu-Han (Peking-Hankow) Railway, recently memorialised, and has received the sanction of the Empress Dowager to construct a branch line from Lukou Bridge—the proper Peking terminus of the line—to the Changyi-gate of the Capital, and that it is intended to commence on this branch line as soon as the weather becomes favourable for the work after the Chinese New Year. As the traveller from the South on the Lu-Han Railway upon arrival at the Peking terminus will find himself still some six or seven miles from his real destination the construction of this branch line will be a great benefit.—*N.-C. Daily News.*

reign requires his Minister to die it is the duty of the loyal official to humour him," Weng Tung-ho should "take the hint" and make away with himself, in order to save his Imperial Mistress the trouble of working towards that end! These people, however, forget that the real Sovereign is Wêng's pupil who is, moreover, devoted to him, and that it would be contrary to the tenets of our great Sage for the disciple to encompass the destruction of his teacher. The best way would be for this unlucky ex-official "to start on a long journey" where the arm of his great enemy cannot reach him and to wait until the affair blows over and his pupil returns to his own again. Li Ping-hêng is going down South

Digitized by Google Original from CORNELL UNIVERSITY

soon to do his touring of the Yangtze Valley and River. Rumour has it that while down South and with Viceroy Liu *en route* to the North, Li Ping-heng has come to an understanding with his bosom friend that the latter shall recommend him as Liu K'un-yi's successor in the Liang-kiang Viceroyalty. If he succeeds in his intrigue I would indeed pity the poor people, high and low, in those provinces!

We take the following paragraph from the *Shanghai Mercury*. It embodies a report of a drawing-room meeting held in Mdme. Rocher's house by the ladies who are making a crusade against the cruel system of foot-binding: There was an Expectant Taotai's wife and sister present, the wife of a naval captain, the Head of the Telegraphs' wife, and many others whose carriages and befurred servitors coming beforehand to announce them sufficiently showed their social position. Miss Wang interpreted Mrs. Little's speech, and she and Miss Allen, and Mrs. Timothy Richard carried on much conversation on the subject. One of the guests undertook to unbind the younger daughters' feet, some others to loosen their own bandages, while several others appeared impressed. They all agreed that they had never heard of a child's feet being bound before three years' old, and only then in certain parts. They all agreed that no mother in good circumstances would bind her own daughter's feet, but would have in a woman with powerful hands to put on the bandages for her. They all agreed that this woman would often beat the child with quite a large stick in order to make her walk about after binding, and that the bandages were put on so tight that they could not be removed without putting feet and bandages into hot water first, and that even then the skin would often come off with the bandages, and sometimes bits of flesh, but some would not admit the custom was so very cruel after all. It was to get the girls husbands, and as long as men liked it what could be done?

In the early part of last year, says the *N.-C. Daily News*, there was a serious magazine explosion in the city of Hangchow which caused great loss of life and the destruction of a number of buildings, including some belonging to a Mission Compound near by. News has now been received from that city reporting a somewhat similar calamity which occurred at about ten o'clock on the morning of the 10th instant in the gun powder factory situated at a place called Sinoynents'i, inside the Taiping Gate. It appeared that the workmen were boiling or clarifying a large quantity of saltpetre and somehow the stuff got upset, setting the whole place on fire. The fire got to a building where was was stored a quantity of gunpowder, with the result that not a building in the vicinity was left standing, while of the hundred or more workmen very few survived. Of course, the mandarins in Hangchow have been doing their best to keep the facts from being known to the public outside that city, and when questioned would only acknowledge to a "small accident accompanied by the injuring of a couple of workmen who are now doing quite well and will be able to resume work in a couple of days." It remains to be seen what sort of a report of the catastrophe will be sent to Peking by the Governor of Chê-kiang. Last year's explosions caused the degradation and dismissal of a number of civil and military officials of that city. Even the unfortunate *weiyuan* who was in charge and who was killed did not escape, for his name was struck from the official rolls, making his family commoners again.

The native correspondent at Peking of the *N.-C. Daily News*, writes as follows:—It is generally reported here tha the Empress Dowager intends to appoint Viceroy Liu K'un yi a member of the Grand Council when he comes up for his audience, which means that she is going to keep him by her side instead of allowing him to hold office as usual in the provinces. With reference to the impeachment of the Emperor's retired Tutor, the now cashiered Assistant Grand Secretary, Weng Tung-ho, by Kang Yi and Li Ping-hêng, which occurred not long ago, it appears that the Empress Dowager, who read the memorials in question in the presence of her Grand Council, was so greatly influenced by the bitter language used by the memorialists that she was on the point there and then of issuing a Rescript commanding the immediate arrest of the accused ex-official at his home in Ch'angshu, near Soochow, on the charge of high treason. At this critical moment Liao Shou-hêng, then a probationary member of the Grand Council, suddenly stood up and going before the *dais* of the Empress Dowager knelt down and made an eloquent appeal for mercy. This had one good effect, however, for although it made the Empress Dowager more enraged it made her give pause. Shrewd woman that she is she rarely acts hastily or with unmatured judgment. She saw that there was something in this appeal for mercy which she must investigate and digest, and though Liao Shou hêng's action will not, apparently, prevent her from destroying Wêng Tung-ho in her own good time, she has evidently thought it best to delay her thunderbolt, for up to now (1st Jan.) no decree has been issued on the subject. His friendship for Wêng Tung-ho, however, has cost Liao Shou hêng something, for two days after the affair a decree was issued removing him from his seat in the Grand Council. It would be interesting to know what Wêng Tung-ho will do when all this gets to his ears. There are not wanting men here in the capital who declare that, on the principle "If the Sove-

According to a dispatch received from Nganking, the provincial capital of Anhui, and translated by the *North China Daily News*, it seems that, encouraged by the successes of the marauding band in Shantung, a number of rowdies of the former province have been lately banding themselves into a society called the *Siao-Tao Hui* or "Little Swords Association," having the same objects in view as their predecessor the *Ta-Tao Hui*, or "Great Swords Association"—that of plundering converts and men of wealth. The new association, it appears, commenced its work on the Yangtze river and raided a very wealthy family of the surname of Wu, a few miles north of Wuhu, carrying away a large quantity of spoil and wounding several persons. The next step of the rowdies was to plan a raid on a number of Christian families living in the hamlet of Yiki, also near Wuhu, where there is an American Mission Chapel in the charge of a Missionary. One afternoon, not many days ago, a fleet of many-oared boats manned by a rough-looking crowd of some 60 to 70 men arrived at Yiki and tied up for the night. They gave out that hey were refugees bound up river to join a band who had preceded them, but the inhabitants of Yiki became alarmed and applied to the American missionary there for protection, who in his turn appealed to the local authorities to whom he reported the matter, stating also that there were reasons to fear that a raid on the place was contemplated that same night. Soldiers were promptly sent to guard the chapel and converts, and the Little Swords, seeing that they were suspected, left shortly after the arrival of the troops. There have been several arrests of suspicious characters lately by secret agents of the local *yamêns* belonging to the riverside districts of Anhui province, all of whom boldly declared that they belonged to the Little Swords, "whose mission was to exterminate converts to outside religions, and missionaries.

CASES IN THE LAW COURTS.

The appeal of the H. R. B. Kent, late of the N. Y. K. *Tamba Maru*, against a judgment of the Yokohama Chiho Saibansho, whereby he was sentenced to 6 months' imprisonment for striking a quartermaster in the same employ, came on for hearing in the Tokyo Court of Appeal on Friday before Judge Koyama, President, and Associate Judges Takekawa Chokyo, Hirano Masatomi, Nonaka Shoryo and Sawamura Sho. Mr. Public Procurator Hiranuma was for the prosecution; Mr. Akiyama appeared for the appellant; Mr. Hattori, of the Yokohama Chiho Saibansho, acted as interpreter; Mr. E. A. Griffith, of the British Consulate, Yokohama, watched the proceedings.

Evidence regarding the affair, which occurred on Sept. 30th, last at Moji, was given by the Appellant. Dr. Sagara Seiichi, a physician practising in Yokohama, was ordered to prepare a statement, based on the record of his books, by the 24th inst., regarding the nature of Toyomatsu's wounds. Another doctor named Fujii Sukiwo gave his reasons for stating at the preliminary enquiry why he considered the quartermaster's wounds would incapacitate him for three weeks. Mr. Akiyama asked that the doctor of the *Tamba Maru* and other physicians, foreign and Japanese, should be examined on the question of the nature of the quartermaster's injury. The point was left over for future consideration, and meanwhile the evidence of De la Hoyde, second officer of the *Tamba Maru*, was taken. He spoke in detail of the assault and of the drunken condition of the quartermaster.

The case was then adjourned till the 24th.

In the Tokyo Court of Appeal on Wednesday the hearing of the appeal of Mr. R. Kent, third officer of the *Tamba Maru*, against the sentence of six months' imprisonment passed by the Yokohama Chiho Saibansho, was resumed before Judge Koyama and four Associate Judges as before. Public Procurator Hiranuma conducted the prosecution, and Mr. Akiyama appeared for the defence.

Dr. Sagara produced a medical report of the injury of Toyomatsu, which stated that the patient's working on board a ship would have retarded his recovery. Supposing he was confined indoors it would have taken over two weeks for his wound to heal.

The evidence of Umeseko Toyomatsu, given at the public trial in the Yokohama Court, having been read and translated to the accused, the latter said that Toyomatsu's evidence was false in several respects.

The depositions of Shinoye Kozo and Takahashi Kuro, given at the preliminary examination, and those of the accused himself and Mr. Hill, given at the public trial in the Yokohama Court, were read and translated to the accused. The reading of the evidence of other witnesses occupied the whole morning.

The Public Procurator, addressing the Court, claimed that the injury inflicted on Toyomatsu should not have incapacitated him for more than 20 days if properly treated. He reviewed the whole evidence as to the assault, dwelt upon the impudence shown by Toyomatsu towards Kent, and said it was improbable that Kent would strike him unless he had first been rudely treated. He contended that the offence of the appellant came within the scope of Clause 2 of Art. 301 of the Penal Code, but it should be commuted by two or three degrees according to Art. 309 and 313 of the same Code. He urged that the finding of the lower Court be quashed, and a proper judgment rendered by applying the articles of the Code mentioned.

Mr. Akiyama spoke at length for the defence.

Judgment will be given on the 29th inst.

The Alcohol Dispute.

The case brought by Otake Mohe, a wine merchant of Tokyo, against Messrs. Worch and Co., for the delivery of 7000 cases of alcohol, valued at *yen* 96,400, alleged to have been deposited with the defendants' firm as security for money borrowed, came on for hearing before Judge Fujise in the Chiho Saibansho on Tuesday morning at 9 30. Messrs. Isobe appeared for plaintiff, while Mr. Serizawa appeared for defendants.

Yokomizo Isuke, a forwarding agent, was called as a witness, and deposed that on various occasions he had transported cases of alcohol to Suzuki Hansuke, on orders given by him, from Messrs. Worch & Co., and Messrs. Otto Reimers & Co., but only once had he taken 15 cases of alcohol to Otake Mohe. Whether Suzuki Hansuke was acting for Otake Mohe, he was

Digitized by Google Original from CORNELL UNIVERSITY

unable to say, as he always received orders direct from Suzuki; and was paid by him. Witness was asked to identify several receipts and orders, and the case was adjourned to Feb. 22nd at 10 a.m. At the request of the defendants' lawyer, Suzuki Hansuke and Tatebe Torakichi, a *banto* in Messrs. Woich & Co., will be called.

The McKelvy Divorce Case.

The petition of Mrs. McKelvy, *née* Bell, for divorce from her husband, on the ground of desertion and non-support, came up for hearing again before Judge Fujise in the Chiho Saibansho on Tuesday morning at 11 a.m. Mr. Akiyama appeared for the plaintiff, while the defendant was not represented. Mr. Akiyama cited reasons for the divorce being granted and then read a letter sent by Mrs. McKelvy to Mr. McKelvy's parent, as a last resort to find traces of her husband. The following letter was also read:—

Pittsburg, July 10, 1898.

Dear Mrs. McKelvy.

I beg to apologize for addressing you, but as I am your husband's brother I take the liberty of writing to you. I received a letter from Clarence, about a month ago, from San Francisco telling me he was going to Klondyke on the 9th June, and for me to go to the P.O. and see if there were any mail for him, if so to forward it to him, but there was no mail. I had seen a letter advertised for him and I went to the P. O. and found four letters for him. I think they are all from you. I have them and if you want them let me know, or will I destroy them? I am very sorry for the position my brother has left you in, but I hope you and he will come out all right, but he done all his friends, even his mother. But I always hope for the best. I think he has had a lesson this time that he will never forget; we do not let his mother receive any mail pertaining to him, for she is heart-broken.

I am, your husband's brother,

Frank R. McKelvy.

After reading this letter, which was translated into Japanese, Mr. Akiyama cited various American laws on desertion and divorce and handed to the judge the law-books with the passages marked from which he had quoted.

The Court, after retiring for a few minutes, concluded to postpone decision *sine die*, in order to have the passages referred to by Mr. Akiyama fully translated.

PATRIOTIC FUND.

Amounts received by the Chartered Bank of India, Australia, and China, on account the Lord Mayor's fund for the widows and orphans of the officers and men of Her Majesty's forces who may lose their lives from the war in South Africa:—

NEWS OF THE WEEK.

A wing of the well-known Astor House at Shanghai was partially destroyed by a fire which broke out on January 16th. The damage was not excessive, and was covered by insurance.

As a number of coolies were engaged on the afternoon of Jan. 21 in scraping the sides of the U.S. collier *Brutus*, docked at Nagasaki, the scaffolding upon which they were standing suddenly gave way, and about twenty of them were precipitated into the water. The occurrence caused considerable excitement for a time amongst those who witnessed it, and some of the men appeared to be in considerable danger of drowning. Fortunately, however, all were eventually landed, thoroughly drenched of course, but otherwise none the worse for their impromptu bath.

The Courts at Stettin have just condemned a rich landed proprietor for a simple word uttered concerning the Army. He owns land which is traversed by a railway leading to a field in which manœuvres take place. Recently he wrote to the Minister of War complaining of the damage done to his property by the "soldiery," and claimed damages. The military authorities considered the complaint and the wording of it as injurious to the Stettin garrison. The landowner was summoned, and was condemned in a fine of 500 marks, although he protested that he had no malevolent intention in employing the word "soldiery."

A well-dressed Japanese lady got into a second-class compartment at Fukuroi Station, near Shidzuoka, at 3 30 a.m. on Wednesday, and entered into conversation with some of the passengers, saying it was dangerous for women to travel, and showing them a pistol which she said she always carried. The passengers thought she was rather eccentric, but paid no attention to her, shortly going to sleep. At the next station, Ejiri, the lady got out, and after the train had started one of the passengers found his watch and chain gone and another missed two *haori* he had left in the rack.

The Bishop-Elect of Kioto, the Rev. Sidney C. Partridge, late of Wuchang, China, will, the *Kobe Herald* understands, be consecrated, on 2nd February (Feast of the Purification) at Holy Trinity Cathedral, Tokyo. Bishop McKim will be the consecrating Bishop, and he will be assisted by Bishop Graves of Shanghai, and by the four English Bishops stationed in Japan. This, we believe, is the first consecration of a Protestant Bishop held in Japan. Bishop Boone was however consecrated in Shanghai in 1884. Bishop Bickersteth in 1886 and Bishop Foss in 1899 were both, as it happens, also consecrated on the Festival of the Purification in St. Paul's Cathedral and Westminster Abbey, London, respectively. Mr. Partridge came out to China in 1881. He stayed for a few weeks in Kobe in the summer of 1888 or 1889.

Japanese railway enterprise, remarks the *Jimmin*, has made great progress of late years, but comparison with the conditions existing in Europe and America is not to the advantage of this country. According to investigation made in 1896, Germany possessed 46 902 kilometres of line; France, 40,888; Russia, 37,994; England, 34,089; Austria, 31,790; Italy, 15,447; Belgium, 5,540; Switzerland, 3,708; Holland, 2,955; Denmark, 2,267. The figures for Japan in March last were 3,481 miles (5,663 kilometres). She is therefore above Belgium but below Italy. Taking the length of railways per 100 000 population in the countries above mentioned, the figures stand thus:—Switzerland, 124 kilometres; France, 106; Denmark, 103; Germany, 88; Belgium, 87; England, 86; Holland, 60; Italy, 49; Russia, 36; Japan, 13. The number of railway passengers per 100 000 of population does not in this country exceed 228, while in England it does not fall short of 2,378.

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Shanghai, Jan. 19.

The Times has a telegram from Spearmansform, dated the 17th inst., which says that the force that moved westward on the 10th under Lord Dundonald dashingly occupied the hills above Potgieter's Drift, completely surprising the Boers.

The same evening the Infantry followed.

General Lyttleton's Brigade crossed the Tugela yesterday.

General Warren's Brigade forced the passage of the Tugela near Wagons Drift with all arms in the face of a hot and heavy fire.

They then effected a satisfactory lodgment two miles further towards Stroenkop.

Later.

Sir Charles Warren hopes to be able to turn the enemy's position which is situated 5 miles to his right front, and is being strongly entrenched.

General Hector Macdonald has arrived at Cape Town.

General Buller has issued a spirited appeal to the troops telling them that they are going to relieve their comrades in Ladysmith and that there will be no turning back.

The troops are well and confident.

Shanghai, Jan. 20.

Lord Methuen made a fresh reconnaisance with a force of all arms on the 17th inst. The Highlanders advanced from the river and drove the enemy back by long range volleys. The big guns shatter-

Digitized by Google Original from CORNELL UNIVERSITY

ed the face of the enemy's position with lyddite shells.

Twelve batteries and 3,710 men are to embark for the Cape within the week.

Later.

Dundonald, after being re-inforced by Warren, defeated the Boers on Wednesday at Acton Holmes. A field cornet and 20 Boers were killed and 15 captured. The British casualties were two killed and two wounded.

The Boer position extends six miles westerly along the lines of kopjes opposite Potgieter's Drift, and the entrenchments extend several miles back.

Shanghai, January 21.

Reuter's agent telegraphs from Rensberg that the total losses of the Boers hitherto are reliably estimated at 6,625.

Reuter telegraphs from Ladysmith, under date of the 17th, that everything is quiet and that there is no change in the situation. There is very little bombarding.

H.M.S. *Pelorus* has seized the German barque *Marie* in Delagoa Bay, laden with flour for the Transvaal Government, and has conveyed her to Durban.

The eighth Division has been ordered to mobilize at Aldershot immediately.

Count von Bülow has informed the Reichstag that Great Britain has promised ample compensation in satisfaction of the seizures and that no more German mail boats shall be detained on mere suspicion. Count von Bülow hoped that there would be no repetition of incidents rendering friendly relations difficult.

The *Daily Mail's* correspondent, Mr. Steevens, has died of enteric fever in Ladysmith.

Later.

The Camerons in Egypt are ordered to the Cape and will be replaced by Volunteers.

The second batch of the London City Volunteers has sailed.

The second contingent of the New Zealand Volunteers has left Wellington. The Premier in his speech said that if the occasion arose every man in New Zealand capable of bearing arms would volunteer.

Shanghai, Jan. 22.

General Clery, with part of Warren's force, was in action all day on the 20th. They captured ridge after ridge for about 3 miles, bivouacking on the ground gained, but the main position is still in front. The casualties are not yet ascertained.

Buller wires that 11 officers and 279 men were wounded in the action of the 20th on the Venterspruit, which stream runs between the Tugela and Acton Homes.

Reuter's agent telegraphs from Spearman's Camp on Sunday morning that Warren's engagement continues, and he has forced the enemy from three positions.

Shanghai, Jan. 23.

Buller telegraphs from Spearman's on Sunday evening that Warren's Division was engaged all day, chiefly on the left, which swung forward a couple of miles. The ground is very difficult, and, as the fighting is all up hill, it is difficult to say how much the British have gained, but General Buller thinks they are making substantial progress.

Later.

Reuter telegraphs from Spearman's Camp on the evening of the 21st that the enemy fired irregularly through the night and opened a severe fire at daybreak. The British artillery, who slept by the side of their guns, responded with shrapnel. Thereafter the first kopje was occupied at the point of the bayonet. Fighting continued all day, resulting in the capture of two more positions.

Shanghai, Jan. 24.

It is reported that Pretoria is much perturbed and bitterly disappointed at the apparent apathy of the Continental Powers.

The mortality from dysentery and enteric fever at Ladysmith averages 10 daily. There were 113 serious cases on the 20th instant.

The casualties in Hart's Brigade in the fight on the 21st were :—Killed, Captain Ryall, of the West Yorkshires, and 5 men. Wounded, Captain Maclachlan, of the Inniskillings ; Lieuts. Andrews, Border, and Barlow, of the West Yorkshires, and 75 men.

Later.

A Boer despatch says that the shells from one of the Long Toms smashed the quarters of Generals White and Hunter on the 22nd, but it is not known whether anybody was killed.

A rumour of Buller's defeat is current on the Berlin Bourse, but the London War Office discredits it.

A Boer despatch from Ladysmith, dated the 22nd, says that a battle has been raging since Saturday between the Boers under Pretorius and 6000 British.

The fighting is in full swing at Spionkop, and the Boers under Botha and Cronje have been sent thither.

President Steyn is under fire in the foremost positions of the Free Staters.

Shanghai, Jan. 25.

Buller telegraphs on the 23rd that Warren holds the position gained on the 21st and will attempt to seize the enemy's salient on Spionkop to-night.

Later.

Nothing from Buller. Intense anxiety is felt.

A sortie from Kimberley on the 22nd evoked a furious fire all round, showing that there is no relaxation of the siege. There were no casualties.

All the Powers consulted have sent to Washington a written agreement ensuring the open door for American trade in China.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, Jan. 19.

It is officially announced in London that an English Brigade and a battery crossed the Tugela on the 18th instant at Potgieter's Drift. The rest of General Warren's Division was to cross by a bridge constructed five miles further to the East. Warren hopes to turn the Boers who are strongly entrenched five miles from the right wing of the English.

Saigon, January 21.

Speaking in the Reichstag M. de Bülow said that he had addressed serious remonstrances to England on account of the seizure of German ships. England will pay an indemnity for the *Bundesrath*, and has expressed her regrets.

News from London is that the 8th Division has received orders to mobilize immediately.

General Buller announces a small engagement at Acton Holmes on the 17th.

Saigon, Jan. 22.

Official news from London says that General Warren, after a fight which lasted all day, obtained possession of several heights, but the enemy's main position is still before him. He had about a hundred men wounded, but the number of killed is unknown.

Saigon, Jan. 23.

Intelligence from London is to the effect that Warren continued to fight throughout the whole of Sunday. He is believed to have gained ground. The English have had 295 wounded.

Saigon, January 24th.

No official news has been received in London from Warren. The newspapers estimate that he will require five days more to get over the ground.

Saigon, Jan. 25.

The Minister of Finance will submit to the Chamber in the course of the week a project of law imposing the maximum tariff on colonial products of countries which do not accord most-favoured-nation treatment to France. The project will notably double the duty on coffee. It will maintain the privilege of the reduced duties applicable to the products of French Colonies.

General Warren was to attack the principal positions of the Boers at Spion Kop during the night of Tuesday-Wednesday. Intelligence is awaited with keen anxiety.

(FROM THE "HONGKONG VOLUNTEER GAZETTE" SPECIALLY WIRED TO THE "JAPAN MAIL".)

London, Dec. 12.

The Portuguese police at Lorenzo Marques have stopped all Portuguese recruiting for the Boers. Henceforth nobody will be allowed to cross the frontier without a permit from the Governor.

The Times understands that the Union and Castle Companies are withdrawing from the Delagoa Bay trade in order to prevent the use of their vessels in interests unfavourable to England.

Nagasaki, January 21.

It is reported under date 17th inst. that the new Naval Brigade of 720 men, eight 4.7inch guns, 24 Maxims, and 10 12-pounders, will be formed next month for service at the front.

Reuter's agent at the Modder River wires under date 14th inst. that when the usual naval gun was fired that morning there was no response. The health of the troops is good.

Official news received from General French states that he sent a force to shell the Colesberg road bridge. The force returned without casualties.

The new bridge for the Tugela has been made at Wednesbury, (in the Black Country) in the space of three weeks. It will be shipped on Saturday.

Whilst scouting near Colesberg on the 14th Lieutenant Thompson of the Artillery and a trooper were wounded and captured.

Nagasaki, Jan. 22.

Under date London, Jan. 18, *The Times* correspondent at Lorenzo Marques telegraphed that up to the 11th inst. Mafeking was holding out pluckily. There was no likelihood of the garrison being compelled to capitulate, as the besieged have plenty of cattle and tinned meats.

London, Jan. 19.

General Gatacre reports that with 3,000 men he has advanced from Bushman's Hoek to Lopesberg, while the 74th Battery and a company of Mounted Infantry advanced from Sterkstroom to Bushman's Hoek.

Digitized by Google Original from CORNELL UNIVERSITY

Reuter's correspondent, wiring from the camp at Potgieter's Drift on Monday, says the advance began on the 9th, when Lord Dundonald's mounted brigade with the fifth division under General Hart marched to Springfield, having previously reconnoitred all suspicious country. Thoroughly scouted, the column reached Mount Alice, facing the enemy's position on the Tugela heights.

The South African Horse swam the river and fetched the pontoon bridge across. The enemy, taken by surprise, struck their camp.

14 R Bsq ch	K Kt3	30 K K2	RxPch
15 Q B2ch	K R3	31 K Q3q	QxRch
16 P QR4	P Kt3	White resigns.	

NOTES.

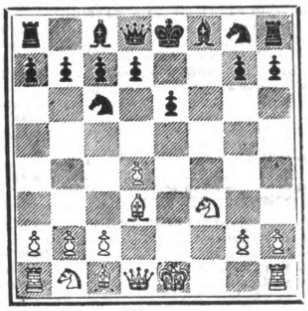
(a) No doubt Black weakens his position and his pawns are likely to become subject to attack, through this advance. The principle applies generally to games where P to K B 4 is played early on either side. Black's aim is to get an open attacking position.

(b) The game now becomes a sort of Blackman gambit.

(c) It is not considered good to take the pawn at once. If now P to K 3 instead White dare not take pawn, because of Q to R 5 ch, &c.

(d) Kt to Q B 3 does not appear best at this point, for now White appears to have good chances if he plays at once Kt to K Kt 5. This threatens Q to R 5 ch, Kt takes R P, followed by B to Kt 6 ch, &c. (see position):—

BLACK.



WHITE.

White to play his 6th move.

(e) And here White does not make the best of his chances. The check drives the king into a better position. R takes P was suggested as likely to prove more effective, and some critical variations would arise therefrom. Obviously K takes R would not do as a reply, and Kt takes Kt is also dangerous, whereas the threat would be 13—R to B 7 ch, K to Q 3, and White has several strong moves to go on with. Somehow Black gets out of the attack with abundance of material to spare. An uncommonly lively game.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 3RD, 1900.

MARRIAGES.

On the 27th ult., in Cleveland, Ohio, U.S.A., Miss MARY E. BABBITT to Mr ALFRED UNGER, of Yokohama.

At Hongkong, on January 30th, BERTHOLD PFEIFER, of Yokohama, to RACHEL ROTH, of Shanghai.

DEATH.

Suddenly, this morning (Jan. 31) at Miyanoshita, WILLIAM GORDON, formerly of Keith, Scotland, in the 50th year of his age.

SUMMARY OF NEWS.

INFLUENZA is very rife in Yokohama.

THE health of the garrison at Ladysmith is said to be improving.

THE Interport Football Match takes place this month at Kobe.

CHINESE New Year passed off very quietly on Wednesday and Thursday.

WITH this number of the *Japan Weekly Mail* is issued the Index for the last half-year.

BISHOP Partridge of Osaka was solemnly consecrated in Trinity Cathedral on Friday.

THE *Daily News* understands that the British Government will ask immediately for not less than 20 millions on account of the war.

MR. W. GORDON, an old resident of Yokohama, died suddenly at Miyanoshita on Wednesday.

THE new Japanese battle-ship *Shikishima* sailed for Japan on Saturday, the 27th January.

THE rumoured relief of Mafeking, wired from Lorenzo Marques, turns out not to be a fact.

NOTWITHSTANDING his check at Spion Kop, Buller is said to be hopeful of soon relieving Ladysmith.

THE inspection of vessels arriving from ports in Japan was dispensed with from Thursday, by order of the Minister.

MR G. C. COX, having resigned the editorship of the *Hongkong Daily Press*, has left for home. A new editor is on his way out.

THE boy who abstracted wines from Mr. W. W. Till's store room to the value of *yen* 380 has been sentenced to 6 months' imprisonment.

NEWS from South Africa is anxiously awaited. The British lost heavily in the attack of Spion Kop and eventually retired beyond the Tugela.

THE situation in Peking is generally considered very unsatisfactory and in Europe it is expected that some diplomatic protest will probably be lodged.

WHAT was practically the last sitting of H.B.M Court for Japan took place on Wednesday, when complimentary speeches were made by Bench and Bar.

THE Kaiser's Birthday was celebrated in quiet fashion at Yokohama on Saturday. Flags were plentifully shown, and festivities took place at the German Club.

IT is reported that M. de Lucy-Fossarieu, French Consul at Kobe, will shortly—probably in the middle of next month—start for home on leave of absence.

A JAPANESE who has succeeded in robbing several Chinese exchange shops in Yokohama by means of forged cheques has just been arrested.

MESSRS. F. R. Kendall, H. W. Uloth, and H. H. Joseph have been appointed joint managers of the P. & O. Co. in succession to the late Mr. F. D. Barnes.

SIR NICHOLAS HANNEN goes home on leave on the 18th of May next, and Mr. H. S. Wilkinson is to be transferred to Shanghai from Japan as Acting Chief Justice.

427 Japanese labourers left for Hawaii on Wednesday by the O. and O. steamer *Coptic*. They were sent by the Morioka and Kaigai Emigration Companies.

THE new steamer *Akanoura Maru*, of some 2,000 tons, which has been completed at the Nagasaki Mitsubishi Dockyard, left there on Tuesday morning for Moji on her maiden trip.

THE British parliament has met and while there is much criticism of the campaign in South Africa, all parties are agreed to vote unlimited supplies in order to bring the war to a successful conclusion.

THE French Government has submitted to the Chamber projects relating to the defence of the coasts and the colonies, the augmentation of the fleet, and the establishment of a system of submarine cables.

A MOST successful ball was given on the 9th Jan. in the spacious rooms of the Hongkong and Shanghai Bank residence at Tientsin, where Mr. and Mrs. Mackintosh heartily entertained a large number of guests, who pronounced the unction most enjoyable.

THE Russian Bank has advanced to the Persian Government 22½ million roubles at 5 per cent. interest with which to discharge all existing foreign obligations. Persia undertakes to incur no fresh foreign loan. This practically binds Persia politically and financially to Russia.

MR. R. S. GUNDRY, of the China Association in London, has been presented by the members with £600 as an acknowledgment of the work he performed for the Association in past years in an honorary capacity. Some of the amount was collected in Hongkong, and the presentation is well deserved.—*China Mail.*

AT the annual general meeting of the Nippon Bicycle Club held on Wednesday evening the following Committee were elected to serve:—President, R. J. Ward; Captain, K. Kingdon; 1st Lieutenant, W. C. Vaughan; 2nd Lieutenant, C. W. Eyton; Hon. Sec. and Treasurer, Geo. Hood.

THE amount of tea exported from Ceylon to the United Kingdom in 1899 was 103,948,138 lbs, as against 96,133,833 in the previous year. It is a curious fact that 1,500,000 lbs. of tea were exported from Ceylon to China, the home of tea, in 1899! The total exports from Ceylon are anticipated to have been 129,894,156 lbs., compared with 119,769,071 lbs. in 1898.

AT 3 o'clock on Tuesday morning a thief managed to enter the house of Onuki Yasuichi through a skylight in the kitchen. He secured several articles of jewellery and clothing, but, as he was leaving the place with his booty, a policeman detected him and gave chase. Finally the thief slipped in some mud and fell, being eventually handcuffed. He is an old offender named Yamaguchi Seijiro.

LORD KITCHENER, when ordered to join Lord Roberts, succeeded in making the journey from Omdurman to Cairo in sixty-one hours. This is thirteen hours better than the previous record—which, by the way, was also his own—and, considering that the journey was complicated by a railway accident, it may fairly be regarded as a really wonderful performance for the new railway.

JUDGMENT was given on Monday in the Tokyo Appeal Court in the Kent case. The Court quashes the sentence of six months' rigorous imprisonment passed by the Yokohama Chiho Saibansho, but imposes a sentence of ten days' detention. The Court considered an assault had been committed the effect of which was to incapacitate Toyomatsu for less than 20 days, but considered the assault was made under provocation.

ON January 25th the *N.-C. Daily News* issued the following "Extra": An imperial edict issued last night in the Emperor's name expresses his thanks to the Empress Dowager for all her kindness and announces his resignation of the Throne. The Empress Dowager has selected as Emperor the nine-year old son of Prince Tuan, who is to ascend the Throne of China New Year's Day under the title of H.I.M. Pu Ting.

SOUTH AFRICA.

Monday, Jan. 29.

The news from the Tugela is most perplexing. On the 20th, Warren commenced his assault on the Boers and continued it throughout the 21st, winning several positions. On the 22nd and 23rd (Monday and Tuesday) he rested his troops, contenting himself with holding the captured positions; and during the night of the 23rd (Tuesday) he carried Spion Kop, surprising a small Boer garrison. Throughout Wednesday (24th) he held Spion Kop in spite of strong attempts to dislodge him, and General Buller telegraphed that the casualties had probably been heavy. But during the night of the 24th-25th Warren evacuated the position which he had thus fortunately won and obstinately defended. The whole thing is so strange that we proceed to state the operations in tabular form, as hitherto telegraphed:—

Date.	Operations.	British casualties.
Wednesday, 17th.	Dundonald, reinforced by Warren, attacked & defeated the Boers at Acton Homes, killing 21 and capturing 15.	2 killed and 2 wounded.
Saturday, 20th.	Clery with part of Warren's force was in action all day; captured ridge after ridge, bivouacking on ground won.	11 officers and 279 men wounded.
Sunday, 21st	Warren's engagement continued; forced the enemy from 3 positions.	Not stated.
Tuesday, 23rd.	Warren captured Spion Kop during the night.	Not stated.
Wednesday, 24th.	Warren held Spion Kop against heavy attacks, but abandoned it during the night, or on the morning of the 25th.	6 officers & 18 men killed; 11 officers & 142 men wounded; 31 men missing.

Under what circumstances was Spion Kop abandoned? Were the British forced from the position by an attack of the Boers, or did Warren decide to abandon it, his experience of Wednesday's fighting having proved that the place was untenable? It is useless to speculate, for before these words are in print the telegraph will doubtless have made the matter clear. But it will be observed that whereas the telegrams—Reuter's and that of the French Legation—speak of the abandonment's having taken place during the night of the 24th-25th, the casualties are referred to the 25th. The only way to reconcile these statements is to suppose that Warren was driven back by a night attack delivered after midnight. But, if so, what were his casualties during the 24th, when he had to resist violent attacks, and when Buller expressed a fear that he had suffered considerably? Are we to suppose that during the battle of the 24th and the attack on the 25th, which drove him out of his position, his casualties totalled only 24 killed and 142 wounded? That is difficult to believe. The most reasonable hypothesis is that the telegram errs, and that the casualties said to have occurred on the 25th really represent the list of the 24th. If that be so, what happened was that the fighting on the 24th proved Spion Kop to be commanded by the enemy's artillery, and that Warren consequently decided to abandon it during the night after the engagement. That would account for the fact that it was held by only a small Boer garrison, and that Warren suffered heavily from shell fire during the 24th. Hitherto our artillery has been able to silence that of the Boers in the field, but evidently such was not the case at Spion Kop, for the Boers were able to shell the position effectively. A particularly disappointing feature of the incident is that the telegram of the 26th represented Warren as expressing the belief that his occupation of Spion Kop had rendered the enemy's position untenable. Did he express any such belief? Did he not rather say that Spion Kop was rendered untenable by the position which the Boers held? The whole story is very perplexing, and not the least puzzling part of the business is the fact that so much fighting should have taken place at Spion Kop, for, unless the maps errs, that mountain lies westward of the Venter Spruit and Acton Homes, where the combat began. One thing, at any rate, is consoling, namely, that the casualties up to date in the 8 days were only 67 killed and 639 wounded and missing, whereas, in the first line of trenches captured on the 21st, 200 dead Boers were found. But we can not conceal from ourselves that this check means practically the failure of Buller's plan. He devoted strength to capturing a place which, when seized, was found to be commanded from the enemy's position, and to be therefore useless.

Another singular point is that there seems to have been fighting at Chieveley on the 23rd. Nothing is stated as to its nature, but the only theory we can form is that the Boers found themselves strong enough to make a dash at the British communications while the fighting was in progress on the west.

As to the statement that London is in consternation, we do not believe it. The check at Spion Kop can not be called a serious disaster, unless it involves the ultimate fall of Ladysmith. But if Buller can maintain his present position, the Boers will scarcely venture to assault Ladysmith. They must try to dig it out, or starve it out. Its provisions must be getting short.

Tuesday, Jan. 30.

It can not be denied that the news of Buller's second failure to relieve Ladysmith is very disappointing, and the disappointment is accentuated by the difficulty of understanding what has happened. Some clues do indeed present themselves. In the first place, it seems plain that the Boers themselves do not attach much importance to Spion Kop. Between January 17th, when Warren and Dundonald commenced their offensive operations, until January 22nd, when the night attack was made upon Spion Kop, the Boers had ample time to garrison the position strongly, even supposing that they had not previously taken such a precaution. We know from their own accounts that Cronje and Botha were sent to reinforce their right wing, and, if the tenure of Spion Kop had been vital, it would not have been left to the keeping of the small garrison that Warren surprised during the night of the 22nd-23rd. In the second place, it does not appear that the Boers had any artillery on Spion Kop. If they had, they would not have been able to remove the guns when surprised by a night attack, and we should have heard of their capture. This seems to suggest that the salient is not suitable for artillery: possibly nothing heavier than mountain-guns could be brought to the summit without great labour. On the other hand, the position may be exposed to artillery fire from a neighbouring mountain. We do not know of any such mountain. According to a map in our possession showing the topography of the district very clearly, Spion Kop lies between two tributaries of the Tugela, the Sand Spruit and the Venter Spruit. It rises abruptly from the eastern bank of the Sand Spruit. Similarly the ground on the eastern bank of the Venter Spruit rises abruptly to the Ladysmith plateau, Ladysmith being about 20 miles distant from the Venter Spruit bluffs. It was of course necessary for Warren to surmount the Venter-Spruit bluffs in order to reach the Ladysmith plateau, but what concern he had with Spion Kop, or why the Boers should have held it, we do not see. The natural position for the Boers would have been to rest their front on the Tugela and their right on the Venter-Spruit bluffs. At all events, Spion Kop is not within effective artillery range of the Venter bluffs, and, if Warren found it untenable, it must be commanded from some height in closer propinquity. The riddle can not be solved with our present knowledge, but the fact remains that Buller has again failed. For the Ladysmith garrison the disappointment must be very bitter. They had fully persuaded themselves that relief was at hand. They could see Buller's shells bursting, and now another period of weary waiting lies before them. What the next step will be we can not clearly foresee. There are no available re-inforcements for Buller in sight. The 6th Division has arrived at the Cape and the 7th is arriving, but Roberts is not likely to send either of them to Natal. Unless we are greatly mistaken, he will move against the Free State as soon as ever he can organise his columns. The Maggersfontein Boers have extended their entrenchments so as to form a semicircle with each end resting on the Orange River and Methuen at the centre. It will be Roberts' programme to turn their left flank by crossing the Orange River at a point further eastward. With the 6th and 7th Divisions and other available troops, he can muster from twenty-five thousand to thirty thousand men for that purpose, independently of Methuen's force, which numbers some thirteen thousand. The Boers dislodged from Maggersfontein, and a junction effected with Methuen, Lord Roberts would find himself at the head of an army of thirty-five thousand or forty thousand men, and an advance into the Free State with such a force would relieve the pressure at Ladysmith almost as effectually as any movement Buller could make. We do not see day-light anywhere else. Roberts may consider it necessary to reduce Colesberg before he commences his northward march across the Orange River, but, with the force he will have at his command, that should not prove a very difficult operation. It has been our firm belief throughout that a direct advance into the Free State is the only effective solution of the situation. The saying may sound hard, but it is none the less true that the relief of our beleaguered garrisons ranks altogether second to the main purpose of the campaign, and the characteristic of great captains has always been that they never allowed themselves to be turned from their ultimate object by collateral incidents. The fall of Ladysmith would be very regrettable, but, so far from being calamitous in a general sense, it

Digitized by Google Original from CORNELL UNIVERSITY

would not appreciably affect the issue of the campaign. So far as Ladysmith is concerned, what is desirable is that it should hold out long enough to occupy the attention of a large force of Boers pending Lord Roberts' operations on the other side. The brave fellows shut up in the beleaguered camp know their countrymen's hearts are with them, and that whatever is humanly possible, within the limits of strategical necessity, will be done for their relief. But their plight will not be allowed to govern the general situation. Meanwhile, it is some consolation to reflect that things have improved for them. For, though Buller has fallen back, he holds the passage of the Tugela as a matter of course, and the Boers can scarcely venture to make another attack upon Ladysmith like that delivered on the 6th: they would have Buller on their backs.

We must not, at this moment of failure, make the mistake of concentrating our whole attention on the front of the stage, and forgetting what is going on behind the curtain. Buller, operating once with greatly inferior, and once with nearly equal, forces, has twice failed to drive the Boers from a naturally strong position which they have had three months to strengthen by every artificial means. That is what has happened on the front of the stage. But behind the curtain, eight or nine thousand Englishmen, occupying a position commanded by the Boers' artillery, have defied all efforts to subdue them on the part of an enemy outnumbering them by at least three to one. Victory rests thus far with the defensive, but it is far more signal victory for the British than for the Boers.

The Times' correspondent in Paris says that the following letter has been addressed to M. Delcassé:—"We, the undersigned Frenchmen residing in London and occupying various positions, whether in business or in liberal professions, each of us representing French interests, energetically protest against the campaign of insults recently directed by a portion of the Parisian Press against Queen Victoria, insults as unworthy of Frenchmen as they are unwarrantable. We protest as energetically against the evident bias of certain English journals in daily collecting and publishing all that can be insulting and unfavourable to France, a bias which has been especially manifested at the time of recent events. These abuses of the Press are creating an intolerable situation for us, their effect among a portion of the English public being to tarnish our good reputation, to diminish the prestige of our country, and to change cordial relations into difficult ones, as well as, to a certain extent, to tend to put on the index everything French. We appeal to you, Sir, as our natural representative, and beg you to use all the means in your power to bring to an end this state of things, so prejudicial to French interests."

Wednesday, Jan. 31.

A telegram sent by Buller on the 22nd instant affords much help in deciphering the situation which has hitherto proved so perplexing. The telegram is that, in order to relieve the pressure on Warren and to ascertain the enemy's strength opposite Potgeiter's Drift, Lyttleton's brigade undertook a reconnaissance in force on the morning of Sunday, the 21st, and held the Boers in their trenches all day, the British casualties being 2 killed, 12 wounded, and 2 missing. It is thus evident that the Boers' line of defences extended all along the Tugela as far as Spion Kop, where their right rested, and that Warren never got behind them at all. If Acton Homes was taken by Dundonald's horse, as one of the telegrams alleged, it can not have been held, and the affair was simply a reconnaissance. In fact the whole matter amounts to this, that the attack on the Boers' position was limited to an attempt to turn their right; that the attempt nearly succeeded, but it had finally to be abandoned for reasons which remain obscure. We have yet to learn the circumstances which were deemed fatal to the continued occupation of Spion Kop, but it is easy to conjecture that if Buller's force had been sufficient to enable him to deliver a really effective attack at Potgieter's Drift while Warren was engaged at Spion Kop, the position might have been carried. Spion Kop must be commanded from some other point in the Boers' line of defences. One is naturally perplexed to understand how some thirty thousand Boers can hold a line which must extend at least forty, or forty-five miles. The explanation is afforded, we think, by their mobility. These mounted men have ample time to concentrate at any point threatened by ordinary infantry. In order to find a weak joint in their armour, it would be necessary to extend the front of the attack in a degree commensurate with the length of the line of defence. This has been proved in all operations up to the present. The opening attacks of the British were successful, but before they could deliver their final blow, the Boers had leisure to mass their strength at the place assaulted, and the assailants failed. It was so in Buller's case, it was so in Methuen's case, and it was so in French's case, though French can scarcely be said to have yet delivered any final attack.

Thursday, Feb. 1.

It is to be apprehended that we have not received a full list of the casualties in connexion with Buller's recent attempt. The accounts have been most confused. Only one clear statement has come, namely, that received at the Legation of France in Tokyo, which said that Warren's losses from the 17th to the 25th were 67 killed, 579 wounded, and 60 missing. That is explicit enough. But now comes a nominal list which shows that 22 officers were killed, 20 wounded, and 6 missing on the 24th instant alone. We also know from Buller's official telegram that 11 officers were wounded in the action at Venter's Spruit on the 20th; and that, on the 25th, 6 officers were killed and 12 wounded. Hence it is certain that at least 28 officers were killed and 43 wounded. It is plain that, if the total number of killed was only 67, as reported by the French Legation telegram, 28 officers would be a monstrous proportion; and when we find that there were 77 casualties among the officers in the whole operations, we can not choose but anticipate that the killed and wounded of all ranks will be found to have aggregated a very much larger number than that hitherto telegraphed.

Another perplexing feature is that there were considerable casualties on the 25th—6 officers killed and 12 wounded; and 18 men killed, 142 wounded, and 31 missing. The 24th was the day of heaviest fighting. It was on the 24th that Warren's troops, in their attempt to hold Spion Kop, seem to have been exposed to a murderous artillery fire from a commanding position. During the night of the 24th, they abandoned the hill, and thereafter Buller withdrew his forces to the south of the Tugela "without loss." Where the fighting occurred on the 25th we are unable to say.

Friday, Feb. 2.

The question of relieving Ladysmith must present itself to Lord Roberts in a tolerably well defined form. It is evidently impossible to force the Boers' position without much greater strength than Buller now possesses. We exclude surprises from the consideration. Anything might be effected at any moment by a surprise, but such accidents are not be counted on. Lord Roberts can not take them into his reckoning. What he has to determine is whether Buller can be so strengthened within a reasonable time as to enable him to deliver an attack with a good prospect of success. Experience seems to have shown very clearly that peculiar features are presented in connexion with the defense of a line of entrenchments by a garrison capable of concentrating its full force at any given point with much greater rapidity than the assailants can impart to their movements of assault. To such a case there is no strict application of the old rule that with a fixed garrison the strength of the defence varies inversely as the length of the trace. The Boers' line of defenses at Ladysmith must extend at least 50 miles, and they are holding it with about thirty thousand, or thirty-five thousand troops. Evidently if ten or fifteen thousand assailants could be launched rapidly and unexpectedly at any point of such a position, the line would be at once broken. That could be done, within limits, if the assailants and the defenders were similarly organized. But at Ladysmith they are not similarly organized. A few hours, at most a day, suffices for the Boers to mount their horses and concentrate a force of twenty thousand men at any part of the lines, whereas Roberts requires at least three or four days to mass his troops for an attack. If the recent operations be considered, it will be observed that from the time when Potgieter's Drift was seized until Dundonald's horse began to manœuvre in the direction of the Acton Homes road, an interval of full seven day elapsed. In fact, from the 10th of January the Boers knew perfectly well where the assault war to be delivered. There was some talk, it is true, of a flanking movement on the east, but ordinarily efficient scouts must have ascertained at once that nothing was really in progress on that side. The Boers knew, then, that their extreme right was to be the scene of the struggle, and they despatched Cronje and Botha with—we may be sure—every available man to hold the position. Even had they been uncertain prior to the moment when Warren began to rush their trenches on Saturday, they still had ample time to marshal an overwhelming force against him before he delivered his final attack on Tuesday night. It does not appear, indeed, that they adopted any strenuous measures to hold Spion Kop. They doubtless knew well that it was indefensible, and they made all their dispositions to render its indefensibility as injurious to

Digitized by Google Original from CORNELL UNIVERSITY

the British as possible. But had it been to their greater advantage to hold it, what appears plain is that they could have garrisoned it with twenty thousand men before Warren got within range of it. The upshot of these considerations is that to carry such a position by means of a single column of slowly moving infantry, in the fact of an exceptionally mobile garrison of at least equal strength, is an impossible feat. There must be at least two simultaneous attacks delivered at two points tolerably wide apart, by columns each stronger than two-thirds of the defenders' total force, and, at the same time, there must be a central supporting column of substantial dimensions. These requirements represent a total force of fifty thousand men, or fully the double of Buller's troops. If Roberts could raise Buller's command to that strength within a reasonable time, and without dislocating all other plans, it would be his duty to do so, for, as a matter of sentiment and prestige, the succour of Ladysmith is a very desirable operation. Now Roberts could send twenty-five thousand men to Buller, but let us see what would be entailed in doing so. The 6th Division, which landed at the Cape more than a fortnight ago, is now in the neighbourhood of Stormberg. To recall it to Capetown, embark it, despatch it on a five days' voyage to Durban, and carry it thence into Buller's fighting line, would be an operation of at least three weeks; more probably 27 or 28 days. The 7th Division has almost completed its landing. It could be re-embarked and rendered available for Buller in, perhaps, 20 days. These two Divisions would give Buller twenty thousand additional troops, and with them he could doubtless relieve Ladysmith. But observe what that programme involves. It involves, in the first place, the withdrawal of twenty thousand men from the field of active operations during the space of at least three weeks. It involves, further, the paralysis of any offensive movements which Roberts may have planned—has certainly planned—for immediate execution on the western and southern frontiers of the Free State. It involves an order to Methuen, French and Gatacre to mark time for an indefinite period until reinforcements can be obtained from England. And it involves, finally, the locking up of a force of from fifty to sixty thousand men in Natal after the relief of Ladysmith. There can not be any doubt that the object of the Boers is to force the British to deliver the main attack from the direction of Natal. Nature has provided for the two Republics an almost impregnable barrier all along their eastern frontiers, and they naturally want to have their enemies approach from that direction. In a measure England has hitherto shaped her movements to suit the Boer programme, and she would be carrying her complaisance still further if she diverted twenty thousand men from the Cape to re-inforce Buller. After the relief of Ladysmith Buller would find himself with an army over fifty thousand strong, and in order to utilize it for further offensive operations he would have to force the passes of the Drakensberg, where fifteen or twenty thousand Boers could render his advance terribly costly, if they did not succeed in checking it altogether.

Thus, for Roberts the problem is—"Shall I detach a force of two Divisions for service with Buller, in spite of the facts that they could not be utilized for his purpose before some four weeks, and that their loss would compel me to suspend my own operations, for at least six weeks; or shall I employ the two Divisions according to my original programme? If I decide in the latter sense, I can begin my advance within three weeks, at latest, and there is good reason to think that my invasion of the Free State at the head of thirty-five thousand men will relieve the pressure at Ladysmith as effectually as a fresh attack from Buller." We do not, for our own part, entertain any doubt about Roberts's decision.

But will the British Government be content to trust solely to Roberts' advance, or will some means be adopted to strengthen Buller, independently of the troops now *en route* for South Africa from England? We believe and hope that the latter alternative will be chosen. There are sixty thousand British troops in India. Two Divisions, probably three, could easily be spared for service in South Africa if they were replaced by militia, and to get troops from India to Durban would be almost as quick as to move them from the Cape Colony to the latter place. What seems certain is that there are not sufficient British troops in South Africa at present, and that every failure resulting from their numerical weakness enhances the difficulty of their ultimate task by bringing recruits to the enemy. It will be an immense relief to learn that Her Majesty's Government have determined to throw overwhelming strength into this difficult war. In one sense we count it a fortunate thing that events have not hitherto moved in a more satisfactory manner, for a full appreciation of the obstacles would not then have been attained, and without such appreciation the British generals might ultimately have found themselves in almost hopeless positions and the country would not have been prepared to help them efficiently. The work is more onerous than anything that has ever yet fallen to the lot of any nation, but England has put her hand to the plough and there can be no looking back.

STATE OWNERSHIP OF PRIVATE LINES.

The Committee appointed by the Diet last session to examine and report upon the project of nationalizing the principal private railways, is said to have completed its labours, and to have drafted a Bill providing for the State purchase of the Nippon line, the Kansei, the Kobu, the Sanyo, the Kiushiu, the Nishi-nari (Osaka), the Kyoto, part of the Hokkaido Tanko, and one other line—nine in all. We do not yet know what system of purchase is to be adopted. The Bill will be submitted to the Lower House, it is said, on the 3rd instant, and doubtless it will pass, as Mr. Hoshi Toru is chairman of the Committee, and the Liberal Party are understood to approve the measure strongly. It is also stated that the Ministers of State are either neutral or emphatically in favour of the project. We do not know how much truth there may be in the latter assertion, but we find it somewhat incredible.

SOCIAL ENTERTAINMENTS IN JAPAN.

A combined campaign is inaugurated by the *Jiji Shimpo* and the *Kokumin* against the prevailing fashion of social entertainments in Japan. They are denounced as lacking in any element of refinement, and abounding in elements of licence, vulgarity, and extravagance. We are glad to see these remonstrances in print. Our contemporaries refer, of course, to convivialities in purely Japanese fashion, but we venture, on our own account, to add a word of protest against the conduct of many Japanese at entertainments in foreign style. The perfect courtesy and faultless manners of the Japanese gentleman may not be at the command of all those bidden to such entertainments. *Meiji* democracy has caused a levelling down which has its drawbacks as well as its advantages. But such roughness and lack of manners as are sometimes witnessed make one doubt whether the scene is really laid in Japan, a country famous for social graces and stateliness. In connexion with this subject we note that the *Kokumin* denounces the Japanese habit of moving about from one place to another during an entertainment. *Quot homines.* That is precisely the feature of Japanese socialities which we should like to see preserved.

"THE YOUNG IDEA IN JAPAN."

Mr. Alfred Edmonds contributes a pretty essay to the *Windsor Magazine* for January, under the title of "The Young Idea in Japan." The purpose of the writer is to give to English readers some notion of the method of bringing up of Japanese children. It is a subject which has already attracted some able pens, and Mr. Edmonds does not attempt any profound treatment; he contents himself with a brief sketch to which much attraction is added by the reproduction of excellent photographs. In some respects we do not at all agree with Mr. Edmonds. He says, for example, that "the little Jap" (horrible contraction) "knows nothing of the tender love and the all-absorbing adoration that the Western baby exacts from all around it," and he explains this supposed fact by saying, first, that the Japanese child does not need such careful nursing owing to the equable nature of the climate; and, secondly, that "nowhere in the East is to be found that passionate love of children which makes the European and American mother the saintliest, gentlest, truest friend that God ever gave to humanity." Truly it is difficult to read such statements without indignation. Nothing remoter from the truth could have been penned, we think. It is quite plain that Mr. Edmonds has had no opportunities of observing the Japanese mother, and his ignorance has betrayed him into penning a gross libel on her. "Nowhere in the East," forsooth, "is to be found the passionate love of children" and the motherly devotion which are the glory of the Occident! The old race prejudice—prejudice so strong that it totally blinds a man not only to the facts that fall under his observation, but also to the discord of that wearisome trumpet-blowing which the Occidental essayist so often mistakes for pleasant music.

THE CHINESE AFFAIR.

Saturday, Jan. 27.

Various telegrams were received in Tokyo on the 25th instant with reference to affairs in Peking. The *Jiji Shimpo*, as usual, had the fullest service, and its correspondent displayed a remarkable faculty, for, instead of confining himself to actual occurrences, he adopted the rôle of prediction. His first message spoke of indications that something would happen to the person of the Emperor within a few days. His next said that Fu shun, a lad of 12, cousin of the late Emperor Tung Chih, had been adopted and declared heir-apparent. His next told of a Court Council presided over by the Empress-Dowager; and his last announced that the Emperor was dead, and that the name of the period was to be changed to *Hokei* from the beginning of next year. A more complete round of news it would have been difficult to construct—first, the prediction; then the process; and finally the catastrophe. We are glad to be able to say that the finale of the message is not true. The Emperor is not dead, but an heir-apparent has been adopted, and the fact has been duly announced in the Peking *Official Gazette*. Perhaps the event preludes the dethronement of the Emperor, but there is not at present any reason to suppose that violence to his person is contemplated. The incident will, of course, be sensationally construed, but it is well to remember that the adoption of an heir would have been a natural, if not an inevitable, step under *existing circumstances*, even had the Emperor been really in possession of the administrative power. His Majesty's confirmed ill-health, and the fact that he has no son, necessarily bring the question of the succession into prominence, and it has never been the custom in the East to leave that question long in abeyance. Thus viewed, the event has no special political significance, and need not be regarded as the prelude of a sinister sequel. But it must be confessed that public opinion does not set narrow limits to the acts of which the Empress-Dowager is capable.

Monday, Jan. 29.

There is intelligence that the adoption of an heir-apparent in Peking has created excitement in the provinces, and that it took Peking by surprise. But such a large element of sensation invariably enters into the rumours reaching us from China that we are disposed to discount these last reports. It does not appear either singular or alarming that an heir should have been chosen. There is not the least chance of a son's being born in the direct line, and the delicate condition of the reigning Emperor's health renders his tenure of office very uncertain. Under such circumstances, it is surely natural that steps should be taken to provide for the succession. Indeed the Empress Dowager and her advisers would be greatly wanting in sagacity if they failed to deal effectually with this element of the situation. Hence, when the public comes to think calmly over what has occurred, there will probably be very little excitement. From another point of view, also, the incident was to be expected. It is, after all, only the due consummation of the programme inaugurated a year ago when the Empress-Dowager resumed the direction of affairs. For all purposes of practical administration the Emperor was then dethroned. The men His Majesty had trusted were not only deprived of office but also degraded and mercilessly punished; the reform movement headed by the Sovereign was totally discredited, and, if ever a crowned head was disgraced and humiliated, that was the lot of the unhappy Kwang-sü. In any Occidental country formal dethronement or a desperate struggle must have followed. Even in China there was nothing in the history of the past to justify the expectation that such incidents would not be attended with serious commotion. But the Empress-Dowager and her coadjutors had laid their plans so astutely, and with so thorough a perception of all the contingencies, that this far-reaching *coup d'état* caused only a few ripples on the surface of the national life. In earlier times, the inconvenience of the Emperor's continued existence after all use for him had ceased would have been very rapidly obviated. But China, despite her obdurate conservatism, has made at least sufficient progress to understand that, while public opinion is ready to condone the grossest immorality in the management of national or international affairs, public nerves have become too tender to permit recourse to poison or the dagger. The Emperor was, therefore suffered to live, and even his formal dethronement was deferred. But only deferred. First an heir had to be duly adopted, and even that formality was not indecently hastened. More than a twelvemonth was suffered to elapse. The Empress-Dowager and her advisers doubtless thought that a year would suffice to reconcile the world to the next act in the drama. We believe that their calculations were correct, and that, although alarmist rumours are circulated, there will not be any serious commotion. The progressive programme has received its final blow: that is all The Chinese people are not so wedded to progress that the stroke will hurt them badly. Their chief sentiment when they begin to reflect calmly will be that the Empress-Dowager is an uncommonly astute person, and that she has complied very punctiliously with all the conventions and *convenances*. A languid interest will continue to attach to Kwang-sü; not so much on account of the position he has lost or the cause he represents, as because of the mystery attending his own future. The appointment of an heir is not a startling, or even a remarkable, occurrence, but its sequel may be shocking. The invalid Emperor has now become not only a superfluity but also a source of embarrassment and even danger, so that the probability of his lingering long upon a stage where the curtain has finally fallen upon his kingly career is small. But there will be no indecent hurry in this instance also. The drama will proceed with becoming slowness, just as it did in the case of the last Emperor before he finally "mounted the heavenward dragon." The rumours circulated about Kwang-sü's death must have emanated from persons who under-estimated the Empress-Dowager's capacity for avoiding political solecisms.

It goes without saying that this affair has the usual fringe of sensational suspicions. Russia and France are supposed to have inspired the Peking folks' procedure, and to be prepared to lend active aid against any inconvenient consequences—for a consideration, of course. Russia was also supposed to have had a large share in the much greater *coup* which restored the Empress-Dowager to power, but the public still awaits proof of the validity of the supposition. We suspect that there will be an interval of similarly protracted expectancy in the present instance also, in spite of the views attributed by a Tokyo contemporary to a distinguished Japanese statesman, who is credited with predicting that a struggle between the progressive south—or China proper—, and the conservative north—namely, the Manchus—will be at once precipitated; and that Western Powers will be found ranged on both sides. That will come, probably; but not yet.

Truly no great interest attaches to the age or lineage of the little boy now brought into such prominence. For the sake of the records it is well to know that he is called Po T'sun; that he is 7 years of age, and that his father, Tün Kwan-wong, is a brother of the Emperor. Such at least seem to be the facts. We also note that Messrs. Tsü Tung and Shung I are appointed tutors to the child, and that Kong Ngei holds some other important office in connexion with his care and education. If the extreme juvenility of the boy might be interpreted as an official indication of the reigning Emperor's "expectation of life," seven years would be a welcome age; but since it points, rather, to the term of supremacy lying before the Empress-Dowager, we do not find it particularly gratifying.

Tuesday, Jan. 30.

Rumours continue to fly around in connexion with the adoption of an heir to the Throne of China. Kang Yu-wei, we are told by the sensationalists; has fled (!) to Singapore, and Shanghai is in a state of commotion—assertions which are remarkably lacking in continuity;—France has marched a force of marines into Peking; Russia is preparing to send 4,000 men thither from Port Arthur; M. Pablov, from his place in Korea, is demanding the removal of Sir Robert Hart and his replacement by a Russian subject; and arrangements have been completed in Peking for the formal dethronement of the Emperor on New Year's Day of the old calender, which falls, we believe, on the 3rd of February. All these stories are aptly capped by a telegram published in the columns of the *Jiji Shimpo* that Peking is quite undisturbed.

Wednesday, Jan. 31.

The *Jiji Shimpo* formulates, with regard to Chinese affairs, views much the same as those advanced in these columns, namely, that the adoption of an heir apparent will not lead to any serious commotion. Our contemprary thinks that the Empress-Dowager had made full preparations for the *coup*. The quarters from which she had most reason to anticipate opposition were Chang Chi-tung and Liu Kun-yi. But the former's antagonism has been removed, and the latter's journey to Peking shows that he too has become a supporter of the Empress-Dowager. Further, Li Hung-chang's appointment as Viceroy of the two Kwang can not fail to produce an alteration in the attitude of those districts. Thus everything goes to show that the cause of progress in China is at present in a most parlous state, and that instead of attending to matters which threaten the integrity of the empire, officialdom is busied solely with domestic intrigues.

Digitized by Google Original from CORNELL UNIVERSITY

It is stated that the Progressists intend to make use of the incidents in China as a pretext for renewing their attack upon the Cabinet. The assault will take the usual form of a series of questions, framed with the purpose of embarrassing those to whom they are addressed rather than of eliciting information. The Government will be asked what information it had received as to the appointment of an heir to the Chinese Throne previously to the official announcement of the fact; what action it took when the proceeding was consummated; what action it intends to take, and so forth; queries which can not be answered without public disadvantage, whereas any failure to answer them will be construed to the Cabinet's discredit. It will become, one of these days, a serious problem whether some check should not be put on the system of presenting questions in the Diet. According to existing arrangement, any group of members numbering not less than thirty may frame a question and hand it to the President. Then, before the House proceeds to the Order of the Day, one of the questioners is at liberty to stand up and address the House in explanation and vindication of the questions. There are no limits to the length of the speech and there is nothing to check the utterances of the speaker, for no reply is permitted at the time. Hence the opportunity is frequently taken to deliver a violent tirade against the Government, and when the latter's reply is made some days later, people pay very little attention to it, however vivid may have been the impression produced by the assault. In this matter the English system seems to us incomparably preferable. Due notice has to be given of a question, and no public reference to it is made until the Government is prepared to answer, which is done verbally, so that if further points are raised by the questioner, they can be answered then and there. The framers of the Japanese Law of the Houses doubtless anticipated that the restriction as to at least 30 members having to combine for the purposes of a question, would prevent any abuse of the system, but experience shows that the forecast was mistaken. We do not mean to deny that recent events in China constitute a good and sufficient reason for questioning the Japanese Cabinet. What we desire to convey is that the whole method of presenting questions, as now practised in the Japanese Diet, is faulty.

Thursday, Feb. 1.

The telegrams from Peking indicate that the city is absolutely undisturbed by recent events, and that everything is going on just as usual. Doubtless the citizens find it quite natural that the important question of the succession should be settled definitely. There is nothing at present to warrant us in describing what has happened as a *coup d'état*. The Emperor himself, even were he in full possession of administrative power, must have seriously considered the question of adopting an heir, in view of the fact that he has no son of his own nor any prospect of having one. Of course it would greatly conduce to public tranquillity if such problems were placed beyond the necessity of fortuitous solution; in other words, if a law were enacted, indicating the exact lines of succession in all reasonable contingencies. But in the absence of any such law nothing could be less perturbing than a step like that just taken in due accordance with recognised precedents. If, as we have already observed, there were any indication of dethroning the Emperor or otherwise "disposing" of him, the public mind might be justly excited. No indication of the kind is apparent, however. On the contrary, the Empress-Dowager is said to have instructed the Board of Ceremonies to make investigations as to the proper mode of conducting a grand ceremony to celebrate the Sovereign's thirtieth birth-day. His Majesty Kwang Hsü was born on August 15th, 1871. He therefore enters his thirtieth year, according to Chinese reckoning, from New Year's Day of the old calendar. Unless the intention to hold this celebration be an extraordinarily astute ruse, which we have no right to suppose, there is evidently no intention of deposing the Emperor for the present at all events.

Friday, Feb. 2.

The latest news is that the Empress Dowager has issued an edict cancelling her previous order with reference to the celebration of the Sovereign's thirtieth birthday. This change of programme is avowedly based on the wish of the Emperor himself. His Majesty, if indeed he has been consulted, probably objects to be made the central figure in a farce which could only increase his humiliation. But was he consulted? It looks to us as though the whole affair—the issue of the original order and its subsequent revocation—was a game of bluff. The order would have created an impression that no intention exists of dethroning the Emperor; the edict recalling it would have suggested that His Majesty has still a voice in the councils of the State. Meanwhile it is very evident that many Japanese publicists regard the dethronement of the Emperor as imminent. The *Jiji Shimpo*, for example, says that nothing restrained the Empress Dowager from taking that extreme step except her apprehension of the effect upon foreign public opinion. We may add that the *Jiji* takes this incident as a test for preaching one of its favourite and forcible sermons against the philosophy of Confucius with its bases of loyalty and filial piety. Assuredly the Chinese nation, in spite of its extraordinary fidelity to Confucianism during the past 2,000 years, has not given much evidence of loyalty towards its Sovereigns. Many of them have closed their reigns in the presence of intrigue if not of actual rebellion. Such is the *Jiji's* view, but we think that it would have more cogency were its illustrations furnished under different circumstances. Confucius set the people above everything, and by the people there can be no doubt that he meant the Chinese people, not a Mongol people, not a Manchu people. The present dynasty is foreign to China, and the methods pursued by those that surround the Throne can scarcely be quoted as evidence of the working of Confucianism. Moreover, it seems to us that our contemporary is unjust to Li Hung-chang. It alleges that when Li came to Shimonoseki to negotiate for peace, and found Japan, as he thought, in an implacable mood, the first telegram despatched by him was to his own family, directing that his affairs in Tientsin should be wound up, and all preparations made for retiring to his native province. The *Jiji*, as we understand, adduces that as a proof that Li thought of his family first and of his country second. A hard saying, surely. Must we not remember that Li had to adapt himself to a system which imposes upon its ministers responsibilities without parallel elsewhere? Li knew that to fail in his negotiations meant ruin for himself and his family, however unreasonable Japan might have proved. Was it not natural that he should take steps to protect himself against such an injustice? Let us add, however, that with regard to the potency of Confucianism to educate a spirit of true patriotism, or true loyalty, or true filial piety, we are entirely at one with the *Jiji Shimpo*.

The *Asahi* publishes a telegram to the effect that an order has been issued in Peking and Tientsin forbidding the despatch of Chinese telegrams throughout the empire with reference to recent occurrences. One can not be surprised at such a precaution in view of the wild rumours that are circulated. Very likely Her Majesty the Empress Dowager begins to feel a certain measure of resentment against that troublesome innovation of Western science, the telegraph.

THE JAPANESE SETTLEMENTS IN CHINA.

It is complained with apparent justice that Japanese enterprise in China is deterred by the high prices officially fixed for lands in the new Settlements. At Suchow the price is 160 *yen* per *se* (30 *tsubo*) with a ground rent of 4,000 cash per *se*, and liability to have the rates changed after 10 years. At Hangchow there are three figures; 170 *yen*, 165 *yen*, and 160 *yen* per *se*, according to the quality of the lot. There is also a land tax, the same as that paid by the Chinese, and there is a future liability to pay 34,400 *yen* an account of roads along the banks of the Canal. At Shashi the prices are not determined, and the uncertainty is said to be more deterrent than even a high price would be. As to the contention that the fault lies mainly with the want of enterprise of Japanese merchants, their defenders point to the Korean settlements of Jinsen, Mokpo, and Masampo, where the lands, put up to public auction, were nearly all taken up by Japanese bidders. Another augument advanced is that the rapid acquisition of land in Yokohama was originally contrived by offering the best sites gratis to foreign merchants; but persons familiar with the history of the Settlement will recognise the error of that analogy. The Government gave the Yokohama land—or a great part of it—gratis to foreigners willing to occupy it, not because there was any lack of foreign enterprise to acquire lands and build houses, but because the Japanese Government desired, for political reasons, to have the Settlement transferred from Kanagawa to Yokohama, and the foreign community, as well as the foreign Representatives, were unwilling to make the change. The bait of free lots ultimately tempted them. If the same advantage could be offered in the new Chinese Settlements, it would doubtless prove a great incentive, but that is rather too much to expect. We agree with the *Asahi*, however, that the Japanese Government might reasonably approach China with representations that, in view of the experience thus far gained, the new settlements are practically a farce, and that something should be done to change that state of affairs.

THE "NIPPON" ON THE WAR.

The *Nippon* has collected and published a number of extracts from European newspapers, which go to prove that the South African Republics are receiving substantial, though non-official, assistance from nearly all the countries of Continental Europe, notably France, Russia and Germany. Our Tokyo contemporary comes to the conclusion that Great Britain is fighting, not merely the Transvaal and the Orange Free State, but the Transvaal and the Orange Free State reinforced by all the leading Powers of Europe, and that unless England makes up her mind to seize Delagoa Bay, and effectually check the inflow of men and material of war into South Africa, the *Evening Post's* comment will be verified, "God only knows when the war will end." It certainly does appear that Portugal is wholly incompetent to enforce her rights as a neutral. She may be acting with entire good faith, but if it be true that a body of Transvaalers have crossed her territory for the purpose of attacking Rhodesia, there can no longer be any question that her neutrality is a myth. The British Government has of course given this subject the fullest consideration, and has been guided by reasons of sound policy in the very conservative attitude hitherto maintained towards Portugal. Outsiders can not conjecture what might be involved in a strict enforcement of Great Britain's belligerent rights against Portugal's perfunctoriness, but outsiders can see very plainly what serious embarrassment is caused by leaving *Delagoa open* to the free entry of supplies for the use of the Transvaal. The result of the recent complication with Germany about the *Bundesrath* affair seems to be a distinct recognition of the principle that neutral vessels bound for a neutral port are not liable to seizure by belligerents upon the high seas. If that doctrine be practically admitted, then it follows that Lorenzo Marquez may remain an open gate for the uses of the Transvaalers; a back door through which Continental Europe can clasp hands with England's enemies. But is Lorenzo Marquez a neutral port? Its authorities certainly appear to have ceased to discharge the obligations devolving upon a neutral.

THE OWARI DISASTER.

It transpires that the house where the unfortunate factory girls of Komyo-mura were sleeping at the time of the conflagration was securely locked on the outside to prevent the ingress of Don Juans from the neighbouring village. There were 49 girls in the building—not 37, as originally stated—and 31 of them lost their lives. Of course the shocking incident has stirred public emotion, and there is loud talk of the necessity of at once inaugurating a proper system of factory control and inspection. The Government had already recognised the expediency, for the Budget of next year contains an appropriation of 7,320 *yen* on account of expenses of investigation. But the incident is a strange commentary on the morals of the lower classes. Things used to be bad enough in British factories, but we do not think that they were ever so bad as to suggest the imprisonment of girls in order o guard their virtue. That is a revival of the old Grecian mythology.

FOREIGNERS IN JAPANESE EMPLOY.

The foreigners engaged at the Imperial Iron Foundry are to be in the capacity of advisers: that is to say, their views are to be consulted, but the adoption or rejection of their advice will be entirely at the option of their employers, and no responsibility will devolve upon the foreigner. Count Inouye, in an interview with a newspaper (*Chuo Shimbun*) reporter, has, with his usual insight, denounced this principle. So have we in these columns, over and over again. The sense of responsibility is an essential incentive to good work. Without it a man is denied all share in the pride of success, and his chief aim becomes to avoid being saddled with failure. We often wonder whether the Japanese fully recognise the latter point; whether they understand the effect it must have upon their own reputation. In an experience extending over nearly thirty-three years we have never heard a foreign *employé* of the Japanese express unreserved approval of their methods. Some, too loyal to be censorious, have been reticent; some have been radically condemnatory; the rest have been severely critical. In short, the volume of their testimony—and it is testimony which has great weight—has been emphatically injurious to Japan. The reason is patent. Excluded by his employer from the credit of success, it has been the foreigner's object to exclude himself from the discredit of failure. His advice having been often rejected, doubtless for good reasons of which, however, he is kept in ignorance, he naturally concludes that things might have been much better had it been adopted, and he is at all events careful to let the public know that the results they witness are not of his making and do not reach his standard. We do not pretend, however, to attach prime importance to that side of the question. The other aspect seems far more vital, namely, that unless a man is made responsible for his views and is required to put them into successful practice, he can never be a useful servant. There used to be an excellent reason for not entrusting to the foreigner executive functions: he was not subject to Japanese jurisdiction, and could not be made amenable to the regulations by which Japanese executive officers were governed. But that reason has now disappeared, and we hope that for Japan sake Count Inouye's shrewd advice will be adopted.

FOREIGNERS AND MINING ENTERPRISE IN JAPAN

A Special Committee of the House of Representatives is said to have unanimously decided that the 3rd Article of the amended Mining Regulations should be changed so as to read that mining enterprise shall be lawful for Japanese subjects or for companies organized in accordance with Japanese law. The effect of this would be that, although individual foreigners could not engage in mining operations, companies formed by foreigners in due accord with the laws of Japan would have the right to do so. That would bring the mining question into conformity with the land question, for, whereas an individual foreigner can not become a land-owner, a juridical person—namely, an association of two or more individuals—organized by foreigners is entitled to enjoy that privilege. It is extremely improbable that any one foreigner would desire to engage in mining enterprises: such work would naturally be undertaken by a company. Hence the amendment proposed by the Committee of the House of Representatives is of a very practical and important character. It may be presumed that the House will adopt its committee's recommendation, but there appears to be some doubt as to the attitude of the House of Peers, where an influential section of Conservatives is said to be opposed to concessions in the matter of land-owning or mining enterprise.

GERMANY'S NAVY.

No one can be surprised that the Emperor of Germany and his Ministers should desire to strengthen the navy. A comparative table of the first-class battleships of all the great Powers stands thus:—

England	45
France...	17
Russia...	15
Italy	12
United States...	12
Germany	10
Japan	6

Germany ought certainly to occupy a different place on the list. But, while we sympathise with the aspiration, we read with no little surprise the line of argument adopted by Count Posadowsky, Imperial Secretary of State for the Interior, in his recent speech advocating an increase. He said that England had denounced her treaty with Germany—the treaty rendering it impossible for preferential duties to be imposed in the British colonies against the German Empire—, and it was therefore "necessary to take account of the possibility that attempts would be made to exclude German goods from the British Colonial Empire." The Count added that America also, in spite of the favourable treatment she received from Germany in the matter of tariffs, had adopted a policy of increased duties particularly burdensome for German industry. We have not the smallest sympathy with the obnoxious and economically false policy of discriminatory duties, but neither can we sympathise with the notion that fleets should be used to correct economical blunders.

BALL IN TOKYO.

A most delightful Ball was given on the 25th instant by His Excellency the Minister of Foreign Affairs and Viscountess Aoki af their official residence within the enclosure of the Foreign Office. Dancing commenced at half-past nine and was kept up with the greatest spirit until nearly two o'clock to the music of the Imperial Household Band. These brilliant social events have been few and far between in Tokyo this winter, so that Thursday's dance was keenly appreciated. The following was the programme:—

PROGRAMME.

1.—Waltz.	7.—Pas des Patineurs.
2.—Lancers.	8.—Waltz.
3.—Polka.	9.—Pas de Quatre.
4.—Two Steps.	10.—Waltz.
5.—Lancers.	11.—Galop.
6.—Waltz.	
Supper.	Extra.—Waltz.

THE LAW OF ELECTION.

The Special Committee charged with the duty of examining and reporting on the Bill amending the Law of Election has completed its labours, and will present its report on Monday next (29th instant). It has decided to eliminate the chief reform proposed by the Government, namely, the increased representation of the urban population. The Committee places the urban and the rural populations in the same rank, and gives to each one member for every hundred thousand units. The result would be to increase the number of representatives from 300 to 478—an additional expense of 356,000 *yen* annually on account of salaries alone, without any visible compensatory example. Speaking frankly, we fail to see any reason for a mere increase of the members of the Lower House. To add 59 per cent. to their number would be merely to augment the dimensions of a body already constituting a sufficiently bulky obstacle in the path of progress. What would the country get by way of equivalent for an additional outlay of nearly half a million *yen*—for the total would reach the neighbourhood of that figure when travelling expenses were added? As to the property qualification, the Committee proposes 5 *yen* of annual taxation, land tax or direct taxes—candidates for election to be exempt—and fixes the age of electors at 20 and that of candidates at 30. But in the manner of voting there is again a radical departure from the Government's programme, though it will doubtless be called a compromise. The latter contemplated unsigned ballots and uninominal votes; the Committee recommends signed ballots and concedes the question of one vote for one nominee. The point as to unsigned ballots is of the utmost importance, and the Committee's reluctance to abolish a system which virtually deprives the voters of freedom is in itself a sufficient reason for rejecting its proposals *in toto*. By pressing such a change, the Committee practically announces that its purpose is to employ the House of Representatives as a large party machine, not as an earnest national legislature. We fail to see why the country should be asked to put up a big sum for the sake of saddling itself with such a monstrous abuse.

DEATH OF MR. W. GORDON.

We regret to record the sudden death of Mr. W. Gordon, of the firm of Gordon and Co., which occurred early on Wednesday morning at Miyanoshita. On Saturday, when Mr. Gordon started on a country trip, he was apparently in good health and spirits. The cause of death was the breaking of an aneurism on the heart. Mr. Gordon was a Scotsman, born at Keith, Banffshire, in 1850. He had lived in Shanghai for some time before he came to Japan, and was some years in the employ of Reynell and Co., of Yokohama, and in 1892 took over their business. He has been a director of various limited liability companies. Mr. Gordon had returned quite recently from a trip to Scotland. He will have many mourners in this community, for he was a man of the highest character and the most lovable disposition.

NOTE ISSUES.

There is again talk of the Bank of Japan raising its rate of interest in consideration of the fact that the legal limit of note issues has been exceeded by nine million *yen*. All these manipulations of interest begin to be a little farcical. Does any real importance attach to an over-issue of nine hundred thousand pounds sterling in a nation of 40 million inhabitants, when the clearing-house figures for Tokyo alone amount to sixty-five millions sterling annually? The volume of notes in circulation at the date of the latest return was only 239 million *yen*, or less than 6 *yen* per head of population, on the average. Truly an additional issue of a few million *yen* should not be regarded as a reason for disturbing the business world by suddenly meddling with the rates of interest and discount. We suspect that this financial nervousness is accentuated, if not produced, by the writings of publicists who seem to think that the addition of twenty or thirty millions to the volume of the currency would be responsible for a marked appreciation of commodities. The doctrine that the prices of commodities vary directly as the quantity of currency available for their purchase has a certain measure of truth, but there is a tendency among some writers in this country to apply it extravagantly, we think.

KOREA.

It is stated that the Korean Government has nearly concluded its negotiations with Russia for a loan of from five to seven million *yen*. We do not hear anything about the security offered or the purposes to which the money is to be applied. But if there be any truth in the story—which we are disposed to doubt—one condition of the loan would probably be the placing of Korean finances under Russian management. The little Empire is in a bad way, apparently. Its expenditures far exceed its revenue, and though the latter could certainly be increased a hundred-fold under good management, it is not at all probable that, failing such management, any one will be found to lend a large sum of money. The long purse wins the day in the end. If Russia is really willing to put her hand into her capacious pocket for Korea's convenience, her influence in that country will receive an immense impetus.

A rumour is given currency by the *Kokumin* to the effect that the Korean Government, through Mr. McLeavy Brown, has imposed its veto upon the passage of the Söul-Fusan Railway through Chollado. It may be remembered that the originally proposed route for the line was not to pass through that district, but a change was subsequently made in consideration of the advantages that would accrue in connexion with traffic. Of course it is alleged that "a certain Power"—the perpetually suspected Russia—has "squared" Mr. Brown in this matter, but the *Kokumin* justly remarks that Mr. Brown has always made the furtherance of Korea's interests his prime object, and that, at any rate, he is not the kind of man to be approachable in such a manner by anyone. Besides, the reason alleged for the objection is unaccountable. Korea is supposed to object that a line from Söul to Fusan *viâ* Chollado would impair the prospects of the line projected by herself from Söul to Mokpo. But inasmuch as the Söul-Mokpo road's best chance of success is that it should be joined to the Söul-Fusan line, and inasmuch as the carrying of the latter through Chollado would facilitate the former, there is an obvious want of coherency in the logic of the alleged veto. Probably the whole tale is a *canard*.

"SOCIAL CHESS."

Mr. James Mason has published a book under the above title. It is a small volume, but it deserves to rank among the most interesting works hitherto devoted to this entrancing game. The preface, which is very brightly written, discusses, *inter alia*, the often mooted question whether a faculty for playing chess necessarily, or even probably, connotes the possession of abilities of another class. Mr. Mason concludes that it does not, and we can not but think that he judges rightly. Morphy's case is very much in point. He abandoned chess—public chess—at 22, in order to devote himself to "the serious business of life," as he called it, namely, the law, which he had originally intended to make his profession. But as a lawyer he was a complete failure. His appearance before the world as a chess-player lasted for two years only, and in that brief interval he acquired a reputation which will never die so long as the game is remembered. Had he recognised the great gift bestowed on him by heaven, he would have continued to cultivate it, sacrificing everything else, and he would probably have not only climbed to a pinnacle which no other is ever likely to reach, but also greatly enriched the chess literature of the world. What actually happened was that he died a thoroughly unsuccessful lawyer. In truth everything goes to show that the faculty for chess is altogether special. Many men can become mediocre players; able to hold their own with credit under ordinary circumstances. But between a man of that calibre and a master there is what the Japanese call a difference of "clouds and mud." The chatty, interesting preface would alone suffice to justify the title of this capital book, but what Mr. Mason means by "social chess" is chess of the short and sweet description; brilliant games, generally ended within 20 moves and scarcely ever extending to 30. Of these Mr. Mason has collected 131. Adding full explanations and diagrams, he embodies them in a small volume which constitutes the most interesting chess treatise we have ever had the pleasure of examining.

THE PEST.

Two fresh cases of pest are reported, one from a hamlet (Nano-mura) in the province of Settsu, the other from a cotton factory at Koyama in Kozu. The former proved rapidly fatal, but the result of the latter is not reported. It is stated that the losses incurred by Osaka, directly and indirectly, in connexion with the Pest, from the 12th of December, when it first made its appearance there, to the 30th of January, are estimated at 1½ million *yen*.

MINING PRIVILEGES.

A good deal of attention is naturally attracted by the action of the Special Committee of the House of Representatives, which was entrusted with the duty of examining and reporting on the Government's Bill for amending the Mining Regulations. The Bill was submitted, in the first place, to the House of Peers. In its original form it did not contain any provision of a striking character, its object being merely to extend the scope of the Regulations in the sense of including certain minerals not mentioned in the existing text. The Upper House passed it in that form. But the Special Committee of the Lower added to the third Article a radically new clause, namely, that not only Japanese subjects, but all juridical persons duly organized under the provisions of Japanese law, shall be eligible to carry on mining operations. Such a change would admit all partnerships and companies of foreigners in Japan. It is intended in that sense by the Committee and it is viewed in that sense by the public. The amended Bill was placed on the Order of the Day for the 31st January, and at this moment of writing we do not know how it fared. But we notice that, on the morning of the 31st, the *Jiji Shimpo* published a most liberal and opportune article, urging that the House should proceed a step further, and extend the privilege to individuals as well as to juridical persons. The *Jiji* attacks the whole question of land-owning and mining privileges, and casts ridicule upon the apprehensions which deter a great nation like the Japanese from granting to foreigners rights the enjoyment of which must benefit the grantor a great deal more than the grantee. Our contemporary traverses the whole ground in a most able and thorough manner, and we can not doubt that such unequivocal writing appearing in the columns of so influential a journal, must produce a large effect. It has always been our opinion that Japan might be trusted to go ahead without any further application of foreign spurs. Five years ago, when there was so much talk about the hardship of local foreign journalists having to submit to the then objectionable press laws of Japan, we did not hesitate to predict that before Consular Jurisdiction was abolished, all obnoxious clauses would have been removed from the Press Law by natural operation of the forces of progress which were steadily working in every sphere of the national life. Events have justified our confidence, and we are quite assured that they will equally justify our forecast of 1898 as to the ultimate disappearance of all restrictions upon mining and land-owning privileges.

REPRESENTATION of the MANUFACTURING & MERCANTILE CLASSES.

The urban population of Japan aggregates 9,620,000 out of a total of 42 millions, the ratio being thus as 1 to 4 approximately. Marquis Ito adopted that ratio in framing the first Bill for the amendment of the Law of Election. He proposed that the total membership of the Lower House should be raised to 473, of whom 113 were to be elected by the urban districts. Marquis Yamagata's Bill, submitted to the Diet this session, is less radical. It increases the membership to 426 and gives 90 seats to manufacturing and mercantile classses. But the House has declined even that measure of justice. It has amended the Bill so that the total members shall be only 478, and the urban representatives, 77, or a ratio of over 6 to 1. It would be quite impossible, we imagine, to defend the principle of the House's amendments. In point of fact there ought to be a larger representation for the urban classes than for the rural in proportion to their numbers, but the majority in the Lower House decline to place the city folks even on an equality with the farmers. Of course the explanation is that out of 300 men now sitting in the House, only 17 have been returned by the merchants and manufacturers; the remaining 283 being, for the most part, nominees of the farmers. They are not likely to consent to any radical modification of the uncivilized doctrine that the men who engage in the comparatively rude process of obtaining products from the soil are worthy of a higher place in the national polity than the men who employ the resources of science and invention to render those products fit for human uses.

OWNERSHIPS OF REAL ESTATE BY FOREIGNERS IN FORMOSA

It has been decided, and an ordinance has been issued in that sense, that ownership of real estate by foreigners in Formosa shall not be permitted, but that this veto does not apply to the case of persons who have acquired property prior to the promulgation of the Ordinance. The upshot is that existing rights are to be recognised and protected, but that similar rights may not be acquired hereafter. Another clause of the same Ordinance limits the period of ordinary leases to 20 years, and the duration of other kinds of land tenure, independently of ownership, to 100 years. It will be understood, of course, that the Civil Code is not operative in Formosa.

A MILITARY FRACAS.

There has been a fracas of some magnitude between soldiers in Tainan. A few of them were out on the "spree" on the second of January, when some dispute with reference to a salute led to blows, an infantry soldier coming off second best in an encounter with an engineer. Next evening the infantry men assembled a squadron, and "went for" every engineer that appeared upon the scene. A general rough-and-tumble fight ensued. Many of the men used their side-arms, and nine wounds of more or less gravity were inflicted, Several arrests were made, and, in the end, a sergeant and nine privates were told off for court-martial.

BANK NOTES.

The total note issues of the Bank of Japan on the 30th ultimo were 260 million *yen* and its loans amounted to 110 millions. The excess of note issues over the legal limit was then 18 millions, and expectations were entertained that it would rise to 20 millions before the 2nd instant, the 31st ultimo having been New Year's Day according to the old calendar.

NOTES ON CURRENT EVENTS.

The *Akagi* is said to be missing and the *Takao* has gone in search of her. The *Akagi* is a steel gun-vessel of 622 tons and the *Takao* is a composite coast-service vessel of 1,778 tons.

A very heavy snow fall is reported from Shinano during the night of the 25th. The first train from Takata on the morning of the 26th was derailed and buried in a drift. The news is not a surprise, for the cold in Tokyo and Yokohama on the 25th and 26th was intense. Nothing equally severe had been felt for many years.

The first-class battle-ship *Shikishima* left Plymouth on the 27th instant, and as her voyage out will probably occupy 70 days, she can not reach Japan before the 10th of April, approximately—too late for the naval manœuvres. Some delay seems to have occurred in connexion with her armament. That was to have been expected, for all the gun-makers in England must be working at high pressure now.

There are 24 prentice schools (*Tōtei-gakko*) in Japan; that is to say, schools where pupils are taken for a fixed term of years, on condition that a certain portion of their time is employed industrially for the benefit of the school. There are also 113 technical assistant schools (*Jitsugyo Hoshu-gakko*), where lads learn various useful professions. But among the whole number there are only 24 genuine industrial schools.

H.I.H. Prince Kanin will start for Europe on the 16th instant and proceed to Paris, whence, after viewing the Exhibition, he will continue his journey to England, Belgium, Austria, Germany, Holland, Greece and Russia, returning to Japan *viâ* Siberia. The Prince will be accompanied by Prince Iwakura, Lieut.-Colonel Oshima and Messrs. Matsui and Doki, but Prince Iwakura will return to Japan direct from St. Petersburg, not making the Siberia journey.

General de Gallifet becomes more admirable the longer he remains before the public. Reproached by the Anti-Semite, M. Morinaud, with having bestowed the military medal on an Israelite non-commissioned officer, M. Gallifet said:—"As to the decorated officer, he was proposed for the medal by his chiefs. He is a Jew, it is said. That is all the same to me. Whenever a soldier is judged worthy of the medal by his chiefs I shall decorate him, Jew or Christian."

It is stated that the prospects of gold mining in Hokkaido this year are better than ever, though we can not discover that there is anything more than mere rumour to support the forecast. A party of eight or nine miners are said to have discovered a very rich stratum somewhere near the sources of the Teshiwo River, and things are booming in the north-western corner of the island. As usual the "camp-followers" of the movement—lodging-house keepers, purveyors, and so forth—are reaping a rich harvest. From 400 to 500 new claims have been staked out.

The Loafer element is said to be making itself very prominent among the Japanese in Hawaii. A number of men who have failed to find employment, are organizing

Digitized by Google Original from CORNELL UNIVERSITY

clubs, exacting money from peaceful folks and committing various excesses. The *Nichi Nichi Shimbun*, from which we take these facts, says that the Hawaiian Authorities are perplexed how to deal with the difficulty. Presumably this is a result of permitting free immigration. It justifies the wisdom of the restrictions formerly imposed by the Governments of the Republic and of Japan.

The Japanese residents in Honolulu seem to be suffering on account of the very drastic measure adopted to stamp out the plague. Apparently the sanitary authorities have concluded that the quarter inhabited by the Chinese is the hot-bed of the disease, for they are pulling down all the houses, saturating the ground with kerosene, and setting fire to it. Some Japanese residences have been included. But the chief trouble is that all merchandise from Japan is quarantined, and traders who imported considerable stocks in view of the New Year find themselves greatly embarrassed.

The Tokyo Municipality has finally decided to raise the special taxes in various directions. The gas companies will have to pay 1½ *rin* for every 6-feet length of 4-inch piping; the Electric Light Companies will pay 50 *sen* for every post; the exchanges will pay 3 per cent. of their net profits; the trams will pay a progressive impost beginning with 1 per cent. of their gross earnings, and vehicles will also have to contribute more largely, though their exact rates are not yet announced. The total product of all these taxes is estimated at 120,000 *yen*.

It is alleged that a leader of *soshi* named Kudo Heizaburo, who had been ordered to leave Osaka, under the provisions of the Precautionary Regulations, and had transferred himself to Kyoto, recently submitted to the Otani section of the Higashi Hongwan-ji priests a proposal that, if they would pay him the sum of two thousand *yen*, he would undertake to bring the violent section to their senses. The proposal was refused, whereupon Mr. Kudo began to reduce his terms, and finally came down to 300 *yen*. The Hongwan-ji people, however, not only rejected the offer, but also gave information to the police, and the *soshi* leader has been "moved on" out of Kyoto also.

It is impossible not to endorse the *Jiji Shimpo's* views that there is no chance of giving practical effect to the Bill passed by the House of Representatives and now awaiting discussion by the House of Peers, for preventing the use of tobacco by youths under twenty years of age. Considering that the law permits lads of 16 to frequent haunts of vice, it is surely extravagant to impose a larger restriction in the matter of the much more venial sin of tobacco smoking. How is the thing to be accomplished, too? As long as a boy is under school discipline, he may be restrained, but after he passes the age of sixteen he can easily evade any regulations interfering with his liberty in such matters.

The opposition to the Religious Bill has become quite wearisome. Various details are published by vernacular journals about a split in the ranks of the Higashi Hongwan-ji monks, and discriptions are given of a body called the *Shuku-ro*, which is said to correspond with the Privy Council in the Government's organization, and another body presided over by the Chief Vicar, Mr. Ishikawa, which is compared to the Cabinet. We do not imagine that our readers care to learn these particulars. It will be sufficient to say that the agitation against the Religions Bill continues, though, as its novelty wears off, it loses something of its fire.

It has been already reported that the Douglas S. S. Company has determined to abstain from further competition with the Osaka Shosen Kaisha on the Formosa-Amoy line. Japanese journals now allege that the former company has approached the Osaka folk with a proposal to sell three of its steamers—presumably those employed hitherto upon the Formosan line—, but that the Directors of the Osaka Company are not inclined to consider the proposition unless its rivals consent to dispose of all their vessels, some 6 or 7 in number. That would involve the surrender of the Douglas Company's service to Foochow, which is understood to be a paying business. It is stated that Messrs. Samuel Samuel and Company are acting on behalf of the Douglas Company in this matter.

The Yokohama Chamber of Commerce (Japanese) recently decided that foreigners should be admitted to membership, but rumour says that the Cabinet, after fully considering the question, has come to the conclusion that the provisions of Law No. 81 of 1890 can not be construed in the sense of such a sanction. We are sorry to learn that this new obstacle presents itself to the free intercourse of foreigners and Japanese. As a matter of fact, very few foreigners, even if the restriction were withdrawn, would think of taking an active part in the doings of Japanese Chambers; the proceedings would be a sealed book to them. But a good many might desire to become members, merely for the sake of meeting the Japanese on friendly terms and establishing closer relations with them. That would not be a loss to the Japanese, surely.

The *Kokumin Shimbun* contains a glowing account of experiments conducted at Meiji-mura in Sagami Prefecture on the 24th instant, with an explosive invented by Mr. Ijuin fired by means of the smokeless powder of Mr. Shimose. A 24-cent. gun was used at a range of from 5,000 to 6,000 metres, and the targets were facsimiles of the armour of two men-of-war, one Japanese and one foreign. It is evident that great importance was attached to the experiments, for among those present were Prince Yamashina, Marquis Oyama, Admiral Yamamoto, Minister of Marine, and other distinguished personages. The effect of the explosive projectiles is said to have been extraordinary. So destructive did they prove that the *Kokumin* predicts a revolution in the manufacture of this kind of war material.

Our readers may remember that, in the early part of last year, we announced a resolve on the part of the *To-a Dōbunkwai*—Society of East-Asian Associated Literature—to establish a school in China for the purpose of encouraging progress in that country and improving its relations with Japan. The school was duly organized in Nanking, and has proved so successful that the Society has now decided to invite Major-General Sato to become Director. Major-General Sato—then Colonel Sato—distinguished himself greatly in the war of 1894-5, but, having lost a leg from a very serious wound, he became incapacitated for active service. He has accepted the post now offered to him, and it is justly anticipated that his presence at the school will add materially to its prestige. We presume, however, that such an appointment must be interpreted as indicative of a military element in the school's course.

The successful enterprise of Mr. Kubo Isamu, head of the Futayama Shokai, is the talk of the hour in Tokyo. Some years ago, he obtained a concession to dig sulphur in the island of Itorup. Two partners were associated with him, but the early results were so profitless that the two finally turned their backs on the affair and left Mr. Kubo alone. He toiled on assiduously, and ultimately "struck oil" in good truth, for the sulphur obtained in the island came to be recognised as of the highest quality, while, at the same time, it offered itself in almost inexhaustible quantities. The Sicilian sulphur mines are said to have become expensive to work, but the Itorup mine gives up its stores to the most unsophisticated digger. Mr. Kubo is now a millionaire, and has taken the step which always suggests itself first to a Japanese who has made his fortune—he has purchased a large lot of land in Tokyo and is constructing a landscape garden. What is more important, he has provided himself with an American partner, who is ready to put up a substantial sum of capital.

We hear so much about the exceedingly unfriendly utterances of the French press towards England that it is pleasant to find one of the leading journals, the *Siècle*, writing as follows:—"The British follow the policy of the open door, and do not try to reserve their colonies exclusively for themselves. Therein lies their superiority over other peoples. In the Transvaal affair they are defending international interests, a fact which is known and appreciated by far-seeing men in France and Germany." That seems to be a truth which even the most prejudiced should admit. We have heard level-head, moderate Germans assert that their country's desire to see England defeated in South Africa is quite natural, seeing that the German Colonies in that part of the world could not continue to exist if Great Britain annexed the two Republics. But why? What reason is there for such a forecast? Live and let live is England's motto. We should have thought that her neighbourhood would be more likely to promote the prosperity of German colonies than to deal them a death blow.

It is stated in reliable quarters, says the *N.-C. Daily News*, that H. E. Viceroy Liu K'un-yi refused to receive a single gift from the 1,400 odd people who had presented them in honour of his seventieth birthday anniversary on the 22nd inst. From kinsmen and younger relatives he refused everything of value, confining himself to receiving only such things as fire crackers and long, red "candles of longevity." The only instances in which he received the full lists of presents him were those from the Emperor, Empress Dowager, and Princes of the Imperial clan and other houses, whom to refuse constituted a breach of etiquette on his part. It is estimated that H.E. refused gifts aggregating a value not far under Tls. 150,000.

LAND REGISTRATION QUESTION.

WE do not think there is the slightest probability that the Japanese Government will ask the Diet to legislate in the senseindicated by the Meeting of Land-Renters on the 19th instant. Moreover, inquiries subsequently made convince us that if the Government's position were fully understood, the desire for special legislation would cease to be entertained. Perhaps the easiest way to explain the facts will be to examine the Resolutions adopted at the Meeting in order to ascertain how far they consist with the step that the Government has already taken.

The first Resolution says :—

1. That although the revised treaties provide that the existing Government leases in perpetuity of foreign settlement property shall be confirmed, steps have not yet been taken by the Government to confirm them, and the laws of Japan appear to contemplate their compulsory conversion into a new and different kind of right, which is called "superficies."

Now, according to the Government's view, which we believe that our inquiries have enabled us to understand, it is emphatically denied that "steps have not yet been taken to confirm the perpetual leases." Without referring to the course originally pursued by the Government, if we turn to the Imperial Ordinance of December 27th, we find that the title-deeds of the lands held by foreigners in the Settlements are textually confirmed. All transfers are to be entered *on the* title-deed by the *Chihōchō*, and the latter has to submit a copy of the title-deed to the registrar when requiring him to register a transfer. Our readers are probably aware that in the ordinary routine of Japanese legal procedure, title-deeds are quite unnecessary. In fact, they may be said to have no existence. Their place is taken by a copy of the register. The owner of land need never encumber himself with a title-deed of any kind, the validity of his right being established by the register alone. But the Imperial Ordinance of December 27th recognises title-deeds as essential in the case of the Settlement lands, and thus effectually differentiates their tenure from the ordinary kind of tenure provided by law. In a word, the Ordinance confirms the leases.

In the next place, it is emphatically denied that "the laws of Japan contemplate the compulsory conversion of the leases into a new and different kind of right called 'superficies'". There is not to be any conversion of the leases into any other form of right whatsoever. They will stand exactly as they are now for all time, their form unchanged and their phraseology unaltered.

Let us now take the second Resolution :—

2. That under existing laws the right of perpetual lease is not recognised, and since the coming into operation of the revised treaties the holders of such leases have been unable to sell or mortgage their land except on the terms of allowing the leasehold interest to be registered as a "superficies," which they have been and are unwilling to do.

As to this, it is quite true that the right of perpetual lease is not legally recognised for Japanese subjects, but it is a mistake to allege that the foreign holders of the Settlement leases can not sell their land "except on the terms of allowing the leasehold interest to be registered as a 'superficies.'" Registration—that is to say, the entry of a record in the books of the local office—is not necessary to the validity of a transfer in the case of Settlement lands. The first Article of the Ordinance of December 27th says :—

When a superficies (perpetual lease) created in a foreign settlement is transferred, such transfer can not be set up against a third person unless it is entered in the title deed by the *Chihocho* of the place where such land is situated.

Entry in the title-deed, not registration at the local office, establishes the validity of the transfer. Here again a foreigner's right is distinctly differentiated from that of a Japanese, for whereas the latter acquires validity by registration and by registration only, the former acquires validity by an entry in the deed, and need not be registered, though provision is duly made for its registration.

But, it may be argued, the *Chihōchō*, after making the entry in the title-deed, is required by the Ordinance to register it, and the registrar has to record it as a "superficies," so that, in the upshot, the foreigner's tenure is converted into a "superficies." To this there are three replies. First, the foreigner's right does not undergo any process of conversion whatever. It is not affected by registration. The title-deed determines it, and the title-deed remains unaltered for all time. Secondly, the registration being undertaken by the Japanese Authorities themselves for the convenience of their records, its form does not really concern the foreigner at all. If he were asked to place himself on the same footing as a Japanese landholder, namely, to tear up his title-deed and derive his right solely from the entry in the register, the phraseology of the latter would be of vital importance to him. But he is not asked to do anything of the kind. He preserves his title-deed ; he derives his right from it, and the nature of his tenure is quite independent of the registration. Thirdly, even assuming that the conversion spoken of in the Resolution did take place, it would not be conversion into "superficies." It would be conversion into "superficies" qualified by "perpetual lease" in brackets. The difference is fundamental. A law court, on application by a land-owner, has competence to set a fifty-years' limit to a "superficies" of which the period is not fixed. But a law court has no competence to deal in that manner with a "superficies" qualified by the addition "perpetual lease." Such a title is removed beyond the reach of the interference to which an ordinary "superficies" is subject. It is, in fact, a specially protected title, and that the Government has power to afford this special protection is established by the 45th Article of the Law of Application of the Civil Code, which says :—

With regard to superficiary land rights acquired by foreigners or foreign juridical persons, the provisions of the Civil Code shall be applicable only in cases not specially provided for by treaty or order.

This most important Article deserves attention. Its effect is to remove from the purview of the Civil Code all rights of land tenure acquired by foreigners under the special provisions of treaties or orders. The treaties create a special right of land tenure with in the limits of the former Settlements, and that right have been confirmed by Imperial Ordinance. It is thus absolutely certain that a Court of Law has no competence to apply the provisions of the Civil Code in the sense of abridging or impairing the title of the foreign land-holder. But although even this point is thus capable of satisfactory explanation, the fact must always be borne in mind that the foreign land-holder's right is derived, and will continue to be derived, not from an entry in the register, but from his title deed.

It is unnecessary to refer in detail to the third Resolution, because it is answered by what we have already stated. There has not been any "non-recognition of what foreigners conceive to be a right secured by their title deeds and by treaty," nor is there any valid reason why sales of property should have been stopped.

The fourth Resolution says :—

4. That in order to remedy the evils of the situation, and to restore confidence, it is most desirable that the Imperial Japanese Government shall at once confirm the aforesaid leases in perpetuity and make all necessary provisions for their recognition by law, and for the registration of them under a separate designation.

As a matter of fact, the leases *have* been confirmed in perpetuity, and provision *has* been made for their registration under a separate designation. But the meaning of the Resolution is that the Legislature should be duly invited to pass an enactment providing for the registration of the titles as "perpetual leases." It is certain that the Legislature could never be persuaded to do anything of the kind. Were such a Bill submitted to it, the first question asked would be :—"Is this step necessary? Is it essential that a new kind of nomenclature should be created by law in order to give effect to the treaties?" Obviously the Government Delegates could not answer in the affirmative. They would have to say :—"No. In the due exercise of the powers already vested in us, we have provided a method which, in our opinion, satisfies all the requirements of the case." The next question would be :—"Then why this proposal for special legislation?" and the reply must follow :—"Because the foreign land-holders are not satisfied with the method we devised and established by Imperial Ordinance." Would

Digitized by Google Original from CORNELL UNIVERSITY

any Parliament in the world pass a Bill presented to it on such grounds, or could any Cabinet be reasonably asked to present such a Bill? The Japanese Government has adopted a certain course for giving effect to its treaty engagements, and it is fully persuaded that by pursuing that course it can guarantee the foreign land-holder against the smallest infraction of his rights. Thus the matter finally resolves itself into this:—What foreign land-holders object to is, not the Japanese Government's failure to carry out its treaty engagements, but the manner it has chosen to carry them out. Have they a just right to raise such an objection so long as there is no disturbance of their titles?

There is another point to be considered. If the Diet were invited to legislate in the sense of creating a new legal designation for registering foreign titles in land, would it consent to waive the payment of registration fees? Most assuredly it would not. The Government has contrived to secure exemption for the foreigner by transferring the duty of registration from his shoulders to those of the *Chihocho*, but he must be a very sanguine man indeed who imagines that a majority in the House of Representatives could be persuaded to endorse scuh differentiation in favour of the foreigner while, at the same time, throwing open the registers to him.

Finally it must always be remembered that the perpetuity of the title "superfices" is guaranteed so long as the owner of the land does not attempt to disturb it. The Government is pledged by treaty to confirm the perpetuity of the foreigners' leases. Hence, any doubt cast upon "superficies" in such a context is a doubt cast upon the Government's respect for its treaty engagements. But, in point of fact, the title is not converted into "superficies" nor even into "superficies" with "perpetual lease" in brackets. The title remains as it has always been, and is not in any way effected by registration.

Our readers will perceive that we have not spoken of mortgages. The Imperial Ordinance of December 27th makes no mention of mortgages, and we are not aware what procedure is contemplated with regard to them. That seems to be a serious omission.

We have stated the case as clearly as possible in conformity with the result of our investigations, for we feel that, the more thoroughly it is understood, the more quickly will the present dead-lock be resolved. There is still one phase of the question which should be noticed, though we do not imagine that any one attaches practical importance to it. It is the suspicion that although the 45th Article of the Law of Operation of the Civil Code enables the Government now to remove the foreign titles beyond the reach of the Code, the protection thus given will cease when the treaty terminates 12 years hence. In other words, the Government, though pledged by treaty to recognise the perpetuity of the leases, will be guilty of the chicanery of interpreting "perpetuity" to mean "12 years," and will withdraw the protection of the Ordinance. Well, even granting the possibility of such a wild chimera, would the danger be averted by having the titles registered as "perpetual leases?" If the Government can not be trusted to keep its solemn engagements, can the Diet be trusted? If it be conceivable that the Government should resort to the twelve-year subterfuge, is it not at least equally conceivable that the Diet, at the end of 12 years, might rescind the special law which the land-renters now desire to have passed, and might decline to continue the system of differentiation? Truly this line of objection does not deserve analysis. If the Government's *bona fides* can not be credited, there is little to be hoped from the liberality of the Diet. But we may take it for granted that neither Government nor Diet will ever be guilty of the gross dishonesty of pretending that a promise to confirm a perpetual lease holds good for 12 years only.

A NEW VIEW OF THE BUDDHIST AGITATION.

MR. "Miyake Setsurei" contributes one of his invariably interesting articles to the *Nippon*, taking for theme the agitation now fomented by certain sections of Buddhists against the Government's Religions Bill. The upset of his comments is that the basis of the trouble is political, and for proof of that view he goes back as far as the sixteenth century. In the days of OTA NOBUNAGA and HIDEYOSHI, the *Taiko*, the great Shin sect had only one principal place of worship, the Nishi Hongwan-ji. Upon that temple the *Taiko* bestowed his favour, and thither one of the most beautiful pavilions of the Palace of Pleasure was conveyed after the treason of HIDETSUGU and the consequent demolition of the Palace. But IYEYASU, the Tokugawa chief, removed his patronage from KOSHO, the hierarch of Nishi Hongwan-ji, and gave it to a rival, KOFU, the result being the founding, in a later era, of the splendid temple, Higashi Hongwan-ji. While the Tokugawa held administrative sway, every Japanese subject had to register himself as a Buddhist. Whatever his real convictions might be, the only method of escaping the stigma of Christianity was to have his name borne upon the books of some temple. Buddhism thus acquired factitious importance and flourished correspondingly. The Shin sect obtained immense influence. In the western provinces the sway of the Higashi Hongwan-ji became paramount, but in Nagato, Suwo and parts of Kwanto, Oshiu and Kiushiu, the rival and older temple, Nishi Hongwan-ji, took the lead. Thus the Choshiu men leaned naturally to the latter, and in the days of preparation for the great *Meiji* Restoration, KIDO, SHINAGAWA and other leaders of the movement, did not neglect to seek the alliance of the Nishi Hongwan prelates, in which endeavour they were afterwards successfully assisted by Count INOUYE. At a later date an attempt was made by the Choshiu statesmen—Viscount AOKI is specially mentioned—to secure the support of the Higashi Hongwan-ji also, but, in the meanwhile, the Satsuma men, proverbially slower than the Choshiu to detect opportunities, had awoke to what was going on. They stepped forward, and Marquis OYAMA, when he occupied the position of Chief of the Tokyo Police, established with the Higashi Hongwan-ji relations which have held ever since. Thus, according to Mr. MIYAKE'S analysis, the relative attitudes of the two great temples towards the Religions Bill is not moral but political. A Choshiu Cabinet has introduced the Bill; therefore it has the support of the Nishi Hongwan-ji and provokes the opposition of the Higashi Hongwan-ji. Had the Cabinet been of Satsuma complexion the attitudes of the temples would have been reversed. But the question has very great practical importance also for them, since, if victory rests with the Nishi Hongwan-ji, as seems very probable, it will receive a large accession of strength at the expense of the Higashi Hongwan-ji.

THE DIET.

Saturday, Jan. 27.

The House of Representatives met yesterday and got through a good deal of business, but the greater part of it was entirely without interest for the foreign public. The most noteworthy incident was the introduction of a Representation urging the appointment of a Committee to investigate the whole system of education as now organized. Mr. Shimada Saburo presented the Representation in a speech of great force and eloquence, dwelling upon the disadvantages of the present system—disadvantages which, as they have often been spoken of in these columns, need not be repeated here. Count Kabayama, Minister of State for Education, made a long reply to Mr. Shimada. His Excellency spoke for about an hour, and both the matter of his speech and the manner of its delivery were greatly applauded. He entirely endorsed the spirit of the Representation, but expressed the opinion that no occasion exists at present for the proposed step, the Government having already taken measures which will produce the desired result. The House nevertheless adopted the Representation.

A Bill was passed for amending the provisions of the Civil Code relating to perpetual superficies for agricultural purposes. The Civil Code empowers the Law Courts to set a limit of 50 years to all perpetual superficies. But in many parts of Japan there are lands which have been held from time immemorial under the title *chigo-ken*, and

Digitized by Google Original from CORNELL UNIVERSITY

the right of farming them even has been regarded as secure to their holders for all time. It would be a great hardship now suddenly to enable the owners to resume possession of such lands after 50 years, and the Bill provides that, if resumption takes place, suitable compensation must be given to the holder.

Many other measures were committed to special Committees. We shall refer to them when they come up for discussion.

Tuesday, Jan. 30.

The House of Representatives met yesterday to discuss the Bill for the Amendment of the Election Law. The changes recommended by the Special Committee were adopted as set forth in a recent issue of this journal. It is not at all likely that the Bill will be accepted in this form by the Upper House.

Thursday, Feb. 1.

Both Houses of the Diet met yesterday, but their proceedings were quite uninteresting. The Representatives concluded the discussion of the Bill for amending the Law of Election and voted for its Second Reading in the form given to it by the Special Committee and already described in these columns. Mr. Oishi Masami submitted another series of questions relating to foreign policy. His chief topic on this second occasion was the recent events in China, concerning which he wanted to know what the Government had done and what it intended to do.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

The *Teikoku Bungaku* reviews in despondent tones the history of proposed orthographic reform in this country. According to this authority the Romaji-kai and the Kana-no-kai failed because they were supported only by a small section of the educated public. The Mombushō attempted to enter the field a few years ago. It commenced by asking for an appropriation for the necessary investigation prior to any reform. This was struck out of the Budget by the Diet, and the Education Department has been content to let the subject drop. We are now informed, says the *Teikoku Bungaku*, that the Teikoku Kyōikukai has decided to take the question up and try and bring it to a solution. But it seems that the Society does not recognise the necessity of a preliminary investigation of the state of the language and proposes straightway to elaborate a scheme of reform. This plan is sure to fail, says the *Teikoku Bungaku Zasshi*.

In another article on the study of the Japanese language, the Magazine we have just quoted mourns over the poor results attained by the small bodies that are engaged in linguistic investigations of one kind or another. The Bungei Club has been in existence a year, but has as yet effected nothing worthy of note. The Committees appointed to report on the language exist only in name. Whatever the Waseda Bungaku kai may be doing, nothing is made public. As for the Gengo-gakkai, its weakness is known to everybody. Certain individual scholars, however, have done good work in contributing to a better understanding of the Japanese language. Among these Messrs. Shiratori Kurakichi, Kanazawa Shōzaburō, Otsuka Fumihiko and Hagu Yaichi are worthy of special mention. Among books recently published on the Japanese language Mr. Chamberlain's *Monji no Shirube* and Mr. Hoshino Kōichi's *Gengo Hattatsu Ron* occupy a high rank. The latter is a translation of Dr. Whitney's *Life and Growth of Language*. Mr. Hoshino is also the author of a very instructive book entitled *Koku gaku Shōshi*. Mr. Takayama Rinjirō has also contributed a good deal of information on the subject of language in his *Chuō Kōron*.

* * *

A recent number of the *Sekai-no-Nihon* discusses the commotion in educational circles together with the various policies proposed. That there is general dissatisfaction with the system in vogue is quite certain, says the *Sekai no-Nihon*. One of the causes of the inefficiency of so many school teachers is the fact that the Mombushō refuses to employ other than graduates of Government schools. The private schools are turning out some excellent men, who would gladly enter the ranks of school teachers and who would be a credit to the service. But the Mombushō refuses to make use of such persons. Then the formation of cliques and parties among the officials of the Mombushō is a great evil. There is the University party, the Normal School party, and a party consisting of go-betweens. The wrangling of these parties is no less continuous and petty than that found among political parties. The remedy for these evils proposed by the *Sekai no-Nihon* is that the Minister of Education should make his authority felt in a more thorough manner than he has hitherto done and insist on reform.

* * *

In the *Taiyō* Mr. Takata Sanai writes on the corruption of Japanese politics and says that one of its chief causes is the indifference of the upper classes to politics. Mr. Takata thinks that the marked deterioration in the political world furnishes cause for anxiety. It is true, says Mr. Takata, that both England and America have had their periods of corruption and yet in time of crisis have proved themselves equal to the overcoming of the gravest difficulties. But this was because those two countries have immense resources of strength. Countries like China and Korea, on the other hand, are being ruined by political corruption. Japan flatters herself that she occupies a different platform from these two countries and that she has the recuperative power of a first-class western power. But is not this too optimistic a view to take of the existing situation? One way of improving the character of the present Diet is to impart to the electors a sense of their responsibility. But this will be found to be a very slow process. The upper classes might give an entirely new tone to politics if they would but interest themselves in political affairs. As it is they stand aloof. If the upper classes could have instilled into them the spirit which made the old Roman assert with pride *Civis Romanus Sum*, if they could but feel that their own real interests and those of the State were one and the same and if they could take an active part in political affairs their anti-sordid influence would be felt far and wide.

* * *

In the *Gwaikō Jihō*, Dr. Ariga writes at some length on the language used for diplomacy at Peking. He says that for many years owing to the influence of the late Sir Harry Parkes English was used, but that since the China-Japan war the Russian ambassador has succeeded in replacing it with French. According to Baron Hayashi, whom Dr. Ariga consulted on the subject, some little time ago, there was no special reason for the change beyond the desire of the French and Russian Ministers to re-establish French in the position it had held in former times. Baron Hayashi when questioned expressed himself as in favour of English and says that when he was at Peking English was was better understood than French by the majority of diplomats. There was at that time a great dispute among diplomats as to the language that should be employed, the various ministers taking either the pro-French or pro-English side, but, when the controversy had subsided, the Baron found that in practice French was almost invariably employed, and this custom is still followed.

Dr. Ariga speaks in laudatory terms of an important work that has lately been published entitled "Russia and Asia—A Record and a Study (1558-1899) with maps." (London: Grant Richards). The author is Mr. Alexis Krausse, who is also the writer of a book entitled, "China in Decay." The first work, according to Dr. Ariga, gives a most exhaustive account of the way in which Russia has built up her ever-expanding Eastern Empire. It treats of Persia, India, China, and Siberia. Dr. Ariga says that some of the stratagems by which large pieces of territory were won make the reader angry as he peruses the volume, but that the book is most fascinating throughout.

* * *

The Home Department has brought out a translation of an American work on the municipal system of the chief towns of Europe, which seems to be very thorough. It sells at $1.80 per copy. It treats of drainage, the supply of food, road-making, education, finance, &c. The author we transliterate as Albert. The publisher is Yūhikaku, Hitotsubashi-dōri, Kanda, Tōkyō. The translation is said to be a very good one.

The *Hikaku Kokuhō-gaku* is a posthumous work on Comparative Law by Dr. Sueoka Seichi. It covers 800 pages and sells at 1 *yen* 50 *sen* per copy. Dr. Sueoka studied international law in Germany and Austria, paying special attention to the differences in the Constitutions and in the administration of different nations. His lectures as a University professor were most instructive. These have been collected by his pupils and fellow-professors and published under the above title. Dr. Sueoka's death last year was a great loss to the learned world.

The new edition of Cock's Diary has at length appeared, and unstinted praise is given by reviewers to the care with which the book has been edited. The index and the appendices are most valuable, and the same may be said of the notes. Chinese characters have been supplied in instances where the names would be otherwise obscure and the meaning of dialectical phrases is given. The thanks of the public are due to Mr. Murakami for the pains he has bestowed on the work.

A Japanese Gazetteer is announced as in course of publication under the title of the *Dainihon Chimei Jisho*, by Mr. Yoshida Togō. It is to cover 1,800 pages, to con-

Digitized by Google Original from CORNELL UNIVERSITY

tain the names of 19,000 places, and the subscription price is 7 *yen* 50 *sen*. It will come out in 4 parts, beginning in February and ending in September. The Fusambō, Urajimbō-chō, Kanda, are the publishers.

* * *

Writing on suicide in Japan, the *Jimmin Shimbun* states the following facts. There are between seven and eight thousand cases of suicide in Japan every year. According to statistics published in 1896, Gifu-ken stood first as to number of cases, followed by Kanagawa, Kyōto occupying the third place. At the bottom of the list stood the Loochoo islands. Compared with the main island Kyūshū has few cases of self-destruction. There are more suicides in summer than winter, and more in autumn than spring. There are twice as many men suicides as women. Hanging seems to be the most popular form, both among men and women. Drowning stands next. As regards age, among males the majority of suicides are over 50. With women between 20 and 30 years of age is the worst time. There are a good many cases of girls destroying themselves between the ages of 16 and 20. Cases of self-destruction when the victims are under 16 years of age are very rare.

* * *

In the *Taiyō* (No. 27) Dr. Katō Hiroyuki draws a comparison between Japan and the Transvaal, and contends that Japan has much to be ashamed of when compared to a small state like the Transvaal. The point that Dr. Katō is bent on making is Japan's comparative neglect of education. Dr. Katō's argument is based on the following statistics.

Size of Japan, without Formosa, 382,416 sq Kilometres.
Size of the Transvaal, 308,560 sq. Kilometres.
Population of Japan, 42,708,264.
Population of the Transvaal, 867,941.
Population in proportion to 1 sq. Kilometre Japan, 112, Transvaal, 3.
1. Total annual expenditure. Japan, 234,348,196 *yen*. The Transvaal, 43, 940,660 *yen*.
Expenditure for education. Japan 4,651 937 *yen*. The Transvaal 1 084,070 *yen*.

Compared to the population, says Dr. Katō, this expenditure on education in the Transvaal is remarkable, and accounts for the show the Boers have been able to make in fighting a great power like England. Is it not astonishing that a country whose total population does not amount to half of that of the city of Tokyo should be able to make such a stand? * asks Dr. Katō. Politicians would do well to turn their attention to the subject of education. They will find that there are western countries who spend 9 per cent. of their total expenditure on education, and that there is no country pretending to be called prosperous but what expends 4 per cent. of its income on this object. And here is Japan satisfied with its 2 per cent. It is idle to talk about our being abreast of Europe and America while this state of things exists. Even the Transvaal is ahead of Japan in the matter of education.

* * *

The *Taiyō*, hitherto a fortnightly, has become a monthly. The size of the newly issued magazine is about twice that of the fortnightly number. But the price has not been doubled. It is now 25 *sen* per copy. The first number contains an article by Dr. Katō Hiroyuki traversing the arguments of the Gakusei Kaikoku Doshikai (Society for Reforming the System of Education) writers, whose arguments were given by us in the last Summary when reviewing Mr. Kubota Yuzuru's article in the *Taiyō*. Dr. Katō first opposes the idea of shortening the time of study. The extra time as compared with that required in other countries, says Dr. Katō, is caused by the difficulty of learning Chinese characters and their use. As long as the present system of orthography is retained, it is quite impossible to curtail the time devoted to study, Another reason for making the course extend over a number of years as it now does, given by Dr. Katō, is the absolute necessity of students' acquiring foreign languages before they enter the University. This they find a difficulty in doing even with the time now allowed them, which makes the shortening of the course quite impossible. As regards elementary schools Dr. Katō thinks that there is much truth in the contention of the advocates of reform to the effect that the subjects of study are too numerous and in many cases superfluous. The converting of the present High Schools into Universities and the raising of the present Middle Schools to the status of preparatory schools to the present Imperial Universities, a course strongly advocated by Mr. Kubota and his fellow thinkers, Dr. Katō opposes on various grounds. In the first place the present Middle Schools are not in a position to impart the instruction in foreign languages necessary as a preparation for the Universities. In the second place the creation of a number of second-class Universities in Japan such as exist in Western America, Spain, Portugal, and Greece, is most undesirable. None of the great European powers adopt this course, for evident reasons. The idea that our present Imperial Universities should be utilised for the study of abstract subjects only and that in the newly created Universities only practical subjects should be taught, which has been advocated in many quarters, is based on a radical misconception of the whole relation of principles to practice. In all the great learned institutions of the Western World the various branches of knowledge are taught side by side, because it is recognised that they are minutely related to each other. It is quite impossible for us to create a number of very high-class Universities, and hence we shall do well not to degrade the name by giving to inferior institutions the title of University. It is said that the present High Schools do not fulfil their functions as preparatory institutions to the Universities. If this be so, let them be reorganised so as to compass that object. The only reform that I advocate, concludes Dr. Katō, concerns the elementary and middle schools. A re-arrangement of subjects to be taught in these institutions is desirable. But beyond this I would not go.

* * *

In a speech of Marquis Ito's published in the New Year's number of the *Nichi Nichi Shimbun* the following observations occurr. This is the rat year (Chinese Calendar), the third time in my life-time that this year has come around. I am to-day vividly reminded of 36 years ago when I had first returned from Europe. At that time anti-foreign sentiment was at its height and there was hardly anybody that knew anything about European affairs but the few doctors who had studied Dutch. Among those who advocated the opening of the country not a few did so at the cost of their lives. There was Takano Chōyei, whose *Yume Monogatari* showed a minute knowledge of the state of Western countries. He was first imprisoned and afterwards commanded to commit suicide. I was only 10 years old when this took place. Takano's friend Watanabe Kazan was another pioneer of Western civilisation who suffered on account of his views. Yoshida Shōin and Shimoda both lost their lives by attempting to go to a foreign country. Had I been born a little earlier I could hardly have escaped; as it was I was often in danger. . . . . The progress we have made in 36 years has been astonishing, but when compared with what has been accomplished in the West during that period it seems to me insignificant. Think of the inventions and scientific appliances of which foreigners have been the authors within my lifetime. If we have gone ahead 5 or 10 *ri*, they have travelled quite 100 *ri*.

* * *

The *Shakai Zasshi* publishes some interesting statistics referring to the number of afflicted persons (blind, deaf, and dumb) in Japan, as compared with foreign countries. According to figures published by the Mombushō at the close of the year 1897, there were 2,476 blind boys of a school age, and 1,858 girls; and of deaf children there were 2,731 boys and 1,950 girls, a total of over 9000 children. Of these only 180 have entered asylums. These figures only refer to the young, and no reliable statistics giving the total number of afflicted persons in Japan have been published. The number of blind persons in Tōkyō and Kyōtō asylums is 203 in the former and 170 in the latter. These figures compare badly with those of Western countries. In Germany there are 97 Deaf Asylums, with 6,000 inmates, in America over 100, with 11,000 inmates, in France 70, with 4,000 inmates, in Italy 50, with 2,000 inmates, in England 47, with 3,500 inmates, in Austria 30, with 1,800 inmates, in Russia 12, with 800 inmates. Blind asylums are less numerous than Deaf and Dumb Asylums. The numbers as given by the *Shakai Zasshi* are: England 37, with 3,000 inmates, American 35, with 4,000 inmates, and Germany 28, with 2,000 inmates. By these figures it will be seen how little Japan has done in this line, continues the *Shakai Zasshi*. It is said that in foreign countries extensive plains where the soil is light and dusty are conducive to blindness. Egypt, for instance, is specially hard on the eyes. Also that a large proportion of deaf people are found in lonely mountainous districts. In Western countries the proportion of blind people to the total population is said to be about 9 in 1,000 inhabitants, the proportion of deaf people 8 in 1,000, and the proportion of idiots 22 in 1,000. These proportions would make Japan's blind to be 36,000 and her deaf to be 32,000. . . . An analysis of the cases of blind persons in the Tōkyō asylum made last March shows that children at the age of 3 very frequently become blind. Out of 69 cases examined no less than 12 were traced to venereal disease in parents. Out of 140

* Dr. Katō seems to overlook the fact that the Transvaal is not fighting alone. State education has, we imagine, little to do with the warlike qualities displayed by the Boers (WRITER OF SUMMARY.)

Original from CORNELL UNIVERSITY

cases of dumb persons examined 55 were congenital.

* * *

The *Sekai-no-Nihon* reviews at some length Mr. Fukuzawa's series of articles entitled *Shin Onna-daigaku*, which have now appeared in book form. We give in a brief form the gist of the reviewer's remarks. Mr. Fukuzawa's object in writing so much on the subject of women's position in modern times is to endeavour to create a new standard for women. Hitherto the teaching of Kaibara Ekiken's *Onna Daigaku* has been accepted in all quarters. According to it woman occupies a subordinate position and must on no account assert her independence or claim equality with man. While showing the untenableness of all such theories, Mr. Fukuzawa does not rush to an opposite extreme. He defines woman's position in a remarkably common-sense way. He would not have women attempt to imitate men. They have their own spheres and should keep to them. When discussing the education of girls he insists on the necessity of making a special point of giving them a thorough drilling in household duties. They should have a knowledge of cooking; they should be taught how to make the most of money, how to manage servants, &c. Next to these things he attaches great importance to their being instructed in the laws of health. Among other subjects botany is to be recommended as specially suited to the female mind. He further argues that women should be taught Economy and Law. He thinks that a knowledge of these subjects will tend to develop their general intelligence and save them from becoming the creatures of emotion. In olden times a woman carried a dagger in her girdle to be used as a last resource. In modern times a thoroughly enlightened mind will be her best protection against the dangers to which she is exposed. With the tendency to conceit which is said to be engendered by the kind of education recommended Mr. Fukuzawa deals in his treatise, arguing that this tendency can be rendered harmless by instruction in the kind of demeanour that best becomes a woman. Marriage according to the old methods Mr. Fukuzawa condemns, and the practice of having the father-in-law or mother-in-law living with the married couple should, he thinks, be discontinued. Marriage should be regarded in a serious light, and the duties and responsibilities it involves should be duly considered. Mothers should take pleasure in instructing their children and should know enough to gain their respect. The whole system recommended is based on Western life and thought. This new Gospel for woman preached by a man who has spent his whole life in advocating reform, as one of his last messages to the nation is, says the *Sekai-no-Nihon*, very striking and likely to effect great good.

* * *

A writer in the *Sekai-no-Nihon*, in giving an account of the views of the Jiyutō at the present time, maintains that, while opposing Jingoism of every sort, they have adopted Imperialism to the extent of urging that steps be taken to increase Japan's prestige in foreign countries. Their Imperialism resembles that of Lord Rosebery, Pitt, and Disraeli, says the writer we are quoting. He replies to the charge that the Liberals have changed their principles by pointing out that the party is as zealous as ever in advocating the rights of individuals and the necessity of lessening the burdens of the people as much as possible.

* * *

In the *Kyoiku Jiron* Dr. Inouye Tetsujirō discusses the effects of newspaper reading in Japan on the minds of young people, and comes to the conclusion that many of the benefits derived from school education are entirely nullified by the perusal of contaminating literature such as is dished up day after day by certain newspapers. The contention that the object of certain writers in furnishing indecent details is the reform of society will not hold water, says Dr. Inoue, as it is quite evident to all discerning persons that what they have published has produced no satisfactory result in the conduct of the persons who are living irregular lives. The real motive of this kind of writing is one of the following: A desire to satisfy the unhealthy curiosity of readers, a desire to lessen the influence of political adversaries by holding them up to scorn, or a desire to hide inefficiency of the writers by showing up the weaknesses of other people. Readers do not give the editors credit for worthy motives in the course they have taken; hence their crusade has effected no good. As a proof that certain papers revel in polluting details Dr. Inoue cites the fact that day after day publicity is given to the goings-on at brothels and to incidents that have no interest whatever to anybody but a lover of the indecent. Then in advertisements details are published that never ought to be allowed to appear in a newspaper. While contaminating their sheets with all kinds of indecent matter, in their leading articles the newspapers to which I refer, says Dr. Inoue, complain of the powerlessness of education, of the lack of religious zeal, and of the general moral corruption of the country, for all of which they themselves are largely responsible.

* * *

The 回天實記, *Kaitenjikki*, is an account of the revolution and the restoration of the Imperial power by Count Hijikata. The work is founded on the Count's diary, which covers the period between the third year of Bunkyu (1863) and the first year of *Meiji* (1868). The work now published covers 650 pages and sells at 1 *yen* 50 *sen*; the Tōkyō Tsūshinsha being the publishers. Count Hijikata took a prominent part in many of the events which he describes, and hence his testimony is of special value. It was in the year 1863 that Count Hijikata fled to Chōshū in company with Prince Sanjō. He was in the midst of all the excitement of the five years that preceded the opening of the *Meiji* era and his description of these times is said by the reviewers of the *Kaitenjikki* to be most vivid. At the opening of the volume is a picture of Prince Sanjō and his followers, clad in peasants' rain coats, fleeing from their foes. The *Tetsugaku-han* (汎) *ron* by Mr. Fujii Kenjirō is a translation from a German work, which forms one of the Hakubunkwan's series known as the *Hyakka Zensho*. It covers 306 pages, and is furnished with notes and explanations.

* * *

In connection with the exhibits sent to the Paris Exhibition the *Nichi Nichi Shimbun* publishes some interesting information, obtained from Mr. Hayashi Tadamasa, who has gone to France in charge of the Japanese exhibits. The following is the gist of what Mr. Hayashi has to tell us:—The French Government some time ago sent a special request to the country bearing on the choice of exhibits for the Paris Exhibition. They pointed out that Europe as a whole is only acquainted with comparatively modern Japanese art, that few people have ever seen good specimens of ancient art, that therefore it was recommended that the Japanese Government should make a collection of objects of vertu all over the the country, and that they should be arranged so as to show the historical development of Japanese art. This request having been repeated several times, the Japanese Government did its best to meet the wishes of the French people in the matter. The owners of rare specimens of art, from His Majesty the Emperor downwards, have come forward in a most liberal manner and furnished exhibits. Count Inouye alone has lent articles worth some 130,000 *yen*. All the chief temples have ransacked their treasures in order to make the collection of objects as complete as possible. So great is the responsibility of conveying all the valuable articles to the other side of the world that Mr. Hayashi informs us that should any mishap befall them, he would not consent to remain another day in the world. No such collection of chefs d'œuvre, we are informed, has ever been made before.

THE BRITISH COURT.

AN INTERESTING CEREMONY.

There was a large attendance of the public at Her Britannic Majesty's Court for Japan on Wednesday morning to witness what is probably the last sitting of the Court. Quite a number of ladies were present, and the muster of the bar was imposing. His Honour Judge Wilkinson occupied the Bench, Mr. H. A. C. Bonar, Consul and Assistant Judge, being seated beside him. At the barristers' table were Mr. Harry Parkes Wilkinson, some time Acting Chief Justice of the Supreme Court for China and Japan; Mr. H. C. Litchfield, Mr. J. F. Lowder, Mr. A. B. Walford, Mr. H. C. Brushfield, Mr. C. H. Crosse (Kobe) and Mr. G. H. Scidmore.

At the conclusion of the judgment in the Enslie will case (reported elsewhere in the present issue) Mr. Litchfield, as the senior practitioner and retiring Crown Prosecutor, of the Court addressing his Honour, said:—

May it please Your Honour.—On this occasion, which is probably the last on which you will preside over this Court—or if not actually the last occasion, the last on which so many members of the profession who have practised before you will be able to be present—I ask your Honour's permission to say a few words in farewell. We have to take leave of Her Majesty's Court for Japan. This Court was constituted in 1878 to carry out Her Majesty's jurisdiction in this far-away land. This Court succeeded the one of Consular jurisdiction, an appanage of Her Majesty's Supreme Court for China and Japan. During the past now more than 20 years during which this Court has been constituted many able men have presided upon the Bench and during that time I may say that justice has been constantly rendered. If I may attribute to the word justice the meaning of earnest and conscientious striving to render right to all parties without fear or favour according to rules of law, then I am sure this Court has been the means of administering justice here. The old order of things changeth, giving place to the new, and although the cessation of this Court is a peaceful consequence of a step brought about by the progress of things, yet a great many of us who have worked here for many years of our lives cannot disguise from ourselves that we have to say farewell to it with deep regret. We wish to say to you, sir, the last to preside in this Court, words of good wishes for the future and of thanks for the past. I do not forget that you also presided over the Consular Court years ago. During your term of office I may say, I think, on behalf of my friends that you have in this Court given strict attention to business, and made the practitioners before you feel that this is a place of strict business. When we leave it you also make us feel that we have a friend in yourself. If rumour is right, I hear that some now present will be practising before you in the future in another place. I hope they will find you the same friend to them as those who have practised before you in this Court have done. I have to offer you a kind farewell and good wishes for the future on the part of the English bar and also the practitioners of other nationalities who have been before you.

His Honour, whose voice expressed deep emotion, replied as follows:—

Mr. Litchfield and gentlemen of the Bar,—I thank you most sincerely for the kind words which you have addressed to me, and I thank you in my own name and in that of my predecessors for the terms in which you have referred to their services in this place. No greater aim could any man put before him as a judge than to strive to reach that standard which is the standard of the English Bench. My predecessors—and I am glad to see one of them here to-day—have, I feel, endeavoured to keep up to that highest standard. The new order has come, and you speak of the change with regret. I think few of us can help feeling regret. It is not for us to say whether the time had or had not fully come for such a change, but we have to recognise that such a change had to be made, and I for my own part—and I think I express the feeling of both Bench and Bar—may say that it is our wish that the difficulties connected—and inseparably connected—with such a change shall be overcome and that the system which will replace this—while I believe it is not possible for it to be better than this—will before long approach to the same excellence. In speaking thus I am not speaking of my own individual efforts or of those of particular persons, but of this Court as an institution which I am glad you, gentlemen, have recognised, has kept up its reputation as an institution which has been as it was intended to be, a place for the dispensing of justice between man and man. I thank you on behalf of my colleagues of years gone by for the terms in which you have referred to the Court; I thank you on behalf of my predecessors, and for the good wishes you have expressed towards me I also return you my hearty thanks. We all know that it would have been impossible to administer justice here without the assistance of the Bar. All English judges recognise that, and that assistance which is given in all English Courts has been generously given here. I feel I owe you personally a debt of gratitude for the assistance I have received from you. Whatever sphere of labour you may turn to, or wherever your duties may be exercised, I wish you all success. Gentlemen, I wish you a hearty farewell.

The Clerk of the Court (Mr. C. D. Moss) then pronounced the formula:—"Know all men this Court stands adjourned. God save the Queen!"

The members of the Bar, and some of the ladies and gentlemen present, were afterwards received in the Judge's private room.

GRAMMARS FOR JAPANESE STUDENTS.

Nesfield's Grammar Series, specially adapted for the use of Oriental Pupils Studying English. Book 1. The Parts of Speech. Book 2. Easy Parsing and Analysis. Book 3. Idiom and Grammar for Secondary Schools. Book 4 Idiom, Grammar and Synthesis for High Schools. Manual of English Grammar and Composition, by J. C. NESFIELD, M.A., London, MacMillan and Co.; Yokohama, Kelly and Walsh.

These thoroughly practical and scholarly handbooks may be confidently recommended. They are already, we believe, well-known and appreciated in Japan; the fact that they have been freely pirated is sufficient to show that. Pirated editions, however, are everywhere to be avoided, and in Japan more than anywhere else, for here they abound in misprints and stupidities of all kinds, which offer a serious bar to the student. We ourselves have had experience of the Japanese editions of French and German grammars, and the advice we offer to those who contemplate the purchase of these cheap but nasty editions is emphatically, Don't. The publishers of the Nesfield Series have been induced to extend the publication of their Indian edition of these Grammars to Japan, and at prices which compare very favourably with Japanese reprints. The difference in price between the works as published in London and in Tokyo is trifling, but the difference in quality is infinite. Sample copies will be lent to teachers on application to Messrs. Kelly and Walsh, Yokohama, and special prices will be quoted for quantities.

CLEARING HOUSES.

The following table shows the figures for the Tokyo and Osaka Clearing Houses during the past 10 years:—

	Tokyo. Yen.	Osaka. Yen.
1890	20,206,094	39,247,779
1894	67,595,422	39,122,501
1892	113,576,594	49,610,070
1893	148,018,871	63,600,661
1894	185,597,497	67,543,866
1895	289,102,424	79,654,187
1896	417,425,507	138,409,333
1897	552,890,211	160,967,475
1898	790,247,455	225,980,828
1899	1,090,767,793	334,608,662

The extraordinary development shown in Tokyo's case—a multiplication by 50 in 10 years—must not be taken as a conclusive indication of business growth. The amount has been largely swelled by speculative dealings in bank shares, which do not represent genuine transactions. Some critics are disposed to regard Osaka's progress as more substantial, but to whatever extent Tokyo's figures may be discounted, they are certainly remarkable.

CORRESPONDENCE.

"SATSUMA BIWA."

To the Editor of the "Japan Mail."

Sir,—I should like, if you can allow me the space, to give a few words of explanation to your readers in regard to the use of the *Satsuma Biwa* in our concerts at the Central Tabernacle.

About two years ago, at one of our concerts, there was such an unseemly disturbance on the part of the student portion of the audience, owing to the *Satsuma Biwa*, that in a letter to the *Mail* I afterwards stated that, so long as I remained connected with the Tabernacle and could prevent it, I should not allow the *Satsuma Biwa* in a concert. The confusion into which the audience was thrown and the rudeness displayed even towards other performers on account of the *Satsuma Biwa* man, made me thoroughly disgusted with myself for ever having permitted such a number on the programme. In preparing for the next concert, when the question was raised by some of my Japanese associates of having the *Satsuma Biwa*, I at once most vigorously protested. The conversation which ensued convinced me that the trouble before had been due to the special circumstances connected with the case rather than to anything inherently objectionable in the *Satsuma Biwa* itself,—and chiefly to the extremely late arrival of the performer, which not unnaturally made the students impatient, and was the occasion of their rudeness. After much discussion and very careful inquiries, I yielded and decided to give it one more trial. I secured the most famous player in the capital, Mr. Kokichi Nishi,—a man who is engaged by the Imperial Household and frequently plays before His Majesty the Emperor. The experiment convinced me fully that my first resolution was based upon a misconception, and that it is not without good reason that this kind of music is *so popular in Japan*, especially among young men. I do not speak at all as a specialist in Japanese music, but I am persuaded in my own mind that, though all music may be and has been prostituted to base uses, the *Satsuma Biwa* deserves to take rank with the *Sankyoku, Shingaku, Nagauta, Shakuhachi*, &c., if not from the strictly technical musical standpoint, at least from the point of view of the elevating and inspiring influence exerted upon the hearers, at all events when handled by such a master as Mr. Nishi. Most Japanese music seems to be of that weird type which appeals chiefly to the pensive and melancholy mood, usually associated with the ascetic life; whereas the *Satsuma Biwa* seems rather to minister to those emotions which find expression in active deeds of devotion to country and ruler. The subject of the song is almost invariably related to some scene in Japanese history which throbs with noble heroism. Fostering, therefore, as it does the spirit of patriotism and loyalty, for which, in spite of its extravagances, the Japanese is surpassed by few nations of history, it is not to be wondered at that young men in this country are stirred by the *Satsuma Biwa* as by no other purely Japanese music.

The feelings to which it gives rise, however, being so different from those awakened by other Japanese music, with which it can hardly coalesce, I think it should have a separate place on the programme, either at the beginning or end.

In our concert on the 20th inst., which was one of the best we have ever had in the Tabernacle, we again had Mr. Nishi, and I was more than ever convinced that my antagonism to the *Biwa* was not justified.

Some good people object to the holding of concerts in churches as they are dedicated to the worship of God. My own feeling is that the Church has greatly erred in the past in failing to attend to the social and intellectual sides of human life. Better that men and women, especially the young, should have entertainment provided that will be refining and uplifting than that they should be left to seek it in ways and places that may lead to evil and often are positively injurious to good morals. For this reason I feel it to be my duty to have the Church provide means of aesthetic as well as spiritual culture for the people in the best way that the circumstances will permit.

Thanking you for your kindly mention of the Tabernacle work.

I am, yours sincerely,

H. H. COATES.

Hongo, Tokyo, Jan. 26th, 1900.

A BICYCLE RIDE.

[Written for the "Japan Mail" by R. B. Peery.]

It is Saturday afternoon, and the long, hard week's work is done. Now for the bicycle, and a brisk spin into the country. The crowded, dirty city which hems us in will be left behind, and for the time forgotten, as we refresh ourselves with the sweet breath of the fields and the pure air of the mountains. Instead of the endless rattle of wheels and clatter of clogs that have irritated us all the week, we shall hear the singing of birds, the low murmur of brooks, and the wild roar of the mountain cataract. Three cheers for the country, and for the wheel that brings its joys within our reach!

Feeling like school boys when lessons are done, we hurriedly mount our wheels and speed away. Although we must pass over two miles of road before leaving the city limits, we fly so fast that we will have to keep our eyes open to see one half of the strange sights about us.

It is a holiday, and the people are dressed in gay holiday attire. Look at that little girl in her gorgeous red robes, with her head cleanly shaven, and only a little tuft of hair in the crown remaining. What an opportunity for a man with a kodak! The national flag is waving from an upper window, or from the roof, of every house; and the bright red suns look very pretty in their setting of spotless white. We spin along rapidly under the perfect canopy of flags, and our hearts catch some of the gaiety and mirth overflowing all around us.

The little dogs, not very used to men on wheels, break out after us from every house; and we soon have a whole pack chasing us. Here is one big old mastiff intentionally sent after us by his master, that is braver than the rest. He runs boldly up at the side and makes as though he would take hold of my foot. Slowly a minute, and I'll give him a surprise. There! One good hard kick on the jaw, from whence he knows not, has sent him tumbling over the roadside, and I think he will be more careful about chasing a cyclist next time.

Suddenly we dart out from between the long, dirty rows of houses, and are in the glorious country. How sweet and fresh the air feels? What delicious odours are wafted on the evening zephyrs from fields of ripening grain! And what a fine view before us! To the right and left, as far as the eye can see, stretch fertile plains, bearing all manner of fruits and flowers, and dotted here and there by drowsy-looking little farming villages. There, in the west, ten miles away rises a magnificent range of mountains, making a fine background to the scene. A little village at the foot of those mountains is our destination.

As we fly along over the smooth roads, notice the large rice fields on either side. Some of the rice is ripe for the harvest, and little half-dressed men and women are reaping it with short sickles. Some that was planted earlier has already been reaped, and is piled in heaps over the fields as American farmers pile wheat or oats. Some of the later rice is still green; and the evening winds are chasing each other across it. There to our left is a little brown man, with feet and legs bare, plowing a field for wheat. His small wooden plow is drawn by only one horse, but it turns up the soft soil well.

Here to the right are long rows of small mulberry trees, which furnish food for the silk worms. Between these are rows of large coarse radishes, that form a prominent part of the diet of the people. Now we pass several tall trees by the roadside, laden with nice yellow fruit about the size of apples. They are the delicious Japanese persimmons, and we will have some of them when we reach Kawakami.

See that orange grove just beyond us, filled with large green oranges that will ripen when the persimmons begin to get scarce. Now we spin past a large tea field. The bushes are planted in rows, and are cultivated like corn. They closely resemble the box plant frequently seen on American lawns. Although they are covered with green leaves, the season for gathering them is now past, and these are useless.

Here we run into a small village. Look out that you do not run over some of these little naked children that swarm the streets! As soon as they hear the loud clang of our bells the jump to one side and cry out "Hairy foreigners"! "barbarian"! and at these magic words the whole village at once turns out to see the wonderful sight. The swift motion of our wheels possesses an irresistible attraction for the children, and they run after us as hard as they can, yelling at the top of their voices—just as we sometimes see little dogs chase a passing train. But we soon leave our tormentors behind and are in the country again.

Look carefully as we pass at this strange sight coming in front of us. It is a farmer bringing his produce to market. He has a little two-wheeled cart heavily loaded with vegetables; he himself is between the shafts, his son is in front pulling by a rope, whi'e his wife pushes behind. How harmoniously this family *works* together!

Here comes a strange little conveyance, the *jinrikisha*. It is a small cart, with a folding top like a buggy. This one is occupied by a big fat Japanese who sleeps as he goes along, and whose head swings gracefully from side to side with the motion of the vehicle. A wiry looking little manbetween the shafts furnishes the locom otive power, trotting along easily at a rate of five or six miles an hour. He had great respect for our wheels, and gives us a wide berth.

What splendid roads we have! Level, smooth and straight. The one we are now flying over is slightly elevated, and is lined on both side by rows of tall cedar trees, making a lovely shaded avenue delightful to see.

Now look out for a crash! Here comes a *jinrikisha* man from the mountains, drawing his cart at a rapid rate with a dignified old Japanese snoozing in it. He has evidently never seen a bicycle before, for the sight of ours has turned his head. I cling to my own side of the road, and ring the bell loudly but to no purpose. Staring with wide open eyes, and looking frightened as a wild deer, he runs straight for me. Fortunately I stop my wheel in time to prevent the collision; but the stupid man in his fright has run too near the edge of the road; one wheel goes over the bank, and the graceful little cart is upset, letting its sleepy occupant roll to the foot of the decline in a very undignified way. After helping the coolie get his *jinrikisha* back into the road, and exhorting him to keep to his own side hereafter, we are gone again.

The range of mountains, at first blue and hazy in the distance, gradually draws near; and very soon we whirl into a straggling village at its base. The village itself is not pretty, but the scenery around it is grand. A strong, wild, mountain steam has gradually worn a passage for itself, and it dashes proudly along as though boasting of its victory over the granite hills. Huge boulders lie in its bed, and churn its waters into foam. On either side rise abruptly the beautiful hills, covered with evergreen trees. Over to the left, barely visible above the tops of the pines, is a large Buddhist temple, and its massive bell is just sending forth in solemn tones the vesper peal.

We are especially interested in a large, peculiar arrangement down in the river. It is a fish-trap, erected at a cost of three hundred dollars. It is extends clear across the river, and is made in the shape of a V, with the point down

Digitized by Google Original from CORNELL UNIVERSITY

stream. The water flows to the centre, and there falls over a dam on to a large sieve of bamboo poles. At this season the mountain trout come down the river, pass over this dam, and are left lying on the sieve at the bottom. While we are looking dozens of fine red fellows are carried down; they flounder around bravely for a-while, and are then beaten by the falling water out on to the poles, where they are picked up. What a pity to catch them wholesale in this fashion when they might afford such fine angling!

While we are watching the fish another interesting sight approaches from up the river. A man is bringing down a raft of bamboo poles to be sold in our good city of Saga. He glides gently along in the still waters of the dam until he reaches the obstruction; then opening a little floodgate he lets his raft fall over with the current. Closing the gate in an instant, he is on his raft again, gliding swiftly down stream. How fearlessly he goes over the boulders and down the rapids! His frail raft is beaten and tossed about like a feather, but he never loses control of it. We watch him admiringly until he is lost to sight by tumbling over a cataract; and then we again turn our attention to the fishtrap.

A gray-headed man, one of the old regime, representing a civilisation now rapidly passing away, offers to sell us some trout; and after a little bargaining some of the sparkling beauties are purchassd for a few cents. Wrapping them in evergreen we tie them securely to the handlebars of our wheels, and give them no further attention until we reach home.

The Buddhist temple in Kawakami is a large one and is famous throughout this section. We went across the river to see it, pushing our wheels along with us. It stands on a hill, behind a large pine grove. A flight of stone steps leads up to it by easy stages, and there is a rare old stone wall at the side, covered with pretty climbing ivy. On top of the hill is a large level space, and the temple stands in the centre.

Hundreds of stone idols are ranged in rows under the trees, each with a money-box to receive gifts. Some exceptionally costly idols are in nice little houses, built expressly for them. Behind the temples are many more idols, cut in niches in the sides of the cliff. Although there are hundreds of these stone images, the features of no two of them are alike. The sculptor has laboured hard to give to each his individual expression.

In front of the temple, under a separate roof, hangs the great bronze bell, almost as large as Liberty Bell. A piece of timber as long as a man's body and about as thick is suspended horizontally by two ropes, the end being just a few inches from the bell. When the priests ring the bell, all that it is necessary to do is to pull this timber back and let it swing, and a noise will result like rumbling thunder.

The entrance to the temple is extravagantly ornamented with wood carvings, in the shape of lions, dragons, and other hideous beasts. The aim of Buddhism, in her imagery, seems to be to terrify the superstitious beholder.

The temple doors stand wide open and we can see inside. A rope is suspended from a beam, in front of the entrance, and in this rope a knot in tied just opposite a little flat bell. When worshippers come to pray they jerk this rope a few times, and the knot striking on the bell attracts the attention of the gods Inside the temple is a box to receive the contributions of the worshippers, not one of whom comes without his copper. At the back of the room is the large altar, with its images, candles, and flowers—not unlike a Roman Catholic altar.

While we are looking here an old woman comes to pray. She first strikes the bell to call the attention of the gods; then she casts her copper into the box, and kneels before it. Clapping her hands all the while, she bows her head and mutters a sentence of prayer, repeating it over and over. Afterwards she gets up, goes in to the altar and kneels and prays again very devoutly—frequently looking up at us with curiosity, in the midst of her prayers.

From this temple we had a fine view of the Saga plain, dotted with sleepy little villages and fertile farms. Far away through the mist could be seen the quiet waters of Shimabara bay, at the farther limit of the plain. The evening shadows gradually lengthening remind us that it is time to return; so we descend from the temple, recross the river, and at once begin the homeward journey.

There is always a breeze from the mountains, and as it is now at our backs we fly along at lightning speed—literally borne by the winds. In an incredibly short time we are again in Saga, and at our own door.

While we make our toilets the trout are cooked and supper is spread; and then we sit down to a delicious evening meal, feeling in good humour with ourselves and all the earth.

How much brighter and better the world looks when seen from a bicycle saddle!

UNION CHURCH, YOKOHAMA.

The annual meeting of the Yokohama Union Church was held on Monday evening, at Van Schaick Hall, 178, Bluff. The Rev. E. S. Booth, Hon. Pastor, took the chair, and called on Mr. Isaac Bunting to offer prayer. In the absence of the Secretary, Mr. I. C. B. Cambier-Holland was called to act as Secretary *pro tem.*

THE PASTOR'S REPORT.

Brethren and Sisters and Members of the Congregation of the Union Church in Yokohama in annual meeting assembled.

Dearly Beloved:—I have the pleasure to present to you my report as Hon. Pastor of the Union Church. It has been an esteemed privilege to serve you in this capacity for the year now closing, and, through the kindness of local missionary brethren and brethren from Tokyo, the regular services of the church have been maintained. The fruits of these services, for the most part, remain to be revealed at the last day.

In looking over the Church roll, I find the following facts, which may not be without interest, viz:—

The total number of names on the roll, not including missionary members, is eighty, of whom nineteen are absent from town, six do not attend or have intimated their intention to attend church elsewhere, and fifteen are Chinese, leaving an active membership of sixty-five, including the Chinese, or eighty-one counting the sixteen missionaries.

Five members have been granted letters of dismissal, one of whom was a Chinese brother. Three have removed without letters.

One, Mrs. Louisa H. Pierson, passed into her rest on Nov. 28th, 1899. She was one of the first to be enrolled in the membership of the Union Church, and was a faithful and devoted servant of the Lord Jesus Christ. Her loss is deeply mourned by all who knew her devoted spirit.

Nine members have been received into the church, seven upon profession of their faith in Christ Jesus, of whom four were Chinese. Two have been received by letter.

The removal from the community on account of ill-health of Messrs. Wilkin and Rose with their families has been a sad visitation of providence. We sincerely pray that the church's loss may be their physical and spiritual gain.

Among the changes that have taken place may be noted the following:—

1. Miss M. M. Kuhns was chosen to take the superintendency of the Sunday School, left vacant on the removal from town of Mr. A. J. Wilkin, who had for so many years faithfully and efficiently held this important office. The present condition of the Sunday School shows that no mistake was made in calling Miss Kuhns to that post.

2. The time of the Sunday evening services was changed from eight o'clock to six. The attendance has improved.

3. A few changes have been made in the order of morning service. The difficulty in obtaining and maintaining a full choir is perhaps the chief hindrance to reaping the full benefit of these changes. We can, I trust, hope for better things, in this respect, in the future.

4. A call was sent out early in November to the ladies of the church and congregation, to which a cheerful response was made, and the result was the formation of the "Union Church Ladies' Auxiliary"—an organization which fills a long-felt want in the church, where it has practically a virgin soil in which to expend its efforts. It is already making its presence felt among us through its several sub-committees. I have great pleasure is recommending it to the sympathy and earnest co-öperation of all ladies of the church and community who feel any interest in, and a desire to promote, the cause of Christ among us.

5. Our places of worship have been thoroughly cleaned and done over outside and in, and I feel sure the neat and cheerful aspect which the church has recently assumed will call forth a hearty expression of appreciation from this meeting.

These are some of the changes by way of growth and improvement that have taken place during the past year, which I have thought it worth while to notice in this report.

But if we as a church are to grow and improve there are other changes, and perhaps greater ones, that should be forthcoming in the near future.

The first is to secure a Pastor, whom God would choose for you. He whom you will have presented to you to night would have you make no mistake. He has been for many years a neighbour and fellow worshipper with you. His figure is well known among you. He has not even the advantage of that charm which attaches itself to something new; would not a stranger serve you better? At least, might not a stranger draw the people within hearing shot of his preaching? He whom you will be called upon to choose to-night possesses no novelty. Do not, therefore, make a mistake. If you think novelty is the important quality in the man you would make your pastor, then you must decline to call him.

He is no longer young as he was twenty years ago. If you are looking for a young man, then he is not the one you seek.

He has had no experience in the work of the Pastorate. If you are seeking a man of experience, then he is not the man you seek.

He feels a deep and abiding sense of his unfitness, absolute unworthiness to undertake the duties of the holy office, which has been tendered him by the Consistory and which he has accepted, subject of course, to your approval, simply because he has thought that he must. If any of you have any hesitancy concerning the points above enumerated or any other not enumerated, hesitate no longer, but candidly refuse to place a man in a position where you will afterwards regret to see him.

The only recommendation he can make of himself is that he is a sinner, who is simply trusting day by day that he may be saved by grace through faith in Jesus Christ, and he longs to have others know the joy of this salvation.

But supposing this defect is remedied and a pastor is secured. Another change must be wrought in the body of the church itself. If you will bear with me I would notice in the second place that a new and deeper spiritual life is necessary. There is organization enough, but the organism is inert. It floats with the tide, it gravitates, and all bodies controlled by gravity seek rest on some lower plane. The eldership needs to be more alive to the spiritual necessities of the church. The trustees should have other interests at heart than the mere exchequer. There are "Treasures in Heaven" to be held in trust against the day when they shall be revealed!

Were the individual members of the church more deeply alive, we would hear less of the Union Church being a church for any particular circle, calling, or nationality; where the life of Christ shines forth, there will the body of Christ be discernible.

Third.—The third change to be heartily recommended is a faithful attendance by all the members upon the regular services of the church upon the Lord's day. A heart to attend

Digitized by Google Original from CORNELL UNIVERSITY

and inability to attend are not, I know, incompatible. But usually, where there is a will, there is a way, to prevent either business, or pleasure, or leisure from keeping us away from our Father's House.

Fourth.—As a physical body cannot long survive without breath, so Christ's spiritual body cannot long survive without prayer, and I sincerely hope this meeting will take into consideration the necessity of establishing a week-day church-prayer meeting, and that all the members will try to attend, even at the cost of some inconvenience.

Fifth.—Let me recommend that a year book, or manual, setting forth the characteristic features of the U. C., be prepared for the use of the officers and members of the church. If this recommendation meets your approval a committee might be appointed with power to prepare and publish such a book.

I fear I would over-tax your patience were I to continue this list of necessary and, therefore, possible changes which may be made in our church life. I will, therefore, desist. I wish in concluding this report to express my appreciation and hearty thanks to the Officers of the church for their aid, and considerateness in overlooking my many mistakes and shortcomings. I wish particularly to tender my best thanks to Rev. A. A. Bennett, Chairman of the Prayer-meeting Committee, who with great pains and efficiency has arranged for the Sunday evening services; also to Mr. Southall, the organist; to Mr. Griffin, the choir leader; and Messrs. Bunting and Fitzgerald, the Ushers, for their faithful endeavours in their several places to make the services orderly and helpful.

With these remarks I now tender to you my resignation as Hon. Pastor.

Very respectfully submitted,

EUGENE S. BOOTH,
Hon. Pastor.

Yokohama, January 29, 1900.

The report by the Board of Elders was read by Rev. H. Loomis:—

"As we look over the past year it is very evident that the Union Church has filled a place in this Community, and its need and importance was never more certain than now. Owing to the unsettled state of the pastorate and the removals that have taken place there has not been that growth and power that is desirable in a Community like this. But we have great reason to-night to be thankful for the blessings that we have received. I think that all of us feel that we owe much more than we can express to Rev. Mr. Booth for his faithful and earnest efforts to promote the interests of this organization. No one that has attended our services can fail to realize that our present condition and future prospects are due in a large measure to his untiring efforts. We feel very thankful that we begin the New Year with the prospect of a pastor whom we all know and esteem for his work's sake, and we sincerely believe that God has yet great blessings in store for the Union Church of Yokohama.

In a place like this we cannot ignore the spiritual condition of those around us. As God gives us the wisdom and strength for the work let us go forward trusting in him who is able to use even such unworthy mortals as we are in the building up of a spiritual temple that shall last for ever."

The Treasurer's report was rendered by the Hon. Treasurer, Mr. H. MacArthur, and showed a total of receipts of 3,000 and odd *yen*, and of expenditures 1,100 *yen*, leaving a balance of upwards of *yen* 2,000. Of this, about *yen* 400 was to go to the Church building fund.

The Sunday School Superintendent's report was rendered by Miss M. M. Kuhns.

The report of the Steward for the Poor Fund was rendered by Mr. I. Bunting and the balance handed over to the Treasurer of the Ladies' Auxiliary.

The election of pastor and officers for the year 1900 followed, resulting in the choice of the following persons. For Pastor, the Rev. E. S. Booth. This vote was unanimous, the total number of votes cast being in his favour. For elders—Mr. Isaac Bunting, Revs. H. Loomis, J. H. Ballagh, G. F. Draper, and Mr. J. C. B Cambier-Holland.

For Trustees—Messrs. Geo. Booth, C. F. Sale, L. Pollard, H. MacArthur, Wm. Fisher, and T. Southall.

For Deacons—Messrs. Walter Page and Francis Staniland.

For Deaconesses—Mrs. H. Loomis and Mrs. G. W. Colton.

For S.S. Superintendent—Miss M. M. Kuhns.

For Organist—Mr. T. Southall.

The Ladies' Auxiliary was recognized as a part of the Church's working forces, and the amount on deposit in the Hon. Treasurer's hands, viz: 395 05 *yen*, for church building purposes, was to be turned over to the Treasurer of the Ladies' Auxiliary Church-Building Committee.

The Prayer Meeting Committee, with the Rev. A. A. Bennett as Chairman, was continued, with the name of Mr. F. Staniland added.

A vote of thanks was given to Mr. Southall for his valuable services at the organ in church and at Sabbath evening services. Also to Mr. Clarence Griffin for his valuable services rendered as leader of the choir in the church and in the Sunday School, and as Librarian for the latter.

The meeting was brought to a close by a prayer, and the benediction pronounced by the Pastor Elect, Rev. E. S. Booth.

CHRIST CHURCH.

The annual meeting of members and seatholders of Christ Church was held on Monday evening at No. 14, Bund. Mr. F. Mitchell presided, and there were also present the Rev. E. C. Irwine, Messrs. J. F. Lowder, E. Flint Kilby, E. J. Moss, H. J. Sharp, J. C. Nicholson (Hon. Treasurer) and K. Wilson (Hon. Secretary).

The Chairman, in opening the meeting, made the following remarks:—

The accounts for the year ending 31st December, 1899, are published for the information of seatholders and contributors to the funds of Christ Church.

There is a small debit balance of yen 6.18, but this has since been converted into a credit balance of yen 33 82 by the payment of yen 40 that was outstanding when the accounts were audited.

I am pleased to say that, although it is impossible to provide special seats under existing conditions, the Community show their interest in the maintenance of the Church by the payment of pew rents, the sum collected being slightly in excess of last year.

Another point of interest is that the offertories show a considerable improvement upon 1898, which is an indication that services on the Bluff are better attended than were those in the Settlement.

Although we have been fortunate enough to close the year with a balance in hand, it is due to the proceeds of a Ball and Children's Party last Jan., which produced 1034.34 yen, and the Committee again desire to express their thanks to the ladies who assisted in promoting the entertainment, as well as those who so liberally subscribed to it. We have the promise of a similar entertainment this year and hope it will be equally successful.

The Committee also desire to record their thanks and appreciation of the services rendered during the year by the Hon. Organist, Mr. Karl E. Vincent, under whose able conductorship the evening Choir has become most efficient.

It having been decided at a meeting of seatholders to build a Church on the Bluff, a very suitable site was acquired and the foundation stone of the new building was laid by Mrs. James Walter on the 18th of November, 1899. Work on the edifice is progressing, and the Architect hopes that the Church will be ready for use next December. The Building Committee desire to record their thanks to Mr. Conder, who is giving his services free of charge.

I will ask the Hon. Treasurer, Mr. Nicholson, to give us a statement of the building accounts. The subscription list has been liberally responded to, but as we require more money to complete the edifice and put it in order for public worship, I hope that our friends and supporters will continue to contribute in order that the Church may be opened free of debt.

We regret the temporary absence of Mr. Jas. Walter, the late Chairman, who has taken both an active and substantial interest in the work of the Church and the new Building.

The following statistics have been furnished by the Rev. E. Champneys Irwine, M.A., Incumbent.

During the year 239 services were held by the Incumbent, including 53 Administrations of Holy Communion, with 471 Communicants, 11 Marriages, 17 Baptisms, and 8 Burials.

The last service held in the old building of Christ Church, which was erected in 1862, was the marriage of Miss May Wheeler to Mr. G. C. Murray on April 19, Mr. J. T. Griffin presiding at the organ with his usual ability.

On the 9th of April seven candidates were confirmed by the Rt. Revd. Bishop Awdry in the Public Hall, the offertory, amounting to yen 26.15, being given to the S. P. G. Mission.

At the evening services of March 19 and Oct. 29 some five Cantatas were rendered by the Choir under the able direction of Mr. Karl Vincent. The offertories of yen 28 25 and yen 32.63 respectively were given to the Choir funds.

The offertories of December 10th, amounting to yen 40.12, were handed to the Rev. W. T. Austen, Chaplain of the Missions to Seamen, in aid of the mission, in acknowledgment of his kindness in allowing us the use of the consecrated Chapel of the Mission for Holy Communion, Baptisms, Marriages, &c.

The Offertory for the Poor collected on 10 Sundays mornings came to yen 140.69, which was expended by the Incumbent.

The Offertories at the children's services held on Sunday afternoons, at which Miss Burdett Leach presides at the organ, amounted to yen 65.61, of which yen 45 47 was sent to Dr. Barnardo's Homes for Waifs & Strays, and yen 20 04 was given to the funds for the New Church. The Rev. Mr. Irwine wishes to express his thanks to the Rt. Rev. Bishop McKim for kindly providing for three services for him on Sept. 17, when he was in the country.

The retiring Committee hope that those who are in any way associated with the Church will continue to interest themselves in its maintenance.

	40,851.07

J. C. NICHOLSON, Hon. Treasuter.

Yokohama, January 20 h, 1900.

CHRIST CHURCH REBUILDING FUND: GENERAL BALANCE SHEET ON 20TH JANUARY, 1900.

ASSETS	Yen.
Total Subscriptions promised as per List, of which Yen 21,544.21 has been collected...	23,139.21
Interest to December 31st, 1899	1,631.67
Cash difference on purchase and sale of property...	17,675.19
	42,446.07
Deficiency...	5.508 93
	47.955.00

LIABILITIES.	Yen.
Moving and Rebuilding Parsonage (estimated)	5,500.00
Rent of Temporary Parsonage for 12 months	1,080 00
Paid Dr Mecre for Cancelling lease of Bungalow on new lot...	625 00
Printing and Sundries (estimated) ...	750.00
Building New Church (estimated) ...	40,000.00
	47.955 00

There is thus an actual deficiency of yen 5,500, but the Committee consider that yen 4,500 ought to be estimated as a liability under the heading of "Contingencies"—making a possible deficiency of yen 10,000; it is hoped this will be raised during this and next year.

J. C. NICHOLSON, Hon. Treasurer.

Mr. LOWDER proposed that the accounts be passed.

Mr. FLINT KILBY seconded, and the motion was agreed to.

MUSIC AT THE MORNING SERVICE.

Mr. NICHOLSON called attention to what he considered the unsatisfactory character of the musical arrangements at the morning service, and a long discussion ensued on the question. Finally, on the motion of Mr. FLINT KILBY, seconded by Mr. NICHOLSON, the following motion was passed:—"That the Committee be requested to consider the question of improving the musical portion of the morning service and also as to the remuneration of the organist at both services."

COMMITTEE.

The CHAIRMAN said the next business was the election of the Committee. At present it consisted of Messrs. E. Whittal, E. J. Moss, W. K. Wilson, K. Wilson, James Walter, H. J Sharp, and F. W. Mitchell. Messrs. Whittal, James Walter, and W. K. Wilson were not at present in Yokohama.

Some discussion took place as to the advisability of re-electing the absent members.

Mr. LOWDER proposed that the present committee be re-elected, with power to add to their number and fill vacancies by temporary absence.

This was lost, and eventually the election of the following was agreed upon:—Messrs. F. W. Mitchell, K. Wilson, James Walter, H. J. Sharp, Flint Kilby, E. J. Moss, and J. Dodds.

It was understood that the other absentees, on their return, would be invited to rejoin the Committee.

SEATS.

Mr. FLINT KILBY brought forward a suggestion which he wished the Committee would consider and bring before the next meeting of subscribers. It had been the practice for banks and firms to take seats which were not always used. The Church was greatly indebted for this liberality, but it struck him that if a canvass were made of British and American firms for subscriptions instead they would increase the income and be able to let seats at a smaller rent than 20 *yen*. He should like to see a great many seats alloted as subscribers' seats, not reserved to any particular person but for subscribers in general. Since the services had been on the Bluff a great many more people attended, especially at the evening service.

The suggestion was considered an admirable one, and it was decided to give it consideration.

A vote of thanks to Mr. K. Wilson for his services as Hon. Secretary concluded the meeting.

YOKOHAMA ROWING CLUB.

The annual meeting of the Yokohama Amateur Rowing Club was held on Tuesday evening. Mr. H. C. Litchfield presided over a fairly large attendance of members.

The CHAIRMAN read the annual report and accounts as follows:—

REPORT.

The Committee beg to present to the Members the 28th Annual Report of the Club.

ACCOUNTS.—These show a balance in favour of the Club of yen 84.28, including the Profit on the Bar, which amounts to yen 507.60.

ROWING.—The entries and racing at the Spring and Autumn Regattas show that there has been no falling off in the interest in this sport. In the Spring representatives journeyed to Kobe to take part in the Annual Interport Regatta, but were defeated in 3 out of the 4 events, viz., fours, pairs, and double sculls—the remaining event, the single sculls, falling to Yokohama; in justice, however, to the K.R. & A.C. it should be stated that their representative, Mr. P. Sorhagen, had stroked their fours and pair to victory before going out in this race.

SWIMMING AND AQUATIC SPORTS.—The entries for these were not quite as numerous as usual, but were well contested. On 12th Aug., we sent representatives to Tokyo to compete in the Sumidagawa, against the Suisu ryu Otaha Dai Nippon Yuriji, the result being that the 100 yards and ¼ mile were won by our opponents and the ½ mile by the Y.A.R.C.

BOATS.—These are all in good order; the only addition having been the purchase of a single scull with 2 pairs of sculls from Mr. A. J. S. Lefroy, paid yen 150. This boat being an exceptionally good one, is intended for the use of advanced scullers only. It might be advisable for the new Committee, should funds permit, to obtain some new double sculls of rather more racing build than our present ones. Some new oars and sculls should be ordered from home to keep our stock up.

BATHING BARGE AND LANDING STAGE.—With regard to the Barge the Committee acted upon Mr. Clausen's recommendation in having her fitted with athwartship beams to work on rollers to facilitate the annual beaching and launching—costing yen 225.—With the Landing Stage it was found necessary to expend yen 175, in renewing the outer planking and iron fastenings of the pontoons.

By the kind permission of Dr. Hoskyn, the Barge has been hauled up for the winter on the beach under the British Naval Hospital, under the supervision of Mr. Clausen.

PROPERTY AND HOUSE.—Late in the year the Kencho Authorities approached the Trustees on the subject of the lease of the property—which they wished to be made for a term of 5 years, which has been done and the Club is now assured possession of their property until 30th Nov., 1905. The Authorities (verbally) assured the Trustees that so far as it was possible to speak with any certainty, the Club would have no trouble in renewing their lease for a further period of 5 years, when same expired. The typhoon of 7th Oct. did considerable damage to the main slip, which has been repaired at a cost of Yen 87. The smaller slip was practically all washed away, but the Committee thought it best not to spend any money on replacing it until the early spring.

HOUSE.—A great many necessary improvements have been made during the year. The stone fence was blown down and was replaced by the Custom's Officials by a wooden one. The interior of the upper portion and part of the Verandah were re-painted before the Spring Regatta, the outer stairs were renewed and the flooring of the Band-stand mended. The Roof has been thoroughly overhauled so as to make it as watertight as possible. A canvas awning has been fixed to the upper Verandah. The lighting has been improved and increased, the complicated Jammi burners being discarded. A new bookcase, table and chairs have been acquired for the comfort of the reading members, and four new Magazines permanently added to the literature of the Club, which has been further increased by the purchase of several useful volumes of the Badminton series of works on Sport and by the presentation of some well-known works of fiction by members of the Club. The Sendoes have been rendered more comfortable by the re-matting of their room. A successful Auction of old clothes and papers was held during the year and realised yen 89.81.

GEO. C. ALLCOCK, Hon. Treas.

Compared with the vouchers and found correct.

L. MOTTU, Auditor.

Yokohama, January 18th, 1900.

The reports and accounts were passed, on the motion of the CHAIRMAN, seconded by Mr. ONDERDONK.

The following officers were elected for the ensuing year :—President, Mr. H. C. Litchfield, Captain, Mr. F. J. Hall; Hon. Secretary, Mr. H. E. Hayward; Hon. Treasurer, Mr. H. A. Poole. The following Committee men were also elected : Messrs. A. Rose, W. Goddard, G. C. Allcock, and L. Mottu.

THE YOKOHAMA YACHT CLUB.

The annual meeting of the Yokohama Yacht Club was held on Friday evening at Keil's Building, Mr. G. H. Scidmore presiding over a good attendance.

ALTERATION OF RULES.

A special meeting was first held to consider the adoption of the following alterations in the rules :—

4.—(Substitute for old rule :)

That the Committee shall consist of a Commodore, Vice-Commodore, Hon. Secretary, and two additional members.

That the racing shall be under the control of a Racing Committe consisting of three members who do not belong to the General Committee.

DUTIES OF OFFICERS.

(To be inserted on page VIII.)

1.—It shall be the duty of the Commodore to represent the Club and to preside at the meetings of the Club.

2.—It shall be the duty of the Vice-Commodore to represent the Commodore in his absence.

3.—It shall be the duty of the Secretary to keep a true record of all club matters and to keep a correct account of the Club funds. In case of temporary absence one of the other Committee men shall act in his stead.

4.—These three Officers with two other members shall form the General Committee. They shall control all Club funds and property of the Club and they shall vote all expenditure. They shall decide all questions brought before them by members or by the Racing Committee; they shall appoint an Official Measurer to measure yachts and to calculate their measurements.

5.—The official Measurer shall make a return of the measurements taken to the Secretary, and one of the members of the Racing Committee shall assist the Measurer if required.

6.—It shall be the duty of the Racing Committee to make arrangements for and to take charge of all Races sailed under the direction of the Club; they shall appoint an Officer of the day to start and time the Yachts.

SAILING RULES.

1.—(Substitute for old rule :)

All Races and all Boats sailing therein shall be under the direction of the Racing Committee or of the Officers of the Day appointed by them; all matters connected therewith shall be subject to the approval and control of the Racing Committee, and all doubts, questions, and disputes which may arise shall be subject to their decision. Their decisions shall be based, etc., etc.

(Transferring in this and subsequent paragraphs the power now vested in the Officer of the Day to the Racing Committee. Appeals against their decisions to be decided by the General Committee).

The CHAIRMAN explained with regard to the first alteration that the reason was that the Club had grown to such an exteut and the races were so numerous that it was absolutely necessary to make some different arrangement from that hitherto prevailing, as it was impossible for one man to control all four races and make all arrangements. The second alteration had been mainly adapted from home rules with a few variations in points of detail. By it the Racing Committee would in future have the whole management of the races in hand and would provide for everything, taking over the duties which had been performed before by the Secretary, who would be left to attend to matters more properly coming within the scope of such an officical. The duties of the Secretary had grown enormously. The Chairman also mentioned that under the New Treaties great respect had to be paid to the Harbour Master, and it was necessary to ask his permission to fire a starting gun at each meeting. A general permit for the whole season could not be obtained, and notice had to be given to the Harbour Office three days beforehand.

The alterations to the rules were carried *en bloc*.

GENERAL MEETING.

The general meeting followed.

The report and accounts, already published, were passed, on the motion of Mr. OWSTON, seconded by Mr. K. KINGDON.

The officials were then elected as follows : Commodore, Mr. Scidmore; Vice-Commodore, Mr. Pors; Secretary, Mr. Rose; Racing Committee, Messrs. Talley, C. F. Averill, and R. Boyes. Messrs. E. M. Laffin and F. J. Hall were elected on the General Committee.

Mr. SCIDMORE, in returning thanks for his election, said that he thanked the members heartily for making him the first Commodore of the Club. Though a comparatively new member, no one had more enthusiasm for yachting than himself, or more interest on the Club. He would endeavour to advance the interests of the Club in every way, and to extend enthusiasm for yachting not only among foreigners but among the Japanese, so that some day they might see an Imperial Yacht Club which the Yokohama Club might be the means of founding—(applause). It would give him great pleasure to contribute a Commodore's Cup for the coming season.—(Applause.)

Mr. PORS also returned thanks for his election, and the meeting afterwards proceeded to an informal discussion of various points of detail.

The following is the annual report of the Yokohama Yacht Club for the 1899 season :—

The Committee have pleasure in reporting that during the season 1899, the thirteenth year of the Club's existence, both racing and cruising has been kept up with the usual interest. Fifty-seven races have been raced, as against sixty-eight in the previous year.

The season has been a remarkable one for light winds on Race Days, the light weather boats easily carrying off the Record, *Maid Marion* taking the championship for the 39 Raters, *Abunai* for the 21 Raters, and *Eclair* for the fourth year in succession that for the 17 Raters. In the 12 Rater One Design Class *Titania* through excellent handling won nearly every race, taking 21 Record Points out of a possible 24.

The only addition to the fleet, besides four 12 Raters, is the *Wettinge*, which takes the second place in her class, whilst on the other hand several boats have left Yokohama waters. The total number of Yokohama Yatchts on the Club Register at the end of the season is thirty-five.

The Club has again been favoured by liberal contributions in prizes by those interested in the sport. The Committee recommend the members to consider a thorough reorganisation of the management of the Club, more especially of the racing, as at present nearly all work is left in the hands of the Hon. Secretary.

HERBERT ROSE.

Examined with the vouchers and found correct.

HENRY BOYES.

Yokohama, 10th January, 1900.

NEWS OF THE WEEK.

Another old resident of Yokohama has passed away in the person of Mr. F. C. Boyes, senior partner of the firm of Boyes and Co., whose death is reported from Berlin.

At 8 30 on the morning of the 27th inst., fire broke out in a farmer's house at Nakano, Makino-mura, Kanagawa. The house was burned to the ground, and four other buildings were partially damaged.

From the *Washington Star*:—Li Hung-chang and the Russians.—"Which side do you favour in this Anglo-Russian rivalry for Asiatic influence?" "Can't tell yet," answered Li Hung-chang, "I haven't opened my morning's mail and noted the remittances."

The Shell Line steamer *Telena* was detained at Nagahama on the 26th, a case of small-pox being discovered on board. The patient, a Chinese, was removed to the quarantine hospital, and the steamer was released on Saturday morning, after thorough disinfection.

On the 27th inst. a policeman in Yokohama saw a coolie carrying a large quantity of tins, and, being suspicious, invited the man to the station to explain. Here the fellow confessed to having extracted the tins from a case belonging to Messrs. Weston & Co in the Customs compound.

Judgment was given on the 27th by Judge Fujise and Assistant Judges Odamura and Morii, in the case of Reimers, a Chinese Eurasian charged with forging the name of Mr. L. Salabelle, and obtaining *yen* 748 70 from the Van Tai Exchange.

At the conclusion of the case Mr. Shiranuma, on behalf of the Van Tai, claimed *yen* 748 70, the amount cashed on the forged cheque. Reimers professed his inability to pay, as he was without funds. Judgment in this case will be given at a later date.

About 12.15 a.m. on the 27th fire broke out in a Japanese grocer's store in Ishiwaka-machi, kept by one Ninomiya Eijiro. It originated in the kitchen, the servant not extinguishing the remains of the fire used in cooking *mochi*. Five houses were completely burnt to the ground and four partially. More serious damage would have been done, but for the prompt arrival of the Kotobuki-cho Police Fire Brigade, and for the amply supply of water in the canal. The fire was got under control by 2 a.m.

The plea of the prisoner's counsel for dismissal on the ground that the prisoner had written the name L. Salabella instead of L. Salabelle to the cheque, and that this did not come under the category of forgery, but obtaining money under false pretences, was overruled. The evidence disclosed a clear case of forgery. The crime came under Articles 209 and 290 of the Criminal Code, and the decision of the Court was that the prisoner be sentenced to 7 years' imprisonment, with hard labour. He was given five days in which to appeal.

Dr. Carl Peters is now more certain than ever that he has discovered the Ophir of King Solomon. It is a district lying between the Zambesi and the Pangwe, and is called Fura, which Dr. Peters declares to be a native corruption of Afur, the Sabæan form of Ophir. The inhabitants are fire-worshippers, look rather like Jews, and possess "ancient ruins of an undoubtedly Semitic type." Dr. Peters is by no means the first person to identify "the Ophir of King Solomon;" it is one of the usual processes which precede the flotation of a gold mine in England.

Regarding the *Energia*, which arrived the other day at Nagasaki from the scene of her accident in the Obri Straits, the *Press* says the cargo, which consisted principally of flour, appeared, with the exception of a small quantity in Hold No. 1, to be in good condition and undamaged. The *Press* adds:—It is not possible at present to form any estimate of the extent of the injury which the vessel herself has sustained. Temporary repairs have been effected and one pump, worked at intervals, is found sufficient to keep down the water. There can be no doubt that had the accident occurred in a less sheltered place, the vessel must have foundered. The cargo which it was found necessary to discharge when the ship struck has been salvaged. It is much less damaged than might have been expected and will probably be brought to Nagasaki and disposed of by auction.

H.B.M. COURT FOR JAPAN.

WEDNESDAY, JAN. 31.

(Before His Honour Judge WILKINSON.)

THE ENSLIE WILL CASE.

Re the will of the late James Joseph Enslie, of Kobe.

His Honour delivered judgment in this case, in which the acting Trustee (Mr. Brushfield) asked for directions as to the disposal of the moneys left under the trust.

The case had already occupied the attention of the Court for several sittings. The testator had under his will left the residue of his estate, after the bequest of certain legacies which have been paid, to his trustees upon trust for conversion thereof, and directed the payment thereout of 3.000 dollars to his housekeeper Kozawa Tori, which has been paid. He further directed as follows: "The principal sum of six thousand dollars together with interest at the rate of five per cent. per annum due by me to the said Kozawa Tori and confirmed by my note of hand dated the 11th day of January, 1892, shall be paid to the said Kozawa Tori as a debt due by my estate, and I request that my trustee will conform to my wishes expressed in the said note of hand." By the note of hand referred to the testator stated his intention, and the wish of the said Kozawa Tori "that, unless paid sooner, the principal sum with accruing interest having been paid as a debt due by my estate, these moneys shall be dealt with by my trustees in manner similar as moneys under the Trust in my will." The will further provided for the investment of the residue and the payment therefrom of 1500 dollars a year to Kozawa Tori during her life, and also the payment of 250 dollars a year to each of the trustees, the *corpus* of the estate after the death of Kozawa Tori to be paid to the testator's two sisters. The income arising from the residue, however, had proved insufficient to pay the 1500 dollars to Kozawa Tori and the 250 dollars to each of the trustees, and the Trustee accordingly petitioned for direction as to how the trust moneys should be applied.

His Honour, in giving judgment, recited the facts of the case, which are already familiar to our readers, at great length, and discussed the authorities and cases submitted to him by counsel in the course of their arguments. With regard to the 6 000 dollars he said the gift was never made in fact, and the note of hand became a voluntary contract between the testator and Kozawa Tori, which could not be enforced against the executor, as it could not have been enforced against the testator in his life-time, unless it could be construed, as counsel for Kozawa Tori contended it ought to be construed, as a declaration of trust. He (the learned judge) did not consider it necessary to decide whether it ought to be or ought not to be so construed, for in the events which had happened the direction in the will gave to Kozawa Tori the same rights as if it had been a valid declaration of trust, neither more nor less. After discussing the terms of the note of hand referred to above, His Honour proceeded:—

Effect, then, must be given to the words "these moneys shall be dealt with by the Trustee in manner similar as moneys under the Trust in my will," and that, it appears to me, can only be done by treating the moneys as part of the residue. I do not understand counsel for Kozawa Tori to contend that effect ought or could be given to those words in any other way. What effect, then, ought to be given to the words in the note of hand "the principal sum with accruing interest having been paid as a debt due by my estate," and the words in the will" I direct the principal sum of six thousand dollars together with interest. . . . due by me to the said Kozawa Tori and confirmed by my note of hand. . . . . to be paid to the said Kozawa Tori as a debt due by my estate." I am of opinion that in the events which have occurred no effect need be given to them at all. If the money were paid to her by the Trustees she would be bound to hand it back to the Trustees to be dealt with as directed, and the Court will not require a useless form to be observed. Having arrived at this conclusion, it will also be unnecessary to consider the claim for interest. Whatever might be the amount of interest decided as attributable to the principal sum of 6.000 dollars, that amount would follow the principal and sink in the residue, and in the events which have happened therefore it is unnecessary to determine what that amount ought to be. It may be observed that if Kozawa Tori had been prepared to forego the annuity and other benefits given to her under the trust, a question might possibly have arisen whether she could not claim payment of the six thousand dollars and interest, but that question cannot arise now. She claimed the annuity, and has received payment in part, and she cannot take the six thousand dollars and interest absolutely and take also the annuity towards the payment of which the testator directed that money should contribute."

Turning to the second question, that of the bequest of the annuities of 1,500 dollars to Kozawa Tori and 250 dollars to the trustee, His Honour entered into an exhaustive consideration of the arguments adduced and the authorities quoted. The judgment concluded:—

'It therefore seems clear that it (the annuity to Kozawa Tori) became and was intended to become a charge upon the whole estate, and I see no reason why it should cease to be such a charge when the investments were made. I am of opinion, therefore, that it is a charge upon the *corpus*. The annual sum of two hundred and fifty dollars payable to the Trustee is undoubtedly a charge upon the *corpus*. There will therefore be a declaration that all the annuities are a charge upon the *corpus* of the trust funds, and are payable out of income if, and so far as, it is sufficient for the purpose, and if there is a deficiency they are to be paid out of the *corpus*. There will of course under these circumstances be no priority between them. The questions raised on this application were proper questions to have been brought before the Court, and the Trustee will have his costs out of the estate. With regard to the costs of Kozawa Tori, taking into consideration all the circumstances of the case, I consider it right that her costs also should be paid out of the estate, and they will be paid by the Trustee out of the estate accordingly. I may observe that on the hearing of this application no appearance has been put in on behalf of the residuary legatees, although they have been duly notified, but I am satisfied that all that could be urged on their behalf has been brought to my notice by the counsel for the Trustee and that their interests have not suffered by their not having been directly and specially represented.'

OUR DRAMATIC VISITORS.

By a Wozzbeits.

I have already favoured you with glimpses of the vast array of native talent which is the boast of Wozzle, of ladies and gentlemen who by day follow useful, if humble occupations, from school teaching up to clerking in our brewery; but who by night, when occasion calls, blossom forth, like the June rose, in warbling, singing, reciting, acting, piano-playing, and even skirt-dancing. But I have not introduced you yet to any of the foreign talent which visits us from time to time: the genuine professional article, by whose lustre the noses of our amateurs are quite out of joint, and made to pale their ineffectual fires. Wozzle, is "on the road." It is a half-way house for the travelling companies on their way from our county town back to the Gaiety bar; and our public hall gives them hospitality for one night, or in cases of crowded houses, or want of railway fares, even for two.

We are, indeed, highly favoured. The profession know that our standard is elevated, so they always bring a piece which has been the one success of the London season. You, my dear reader, will probably remember the great excitement in town over the production of a new piece called "East Lynne," about five years ago; well, we had that piece down in Wozzle the very same year, with the same effects as in London, and the actual blue spectacles used by the erring wife there. Ah, that was a piece. There was a baronet in it. His manners were exquisite, so were his trousers. We lost sight of him in the play for some years, and then he came back to us in manners still more exquisite, and more than all, in the very same pair of trousers as he wore in Act I. The endurance of his love went hand in hand with that of his trousers, and I really did not know which to admire most. I sighed to know his tailor, because I never can make mine last more than two years, even when I pull up the knees, which nephew Samuel has taught me is done in the first circles.

Soon after that we had down another great London success, a Lyceum piece, I was told by the money taker, created by the great Sir Henry and the Fair Ellen; and called "Maria Martin; *or*, The Murder in the Red Barn" I stood that *money-taker a whisky*, I was so glad to see anything upon which Sir Henry had set his seal. Mr. De Beauvoir, who played Sir H's part of blank Corder, Esq., I confess, rather disappointed me. He sank beneath an honour to which he had not been born, as Shakespeare pathetically puts it, and in these depressing circumstances had taken rather too much to drink. The first scene in the cottage made me tremble. He broke two chairs by sitting down on them, brought down the mantelpiece with his hand, and in order to make himself agreeable to Maria, fell flat across the table. But that was nothing to the Red Barn and the horrible Murder. I never saw such a murder before, and hope I never may again. I only wish Mr. Rider Haggei could have ridden down to see it, for never was thirst for blood painted redder. He first went for the poor girl with a chopper. The first blow brought down the side scene, with the chopper sticking in it, and he could not stand sufficiently still to draw it out.

He then up with a gun, which he aimed straight at the pianist in front. No man ever got behind a piano quicker. For the first time in my life I felt thankful for the presence of a piano. Fortunately the gun did not go off; and then he aimed it at the sky, while Maria screamed "Spare me! Spare! me!" At the point he seemed to become aware that Maria was the proper target, as per book, and got within three feet of her head; but still the gun would not go off, and he threw it down with a word I am sure Sir Henry never, never uses. He had apparently now nothing left wherewith to kill Maria; but he was quite equal to the situation. He staggered across to the grandfather's clock in the corner. You may be surprised to hear of this clock in a Red Barn; but the Red Barn was really the same scene as the cottage, and the clock had never been removed. With the clock in his arms he literally fell upon poor Maria and buried her, lying on the top of the clock himself immovable, and the curtain fell. We were all aghast. However, someone came out and explained that the clock was hollow, so that she had escaped a horologic death, and that as Mr. De Beauvoir had been taken suddenly unwell, the rest of the part would be played by Mr. Summers Towne. It was decidedly an original murder, and I think there are points in it for Sir Henry when he plays it again.

But it is not all murder on the Wozzle stage. We have the latest London successes also in the way of comic opera. The last we had was the world-renowned Violet Vestris Vivid Variety Company, with the screaming success, "The Empress of the Emporium." They were well-advertised by killing coloured posters, also by a case of beautiful photos at the door of the hall; but I think they might have stopped there. I consider that Violet made herself too cheap. I think it *infra dig.* for an Empress to go round to all our public-houses and be affable at the bars. Public personages must keep well before the public, I know, but before the public and in the public are not, to a very delicate mind, necessarily the same thing. Besides, even if you are an Empress, you are apt to be a little off colour in the morning; especially if you don't comb your hair. Nevertheless, Violet was superb at night. I had never seen an Empress before. It appears that very little protection is needed from the climate in the Emporium, and there is no reserve whatever. Life there is all champagne, jollity, pink tights, and choruses. When the curtain fell Violet kissed her hand to me. Binks said the kiss was meant for him, but he always was conceited. I felt a momentary thrill; but it passed away and only left me thirsty. I had seen her in the Rising Sun that morning, and felt no glamour. Therefore again I say, if you are an Empress, not too much outside.

I was most sorry for the Great Trillionaire Company we had soon after. They played a real, high toned London success comedy, all dukes and rich people. They played two nights, the last time under great difficulties, which we did not understand at the time, but it leaked out afterwards. It appeared that, in spite of their great possessions, the poor things were very short of ready cash, and after paying for the hall from the takings, had very little left. This little they invested in a large beefsteak pudding, ordered to be ready in the dressing-room after the play, but by mistake it came there at 10. Hunger, alas! destroys all mutual confidence, and the members of the company who were on in the last act did not mean the members who were off to get an uninterrupted run of that pudding. The consequence was that the characters in the piece kept on disappearing without any apparent cause, and reappearing suddenly with their mouths full. Perhaps this really helped to heighten the most pathetic parts, for the gulps came so natural; but mastication don't go well with an avowal of tender love, and assurance of undying devotion. When a young lady whispers the words "I am thine" you may like her to falter, but not audibly to chew, between them.

I hardly dare tell you about the Great Illusion Company that was here a fortnight ago, because the wound is still raw. They played a celebrated piece called "Fowst," written, I understand, by a German named Go It. Anyhow, the company did so. They were dazzling. They brought their own effects, and particularly a large sheet of plate glass, to make ghosts come. We had the full benefit of it. Ghosts were cheap that night. If a character sat down anywhere, up popped a ghost at each elbow, and if they went to cross the road, a ghost stopped his traffic. When the devil was not on the stage in his own person he had to be there as a ghost, and if ever a man earned his money the devil did that night. But even the ghosts did not impress me so much as did Miss May Mignonette, who played Margaret. She was quite young, compared to me, not looking more than 40 or 54. She had the most beautiful and the longest blonde hair I ever saw. Some people might have thought her a trifle stout, and indeed when she fell on her knees to pray for her innocence to be guarded she shook the whole hall. But I do not think she was more than 14 stone, a very nice weight for a defenceless woman. Her sorrows touched me to to the quick. The play passed like a dream. The last I saw of that fair Mignonette she was being raised to heaven. How they got her up I don't know; but she has never come down again to me, and I still envy Mr. Fowst.—*The Globe*

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Nagasaki, Jan. 26.

Despatches of the 22nd state that Reuter's correspondent, wiring from Ladysmith on the 20th, reports that the enemy have placed new guns in position, and the bombardment is more vigorous, but is ineffective. The British troops at Ladysmith are jubilant at Buller's advance. The sound of his guns is heard, and his shells are seen bursting.

A telegram dated the 23rd says the paucity of Buller's despatches intensifies the anxious interest felt in London. Nothing is allowed to transpire concerning the disposition of the troops or the strength of the different commands.

The Times correspondent at Spearman's Camp wires on the 21st that the first Boer position is a long ridge four miles northwest of Tritchard's drift. The enemy's position is semi-circular and the defences are chiefly sangars.

Shanghai, Jan. 26.

A despatch from Buller dated Spearman's Camp says: "Warren's troops on Tuesday night occupied Spionkop, surprising a small garrison, who fled. The position has been held by our troops all Wednesday, though we have been heavily attacked, especially by shell fire. I fear that the casualties are considerable. I regret to state that General Woodgate is dangerously wounded. Warren's occupation of Spionkop has rendered the enemy's position untenable."

Shanghai, Jan. 27.

The censorship is intensified. The telegrams published by the newspapers are merely echoes of the official news.

MacDonald has assumed command of the Highland Brigade at the Modder River.

The *Standard* has a telegram from Rensberg dated the 23rd which says that French is deliberately and cautiously drawing his lines round the Boers at Colesberg. The enemy, numbering 7,000, are alarmed.

Warren's troops found 200 dead Boers in the first line of trenches captured on the 21st inst.

Reuter's agent telegraphs from Ladysmith under date 21st that the besiegers are mounting new guns and that points attacked on the 6th inst. have been greatly strengthened, rendering Ladysmith practically impregnable.

Warren abandoned Spion Kop during the night of the 24th.

Shanghai, Jan. 26.

Barton reports that there were eleven casualties at Chieveley on the 23rd, including Captain De Rougemont of the African Horse killed, and Captain Dulton of the Medical Corps wounded.

Shanghai, Jan., 27.

The casualties on the 25th were 6 officers killed and 12 wounded; 18 men killed and 142 wounded and 31 missing. The officers killed were Colonel Buchanan Riddell and Lieutenants Grant, French, and Brewster of the Third King's Rifles; and Captains Murray and Walter and Lieutenant Osborne of the Cameronians.

Shanghai, Jan. 28.

The *Daily News* understands that the Government will ask immediately for not less than 20 millions on account of the war.

The first portion of the 7th Division has arrived at Capetown.

The Times thinks it probable that still greater demands will have to be made on the nation. It says that the Government will be well advised to call out the rest of the militia, also to expedite the mobilisation of the Eighth Division and to despatch immediately the Fourth Cavalry Brigade.

Shanghai, Jan. 29.

Nothing whatever from Buller.

The embodiment of the militia is proceeding.

Digitized by Google Original from CORNELL UNIVERSITY

Battalions of the Leicestershires and the Berkshires, and the Clare Artillery have been ordered out.

The *Nord.-Deutsch Zeitung* announces that Count Bulow has received Dr. Leyds, who has come for the celebration of the Emperor's birthday.

Later.

A later telegram from Buller says that having decided that a second attack upon Spion-kop would be useless he withdrew his force to the south of the Tugela.

Shanghai, Jan. 29.

The new Japanese battle-ship *Shikishima* sailed for Japan on Saturday, the 27th instant.

Reuter's agent at Lorenzo Marquez, telegraphing under date of the 26th, says that it is reported on good authority from a Transvaal source that Mafeking was relieved on the 23rd instant.

There is a delay in news from the Cape owing to an interruption in the West-coast cable.

Shanghai, Jan. 30.

The *Neue Freie-Presse* says that diplomatists consider the situation in China serious, and expect negotiations pointing to collective action on the part of the Powers.

The Times says that Roberts must decide whether it is possible or prudent to make further efforts to save Ladysmith.

Later.

Dundonald's Brigade has arrived on the South of the Tugela.

The Times advises the Government to prepare 50,000 troops for early despatch, and to take steps in view of another 50,000 being wanted.

Shanghai, Jan. 31.

The officers killed at Spion Kop in the battle on the 24th instant were as follow:—

Staff Captain Vertue.

LANCASHIRE FUSILIERS.

Captain Stewart and Lieutenants Mallock and Fraser.

MIDDLESEX.

Captain Neuriel and Lieutenants Lawley and Milsom.

LANCASTERS.

Major Ross, Captain Kirk, and Lieutenant Wede.

SCOTTISH BORDERERS.

Lieutenant Woleerstan.

SOUTH LANCASHIRES.

Captain Birch and Lieutenant Raphael.

BORDERERS.

Lieutenant Garvey.

THORNIECROFT'S HORSE.

Captains Petre and Knox-Gore, and Lieutenants Grenfell, Mesham, Macorquodale, and Trevor.

IMPERIAL INFANTRY.

Lieutenants Rudall and Shand.

There were also twenty wounded and six missing.

Later.

Buller's casualties from the 20th to the 26th, exclusive of those at Spion Kop, which are still mainly unreceived, are 23 killed and 298 wounded.

Leyds is going to St. Petersburg.

Parliament has opened. The speech from the Throne refers chiefly to South Africa. The Queen is convinced that Parliament will shrink from no outlay in order to place the defensive preparations on a level with the great responsibilities now devolving on the Empire, and that it will not abate anything of its solicitude on account of the efficiency of the Navy and of the coast defences in view of the fact that several other nations are perfecting their naval preparations.

The Russian Bank has advanced to the Persian Government 22½ million roubles at 5 per cent. interest with which to discharge all existing foreign obligations. Persia undertakes to incur no fresh foreign loan. This practically binds Persia politically and financially to Russia.

Shanghai, Feb. 1.

The Boers report that they encountered the British at Crocodile Pools, and retired, but, being reinforced, repulsed the British. This apparently refers to Colonel Plummer's advance, and thus disposes of the report that Mafeking has been relieved.

In the debate on the Speech from the Throne, Kimberley in the Lords and Bannerman in the Commons agreed as to the necessity of vigorously prosecuting the war in order to vindicate the integrity of the Queen's dominions. They, however, criticized the Government's unpreparedness. The Lords have voted the Address.

The Irish Nationalists have re-united on the basis of party independence, thus severing their alliance with the Liberals.

Later.

The Times has a telegram from Ladysmith dated the 28th January which says they can hold out. The garrison is healthier.

The Boers state that their losses at Spion Kop were 53 killed and 120 wounded.

The Fourth Cavalry Brigade has been ordered to embark immediately.

Press telegrams describe the fight at Spion Kop as bitter and bloody. The summit of the hill was exposed to a terrific cross fire of artillery and musketry from the neighbouring heights which the British endured for the entire day with splendid heroism, losing about 500. The enemy's smokeless powder rendered it impossible to locate their guns, and the Spion Kop heights were inaccessible for artillery. Withdrawal therefore become necessary and was effected in good order unmolested.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, Jan. 26.

Warren occupied Spionkop during the night of Tuesday, and held it throughout Wednesday in spite of sharp attacks by the Boers. His losses were considerable.

Saigon, Jan. 27.

A despatch from General Buller, dated the 25th at noon, expresses regret to have to announce that Warren was forced to abandon Spion Kop during the night.

London is in consternation.

Saigon, Jan. 28.

Warren's losses, as ascertained from the 17th to the 25th inst., are 67 killed, 579 wounded, and 60 missing.

The Consultative Committee of the Colonies has unanimously adopted a proposition completely removing all taxes on coffees of the French Colonies.

Saigon, Jan. 29.

The Senatorial Elections took place on Sunday. Most of the Senators have been re-elected, notably MM. Freycinct and Dupuy. The Nationalist candidates have been beaten or are in *ballotage*, with the exception of General Mercier, who has been returned for Nantes.

General Buller retired to the South of the Tugela on the 25th instant.

Saigon, Jan. 30.

The Senatorial elections have not caused any change in the situation of parties, Four Conservatives have been re-elected. General Mercier, M. M. de Montfort and Gauthier, Nationalists, have been elected. All the rest are Republicans. Among those defeated the notables are M. M. Rauc, Thévenet, Siegfried, and Barodet.

It is reported from Lorenzo Marques that the Boers say that the English had 1,500 killed at Spion Kop on the 24th of January.

Saigon, Jan. 31.

The French Government has submitted to the Chamber projects relating to the defence of the coasts and the colonies, the augmentation of the fleet, and the establishment of a system of sub-marine cables.

Saigon, Feb. 1.

The projects of the French Government require an expenditure of 900 millions of francs, of which 476 millions are for the Navy. They include the completion of the Saigon Arsenal.

A telegram from London says that the Speech from the Throne at the opening of Parliament demands the continuation of the war until victory is secured.

(FROM THE "HONGKONG VOLUNTEER GAZETTE" SPECIALLY WIRED TO THE "JAPAN MAIL".)

Nagasaki, Jan. 29.

A Pretoria despatch, dated the 24th, states that two hundred Boers scouting near Colenso were surrounded, but fought their way back with a loss of four killed and 30 wounded and taken prisoner.

A Boer despatch from Ladysmith says that on the 20th Botha made a strong reconnaisance towards the Drakensburg, turning the British advance after a short engagement.

Boer despatches from the Tugela, dated the 19th, admit that the British infantry captured two rows of kopjes.

The Boers report heavy fighting at Colesberg. They succeeded in holding the positions.

There is nothing from Buller. The Boers claim that they checked his advance, but admit that they suffered heavy losses.

The *Daily Mail* correspondent at Lisbon reports that the Boers have committed a breach of neutrality, crossing Portuguese territory into Rhodesia. Artillery is being sent from Lorenzo Marques, and reinforcements are leaving Lisbon.

The Times correspondent at Lorenzo reports that the bridges on the railway between Natal and the Free State are undermined, and will be destroyed immediately a retreat is necessary.

CHESS.

All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 457.

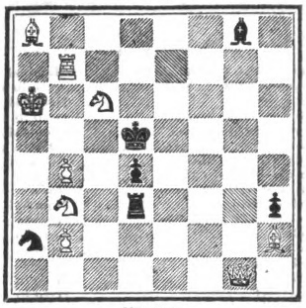
WHITE	BLACK.
1—R to R5	1—B to K2
2—Kt to Q6 ch	2—R, Kt or B takes Kt
3—Mate.	

If Black play 1. B to R6, 2. P takes B; and if 1. R to K3, then 2. Kt to B5 ch, etc.

Correct solution received from "East Anglia."

Digitized by Google Original from CORNELL UNIVERSITY

PROBLEM No. 459.
By Miss D. GREGSON.
BLACK.



WHITE.
White to play and mate in two moves.

GAME No. 588.

We are indebted to "East Anglia" for the following game, which he justly says is well worth reproducing :—

At the Boston Chess Club, recently, John F. Barry brilliantly defeated Harry N. Pillsbury, chess champion of the United States, in an exhibition game played for a purse contributed by members of the club.

The game is remarkable for the new method introduced by White for conducting the Ruy Lopez attack and for the profound and ingenious mating process by which it was terminated.

RUY LOPEZ.

White—Barry. Black—Pillsbury.

WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	17 Kt B6	PxKt

12 Q R3	PxP	Resigns	
13 Kt B3	Kt B4		

NOTES.

5—P to K 5 is one of the most favourable attacks against the French Defence, and White plays it correctly up to 8—P to K B 4. He should have played 8—P to Q B 3, P to Q R 3; 9 Kt to Q R 3, P to Q B 4; 10—P to K B 4, &c. The transposition of the opening moves makes all the difference, White being bent upon the attack commencing with 10—Q to Kt 4, and the subsequent P to K Kt 4, which is not so dangerous as it looks. Instead of 10—Q to Kt 4 he might have still played 10—P to Q B 3, P x P; 11—P x P, Q to R 4 ch, Q to Q2, keeping still an even game. The next weak move was 15 P to K B 3 instead of 15—Q to K 3, followed by Q to B 3 and Kt to B2; but the stereotyped P to K Kt 4 attack being in his mind he neglects temporary defensive measures. Black, however, commences an ingenious counter-attack with R to B sq and Q to R 4, which he carries through brilliantly and with consummate skill. White could not save the game, no matter what he played.

FOR GOLF RASH

Heat Rash or any itching, irritation, inflammation, or chafing, produced by exercise or heat, for undue or offensive perspiration, and for many sanative uses, a bath with

Cuticura SOAP

the most effective skin purifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery, when followed by gentle anointings with CUTICURA, the great skin cure and purest of emollients, is most cleansing, cooling, purifying, and refreshing.

SAVE YOUR HAIR Warm shampoos with CUTICURA SOAP, followed by light dressings with CUTICURA, purest of emollients, will clear the scalp and hair of crusts, scales, and dandruff, soothe irritated and itching surfaces, stimulate the hair follicles, and produce luxuriant, lustrous hair, with clean, wholesome scalp, when all else fails.

SAVE YOUR HANDS Bathe and soak the hands, on retiring, in a strong, hot, creamy lather of CUTICURA SOAP. Dry thoroughly, and anoint freely with CUTICURA, greatest of emollient skin cures. Wear during the night, old, loose, kid gloves. For sore hands, itching palms, and shapeless nails, this treatment is simply wonderful.

YOKOHAMA: SATURDAY, FEB. 10TH, 1900.

BIRTH.

On the 4th February, 1900, the wife of JOHN H. JEWETT, of a daughter.

DEATH.

Died of pneumonia at No 238, Bluff, on the 7th February, 1900, Paul G. FIEDLER in his 35th year. American papers please copy.

SUMMARY OF NEWS.

THE Lord Mayor's War Relief Fund stood at £512,000 on the 10th Jan.

THE British have recrossed the Tugela and are making advances towards Ladysmith.

THERE has been some interruption of railway traffic in the North owing to heavy snow falls.

THE *Times* understands that the Government contemplates drastic changes in the War Office.

A DERAILED goods van at Tsurumi caused the 3.10 p.m. train from Yokohama on Tuesday to be delayed by some 2½ hours in reaching Tokyo. Everything was running smoothly by night-fall.

THE performance of Pinero's farce "Dandy Dick" at the Public Hall on Thursday was a pronounced success.

THE Indian famine is becoming more acute. Three and three quarter millions of persons are receiving relief.

MR. W. D. Cox read an amusing paper entitled "Humbugs" at Friday evening's meeting of the Yokohama Literary Society.

DURING the past week 13,700 men and 3,000 officers, including Cavalry, Yeomanry, Militia, and Volunteers, have sailed for the Cape.

VARIOUS matters of minor importance have come up for discussion in the Diet this week and several representations have been adopted for presentation to the Government.

ON Wednesday morning, at 3 o'clock, a fire occurred in Tsukui District, Kanagawa Prefecture, in a village called Yoseiiki, some 40 *ri* from Yokohama. Forty houses were burnt to ashes.

ONE of the armed robbers who entered a pawn shop in Uragachi, near Yokosuka, was arrested in Tokyo the other day. He was in the employ of the Nippon Yusen Kaisha, on a lighter plying to Tokyo.

FIRE broke out on Tuesday afternoon at half-past three at No. 19, Miyagawa-cho, Ichome, Yokohama, a private house in the occupation of Mr. Suzuki. Four houses were destroyed and six partly damaged.

AT 6.40 p.m. on the night of the 5th instant, a manure carrier employed by Ito Masugoro, living in Hanazakicho, 9-chome, was killed at a railway crossing in Hiranuma, Tobe. Two horses he had in charge were also killed.

ROBERTS and Kitchener have left Cape-town, but the censor has cut the date and place of their destination. It is believed that they have gone to supervise large general operations, extending from Sterkstroom to the Colesberg district.

THERE is a marked change in the German press in the direction of friendliness towards England. Even the *Vossische Zeitung*, hitherto bitterly Anglophobe, says that Germany has no inducement to drive the English from Egypt to make room for the French.

WELL accredited reports represent the Free Staters as increasingly weary of the war. Some influential leaders, including one principal commandant, are said to have entered into secret negotiations with the British, with a view to ascertaining the terms that will be accorded to them, if they quit their allies.

A *sendo* employed by Inouye, a shipping firm in Motohamacho, was killed on Tuesday morning at 10 30 while handling cargo on the steamer *Kyoto Maru*. He was knocked against the side of the steamer. The deceased was a young man of 22, and his name Tanabe Kikunosuke.

A COOLIE was found dead in the hold of the sailing ship *J. D. Rice*, on Monday morning, by the chief mate. The man went to work on the ship three days ago, unloading kerosene consigned to the Standard Oil Company. His body was handed to the boarding-house master, were he was staying.

IN the Yokohama Chiho Saibansho on Tuesday morning at 11 a.m. before Judge Fujise and two Assistant Judges, the hearing of the case of Ishii Kenjiro against Messrs. Oppenheimer Freres, for a claim of *yen* 18,744, on account of a transaction in alcohol, was commenced. The case was adjourned to March 4th at 11 a.m.

LORD ROBERTS, replying to a communication from Presidents Kruger and Steyn, complaining that the British have caused the destruction of farmhouses, says that the charges are unproven. His Lordship accuses the Boers of barbarous practices and the spoilation and expulsion of British subjects when refusing to fight against their own countrymen.

AN employe of a milk dealer in Yokohama named Watanabe Sojiro during his morning round, found a registered letter, wet and opened. It contained a cheque for *yen* 500, the sender being one Dai, of Numadzu, and the payee Mr. Abe Kobe, a well known sugar merchant of Yokohama. The finder reported the matter to the Bluff Police. The letter was dropped by a letter carrier.

ON Saturday morning, a little before 3 o'clock, a man was seen to jump into the Yokohama canal from a bridge called the Senshubashi. A policemen hastened to his rescue and the would-be suicide seemed none the worse for his wetting. He was taken to the Isezakicho Police Station, where he was identified as Umesawa Kansaburo, aged 22. He had tried to end his life owing to a quarrel with a friend.

AN American exchange says:—So contagious is the enthusiasm at Vancouver about enlisting with the British forces in South Africa that the Japanese of this city are not only willing but anxious to see service on the British side in the Transvaal. They have been organized by an ex-Japanese Consul, Mr. Shimidzu, who has made a formal tender of the services of this Japanese corps to the British Government. Numbers of letters have been received by Mayor Garden of Vancouver from Americans in various Pacific Coast cities desiring to fight for Great Britain.

AT 5.30 a.m. on Saturday a man and a woman were run over by the first down train at Takashimacho railway crossing, near Kanagawa Station. It was found to be a case of *shinju*, the man being a lodger at a seamen's boarding house in Kaigan-dori, Gochome, a seafaring man, named Miyazaki Saizo, and the woman an inmate of a house of ill-fame in the Yoshiwara. When they were found they were quite wet and were clothed only in their nightgowns. From this fact it was inferred that both had tried to drown themselves in the canal, but, failing in this, had gone to the railway crossing.

BY the death of the Earl of Tankerville the House of Lords loses its oldest member. He was not, however, the Father of the Upper House, for that honour belongs to the Earl of Leicester, who, although 12 years younger than the last Earl, who was born in 1810, has sat in the House of Lords for 53 years, where Lord Tankerville's membership covered a period of 40 years. His record of Parliamentary service, however, covered no less than 68 years, for he was elected to the House of Commons for North Northumberland on coming of age in 1831, and he sat for the constituency until 1859, when he was called to the Upper Chamber.

Original from CORNELL UNIVERSITY

SOUTH AFRICA.

Saturday, Feb. 3.

The account just received of the Spion Kop reverse is very suggestive—unpleasantly suggestive. As to the details, they are much what we anticipated: a position exposed to strong artillery fire and not offering any facilities for the use of our own guns. But the disquieting question is, why was such a position attacked. General Buller, in announcing Warren's intended assault, spoke of Spion Kop as "the enemy's salient." He evidently believed it to be the key of the position. In fact, on no other supposition would he have been justified in ordering its escalade. The first aim of a commanding officer in planning the assault of a line of defenses, is to choose the vital point; that is to say, the point whence the other parts of the line are most vulnerable. But Buller seems to have chosen the point which most exposed his own men, and was, at the same time, so inaccessible, or of such peculiar topographical formation, that it offered no site for posting his own guns. Throughout Monday and Tuesday, Warren's men made no advance: they confined themselves to holding the position already won. During these two days the natural occupation of Buller and his staff, as well as of the officers in command of the brigades in the fighting line, should have been to determine where to deliver the next and final attack. They appear to have made a most unfortunate selection. The upshot of the capture effected during the night of Tuesday was that Warren's Division found itself set up as a target for the artillery and small-arm fire of the Boers, without any possibility of replying effectively. Of course nothing is easier than to pen these kind of criticisms, and it may prove that the plan adopted was the best possible under the circumstances. With our present limited knowledge, however, we can only conclude that it would have been incomparably better had Spion Kop been left severely alone. Its capture involved a heavy loss of life and was apparently quite worthless. Warren was supposed to have a special knowledge of the features of the country, but his knowledge was evidently defective here. At the same time, we must not forget that Spion Kop is wholly out of the beaten track. Probably among all the officers serving under Buller, whether of the regular or the local forces, there was not one that had ever been in the district comprised between the Venter Spruit, the Tugela and the Sand Spruit until they were required to fight there, whereas the Boers had spent months exploring every inch of it. Indeed the difficulties of this South-African campaign must be something stupendous for the British Generals.

Monday, Feb. 5.

The *Nichi Nichi Shimbun* and the *Jimmin* publish articles speaking in high terms of the spirit shown by the people of Great Britain in this time of stress. Both journals predict that the result of the War will be to greatly enhance England's prestige, for, although weak points in her military organization will have been shown, a striking object lesson will also have been given of national traits which outweigh all questions of organization. There is no mistaking the sympathetic and appreciative disposition of both journals, and indeed we can not choose but express our grateful sense of the genuinely friendly tone uniformly pervading the writings of the Japanese press in connexion with this war. The one exception has been the *Yorozu Choho*, which has only sneers, flouts, and predictions that one or two more defeats will bring England to her knees. Nothing else was to be expected from the *Yorozu Choho*, a journal which represents whatever there is of degraded in the national character. We should regret to find any words of praise bestowed on our country in such columns. The *Jimmin* rightly observes that in adversity the true character of a nation, as of an individual, is shown. Yes, and it is in time of adversity that we discover our genuine friends also. The attitude of the Japanese nation, as reflected in the writings of the newspaper press, will not be forgotten by Englishmen.

Wednesday, Feb. 7.

Marquis Yamagata, speaking to a member of the *Chiuo* staff, expressed the opinion that England has been careless as to the organization of her army, relying too much on her fleet, and that the War in South Africa goes to prove the superiority of the system of conscription over that of a volunteer force or a mercenary force, as it has now become the fashion to call the British army. Of course there can not be, and never has been, the slightest doubt that conscription places at the service of the country much better soldiers than are obtainable by the ordinary process of volunteering. Conscription brings the cream of the population into the ranks, whereas the English system secures chiefly the most thriftless and least educated units of the lowest orders. But those considerations apply to the rank and file only, and, before drawing any hard-and-fast conclusions from the South-African war, we have to ask whether any serious fault can be laid at the door of the private. Has he shown himself deficient in fighting qualities? Has he shown himself to be bad material? By no means. He has fought bravely and resolutely, and has deserved praise for endurance under hardships and for readiness to face dangerous situations. It seems to us that the soldier is not in fault. Probably Marquis Yamagata means that a large and easily mobilized army can never exist under the volunteer system. That seems incontestable, within limits. An army large enough for England's home uses certainly can be organized, but not an army large enough for the purposes of such a war as has now to be carried on in South Africa.

FOREIGN INSURANCE OFFICES.

Over sixty insurance companies, according to the *Jiji*, have made application for official permission to open business in Japan, but, as all the applications have failed to comply with the provisions of law, a favourable answer has not yet been given to any of them. That is an astonishing statement. If it be correct, it argues badly for the development of business in Japan, inasmuch as it suggests the existence of impediments which certainly ought not to exist. We presume that these applications refer to insurance operations conducted outside the limits of the former settlements. Foreign companies, we believe, have not hitherto taken risks on Japanese lives or Japanese property, as was very natural, but, the conditions having changed, and there being an obviously wide field for insurance work, it is not surprising that enterprise in that direction should become active. Considered from the point of view of public interest, nothing could be more desirable than that solid companies of established reputation should offer facilities for insuring life and property in this country. The Authorities should do everything in their power to encourage that result. We presume that they have done so, but certainly the news that not one out of sixty applications has been successful can not be regarded as encouraging. There have been several bogus insurance companies started in Japan, but few now survive, though it may be doubted whether the shock given to public confidence by their fraudulent operations has been entirely effaced. The Kwanto Company, recently suspended, was a very flagrant example. In the matter of life policies, too, even the sound companies are said to follow unwise methods. They do not refuse to pay, but they adopt various expedients to postpone the evil moment, pretexting inaccuracies in original statements and devising other reasons for delay, so that life insurance can not be said to be yet regarded with abundant confidence in Japan. Life insurance, however, is almost as necessary to the moral contentment of a nation as roofed dwellings are essential to its physical comfort. The greater the number of sound companies engaged in the business of insurance, the better for the well-being of the people.

HUNAN.

The Common-language Society of East Asia (*Tō-a Dōbun-kai*) adopted a resolution last year to send to China several Japanese charged with the duty of investigating and reporting upon the condition of affairs in that country. These gentlemen recently returned, and gave an account of their travels at a meeting of the Society held a few days ago. The most interesting report was that of Mr. Shiraiwa Ryoan, president of the Daito Kisen Kaisha. The latter is a steamship company organized by Chinese and Japanese in combination for service in the Yangtsze River. Subsequently the Chinese associates withdrew, and the concern is now in Japanese hands altogether. It is understood to be very prosperous. The scene of Mr. Shiraiwa's travels was Hunan, the traditionally anti-foreign destrict of China. He went right up to Chang-sha, the capital, whither few strangers have yet ventured, with the exception of some courageous missionaries. Mr. Shiraiwa was agreeably surprised to find that the people of Hunan differentiate the Japanese completely from other strangers. They see that Japan and China have a common script; they understand that the philosophies of Confucius and Mencius have always been revered in Japan, and they have learned to think that the Japanese are really well disposed towards China. Mr. Shiraiwa has therefore come to the conclusion that the duty of weaning the people of Hunan from their anti-foreign prejudices devolves upon the Japanese, and that they ought to utilize their opportunities assiduously. One point in his report is a little obscure. He says that the Tung-ting Lake constitutes a kind of barrier between Changsha and the outer world. But surely that fine sheet of water should prove an excellent means of communication?

THE STUDENTS' DUEL.

Monday, Feb. 5.

Very strained relations have existed for some time between the students of Dr. Hasegawa's medical school, the Saisei Gakusha, and those of the military academy known as the Kanjo Gakko. The lads have grown so hostile to each other that they fight whenever and wherever they meet. They seem to have decided that the best plan would be to submit their differences to the arbitrament of a duel, for some sixty of them made arrangements for a formal meeting on the 2nd instant. The place originally chosen for the combat was Tabata, a suburb of Tokyo in the neighbourhood of Oji. But the police obtained information of what was in prospect and made their dispositions accordingly. The students, discovering that they were likely to be interrupted, made a sudden change of programme, and repaired to the vacant ground behind the Mitsu Bishi Bank buildings in Yuraku-cho. There they commenced their battle shortly before dusk, and when the police arrived upon the scene the fight was in full swing, the combatants using sword-canes and iron sticks. The fortune of war appears to have been distinctly in favour of the medical students, for whereas they were all able to effect their escape, six of the military students remained upon the field, incapacitated by wounds, and had to be taken to hospital. They refused to reveal the name of the opposing faction, and the police had some difficulty in finding out that the Saisei Gakusha lads were the culprits.

Tuesday, Feb. 6.

The multitudinous duel fought in Tokyo between 30 students of the Saisei Gakusha and as many of the Kanjo Gakko proves to have been just what was supposed, namely, the outcome of general ill-feeling between the two schools. After many petty collisions between individuals or small parties, it was finally agreed to settle all outstanding scores by a good stand-up fight. Thus far the matter reflects no discredit on the lads. But now comes the miserable part of the affair. It appears that both sides agreed not to employ edged weapons. The youths of the Military School (*Kanjo Gakko*) faithfully observed the compact, and came on the ground armed with sticks only. But their adversaries of the Saisei Gakusha brought sword canes, and the result was that six of the Kanjo-Gakko boys were so severely wounded as to be unable to leave the scene of the combat. If that be true, no punishment could be too severe for the young men of the Saisei Gakusha, and, in our opinion, the Authorities ought to close the school altogether. It is impossible to express too much execration of the wretched cowardice and villainously dishonourable conduct of the lads of the Saisei Gakko, if they were really guilty of such action. The public must conclude that schools where characters of that kind are produced can only inflict disgrace on the country. Dr. Hasegawa Tai used to be one of the most bitter assailants of the Educational Department in the House of Representatives. It was he, if we remember rightly, who, in 1892, declared from the rostrum of the House that the Educational Department was a den of thieves, and indulged in violent diatribes against the foreigners employed by it. His own students have now given a pretty demonstration of the success of his educational methods. We trust that some explanation of this miserable incident may be forthcoming.

This affair has caused a sensation in Tokyo. The greatest indignation is said to be expressed by students of all classes against the dishonourable and cowardly conduct of the men of the medical school —we call them "men" for their ages averaged 25 years, whereas their adversaries were lads from 17 to 23,—and it is feared that some severe measures of reprisal will be adopted. It appears that a regular agreement was drawn up and signed, one of the conditions being that no cutting weapon should be employed, and that, however severely combatants might suffer, no complaint should be made to the police. In spite of this compact the medical students came armed with sword-canes and jack-knives, which they used so resolutely that two of the military students—two brothers—are not expected to recover. The military students had announced that their number would not exceed 25, but the medical students, although aware of the intended limit, mustered 35 or 36. It would not be possible to apply too harsh terms to such miserable conduct.

Thursday, Feb. 8.

The moral of the recent students' duel is discussed with evident anxiety by thoughtful persons in Tokyo. It is interpreted in the sense of another instance of the unruly and demoralized conduct of the student class in general, and the *Kokumin Shimbun* asks what kind of men the nation expects to have for its next generation. We do not, for our part, perceive that so much importance attaches to the incident, as far as the fight itself is concerned. A rough-and-tumble struggle between the students of two schools who have learned to regard each other with dislike is common enough the world over. Most of us have witnessed, and even taken part in, something of the kind in our youthful days, though not with such deliberation and due arrangement of details as marked the fight in Tokyo. The one miserable feature of the affair was the treacherous cowardice of the medical students in arming themselves with swords and knives though they had promised to bring only sticks. They are understood to plead in excuse that, whereas the agreement had been for thirty combatants on each side, the military students brought sixty, and they, the medical students, were consequently obliged to employ exceptional means of self-defence. That excuse seems to us to aggravate the outrage. Even granting that a pact as to numbers existed—and we may observe that no such condition appears in the published articles—, its violation could not have been discovered until the place of combat was reached, whereas the medical students must have made provision of cutting weapons before they started for the ground. As a matter of fact, the military students are said to have been in the minority, but, even if they had come a hundred strong, the use of swords and knives would have been unpardonable on the part of their adversaries.

When Prince Henry of Prussia was at Singapore, he received a telegram from Europe to the effect that a little prince had been born to him on the 8th Jan. The Prince resumed his homeward journey on the 14th.

GENERAL LAWTON.

General Lawton, who was killed by a bullet through the heart while in an exposed position at the head of his troops, carried a musket in the ranks in 1861, and had for fellow-private President McKinley. An American journal justly remarks that the story of the two men's later careers show the greatness of American opportunities to men of sterling character. Yet Lawton's chief success came to him with the bullet that ended his career. He had served for forty years without climbing higher than the rank of colonel in the regular army, and his property at the time of his death consisted of a house with a mortgage on it. Now, however, all America is paying a sincere tribute to his memory, and perhaps had he survived, his country would not have been equally ready to acknowledge that the campaign conducted by him finally shattered the resistance of the Philippine insurgents.

Incidentally to this Philippine reference we can not but observe that a great many writers have much to retract. When the Spaniards were battling in Manila, and month after month went by without bringing to them final success, the Anglo-Saxon public was disposed to draw disparaging conclusions as to their military prowess and to talk sententiously of the decadence of Spain. All who did so then owe an apology now to the Castilian. He said very little at the time. With the fine spirit that has always distinguished the Spaniard, he bore detraction quietly, trusting, perhaps, that time would vindicate him, but scarcely hoping that the balm would come so soon. Well, he is vindicated now. There are no better soldiers in the world than the Americans, and it has cost them a long and weary effort to grapple with the difficulties that we were all ready to ridicule the Spaniard for not overcoming immediately.

THE JAPANESE SCRIPT.

A Representation has been introduced in the Lower House urging that a committee be appointed to investigate the question of reforming the Japanese script. We imagined that, in spite of the Diet's previous refusal to sanction any expenditure on this account, the Government had contrived to divert some money to the purpose. But apparently the introducers of the Representation desire to give greater publicity to the matter, and, if possible, to invest it with the prestige of the Diet's sanction. At all events the more the subject is ventilated the better. For many years it has occupied the attention of persons interested in Japan's progress, and the time seems to us to have fully arrived when practical expression should be given to the views of these scholars. For our own part, we do not believe in any tentative measures or half-way house. To divide a reform of such a nature into various stages—such as, first, reducing the number of Chinese characters for daily use; secondly, substituting the *Kana*, and thirdly, passing to the alphabet —would involve several efforts each virtually as costly in the matter of time and labour as a radical change introduced at the outset. There can be no tinkering. The more the problem is examined the less does it lend itself to partial solutions.

THE SANITARY AFFAIR IN HAWAII.

Monday, Feb. 5.

As a result of the very drastic sanitary measures adopted by the Hawaiian Authorities, no fewer than 2,456 Japanese subjects are said to have been deprived of residence and resources. The houses formerly inhabited by them were in the Chinese quarter, which was entirely demolished for sanitary reasons, the site being afterwards saturated with kerosene and set on fire. Among the Japanese that were so unfortunate as to be involved in this work of destruction, 1,450 can see their way to avoid destitution by hiring themselves out as labourers and servants or by obtaining succour from friends. But 1,006, being entirely without means, have been obliged to seek shelter in the temporary sheds provided by the Government for that purpose. It is understood that their claim to relief and compensation is being pressed by the Foreign Office in Tokyo, but there can be no doubt that under American administration their rights will receive ample recognition.

Tuesday, Feb. 6.

There is evidently a great deal of dissatisfaction in connexion with the destruction of Japanese property in Hawaii by order of the Authorities as a precaution against the spread of the Pest. At first it was understood that the Government did not intend to make any compensation except in obedience to the judgment of a law court. Naturally that decision created great consternation, for many of the sufferers were virtually destitute and could not have procured means for an appeal to the law. But happily no such arbitrary method of procedure was adopted. The latest report says that the Government contemplates making good two-thirds of the value of the property destroyed. That is not very satisfactory, and, as it may be made very much worse by harsh methods of assessment, the Japanese are endeavouring to contrive that one-half of the assessors shall be of their own race. It is alleged that they employed Mr. Newman at the outset to look after their interests, and that he accepted the trust with apparent sympathy, but afterwards espoused the Government's cause, and declared that the demolition of houses and the destruction of property for such a purpose must be regarded in the same light as an ordinary conflagration or other accidental calamity. The unfortunate Japanese are therefore much perturbed, and there is talk of appealing to Washington. But one can scarcely suppose that the obvious principles of justice will be ignored by the Hawaiian authorities. If it has been considered necessary to inflict heavy losses on a section of the community for the better security of the whole, compensation is unquestionably due to the sufferers —not full compensation, but certainly the present value of the property destroyed minus a reasonable portion of the sum that has to be provided for purposes of indemnification.

Wednesday, Feb. 7.

A feeling of great and growing dissatisfaction is apparent in Japan with reference to the procedure adopted by the Hawaiian Authorities for checking the spread of the Pest. Newspaper after newspaper is taking up the question. All proceed upon the assumption that the accounts thus far received are accurate and exhaustive, but that is obviously an extensive assumption. We should like to hear from the other side before forming any conclusion.

Thursday, Feb. 8.

The Government is said to have despatched Mr. Hirai, a secretary of the Foreign Office, to Hawaii for the purpose of investigating and reporting upon the facts of the sanitary-precautions trouble. Mr. Hirai seems to have made his preparations for departure with much expedition. He appears to have received his orders on Tuesday and started on Wednesday.

THE TWENTIETH CENTURY.

It appears that the Czar and the Pope think differently about the time when the twentieth century begins. His Russian Majesty has decided that the old calendar shall be abandoned and the Gregorian adopted throughout his dominions, and that the change shall take place from January 1st, 1901, which His Majesty considers to be the first day of the twentieth century. But the Pope, in a recently issued decree, declares that the nineteenth century came to an end at midnight on the last day of December, 1899. If only the Pope would tell us, under those circumstances, when the 19th century began, we should understand him better. The fact seems to be that many people believe that the so-called "first year" of the Christian era consisted of one week only, namely, the week beginning with December 25th of the year in which Christ was born, and ending with December 31st of the same year. Hence, according to their way of reckoning, the 1st of the following January was the beginning of the second year after Christ. Arithmetically the question does not admit of any argument, for there is no number which commences with a cipher: all numbers begin at unity. But if we agree to regard as the first year the interval of a week between the birth of Christ and the beginning of the following year, then obviously December 31st, 1899, was the last day of the nineteenth century.

SUBSIDIES TO NAVIGATION.

The principle of subsidies for special steamship services, having been adopted by the Cabinet, has found expression in a Bill which will shortly come before the Diet for discussion. According to our Tokyo contemporaries, the details of the measure are as follows in the case of the Nippon Yusen Kaisha:—

	Yen.
The Kobe-Otaru and Aomori-Muroran services	150,000
The Yokohama-Shanghai service	250,000
The Kobe-North-China service	150,000

These figures make a total of 550,000 *yen*, instead of the general subsidy of 880,000 *yen* hitherto granted. A further subsidy of 127,000 *yen* will be paid by the Hokkaido Administration on account of the Hakodate-Nemuro, Nemuro-Abashiri, Nemuro-Itorup, and Otaru-Soya services. Finally, the Osaka Shosen Kaisha is to receive 250,000 *yen*. Thus the payments by the Treasury would aggregate 800,000 *yen*, instead of 880,000, and the Osaka Shosen Kaisha would benefit to the extent of 250,000 at the expense of the Nippon Yusen Kaisha.

THE PEST.

Saturday, Feb. 3.

It is pleasant to read a notification in the *Official Gazette* that the precautions against the spread of plague from Kobe and Osaka have now been relaxed, and that neither ships nor railway trains coming from these places will be any longer subjected to medical inspection and disinfection. In Tokyo's case the new system of sanitation is to be persistently applied, but as it causes no special inconvenience and as its usefulness, independently of the Pest, has been amply shown, there is nothing to be said against its continuation. It is perhaps too soon to conclude that we are out of the wood, but with regard to the record thus far, Japan is to be sincerely congratulated. By the thoroughness and scientific character of her hygienic measures she has battled successfully against an enemy of the most cruel nature. There would be great interest in knowing to what particular class of precautions this happy result is attributable. How much gratitude is due to Yersin's serum, for example? The course of the Pest in Japan's case, brief as it has been, was marked by an incident of great pathos—the death of two physicians and the virtual destruction of their families. But these experts did not perish in vain, for the sacrifice of their lives seems to have been the means of diagnosing one of the most virulent types of the disease.

Monday, Feb. 5.

The number of rats purchased by the police in Tokyo from the time when the crusade commenced on the 15th of January until the 29th of that month was 53,568, representing a sum of 2,678.40 *yen*. Some haughty citizens sent in 117 rodents without claiming the reward of 5 *sen* per head. Kanda and Nihonbashi furnished the greatest number; Azabu and Akasaka the smallest. It is understood that the police will soon close their doors to further arrivals.

MR. CARNEGIE.

It is stated by a Tokyo contemporary that several leading Japanese merchants are planning to invite Mr. Carnegie to visit Japan. The great manufacturer is understood to be perplexed as to the best means of disposing of some fifty million dollars of his fortune. After he had formed the resolve to devote his immense accumulations to purposes of public charity, he proceeded, with all the method and accuracy of detail that business men employ, to examine the various objects inviting assistance, and the result of his investigations was that means of satisfactorily disposing of the whole amount—variously stated at from two hundred to four hundred million dollars—were found, with the exception of fifty millions for which no suitable outlet can be discovered. Learning of these things, it occurred to certain Japanese publicists that since this country has been a large purchaser of the products of the Carnegie factories, a portion of the fifty millions might be diverted to the Far East without doing violence to any principle of justice. Mr. Carnegie appears to have been influenced by arguments submitted to him in that sense, and it is thought that, if he could be induced to visit Japan, he would find here some good opportunities for exercising his benevolence.

THE OFUNADO PROJECT.

The projectors of a harbour and other works at Ofunado have now reduced their scheme to a very definite form. They calculate that the harbour will cost 1½ million *yen*, the railway 6 millions, and the iron-works 4½ millions. Out of that total of 12 millions, they propose to obtain 200,000 *yen* from the proceeds of local taxation, and 7,800,000 *yen* from the public by the sale of shares, and they hope that the Treasury will discharge its usual function of wet-nurse to all infant enterprises by putting up a sum of 4 millions. Ofunado is in the immediate neighbourhood of Kamaishi, where the Government sunk large sums in 1875, 1876, and 1877, in an attempt to develop the iron mines. Viscount Yamao, who then held the portfolio of Public Works, had the foresight to perceive that one of Japan's greatest needs was iron of her own production. But Kamaishi was then a very inaccessible place. Everything had to be carried thither over-sea, and the defective nature of the harbour intensified that disadvantage. Finally the Government stepped out of the business, and it passed into private hands, to be conducted thenceforth in such a desultory manner that Kamaishi iron was scarcely quoted in the market. Nevertheless the place has great natural opportunities, and its accessibility has been much improved by the construction of the Nippon Tetsudo. The line now projected would run from Ofunado to the Nippon road *viâ* Tono and Hanamaki. We presume that the plan is to transport the iron *by railway and* to obtain fuel by sea, but possibly there may be an idea of getting Hokkaido coal also by train. Fuel was always the great difficulty, neither coal nor charcoal being obtainable in the neighbourhood.

THE HOUSE OF COMMONS AND THE GOVERNMENT.

The House of Commons is evidently determined that there shall be no change of horses while the nation is crossing the stream. It rejected Lord Edmond Fitzmaurice's amendment to the address by a majority of 213. Considering that the whole of the Irish Party, numbering at least 80, voted with the minority of 139, it appears that not more than 60 members from England, Scotland, and Wales were found to declare that the Government had been wanting in knowledge and foresight. It is a very remarkable vote, because a great many critics were proclaiming that the Government had been guilty in both of these respects, and because the country is unquestionably very impatient about the reverses that have befallen our troops. But the Cabinet has now received an emphatic assurance of the nation's confidence, and such an assurance, given in the hour of adversity, will greatly strengthen the hands of Her Majesty's Ministers, and enable them to prosecute the war with vigour. England has set her teeth. She means to win, whatever the cost, and we have profound faith in the bull-dog tenacity of her purpose. As Japanese journals have justly observed, she is fighting against, not the two Republics of South Africa alone, but the greater part of Europe. She is nevertheless undismayed.

THE ECHIGO KEROSENE.

Tuesday, Feb. 6.

The shares of the Echigo Kerosene companies are among the most favourite securities in the market at present. Since the principal company—the Nihon Sekiyu Kaisha—recently declared a dividend of 40 per cent. and, further, applied a considerable sum to cover the shares not yet fully paid up, there has been a brisk demand for this paper. The last quotations are :—

	Paid up.	Selling at
Nihon Sekiyu Kaisha.....	50 yen	.....200 yen
Takarada Company	50 yen	.....150 yen
New shares of the above..	37.50 yen	..... 95 yen
Zoo Company	22.50 yen	..... 67 yen

It is alleged that foreigners are interesting themselves keenly in the enterprise, and that a trust is likely to be organized.

Thursday, Feb. 8.

Mr. Asano is reported to be endeavouring to organise a trust among the kerosene companies in Echigo. There are quite a number of companies. The largest of them, the Nagaoka, has a capital of half a million *yen* ; eight others have capitals ranging from a hundred thousand to three hundred and fifty thousand, and some 66 have capitals under a hundred thousand. These are certainly ideal materials for a trust, and we observe that an international element is imported into the affair by reminding the people that, if the trust succeeds, it may hope to oust American oil and all other foreign oils. A considerable sum of money would be needed, however, to organize the business on a thorough scale : two or three millions of *yen* are spoken of, and Tokyo journals allege that Mr. Asano is in conference with Messrs. Samuel Samuel and Company, the idea being that the work can be better managed by a combination of foreigners and Japanese.

OLD AND YOUNG.

Periodically the cry is raised in Japan that the old ought to give way to the young. In the Occident age is never considered to disqualify a statesman. On the contrary it is the highest of qualifications so long as it has not impaired the moral faculties. But in Japan we are sometimes tempted to think that the value of ripe experience is under-estimated. Even the *Jiji Shimpo* urges that the time has come to give a chance to the rising generation. It contends that, although the old men may be still fairly competent, they suffer from the inevitable conservatism that years bring, and are no longer fit to pioneer the nation along the path of progress. The *Jiji's* idea is that there are as good fish in the sea as ever came out of it. People predicted, it says, that Germany would fare badly when Bismarck went out of office, but Germany has managed to get on excellently without him. But to complete the analogy our contemporary should show that after Bismarck's retirement the conduct of German affairs was entrusted to young hands. It would be difficult to show anything of kind. As in England and France, so in Germany, youth is conspicuous by its absence from the councils of State. The one exception is the German Emperor, but a man of such talents must be an exception to every rule. The German Emperor is one of the great men of the century, and no ordinary rules apply to his case.

A QUESTION AS TO PERPETUAL LEASES.

Mr. Yamada Kinnosuke, a well-known barrister of the House of Representatives, has presented a Question which will furnish an opportunity for a reply of some interest to the foreign community. He wants to know why the word "perpetual lease" is used in the Ordinance of last December—Ordinance No. 458—in connexion with the tenure of land in the Foreign Settlements and parenthetically to the term "superficies." There is no such term in the Civil Code, he says, as "perpetual lease." "Superficies" is distinctly provided for—superficies for a fixed term of years or superficies for an unlimited term — but there is no "perpetual lease," and the Government is asked to explain why such a term was employed in the Ordinance. There is a further question directed to ascertaining whether the Ordinance intends to set up a distinction between "perpetual lease" and emphyteusis, but that part of the object is not of much moment. The Government's reply will doubtless make it quite clear that the "perpetual leases" of Settlement property are specially protected by Treaty and that the use of the term parenthetically in the public registers is intended to differentiate the title from ordinary "superficies" and thus to exclude it from the general purview of Courts of Law, even were there the remotest chance of their intervention being invoked.

EDUCATION.

The latest idea is to obtain funds for educational purposes by issuing public bonds. There is certainly much need of liberal reforms. In 1898, out of 7,700,000 school-age children, 220,000, or over 31 per cent., did not enter the primary schools. That, of course, does not necessarily indicate deficient accommodation. But the inference is plain when we come to the case of the Middle and the High Schools. For admittance to the Middle Schools in 1898 there were 36,000 applications, and only 23,000 could be granted, 39 per cent. being refused. In the same year, 3,100 youths sought admission to the High Schools, and 1,600 were refused, or 51 per cent. Girls fared somewhat better. Out of 4,300 applicants for admission, 3,700 could be accommodated, only 12 per cent. being refused. Without an increase of accommodation it is evident that if the population grows, the students will be placed at a greater disadvantage every year. Moreover, owing chiefly to the very small inducements now offered to join the profession of school teacher, there is a deficiency of no less than 30,977 in the ranks of the teachers, and about a thousand imperfectly qualified persons are temporarily filling some of the vacancies. The Government's proposals, passed by the Diet this session, provide for an enlargement of the premises of the First High School, the organization of another High School for general education, and the establishment of three additional technical High Schools —commercial, industrial, and forestry. But the public evidently regards these measures as inadequate. Hence the proposal for an issue of educational bonds.

THE NAVY.

The alarm about the *Akagi* has happily been dissipated. She arrived safely in Shanghai on the 30th ultimo, her voyage having been delayed by tempestuous weather.

The *Fuso*, which was sunk last year and subsequently raised, has now been fully repaired. The work was done at the Kure Dockyard. It ought to have been finished by the close of 1899, but as extensive renewals of her machinery were undertaken, she could not be got ready for her public trials until the 28th of Jan. It is expected that she will have shipped her armament and resumed her place in the squadron by the end of this month.

The *Jiji Shimpo* raises a novel question. It says that the only uniform worn by the Emperor—apart from His Majesty's civil robes—is a military uniform. Even when he inspects ships, the Emperor wears the uniform of the commander-in-chief of the army. Our contemporary asks whether that is quite complimentary to the Navy, and whether the big naval manœuvres this spring, when some fifty men-of-war will assemble, independently of torpedo-craft, would not be a good opportunity for his Majesty to make a new departure.

The line-of-battle ship *Asahi*, now under construction at Lord Armstrong and Company's works, to order of the Japanese Government, is expected to have concluded all her trials before the end of June, in which case she will sail for Japan in July. Commander Iida and 300 men, the second detachment of the crew that is to bring her out, are on the eve of starting for England. The *Asahi* is a sister ship of the *Shikishima*, which is now *en route* for Japan.

PRICES OF COMMODITIES.

The appreciation of commodities continues unabated. Taking the forty principal staples of consumption, and regarding their average price in January, 1887, as 100, it appears that the average last November was 160; that it rose, in December, to 189; and that at the end of January (1900) it reached 190. The following figures are particularly striking:—

PRICES (THE FIGURE FOR JANUARY, 1887, BEING REGARDED AS 100).

	January 1900.	December 1899.	January 1899.
Iron	245	236	188
Cotton	133	126	103
Charcoal	211	190	167
Fire Wood	211	204	185
Oil Cake	219	210	175
Nails	160	154	111

With reference to this subject, Mr. Yamamoto, President of the Bank of Japan, in a paper read before the Yuraku-kai a few days ago, combated the theory persistently put forward in certain quarters that an increase in the volume of the currency is responsible for the appreciation of commodities. The truth is that the latter movement has been going on quite independently of the former. Until last September there was no special increase in the volume of the currency, but in October the Bank of Japan increased its loans by 12 million *yen*, in November by 20 millions, and in December by 18 millions; or some fifty millions in the three months. Instead of regarding that hitherto unprecedented event as a cause of the appreciation of commodities, Mr. Yamamoto considers it to be a consequence. The great rise in the market prices of raw silk, *kabutaye*, copper, coal, and rice—this last plainly due to a defective harvest—can not reasonably be attributed to any swelling of the bulk of the currency, but has obviously the effect of requiring larger sums of money for conducting transactions in these staples. Mr. Yamamoto mentioned incidentally that to fix, with any pretence of approximation, the amount of currency that should be put into circulation *per capita* of the population seems impossible. In England the average is 33 *yen* per head, in France 70 *yen*, in Germany 38 *yen*, and in Japan at present a little over 5 *yen*. Speaking, again, of the charges of conservatism brought against the Bank of Japan because, while lending money on railway shares, it declines to accept the shares of industrial companies as security for loans, the President said, in effect, that the Bank has to cut its coat according to its cloth. Its funds available for lending are only 90 million *yen*, whereas the volume of negotiable securities that may be offered to it comprises 400 million *yen* worth of public bonds, 140 to 150 millions of other negotiable paper, and, perhaps, another 100 millions in kind—silk, cotton, rice, &c.—, making from 600 to 700 millions in all. It is consequently obliged to be conservative even in the matter of public bonds and railway shares, and can not launch out at all into the region of manufactures.

THE HOUSE OF REPRESENTATIVES AND WOMAN'S RIGHTS.

The Japanese House of Representatives has accomplished one of the least creditable acts of its career. It has rejected, by an overwhelming majority, the Bill introduced by Mr. Ando and others for giving practical recognition to the elementary principle of justice that a husband has no right to demand from his wife the practice of a virtue which he himself ignores. Moreover, the House's method of rejecting the Bill was contemptible. The Special Committee appointed to examine it reported that to legislate in the desired sense did not seem expedient, in view of the fact that the Government was engaged in revising the Criminal Code. Thereupon one of the supporters of the Bill asked the Government Delegate whether there was any intention of embodying such a principle in the amended Criminal Code, and received a negative reply. It is perfectly plain that if the Committee had been actuated by any desire to consider the Bill on its merits, they would have taken the precaution of putting a similar question to the Government Delegate on their own account. But they avoided doing so in order not to be deprived of the wretched subterfuge which they offered to the House as a reason for rejecting the Bill. They had not the courage to deny the principle involved—and their pusillanimity is not without encouraging significance—, neither had they the honesty to adopt the most ordinary precaution against deceiving the House. It is also perfectly obvious that, after the Government Delegate's disavowal, the only proper course was to re-submit the Bill to the Committee, in order that it might receive examination on its merits. Such a step was, indeed, proposed by one of the supporters of the Bill, but scarcely half-a dozen members could be found to endorse it, and the Bill was then rejected by an almost unanimous vote. The Japanese nation, or at any rate their representatives, have thus converted their sin of omission into one of deliberate commission. So long as no public refusal was made to recognise the reciprocal obligation of fidelity on the part of husband and wife alike, the Japanese might be regarded as a people whose moral sense in this respect was dormant. But now that the House of Representatives has openly rejected the principle, this country must be content to occupy a lower plane of civilization than that on which Rome stood in the days of Aristotle, Plutarch, and Seneca.

FUNGUS CARVING.

It appears to us that the new art of fungus carving, invented and developed by Miss Ida Musselman of Somerset, Pa., owes its inspiration solely to the Japanese *netsuke*, though we can not find any reference to such an origin in the appreciative notices published by American journals. "The fungus used for wood carving," we read, "is found on partially decayed oak and maple-trees. It must be carefully removed in order to preserve the delicate and creamy surface, which is easily injured while in a fresh and moist state. It is also necessary to have the fungus properly cured and made as hard and durable as wood before it is worked upon." In short the fungus is an easily worked substitute for ivory or the fine-grained woods in which the Japanese *netsuke*-carver has produced such beautiful works since the sixteenth century. A group of lions carved on a fungus by Miss Musselman and depicted in the New York *Tribune* seemed to us to be a *netsuke* until we read its history and observed that the modelling of the animals differed from the conventional treatment they would have received at Japanese hands. The grouping is precisely Japanese, and the fringe of bamboos in which the group is framed is the exact counterpart of a Japanese design.

URBAN REPRESENTATION.

By way of supplement to what we have already written on the subject of urban and rural representation in Japan, the following table, which we take from the columns of the *Kokumin Shimbun*, very clearly shows the ratios contemplated by the framers of the various bills:—

	Total M'bers.	Urban.	Rural.	Total.	Ratio U.	Ratio R.
Composition of present House	300	17	283	100	6	94
Ito Bill	473	113	360	100	24	76
Yamagata Bill of 1898	445	98	347	100	22	78
Yamagata Bill of 1899	426	91	335	100	21	79
House of Representatives' present Bill	478	77	401	100	16	84

It is very plain that so far from recognising the superior claims of the urban population on account of wealth and intelligence, the House of Representatives is not disposed to do even common justice.

A SPLIT IN THE SACERDOTAL RANKS.

Things are not moving smoothly with the Buddhist agitators against the Religions Bill. We have spoken of their meeting in Kyoto, and of the sweeping resolutions formulated there. But it now appears that, on the second day of the meeting, a serious divergence of opinion arose. When the question of the Bill came upon the *tapis* originally, some six weeks ago, a violently hostile attitude was at once assumed by the priests of the Eastern Hongwan-ji. But it was soon found that the Western Hongwan-ji took different ground, and would even sever its connexion with the Eastern Hongwan-ji if the latter maintained its views too vehemently. As such a split would have been a serious calamity to the great Shin Sect, the Eastern Hongwan-ji priests modified their claims, and agreed to a compromise on the basis that the Bill should not be opposed *in toto*, but that steps should be taken to obtain some modification of its provisions. In pursuance of that *modus vivendi* a committee of prelates proceeded to Tokyo, headed by the celebrated Mr. Akamatsu. But in the absence of the committee the agitation was renewed in Kyoto—perhaps because the result of the negotiations for compromise began to be disquieting—and a meeting, as already described, took place on the 5th and 6th instant in that city. It would seem that the Nishi Hongwan-ji priests hoped at first to lead the meeting to a moderate mood, but that, seeing the hopelessness of doing so, they resorted to different tactics. For, on the second day, the *chief* representative of the great Western Temple rose and inquired whether the resolutions were intended to signify total opposition to the Bill's passage through the Diet, and, the reply being in the affirmative, he urged that such a course was out of order, inasmuch as a committee, duly appointed with the full agreement of both sides, were even then in Tokyo discussing amendments of the measure. The meeting declined, however, to endorse that view, and the priests of the Nishi Hongwan-ji withdrew in a body, their example being subsequently imitated by Mr. Doki, the high prelate of the Shingon sect, which has its chief monastery at Koya. We may remind our readers that Mr. Doki, like Count Otani of the Nishi Hongwan-ji, issued a manifesto couched in most liberal terms after the Revised Treaties went into operation. There is thus a complete cleavage in the ranks of the Buddhists. It seems scarcely possible that this much-discussed Bill should make its way through both Houses of the Diet this session, seeing that there only remain some eight working days, but at any rate the opposition of the Buddhists is paralysed by their want of unanimity.

THE WALL STREET PANIC.

A hundred million dollars—two hundred millions of *yen*—lost in a day. This is the calculated result of the recent fall of values in the New York market. The brunt of the calamity had to be borne by the trust stocks and bonds, which have now an aggregate face value of fifteen hundred millions. As usual no one is able to diagnose exactly the cause of this sudden decline. Many reasons are alleged. The cessation of the usual monthly supply of 7½ million dollars' worth of gold from South Africa; the steps taken by Great Britain to provide funds for the war; the recent extraordinary expansion of trade without any corresponding expansion of the currency, the wildly speculative floating of trust stocks and bonds, and a sudden suspicion of the soundness of such speculations caused by two or three failures—such are the factors enumerated. The two last on the list seem to have been the most potent.

THE USUAL MISREPRESENTATIONS.

The degree to which misrepresentation can be carried by the *Japan Herald* is quite astonishing. It can not be intentional, we presume, but, if not, it argues extraordinary inability to comprehend the most ordinary statements. We place side by side a paragraph from a recent article of our own and the *Japan Herald's* comments on it:—

Extract from the *Japan Mail*.

There is still one phase of the question which should be noticed, though we do not imagine that any one attaches practical importance to it. It is the suspicion that although the 45th Article of the Law of Operation of the Civil Code enables the Government now to remove the foreign titles beyond the reach of the Code, the protection thus given will cease when the treaty terminates 12 years hence. In other words, the Government, though pledged by treaty to recognise the perpetuity of the leases, will be guilty of the chicanery of interpreting "perpetuity" to mean "12 years," and will withdraw the protection of the Ordinance. Well, even granting the possibility of such a wild chimera, would the danger be averted by having the titles registered as "perpetual leases?" If the Government can not be trusted to keep its solemn engagements, can the Diet be trusted? If it be conceivable that the Government should resort to the twelve-year subterfuge, is it not at least equally conceivable that the Diet, at the end of 12 years, might rescind the special law which the land-renters now desire to have passed, and might decline to continue the system of differentiation? Truly this line of objection does not deserve analysis. If the Government's *bona fides* can not be credited, there is little to be hoped from the liberality of the Diet. But we may take it for granted that neither Government nor Diet will ever be guilty of the gross dishonesty of pretending that a promise to confirm a perpetual lease holds good for 12 years only.

The *Japan Herald's* criticism of the foregoing.

In concluding remarks we note that our contemporary throws out mysterious hints of what the Diet might do with the leases twelve years ahead. The mere suggestion is monstrous, as such acts would be opposed to international law, and no foreign Government would submit to them. The Japanese would be arraigned before the tribunal of the Powers and branded as untrustworthy among the nations. Moreover, our contemporary seems to have overlooked the fact that, when the period of treaty duration has been fixed, and the conditions of the parties have not been altered, no one has the right to withdraw from it unless permitted by the other party or parties, and in this particular case we may be quite sure that the foreign Governments would not permit the Japanese to withdraw from the present arrangements until they had concluded others equally satisfactory. Such an act as that suggested by our contemporary would never be tolerated under the present law of nations, because in this age of comparative enlightenment it is a recognised truth that, apart from times of peace, even in war time it is against this international law to interfere with private rights; therefore what has once been granted can not be cancelled legally, if the Japanese wish to preserve their credit in the eyes of the world.

BRIBERY AND CORRUPTION.

Our readers know that a Bill has been introduced in the Lower House by Mr. Ozaki Yukio, having for its object the restraint of corrupt practices among the members. The method advocated by Mr. Ozaki is very simple. He proposes that members of the Diet should be included in the same category as officials for the purposes of his reform; in other words, that charges of bribery and corruption against a member of the Lower House should come under the jurisdiction of the ordinary Committee, or a Special Committee, of the House. The Bill was handed to a Special Committee for a report, and it is stated that the Committee has decided to recommend its rejection for two principal reasons. The first is that as the system of Parliamentary Cabinets has not yet been introduced in Japan, the Administration can not be trusted to refrain from interfering with the Judiciary, and impartiality on the latter's part is consequently not to be relied on. The second is that the Judiciary in Japan is not yet sufficiently equipped to discharge such functions in a satisfactory manner. We do not vouch for the accuracy of these reasons, but they are published by the *Nippon* which, doubtless, has trustworthy sources of information. Our contemporary's comment is *sate kuchi wa chōhō na mono da* (verily the tongue is a convenient thing), and perhaps nothing more apposite can be said. It would be a vast joke if the Diet rejected the Bill on such grounds. But it would also be most injurious to the country's reputation, for if the House of Representatives pledges itself to the assertion that the Judiciary is still subject to interference by the Executive, and that the judges are still unfit to discharge their functions, how can foreigners possibly be expected to form a more favourable conclusion?

NIGIRI-TSUBUSHI.

Clever as the Japanese are in devising equivalents for foreign idioms, they have not yet found anything that does such graceful duty as the term "slaughter of the innocents." When a Bill meets with that fate in the Diet, they speak of it as *nigiri-tsubushi*, which literally means "grasped and crushed," and is quite sufficiently expressive, at all events, though deficient in elegance. Such seems to be the inevitable fate of the Religious Bill. It has not even reached the stage of a committee report in one House, and the eight working days that remain of the session are quite inadequate to pass it. Meanwhile its opponents, the Shin Sect, maintain their agitation vehemently. In Kyoto as we have seen, their phalanx has been split, but in Owari and Mikawa, where the Eastern Hongwan-ji has many adherents, meetings are daily held, lectures delivered, sermons preached, and newspapers boycotted, the whole movement being conducted with a degree of earnestness that is, at all events, striking, whatever be the real character of its motives. It is said that in the event of the Bill's being pushed in its present form, a monster array of the Owari and Mikawa objectors have resolved to organize a demonstration in Tokyo. They forget, apparently, that such demonstrations are unlawful while the Diet is in session.

KOREAN NEWS.

Intelligence received by the *Asahi Shimbun* from Korea represents the United States Minister as having taken an unusual step. He has addressed the Emperor direct with reference to a report that certain American citizens had taken part in a conspiracy to overthrow the imperial form of Government and substitute a republic. The American gentleman now employed as adviser to the Korean Government is expressly referred to by the authors of this absurd report. Doubtless the American Representative had intelligence that the Emperor placed some faith in the *canard*, or that the Cabinet was disposed to believe it.

With regard to the Uensan mining affair, the same journal's special correspondent says that the Russian Representative has really lodged a protest against the concession's being given to a British subject, but that Mr. Steyn is proceeding on a misunderstanding. Last spring, an official division of the State property was made, the mines falling to the share of the Household Department. Mr. Steyn's predecessor then proposed that, if mining concessions were reserved entirely for Russian subjects, the Russian Government would undertake to lend Korea any money required by her. No definite reply was given by the Korean Authorities, but the *Asahi's* correspondent thinks that Mr. Steyn is assuming that the arrangement proposed by his predecessor was really made. Meanwhile the British Representative is understood to be very insistent in his demands for recognition of Mr. Morgan's rights, and the latter's workmen are actually on the spot, waiting to commence operations.

The semi-annual meeting of the shareholders of the Söul-Chemulpo Railway has been held, and the following accounts were presented and passed:—

	Yen.
Net profits for the half year	9,406
Brought over from last account.....	5,044
Total	14,450
Dividend at the rate of 3 per cent. ...	11,162
Carried forward	3,288
Total	14,488

It will be observed that the Company reckons its capital at only 744,200 *yen*, a figure which we do not understand, seeing that the line is understood to have been purchased for a million *yen*, and a considerable sum was subsequently spent on its completion. At all events, this account is not calculated to encourage the promoters of the Söul-Fusan line. If the Söul-Chemulpo road, which has admittedly the best prospects of any railway in Korea, can pay a dividend of only 3 per cent., inventors are not likely to be tempted by the shares of the Söul-Fusan line.

The Korean Government has apparently abandoned its heroic policy with regard to the Uensan mine and Mr. Pritchard Morgan. Again and again the telegraph has told as about Mr. Morgan's having sent fifty men to work the mine in defiance of the Korean Government's refusal to grant permission, and about the Söul Authorities having ordered a force of troops to proceed to Uensan for the purpose of restraining the intrepid miners. But a change has come over the spirit of the dream. The Minister of Foreign Affairs is said to have been opposed from the first to any exercise of force, and finding that his peaceful counsels did not receive attention, he finally resigned. That seems to have induced the Government to reconsider its decision, for now, instead of despatching troops to check the enterprise, the Imperial Household Department is about to send 20 men to "guard the mine." The precise interpretation of the phrase "guard the mine" is not evident, but the words are read to mean that Mr. Pritchard Morgan's men are not likely to experience any serious inconvenience.

An interview with Mr. Hayashi, Japanese Representative in Söul, is published by the *Jyji Shimpo*. Mr. Hayashi sets out by denying in the most emphatic manner that any differences exist at present between Japan and Russia. There is not the smallest reason to apprehend that the Masampo affair will ever assume the dimensions of an international question, and no other clouds mar the absolute serenity of the horizon. In fact, since the last conference between Mr. Pablov and Mr. Hayashi, the relations between the two empires may be described as extremely cordial. Mr. Hayashi then goes on to speak of foreign enterprise generally in Korea. He declares that it has never been Japan's policy to interfere in any way with fair competition. An open field, and no favour, is her motto. Nor does he see that displays of force are necessarily conducive to the promotion of industrial or commercial enterprise. The United States of America does not send men-of-war into Korean ports, yet her citizens enjoy more than a proportionate share of the opportunities offered by the country. What the Japanese have to do is to take their courage in their two hands and enter the field of competition in practical earnest. They have the concession of the Söul-Fusan Railway, but others are watching to secure the reversionary interest in it, and so surely as the Japanese promoters allow the fixed period to expire without beginning to construct the road, it will be snapped up by other nationals.

THE NATIONALIZATION OF THE RAILWAYS.

Saturday, Feb. 3.

It is stated that the plan to be pursued in purchasing the private railways, according to the recommendation of the Committee appointed to investigate the question, is to effect the purchase by means of five per cent. bonds. The price to be paid for the nine railways involved in the scheme is 200 million *yen*, and the transaction will extend over 7 years, so that there will be an annual addition of some thirty million *yen* to the volume of Government securities. The price paid for the lines is to be fixed after consultation with the various companies, but is not in any case to exceed twenty-five times the average net profit for a year. We do not exactly know how the average profit is to be determined, or what is meant by "average." At all events the project seems to have finally entered the field of practical politics, for good or for evil.

Tuesday, Feb. 6.

It is the *Fiji Shimpo's* opinion that the action of the Railway Committee in recommending a scheme for the purchase of the private railways, and the action of the Government in embodying the scheme in a Bill, are a big bluff. The Committee knows that the scheme is impossible; the Government knows that it is impossible. But the Committee, for reasons of party polities, deems it well to recommend a programme, and the Government, lest it should offend its political supporters by ignoring the recommendation, has drafted a Bill in the sense suggested, trusting that, in the interval allowed for carrying out the measure, something will occur to stay further proceedings. That is a strange theory of the *Fiji's*. Scarcely credible, we should think. If the Bill contains a clause leaving the Government full discretion as to giving effect to its provisions, there may be warrant for assuming that nothing very serious is contemplated, but not otherwise.

Thursday, Feb. 8.

The draft Bill for nationalizing private railways has received final consideration from the Committee appointed last year to examine the question, and has been adopted with very slight amendments; namely, that the period for carrying out the scheme shall be 10 years, instead of 7, and that the railways shall be purchased in the order of the *i-ro-ha* syllabary, instead of being specially designated for precedence. Many people think that the Bill will be put though the Diet this session. If so, the Diet will have to expedite its proceedings in an unusual degree. Since the measure emanates from the Government, it will have to be submitted to special committees in both Houses, which means that at least four days will be required by each branch of the Legislature. But the session closes at the end of next week. We are bound to say that the management of the State lines has not hitherto been of such a character as to suggest the advisability of transferring all the roads to the care of the Railway Bureau.

Friday, Feb. 9.

Count Matsukata has expressed disapproval of certain features in the proposals formulated by the Railway Committee with reference to the nationalization of the railways. His Excellency objects especially, and with obvious reason, to the provision that the purchase must be effected within a fixed term of years. The inevitable consequence of imposing a time limit would be to seriously disturb the stock market. In this matter the Government must be left a free hand, the finance authorities being empowered to watch for favourable opportunities at their own discretion. Another objectionable feature of the recommendations, in the Minister's opinion, is that the Government is required to seek the consent of the Diet to any arrangement for the purchase of a road. That condition ties the Government's hands unreasonably and unnecessarily, and would be most inconvenient in practice. Thus Count Matsukata has allowed is to be clearly understood that the Bill drafted by the Government in the sequel of the Committee's investigations will differ materially from the Committee's draft. We do not imagine, however, that the question has any immediate practical interest. The Diet's session terminates on Saturday week, the 19th instant, and unless it be prolonged—which seems very unlikely—there is no possibility of passing a Bill of such importance through both Houses. Whatever course the Represen-

Digitized by Google Original from CORNELL UNIVERSITY

tatives might be disposed to adopt, the Peers would certainly refuse to be hurried in their deliberations, for many of them are understood to be strongly opposed to the nationalization of the railways.

MINING PRIVILGEES FOR FOREIGNERS.

Monday, Feb. 5.

The House of Representatives, on the 2nd instant, passed without debate or dissent the important change recommended by the Special Committee in the 3rd Article of the Mining Regulations; the change by which mining privileges will be extended to foreigners organized as juridical persons in accordance with Japanese law. The Bill in which this reform has been embodied by the Lower House was originally presented by the Government to the Peers. Its purpose, as drafted, was merely to extend the scope of the Regulations in the sense of adding certain minerals to the list, and in that form the Peers passed it. But, when it came into the hands of the Representatives, they took the opportunity to amend the 3rd Article in the manner above stated. The Bill must, therefore, be sent back to the Peers. If they approve of the Lower House's amendment, there will be no further difficulty, but, if they disapprove, a Conference of the Houses will have to be held. We can not suppose, however, that the Peers will reject an amendment which comes to them unanimously approved by the Representatives. Indeed, this unanimous approval is a very remarkable sign of the times. However sanguine we were that a majority of the Lower House would endorse its Special Committee's recommendation, we certainly did not entertain any hope that not a single dissentient voice would be raised.

Friday, Feb. 9

The Committee of the Tokyo Chamber of Commerce has unanimously adopted a resolution in favour of granting to foreigners the privilege of owning land or mines in Japan. A proposition was also discussed as to the advisability of presenting to the House of Representatives a petition in the sense of the resolution, but the Committee decided that the wiser course would be to refrain from that step, and merely to circulate the resolution among the various chambers of commerce throughout the empire. It may be taken for granted, we think, that this action on the part of the Tokyo Chamber is the beginning of the end of the restrictions upon foreign ownership of real estate. We have always been entirely confident that every restriction of the kind would disappear before long in Japan. The tendency of the nation is essentially progressive. One after another the old-fashioned fetters are shaken off, and there is not the least probability of any tangible retrogression. In 1893, when the "strict-enforcement" agitation was on the *tapis*, and when there was talk of prosecuting every Japanese subject that had lent his assistance to enable foreigners to purchase land, we ventured to predict that before many years had passed the mood of that time would have faded into the realm of bad dreams. It seems that our forecast was justified.

THE DIET.

Saturday, Feb. 3.

Both Houses of the Diet met yesterday, but the proceedings were as usual quite uninteresting. Some discussion took place in the Peers with reference to a Representation for appointing a Committee to investigate the educational system. The object of the advocates of the Representation is to lower the standard of the University so as to bring matriculation within reach of graduates of Middle Schools, the present High Schools becoming, in effect, universities. Professor Kikuchi, President of the Imperial University; Mr. Kinoshita, Governor of Kyoto; and Professor Kato opposed the Representation, but the House adopted it.

The Representatives were mainly occupied with matters relating to education. They voted Representations for establishing High Schools in the Tokaido and Shinyetsu districts, universities in Kiushiu and Tohoku, and a High School of Agriculture and Forestry in Kiushiu. They also adopted a Representation urging the Government to give due aid to a trans-pacific cable.

Tuesday, Feb. 6.

To the surprise of every one the House of Peers has passed the Bill sent up by the Representatives, providing that a cheque need not have the autograph of the drawer if it bears his seal. The declared object of the Bill is to facilitate business by enabling men of affairs to avoid the labour of writing signatures and have it done by proxy, their own part being confined to affixing a stamp. Strong opposition to the Bill was offered by the Government Delegates on the ground that security is of much more importance in such matters than convenience, and a Special Committee of the Upper House reported against the measure by 4 votes to 3. The House nevertheless passed the Bill, most unadvisedly, in our opinion.

Wednesday, Feb. 7.

The House of Representatives on the 6th instant, witnessed the unwonted spectacle of all parties, Liberals, Progressists, Independents and Imperialists, combining to pass a Representation calling on the Government to take steps for the purpose of starting the construction of the Söul-Fusan Railway. No method of procedure was explicitly defined in the document. It was mentioned that the distance is 300 miles, and the probable cost 25 million *yen*, but it left the Government free to select any suitable means of promotion.

The House also passed a Bill enacting that the supervision of all public works in Tokyo shall be entrusted to the Minister of State for Home Affairs, instead of being left to the Governor and Mayor as at present. The reason advanced by the supporters of the Bill was that a special system is necessitated by the great size of the city and the magnitude of the work to be undertaken. The Government Delegate opposed the project but the House adopted it, without even resorting to the usual preliminary of examination by a Special Committee. It is not so many years since this same House used to contend vehemently for the abolition of the special system of Municipal Government in the Three Cities, and used to treat the question as a kind of struggle against the usurpations of officialdom. Times change.

A COMMENT ON THE WAR..

Military experts will have a great deal to say by-and-by, no doubt, about the South-African war and the lessons to be learned from it. Meanwhile, the natural tendency of ordinary minds is to conclude that the origin of the reverses which the British troops have encountered is to be sought in faults of organization or of strategy; in a word, that from a military point of view England is weak. We find an interesting article on that subject in the *Nippon*. The writer contends that to base any conclusion on the events which have hitherto occurred would be altogether premature. The conditions are so exceptional that they upset ordinary calculations. What may confidently be asserted, however, is that Great Britain is displaying, in the face of disaster, a degree of calmness, resolution, and self-confidence rarely if ever shown by any other nation. Our contemporary then cites examples of the conduct of other peoples when their armies met with reverses beyond the seas, but we refrain from reproducing this part of the article, for, since we belong at present to the vanquished side, it is not congenial to adduce comparisons in extenuation of our failure. Nevertheless it certainly does seem to be true, as the *Nippon* says, that the British are the only people in modern times who have never been deterred by reverses from continuing campaigns in foreign lands, and who have managed to hold the fruits of their victories. Very likely we have been presuming too much on our record.

NOTES ON CURRENT EVENTS.

A terrible calamity is reported from Nagoya. Twenty-eight fishing boats have been wrecked off the Miye Coast, and out of their total crews, aggregating 56, only 2 men have thus far returned in safety. There is very little room to hope that any of the others escaped.

The directors of the Tanko Tetsudo Kaisha of Hokkaido decided, at their last meeting, to issue debentures to the extent of 3,900,000 *yen*. The money is to be applied to two purposes; first to extending their lines of railway—2,700,000 *yen*—and secondly, to opening a new coal mine (1,200,000 *yen*).

The Buddhists have held a meeting of the heads of the Shin Sect in Kyoto, and, in spite of the opposition of the Nishi Hongwan-ji, have passed, by overwhelming majorities, resolutions condemning the Religions Bill. A general meeting is to be held in a few days, when these resolutions will doubtless be endorsed.

Vernacular papers say that of the two great copper mines of Japan, the Ashiwo produces ten million catties of copper annually, which is sold for 4,200,000 *yen*, the cost of production being 2,100,000 *yen*; and the Besshi has an output of 6 million catties, which sells for 2,520,000 *yen*, and costs 960,000 *yen* to produce. It would appear, therefore, that the Besshi mine is much more economical to work than the Ashiwo, the ratio of cost being as 16 to 21.

Mr. Ando, not deterred by his failure to procure support in the House of Representatives for his Bill doing justice to

Digitized by Google Original from CORNELL UNIVERSITY

Japanese wives, has introduced another measure which has for its purpose the abolition of capital punishment. That is not likely to be successful, we imagine, for the profoundest thinkers have not yet been able to come to any definite conclusion on the subject.

There appears to be no question that an issue of postage stamps will take place in connexion with the approaching nuptials of His Imperial Highness the Crown Prince. It is said that two engravers have been busy at the work for some time in the Government Printing Bureau, and that there will be two kinds of stamps, a domestic 3-*sen* stamp and a foreign 5-*sen*. They will be issued on the day of the wedding.

The Authorities have at length ordered the suspension of the Kwanto Fire Insurance Company, which distinguished itself last year by paying 5 per cent. of its losses in connexion with the big fire in Yokohama and borrowing the remainder from the policy-holders, and by paying nothing at all to the folks who were burned out at Toyama. The public expected that sentence of suspension would have been pronounced long ago against the Company, for it was undoubtedly a bogus affair.

Marquis Ito, according to the *Chuo*, does not believe that the adoption of an heir to the Chinese throne should be regarded as likely to produce any disturbance, national or international. In short the Marquis takes much the same view as that taken in these columns, namely, that the event has produced a great deal of unwarranted sensation. In the interview which elicited the above expression of opinion, the Marquis further discredited the rumour that Russia entertains any immediately aggressive designs against Afghanistan or that she has despatched an army into Central Asia.

The latest census carries us up to the end of 1898. It shows that the population of the Japanese empire, exclusive of Formosa, aggregated, at that date, 45,193,605 souls, the number showing an increase of 1,960,000 compared with that for 1897. If such a rate of increase be maintained, Japan will have a population of 100 millions in 27 or 28 years. Where are they to find means of sustenance or place to live? Hokkaido still offers large hospitality, but its capacities are totally inadequate to meet such a demand. The wave of Japan's overflow will ultimately inundate the Asiatic continent.

What the Government asks the Diet to do in connexion with the special settlements in China is to sanction a separate system of accounts for expenditures made there. It does not appear that any fixed sum is to be immediately granted for constructing roads and drains. The idea, as explained by Mr. Sakatani of the Finance Department, is that the lands in the Settlements should be acquired by the Government, and that the proceeds of their subsequent sales or leases should be devoted to preparing them for habitation. In short, a system is to be pursued something like that adopted in the case of the foreign settlements in Japan.

Several Japanese papers publish telegrams to the effect that a company of Russian soldiers is encamped near the Yalu on the north of Korea, and that thirty of them have entered Wiju. No information has yet been obtained as to the reason of their presence in that quarter, but the natural conclusion would seem to be that they are a part of the force employed by Russia to protect the prosecution of her Trans-Asian Line.

The *Takao Maru* has gone to the bottom. After lying impaled upon a rock in Enoshima Oki for some days, tempestuous weather completed her destruction. No particulars are published as to whether the rock was unsurveyed, or as to the exact cause of the disaster.

While the citizens of Tokyo are fighting about a street electric railway so that all enterprise in that direction is paralysed, the Kawasaki Electric Railway Company are going ahead. They have elaborated a project for a line from Aoyama *via* Akasaka, Azabu, Meguro, Ikegami and Omori to Kawasaki. The shares are said to have been already taken up. The capital of the Company is 800,000 *yen*, and it is expected that operations of construction will commence in March.

The police have arrested the youth Suzuki Akira, who succeeded in forging and cashing cheques to the aggregate amount of 1,132 *yen*. He was apprehended when attempting to repeat the trick on a Chinese money-changer in Yokohama. The first crime was a common-place forgery, but the second showed much sharpness. Instead of seeking to change a cheque for *yen* 750, Suzuki, asked the First Bank in Yokohama to transmit a sum of 1,000 *yen* to his credit in Kyoto, for which purpose he handed in 253 *yen* in cash and a cheque for 750. He then hastened to Kyoto and drew the money on the arrival of the order. He seems to have squandered all the proceeds of his thefts except 330 *yen*, which he entrusted to a relative in Aichi.

The Industrial Bank shareholders held their half-yearly general meeting on the afternoon of the 3rd instant, when the following accounts were submitted and passed :—

	Yen.
Total profits for the half-year.....	405,536
Expenses	283,043
Net Profit	122,493
Brought over from previous account.	4,224
Total	126,717
	Yen.
To Reserve for meeting losses	19,599
To Reserve for equalizing Dividends	4,900
First Dividend (at the rate of 5 o/o) ...	62,500
Rewards to officers	6,124
Second Dividend (at the rate of 2 o/o)	25,000
Carried over	8,594

A large number of Japanese emigrants —8,000 is the number started—are said to have been engaged by Mr. Takahashi for work on Canadian railways. Mr. Takahashi says that there are about 2,500 Japanese at Vancouver and in the neighbourhood, and that some 1,500 of them are naturalized. During the winter they work on the railways or in the factories, and in summer they engage in the fishing industry on the Fraser River. He believes that fully two hundred thousand labourers are needed for mining in Canada and at Klondyke, and that a splendid opening for Japanese immigrants offers in those regions. A certain Mr. Okayama is said to have secured four rich claims at Klondyke, whence he writes that sugar sells for 5 *yen* per lb., flour for 15 *yen* per 50 lbs., and able-bodied labour for 15 dollars per diem.

The *Hochi Shimbun* says that the cigarette-making business of Japan is practically in the hands of three firms, the Iwaya, the Kimura, and the Murai. Iwaya sells 10 million packets (?) per annum, Murai 6 millions, and Kimura 7 millions. But since the Messrs. Murai are the sole agents for the American "Old Gold," "Pin Head," and "Cameo," their business bulks more largely than that of Mr. Iwaya. The latter uses Japanese tobacco entirely at his factory, but the Messrs. Murai prefer imported leaf. It is stated that the citizens of Tokyo are rapidly abandoning the pipe in favour of the cigarette. Of the tobacco now sold in the city, only 57 per cent. is cut; the remainder takes the form of cigarettes. No such change has occurred in the provincial districts, however. The lilliputian pipe continues to be the constant companion of the agricultural classes.

A gentlemen travelling by the Nippon Yusen Kaisha steamer *Izumi Maru*, from Yokohama to Hongkong, was so unfortunate as to be arrested at Moji on a charge of violating the regulations for preserving military secrecy. The ship having stopped for the purpose of taking in coal, this passenger—an American citizen, it is said, but his transliterated name is unidentifiable—went ashore for a stroll, and, finding himself in the vicinity of some interesting-looking structures furnished with big guns and various novel apparatus, he proceeded to scrutinise them minutely. A sentry discovered him while thus engaged, and carried him off to the guard-room, where he had to undergo the disagreeable experience of being searched and minutely questioned. The officials of the District Court ordered his release as soon as the depositions were submitted, since it was made evident that he had erred inadvertently.

QUADRUPLE MURDER IN YOKOHAMA.

On Monday morning, about seven o'clock, a well-dressed Japanese presented himself at the Isezakicho Police station, stating that he had killed four persons. The Police immediately made investigations into the matter, and found it to be true. The man turned out to be Nakagawa Kaneo, uncle of Sawada Kaoru, a wine merchant in Hanazakicho, Sanchome, No. 45. It seems that he killed the proprietor of the shop, his wife, aged 23, and a boy servant named Katsuzo, aged 14, and the proprietor's sister, named Masa, aged 16. The deed was done sometime during Monday morning and the weapon employed was a sword, now in possession of the police. The murderer gave as a reason for his atrocious crimes that he had been treated badly by the people of the wine-shop.

The bodies of the four murdered persons were sent on Tuesday morning at 3 a.m. to the Kuboyama burying ground to be cremated.

Persons living in the neighbourhood where the murder was committed have been leaving their houses through horror and superstitious terror.

In an action for libel brought by Mr. U. Nervegna, an Italian merchant in Hongkong, against the Chinese newspaper *Tun Wan Yat Pao*, published in that colony, the jury returned a verdict against the proprietor and the printer and publisher, giving damages against both in the sum of $11,370.

SUBSIDIES TO STEAM-SHIP COMPANIES.

IT certainly does seem to be a measure of very doubtful expediency that the Japanese Government should apply itself to reducing its subsidies to steam-ship companies—penny wisdom and pound foolishness, we venture to think. Japan has spent and is spending great sums on her army. She has now raised it to the dimensions of a most formidable fighting force. What for? Certainly not for purposes of home defense. She is quite invulnerable within her own territories. No Power at present existing could attack her with even a slender prospect of success. England or France might send a strong squadron of fifteen or twenty battle-ships to destroy her shipping and bombard her coasts; but that is a naval problem and what we are talking of now is campaigning on shore. So far as land defense is concerned, one-half of Japan's present army, or even one-third of it, would amply suffice. If she had any doubts about that question six months ago, they must have been effectually dispelled by the object lessons of the South African war, where the immense power of the defense, under the conditions of modern warfare, has been conclusively demonstrated. We come back, then, to the query, what is the purpose of this army of half a *million men?* Evidently for service abroad. We do not mean that Japan harbours aggressive designs, but we do mean that she harbours the ambition of being able to place a force of two hundred thousand men at any given point of the Asiatic Continent, and to maintain them there. That is almost her unique claim to international greatness. She can not possibly hope to compete with Powers like England, France, Russia and Germany in the matter of sea-fighting. Russia is already engaged in making a large addition to her fleet; France is about to vote nearly twenty millions sterling for hers; Germany, if the Government gets its way—as it certainly will—may be expected to launch out on a correspondingly extensive programme, and England, judging from the Queen's recent speech and from the shock that the South African war has given to the country's prestige and therefore to its security, will not be distanced in this race of competitive armaments. Heaven only knows where it will end, or by what kind of cyclopean collision these gigantic ambitions will ultimately be shattered. At all events, Japan is out of that race: she can not begin to pay even the entrance fee. She must do what she can to save herself from being open to attack on the sea, but that has to be the limit of her reasonable hopes. Her army is her sole title to international consideration—it will be understood, of course, that we allude to belligerent titles only—, and the efficiency of her army for that purpose depends mainly, if not entirely, on its mobility. Unless it can be used on the Continent of Asia, it might as well have no existence in its present dimensions. Could it be so used to-morrow? When the *post-bellum* programme was published, we insisted upon that very point. The projected army was quite in excess of the facilities available for transporting it. Japan managed to send a large force over-sea during her war with China; but the opportunities were peculiar. If she succeeded ultimately in collecting a hundred thousand men on Chinese soil, we must not let our applause for the feat blind us to the fact that this force consisted of several distinct *corps d'armeé*, and that they were transported separately to their various destinations, so that, practically, the steamers employed represented not more than one-third of the flotilla which would have been required for a simultaneous effort of the same total magnitude. It was, plain, therefore, that if Japan intended to have an army available for service beyond the seas, its organization must be accompanied by a very large development of her maritime carrying facilities, and no such development was in sight when the *post bellum* programme first came before the public. But it must be admitted that steamship enterprise has made considerable strides during the past three years. The Nippon Yusen Kaisha alone has added to its fleet twelve new steamers of six thousand tons; vessels of a class entirely unrepresented in the former mercantile marine of the Empire; the Osaka Shosen Kaisha also has shown much spirit, and the same may be said of the Toyo Kisen Kaisha, and of other companies on a modified scale. In fact, there is a remote hope—only remote as yet—that if the Government continues its policy of judicious aids, the country will ultimately be able to establish the reputation which is its legitimate aim. Marquis Ito showed his invariable foresight when he drafted the *post-bellum* programme, for he included in it a large scheme of navigation encouragement. But the present Cabinet seems to be weakening on the very threshold of success. For the sake of saving a few thousands of pounds it is beginning to cut down its subsidies, though in truth they are already small enough. The amount of the contemplated retrenchment does not signify so much as the impression of timidity and conservatism that it must convey to ship-owners and ship-builders. Such a narrow policy, if it is to be in any sense logical, should be accompanied by a determined reduction of the army-expansion scheme. Japan wants half a million of tons of shipping at least to render her army serviceable, and she could not at present muster even the moiety of that total.

THE IDEOGRAPH QUESTION.

MR. E. H. HOUSE, in an interesting letter which we publish elsewhere, says much that is instructive in his own forceful style and, at the same time, hurls at our head much sarcasm, undeserved we venture to think. He is particularly severe in his denunciations of two phrases used by us, but even when we reconsider them by the light of his condemnation we really do not find them so very reprehensible. Of course Mr. HOUSE knows very well that, though he chooses to read our words in an absolutely literal sense, they were intended to be read comparatively. We said that when it comes to choosing among several substitutes for the ideograph, the Roman Alphabet is "everything that can be desired," and so we continue to say. But we did not say and do not say that the alphabet is a perfect vehicle for rendering sounds. Human ingenuity has not yet discovered any perfect vehicle. For many centuries, however, the civilized world has found the alphabet reasonably well adapted to every-day uses, and there is no appearance of a serious attempt to devise anything better. It is true, as Mr. HOUSE says, that our English method of using the alphabet is often unintelligible. But is that the fault of the alphabet? Is it not rather due to two causes, of which the alphabet is quite independent; first, that a seemingly arbitrary element has been introduced into our etymology, and secondly, that our language is disfigured by homonyms which can not be differentiated without putting the alphabet to some violent uses? So far as the alphabet is concerned, there ought not to be any such curious contrasts as "size" and "sighs," "sleigh" and "slay," "slight" and "sleight," "limb" and "limn," and so on, nor should we write "chough" and pronounce it "chuf," or "though" and call it "tho." But again we say the alphabet is not to blame. It would perform its functions in a plain, straightforward manner were it suffered to do so. At all events, it can be made to represent the sounds of the Japanese language quite satisfactorily, and far better than the *Kana* syllabary represents them. We gather that Mr. HOUSE rather approves of the *Kana*. Has he considered the strange combinations of *Kana* syllables that are made in order to produce Japanese words? Has he examined such puzzles as *Kiyau-to* (Kyoto), *Tenwau* (*Tenō*), *man-yefu-shifu* (*manyōshū*), *shi-youkou* (*shōkō*), *Taikafu* (*taikō*) and so on? The fact is that the *Kana* syllabary, though expressly designed to produce the sounds of the Japanese language, does not produce them by any means as successfully as the Roman alphabet produces them. Celerity of writing is certainly gained by the use of the *Kana*, for the obvious reason that, whereas each syllable is re-

Digitized by Google Original from CORNELL UNIVERSITY

presented by a single *Kana* sign, two alphabetical letters are generally required to write it in *Romaji*. But in that respect the ideograph is still better, especially the cursive ideograph employed so largely in Japan. Mr. HOUSE finds it very silly and inconsequential to say that as a civilized form of writing a syllabary is as much inferior to an alphabet as long hand is inferior to stenography. One might as well say, he thinks, that a syllabary is as much inferior to an alphabet as long hand is inferior to a syllabary. He calls stenography a syllabary. We do not agree with him. We are, indeed, astonished by his statement. But we must be excused from entering into that part of the question here. Its importance is not apparent. Whether our simile be well chosen or ill chosen, the fact will scarcely be disputed that as a phonographic vehicle an alphabet has many advantages over a syllabary. Neither can we admit the justice of Mr. HOUSE'S reference to the Romaji movement of sixteen years ago and the periodical published in support of it. We were careful readers of the *Romaji Zasshi* week after week, and despite Mr. HOUSE'S sarcasm we adhere to the opinion that its columns provided a liberal education for any Japanese of the old school. Finally, in our own behalf and on behalf of the Japanese who are devoting, and have for many years devoted, close attention to this subject, we can not accept Mr. HOUSE'S very disparaging dictum. We certainly do not claim for ourselves any profound knowledge, but our examination of the subject has not been of the flippant, superficial character suggested by Mr. HOUSE'S strictures, and from direct and indirect intelligence of what the Japanese are doing, we are persuaded that they appreciate the difficulties and the importance of the problem more thoroughly than Mr. HOUSE seems to suppose.

MR. FUKUZAWA AND HIS VIEWS.

Foreigners and Japanese are agreed in thinking Mr. Fukuzawa to be one of the most remarkable men of the day. By his own countrymen he is regarded with profound respect almost amounting to worship. Candour, simplicity, courage, disregard of rank and titles, common sense, earnestness, great decision of character,—these are qualities which are as highly esteemed by the Japanese as by ourselves and Mr. Fukuzawa possesses them all in an eminent degree. Everybody gives Mr. Fukuzawa the credit of being quite sincere in the views he holds and all acknowledge that he wields enormous influence throughout the country. The public reads with great avidity everything he writes. His books run though edition after edition at an astonishingly rapid rate and there are few current questions on which he has not something pointed to say. His newspaper is wonderfully well informed, not only on the internal affairs of this country but also on the policies of Western countries. Old though he is, Mr. Fukuzawa shows no signs of having lost his interest in the march of events. A recent article in his newspaper, to quote only one instance among many, maps out with remarkable accuracy the probable course of events in the Transvaal when the present war is over and the two Republics become English protectorates.

Although all are agreed that Mr. Fukuzawa is a very striking personality, there are not a few Japanese and a great many foreigners who hold that his views are anything but elevating. They think his ideal to be a low one. Some writers pronounce it to be materialistic to the core, in the sense that, according to them, nothing but wordly ends are represented to be worthy of constant pursuit. Others affirm that in stating his views Mr. Fukuzawa uses exaggerated language and that his followers are misled by this and push his doctrines to undesirable extremes. Others say that Mr. Fukuzawa has figured too much as an opportunist and that he has sanctioned and even recommended his followers to outwardly conform to forms of religious belief which he himself does not think worthy of acceptance for the sake of the secondary benefits such outward conformity confers. All this and much beside has been said of him. He has been condemned for his scepticism, and it has been said that he has no adequate idea of the important place that man occupies in the Universe. The present writer has for many years studied Mr. Fukuzawa's writings with considerable interest, and in order to show precisely what are the actual views of the Mita sage on religious belief, human life, and kindred subjects has gone to the trouble of examining very thoroughly his 100 short essays, a book which as early as last April had reached its twelfth edition and has now reached the sixteenth. In this volume he has given us his maturest thoughts and convictions. The various essays furnish abundant data whereon to base an opinion of the general character of Mr. Fukuzawa's teaching. In as short a space as possible we will state what he has to say on the principal subjects discussed.

Essay I. is on the "Universe." All thoughtful men, says the essayist, are agreed that there is a certain sublimity and a certain mystery about the Universe, that the way in which numbers of diverse laws work together in realising certain ends is very wonderful. It is admitted that there is something inexplicable connected with the Universe. It would be no doubt convenient to give this a name, and religious people call it "God," whom they assume is the maker of the Universe. I cannot use that name as I know nothing of God. When young I was taught to speak of all things beyond man's strength to perform as the work of "Heaven," and nature's laws were spoken of as Heaven's way. This language is used for the sake of convenience. It teaches us nothing. All that is certain is that there are many things that are beyond our comprehension. The feeling that nature produces in us is one of wonder and admiration. As to actual causes we have no certain guide.

Essay II. is on nature's work and dwells on the uniformity of nature's laws and of their wonderful comprehensiveness. Nothing great or small is uncontrolled by the law from huge planets to specks of dust. And we human beings are part of the great system of nature.

In Essay III. the view is expressed that nature is favourable to man. The following is the gist of what Mr. Fukuzawa has to say on this subject. In all times there has been much discussion over the question of nature's attitude towards mankind. The Chinese philosophers asked whether Heaven's laws were for or against us *Temmei ze* (是) *ka*, *hi* (非) *ka*? The principal features of their treatment of the subject consisted in lamentations over the many misfortunes and drawbacks encountered in this life. There are those who contend that floods, tempest, earthquakes, war, robbery and the like are all proofs that Heaven's laws pay no regard to man's comfort and happiness. But it must not be forgotten that man is endowed with intelligence that will in the end enable him to conquer most of the ills of life. Judging by the rate of progress he is now making, in five or six thousand years there will be few calamities that his skill and forethought will be unable to prevent. Distant generations will be able to surround themselves with happiness of which we have little conception.

In Essay IV., the title of which is "Hope for the Future," the same subject is continued. The history of the past is pronounced to be most encouraging. The appearance every now and again of moralists like Confucius and great scientists like Sir Isaac Newton enables mankind to make rapid progress. Such lights will go on appearing for centuries to come and eventually man will have no complaint to make against his environment.

Essay V. deals with "Cause and Effect." It is contended that the assumption that nature is favourable to us and that there is no real injustice in the conditions to which she has subjected us implies that the whole chain of cause and effect as seen in things material and things mental cannot be justly taken exception to by us. Most of the evils of mankind come from their own sins. Though there are cases of innocent people suffering, yet on the other hand the wonderful intelligence displayed in nature's arrangements, the superiority of her ways to our ways, should keep us from charging her with causing the misfortunes which cross our path. Instead of accusing nature, we should do better to set about righting ourselves.

Essay VI. asks and answers the interesting question, "Should we or should we not entertain a feeling of gratitude" (to nature)? This essay appears in full with a translation on p. 322 *et seq.* of Mr. B. H. Chamberlain's "Introduction to the Study of Japanese Writing." From Mr. Chamberlain's translation we make a few short extracts. After enumerating various sources of happiness furnished to us by nature, the essayist proceeds thus—"Such is the condition of man, swimming in a sea of happiness. Nevertheless, when we proceed to ask whether he ought or ought not to feel grateful for these favours,—whether, to speak colloquially, he should say thank you for them,—a doubt naturally suggests itself. For mark the word 'favour.' It includes the notion of benevolence, kindly action; and gratitude for these presupposes the existence of some person by whom the benevolence is exercised. But the great machine of the Universe, marvellously as it is constructed, shows no trace of any special constructor; and even if, for argument's sake, we coin the word 'Creator' and apply it in this

Digitized by Google Original from CORNELL UNIVERSITY

context, attaining thereby to apparent logical satisfaction, then we must find some maker for the maker of the Creator. Thus we should go on *ad infinitum*, and, when all was said and done, the only conclusion arrived at would be that the world is a great machine marvellously constructed. It is a great machine originated by chance, and we human beings are born by chance, and really form part of the machine. We may illustrate this by the case of an engine which should move of itself in a marvellous manner, while yet there was absolutely no means of ascertaining the existence of the motor power, steam; and man would correspond, say, to one nail, or to a minute particle of the iron of that engine; in all those revolutions he would participate, but as he would naturally ignore* the causes which brought it all about, no search on his part would bring to light any one whom he ought specially to thank for the favour of whirling him round. All that can be done is to contemplate the vastness, the infinity, the immeasurableness, the marvellousness of the great machine, and to discern ever more and more clearly our own insignificance and weakness." In the same essay nature is defined as "merely a marvellous and spontaneous series of events, from which it is impossible to deduce the existence of any person causing those events to be what they are." And the conclusion arrived at is thus concisely and lucidly stated: "*A single immutable order of nature can justly excite neither gratitude nor resentment; for it is plain that, being so vast as it is, we, in our position as human beings, can no more dare to praise than to blame it.*" (The translation is Mr. Chamberlain's, the italics are ours). The sage continues: "Calm, unbiassed reflection shows us that the fact of human beings being born as human beings belongs to the same order as that of fish being fish, or birds being birds, or a man or woman of thirty being thirty; there is in it no special cause for joy, or yet for astonishment. Nature suits man and all other living creatures. This is simply because nature is nature; it is no mark of any special and particular favour. If nature did not suit man and other creatures, then men and things as we now know them would not exist on the surface of this globe,—nay! the globe itself could not then wear its present aspect. Thus it is only because nature is suitable to their origination that things exist at all. It is not because things exist that we are justified in inferring any special favour towards them on nature's part. To notice things and then treat them with particular kindliness is an exclusively human trait, *and it argues want of appreciation of the greatness of the great machine to judge nature's handiwork by our petty schemes.*" In a note at the end of this essay Mr. Fukuzawa tells-us that this discussion is only designed for the learned, and he expresses a fear that the ignorant may misunderstand it. As translated by Mr. Chamberlain, he says, "In fine, gratitude being a sentiment which springs from piety, the proper course for wise men to pursue in the present uncultivated condition of the world is to foster virtue in the foolish by leaving such piety undisturbed, whether its origin be superstition or emotion." [The above words express Mr. Fukuzawa's habitual teaching on the treatment that religion should receive at the hands of the learned: it should be tolerated as a necessary superstition for the sake of its good effects on the ignorant.

The title of Essay VII. is *Ningen no Anshin* ("Man's Composure of Mind"). It lays special stress on the insignificance of mankind in the great scale of creation. It is in this essay that man is compared to an insect that is born in the morning and dies at night, to dust, and to a maggot. His life is represented as quite unimportant. The world can get on without him. The argument is that most forms of anxiety and discontent originate with over-estimation of the importance of life. Life should be regarded with the indifference and lightness of heart with which we regard our sports. Nothing lasts long, not even the most distressing circumstances, and therefore nothing is worth harassing one's soul about. But at the same time we must make the best of life and fulfil its duties. Indifference should be carried far enough to fortify us against being crushed by reverses, but not to the length of making us neglect any of the means of bettering our position placed within our reach. As the views expressed in this have been very much misunderstood and misrepresented by both Japanese and foreigners and have been pushed to greater lengths than is fair to Mr. Fukuzawa, we quote a few lines of the essay in order to show that he guards against the wrong use of his argument. The passage in which the objections of these critics are forestalled and answered is on p. 38 of the Essays and begins, for we cannot quote the whole, *Sude ni sekai ni umare ide taru ue wa, ujimushi nagara sōō no kakugo naki wo yesu, sono kakugo to wa jinsei wa honrai tawamure to shiri nagara, kono tawamure wo tawamure to sesu shite, adakamo majime ni tsutome, hinku wo sarite furaku ni kokorozashi*, &c. "Having come into the world, though we be nothing but maggots, we must make a suitable preparation for living. And this preparation for living will mean that though we regard life as a joke we shall act as though it were a very serious affair and endeavour to avoid both poverty and pain and aim at obtaining wealth and pleasure, etc." Mr. Fukuzawa goes on to say that all the duties of life must be scrupulously fulfilled. The lightness of heart which he enjoins is intended to be an antidote to the despondency which an over-serious view of life is apt to cause in a certain class of minds.

Essay VIII. treats of the Standard of Right and Wrong. This standard, according to the essayist, is no other than the embodiment of the opinion of mankind generally, or of that of various nations, in reference to the quality of actions. It may be said that actions of which a community disapproves are wrong and those of which they approve are right. Thus the standard must ever change with the change of men's opinion as to the quality of actions. Men reason about all actions and come to some definite conclusion about them, that is, they declare them to be good or bad. Religion attempts to set up a higher standard than this, and teaches that actions have inherent qualities quite irrespective of what people think about them. The standard of morals with people who believe in religion is derived from the teaching of men who are supposed to have been sent by God to tell mankind what is right and wrong. This founding of moral teaching on supernaturalism no doubt offers many advantages when it is sought to influence certain minds. Though I myself do not believe in religion, I can see how it becomes profitable to others and how there are cases in which as a device for leading men into the paths of virtue it may succeed.

In Essay IX. Mr. Fukuzawa maintains that good is held in higher esteem than evil by most men. Man is naturally inclined to be good. Even bad men respect goodness in others and in their better moments wish to be virtuous. Wickedness is not usually the result of a deliberate preference for what is bad, but is only the result of folly. The numerous pleasures attached to virtue and the pain that is so frequently a concomitant of vice teach most men to strive to attain to the former and to avoid the latter.

The argument elaborated in Essay X. is not easy to follow and to not a few it appears contradictory. The essayist himself seems conscious that the view of man that he propounds here stands in apparent if not actual antagonism to the teaching of Essay VII. The limitless desires and high aspirations of man form the theme of Essay X. Man finds himself in possession of a mind that can free itself from all the trammels of time and space and soar to sublime heights. This is some compensation for the extreme insignificance of his existence here and at times it leads him to forget how unimportant he is. Compared with the existence of the millions of units of which the universe is composed the span of life of any individual man is infinitesimally trifling, and his remembering this helps him to bear his lot with composure, but it is given to him to conceive of higher states of existence than any that he can enjoy, to live in a world of thought and imagination. His aspirations know no limits. The consciousness that he possesses an all-exploring mind imparts to his life a loftiness and dignity it would not otherwise possess.

In Essay XI. it is maintained that a virtuous disposition is in many cases nothing but an appreciation of what is beautiful in conduct. This is the old Greek idea. Their *kalos* expressed both the beautiful and the good, just as *aiskros* was used for the ugly to look at and for the morally bad.

In Essay XIII. the benefits of regarding things lightly are set forth in a somewhat new aspect. Light-heartedness is declared to be conducive to activity and zeal. It must not be over-looked that the levity of mind on which Mr. Fukuzawa dwells so much is a quality that the whole nation has cultivated more or less for years, and that it has been repeatedly commented on by foreign observers as one of the most conspicuous traits of national character. It is a form of Stoicism. Mr. Fukuzawa thinks that it does not in this country lead to fatalism, nor according to him does it engender carelessness. The title of Essay XIII. is striking. *Jibutsu wo Karoku mite, hajimete kwappatsu naru wo ubeshi.* (It is only by looking at things lightly that one can become energetic.)

To those who have asserted that Mr. Fukuzawa is a mere man of the world, who grovels in the dust and possesses no lofty

* The translation here seems to us a little misleading. The original is, *mizukara sono shikaru yuen wo shirazareba*, which means simply "as he himself would not know the causes which brought it about." "Naturally ignore" introduces another idea, it seems to us.

Digitized by Google Original from CORNELL UNIVERSITY

ideal. we would recommend Essay XIV., which urges in eloquent language the necessity of our ever setting before us a high ideal and of our daily striving to reach it. Men of learning have the means of finding out what is the highest ideal of virtue, and as for those who have no other guide, they should fall back on religion, which can furnish them with better ideals than they can frame for themselves. In Essay 100, he takes up the subject of ideals again, and points out that in the present state of the world absolute perfection is unattainable, but that in the far distant future, when knowledge will have so advanced that the material world will have disclosed all its secrets to man, when in all spheres of inquiry the chain of cause and effect will be quite clear to all inquiring minds, absolute perfection may be attainable. This last essay, as it is the longest, is in many ways the most interesting of the series. It gives the basis of the optimism that pervades all Mr. Fukuzawa's writing. Mr. Fukuzawa is an optimist because he has unbounded confidence in man's potentiality. He thinks that the world's evils are all curable and that man's happiness during his sojourn here can be made quite complete. His belief in the future of mankind is based on the marvellous progress in knowledge that has been made in the past.

We have confined ourselves in this review to a consideration of Mr. Fukuzawa's opinions on the deeper questions of philosophy. But in so doing we have failed to give an adequate idea of the comprehensive nature of the volume of essays as regards subjects. There are few topics of interest connected with human life on which he has nothing to say. He discusses many types of virtue and many types of vice and he brings to all his discussions practical common sense. His system of philosophy seems to us incomplete and in many particulars inconsistent. His unqualified optimism is only possible because he fails to give due weight to the many irremediable evils of man's existence in the world, and he expects from the study of physics and other sciences far more than it is in the nature of these branches of knowledge ever to yield. But with all this he displays a wonderful knowledge of human nature, and no writer that we have studied shows clearer discernment of what is and what is not possible in the sphere of ethics.

Great umbrage has been taken by some at the attitude assumed by Mr. Fukuzawa to religion. They say that it is an insult to the learned men who still profess Christianity to say that it is a religion that is not needed by the highly educated, but that it doubtless proves useful to ordinary folks. But after all is not this just the very attitude tacitly assumed by the majority of thinkers in Europe and America? Thousands—we may perhaps say millions—of men steer quite clear of religion themselves, never enter a church except for a funeral, a wedding, or a baptism, but they think it natural that their women folk should go to church, and that even a certain class of men should find religion helpful to them. The only difference between Mr. Fukuzawa and the majority of Western thinkers is this. He states in the plainest language his opinion on the subject of religion and its function in the world; they usually maintain a discreet silence. But their practice and the confidential communications made by them to friends conclusively show that in reality their attitude to religion is precisely that of Mr. Fukuzawa. Surely Mr. Fukuzawa is not to be blamed for having the courage to say what he thinks on this subject. We fail to see any real disrespect for the convictions of others in the attitude complained of. Orthodox Christians must bear in mind that other people can have convictions on religious subjects that are quite as conscientious as theirs. One of these convictions is that religion as received and explained by the orthodox is false. The motto of this class of thinkers is *vigeat veritas, et pereas mundus*. Nothing can induce them to accept teaching that to them appears absolutely unreliable. But they are advocates of liberty of belief and do not attempt to interfere with the conscientious convictions of other people. They even hold the view that there are many illusions that do good; that comfort and help of various kinds can be received from falsehoods. History shows that men and women are capable of being deeply affected by lies and may perform many good actions under the impulse received from teaching that subsequently turns out to be quite false. To Mr. Fukuzawa and to many western thinkers religion appears to be a device for getting a certain class of people to perform virtuous actions, which they would not otherwise perform. Now the world is better for these actions, and as a machine for turning them out religion has never been surpassed. It therefore makes little matter whether supernaturalism is capable of proof or not. To assume a personal God, miracles, heaven, and hell gives an authority to moral precepts that they could not otherwise possess. Hence let them be assumed. Don't try to knock down effective error in order to established ineffective truth. The world is not educated up to the higher philosophy. To proclaim it prematurely and indiscriminately would do more harm than good. "A certain degree of general ignorance," says a well-known western thinker, "is the condition of every religion and is the element in which alone it is able to exist, while as soon as astronomy, natural science, geology, history, knowledge of countries and nations have spread their light universally, and philosophy is finally allowed to speak, every faith which is based on miracle and revelation must perish and then philosophy will take its place." This is Mr. Fukuzawa's view and he adds, "In the meantime, encourage religion." It fills a space and thus the vacuum which nature hates is avoided. But when Mr. Fukuzawa goes still further and recommends young men to profess a religion whose doctrines they consider erroneous for the sake of secondary benefits to be obtained thereby, as he did some years ago in a most public manner, we can no longer defend him. This, it seems to us, is recommending dishonesty. Those who enter the Christian Church are called upon to make a public confession of their faith. To repeat words affirming belief in doctrines which the candidate deems false to most right-minded people would appear absolutely heinous. Yet this is what Mr. Fukuzawa recommended some years ago. Whether he still holds such a proceeding allowable we do not know.

But these minor discrepancies and imperfections in his views can never hide from us the greatness of Mr. Fukuzawa's life as a whole. For nearly four decades he has figured as an out-and-out advocate of the superiority of Western thought and learning. This advocacy has been a most whole-hearted affair. There have been no faltering moments, no retrograde steps. In essay 34 he argues that nothing great can be accomplished if a man's mind is never made up on any question. The half-way house between doubt and belief is not a place where one should stop long. The opinions which he has expressed have all a ring of decision about them, and this it is which has made his writing so popular. The majority of his readers read in order to be informed and they welcome fixed opinions. Dogmatism carried to a certain degree is absolutely essential to successful teaching. In all the subjects which he treats Mr. Fukuzawa takes a side and so presents his views that there is no room for an opposite theory. Mr. Chamberlain has pronounced Mr. Fukuzawa to be shallow. We confess we have failed to discover in what his shallowness consists. He has treated some of the deepest questions of life and of philosophy in, as it seems to us, a very effective manner, and has shown no tendency to shirk difficulties of any kind. The essay which Mr. Chamberlain translated for his "Introduction to the Study of Japanese Writing," already cited, struck us as displaying depth rather than shallowness. His contention in that essay would be supported by many great writers in the West. Shallowness is a term of reproach that we should never think of applying to Mr. Fukuzawa. To us it seems that what he discusses he discusses thoroughly. Subjects that could not possibly be made intelligible to ordinary readers he leaves alone. For mysticism of any kind he has no taste. He is eminently practical and hence represents the English or American type of mind rather than the German. In Japan he is quite a new product. He is in every sense of the word a self-made man. It would be hard to find a man that knows Japan better than he and impossible to find any one who has won for himself more universal respect from all classes of society. His pen is still active. Even while we write a series of supplementary essays written by him is appearing in the *Jiji Shimpō*, and in the leading columns of that journal we often recognise his practised hand. Advanced scholars are wont to talk of the Mita sage as a man of the past, but among a very large number of people his popularity has never been greater than it is to-day.

CORRESPONDENCE.

DR. CLARK'S COMING VISIT.

To the Editor of the "Japan Mail."

Sir,—Japan is soon to have the pleasure of welcoming, entertaining, hearing, and seeing the Rev. Dr. and Mrs. Francis E. Clark. They will be accompanied probably by one of their four children, Harold, a lad eleven years of age.

As all the world knows, Dr. Clark is the man who organized at Portland, Maine, 19 years ago this present month, the first society of Christian Endeavour. There are now some 60,000 such societies scattered all over the world, while their members number more than three million and a quarter. The wonderful growth of this organization has been called "the miracle of the nineteenth century."

Thanks to the tireless efforts and high ideals of Dr. and Mrs. Clark and others associated with them, Christian Endeavour stands not alone for private acceptance of the great truths

Digitized by Google Original from CORNELL UNIVERSITY

of Christianity, but as well for a public profession and practice of those principles; not alone for closet consecration but for social service. Hence, in addition to secret prayer and Bible reading, observance of its pledge, and a public profession of religion, it lays strong emphasis on such practical issues as civic righteousness, temperance, social purity, and international fellowship.

In America, England, Australia, and many other lands, Christian Endeavour and kindred societies have accomplished a mighty work "for Christ and the Church."

The annual meeting of the society at Detroit, Michigan, last summer, was one of the most powerful and beneficial meetings of the whole year in all the world. It was attended by some 26,000 people, and was addressed by many of the ablest Christian speakers of this age. Next summer will witness a similar gathering in London, England.

Dr. Clark, its founder, still remains at the head of this great interdenominational and international organization.

Born in Canada in 1851, he is not yet fifty years of age, and is thus in the prime of his vigour and usefulness. He is starting out for a tour around the world with especial reference to China, Russia, and England, and he will spend a full month in Japan.

The committee who have in charge his tour through this country are arranging for meetings at Yokohama, To-yo, Maebashi, Sendai, Nagoya, Kyoto, Osaka, Kobe, Okayama, and Nagasaki, and for the holding of a general convention at Kobe, March 9, 10, 11.

It is the belief of many that Japan needs at the present time the restraints and the inspiration of those methods of aggressive work peculiar to the C. E. Movement.

Certainly all who are interested in the common service of establishing, strengthening, and *enlarging Christian work* in Japan will desire to meet Dr. and Mrs. Clark if practicable, and to hear their statement of what Christian Endeavour is, how it works, and what it aspires to accomplish.

Lest some, who may desire to welcome, either in person or by letter, on their arrival at Yokohama, these world-renowned leaders of young people, may not have heard the exact date of their coming, I crave the liberty of using your columns to spread this notice.

Dr. and Mrs. F. E. Clark are expected on the P.M. steamer *China*, which is due in Yokohama on February 12th.

Rev. T. Harada, of Kobe, the President of the Japan society, will meet Dr. Clark on the arrival of the steamer, and further matter pertaining to the itinerary in Japan will be decided then.

Any who have suggestions or requests to make concerning the matter may address Dr. Clark at the steamer office or write beforehand to Mr. Harada or to Miss S. A. Searle, No. 60, Hill, Kobe.

Yours gratefully,

JAMES H. PETTEE.

Okayama, February 3rd, 1900.

AMERICAN SYMPATHY.

To the Editor of the "Japan Mail."

Sir,—While you naturally prefer to do your own editing, you will not, I am sure take it amiss, in view of the anxiety of some in America and else to show that public opinion is against Great Britain, if I call your attention to an article in *The Outlook* for Dec. 23rd, a copy of which I send herewith. The article includes an extract from an address of Emerson's fifty-two years ago.

In the New York *Independent* of Dec. 21st, I find also the following passage:—

"In this hour of her extremity England feels that the same sympathy that was given us not many months ago is returning to her manyfold. We believe her victory is needful for the best interests of the world, and, while we would not withhold meed of praise for her brave and courteous enemy, we must give to England our best hopes and sympathy during the trying months that are before her."

I am sure that paragraph expresses the judgment of the great mass of Americans, in spite of what a few demagogues like Senator Mason and Congressman Sulzer may say.

Yours truly, G.

England in Adversity.

Many Americans believe that the war in South Africa is without moral justification; many more that, although English rule in South Africa is to be desired from every point of view, the present war is unnecessary; but it is to be hoped that no American read the story of last week's disasters to the British arms without a deep feeling of sympathy, and that no American has seen the spirit in which England has taken her calamities without a thrill of admiration. One of the chief uses of great experiences is the searchlight they throw on national ideals and character. A profound individual experience always brings character out in clear and individual lines. A man is often lost in the rush of activity, but when there comes some tremendous event in his life the activities cease for a moment, and the man stands revealed to himself and his fellows. In like manner, a great nation carrying on world-wide activities suddenly shows its heart when a great calamity strikes home. The Continental press, as a rule, has reported with undisguised delight the story of British disaster, treating the English precisely as it treated us at the beginning of the war with Spain, and for precisely the same reasons: ignorance of our motives, instinctive antagonism between institutions which diverge at fundamental points, and instinctive fear of commercial competition.

The English will look to their own colonies and to their kin beyond the sea for insight into their motives. They will also expect, and they will receive, recognition of the essential qualities of character which inspire all their enterprises. The secret of English greatness in adversity has perhaps never been better expressed than by an American. Speaking at a dinner at Manchester fifty-two years ago, Ralph Waldo Emerson said:—

"For I must tell you, I was given to understand in my childhood that the British island from which my forefathers came was no lotus garden, no paradise of serene sky and roses and music and merriment all the year round; no, but a cold, foggy, mournful country, for nothing grew well in the open air but robust men and virtuous women, and these of a wonderful fibre and endurance; that their best parts were slowly revealed; their virtues did not come out until they quarreled; they did not strike twelve the first time; good lovers, good haters, and you could know little about them till you had seen them long, and little good of them till you had seen them in action; that in prosperity they are moody and dumpish, but in adversity they were grand. Is it not true, sir, that the wise ancients did not praise the ship parting with flying colours from the port, but only that brave sailer which came back with torn sheets and battered sides, stript of her banners, but having ridden out the storm? And so, gentlemen, I feel in regard to this aged England, with the possessions, honours, and trophies, and also with the infirmities, of a thousand years gathering around her, irretrievably committed as she now is to many old customs which cannot be suddenly changed; pressed upon by the transitions of trade and new and all incalculable modes, fabrics, arts, machines, and competing populations. I see her not dispirited, not weak, but well remembering that she has seen dark days before—indeed, with a kind of instinct that she sees a little better in the cloudy day, and that in storm of battle and calamitiy she has a secret vigour and a pulse like a cannon. I see her in her old age, not decrepit, but young and still daring to believe in her power of endurance and expansion."

THE BEGINNING OF THE CENTURY.

To the Editor of the "Japan Mail."

Sir,—Is this the last year or the first year of a century? The fact that such doughty disputants as the German Emperor, Kato Hiroyuki, ex-President of the Tokyo University, Takahashi Goro, and some American College presidents and professors have entered the arena in favour of this being the first year of the 20th century, gives the question an added zest. The Pope, on the other hand, orders that at midnight of Dec. 31st, 1900 solemn ceremonies of praise for the benefits of the 19th century, and of prayer for the coming century be observed, so as to auspiciously open the 20th century, while the Czar of Russia orders that the Gregorian calendar be adopted on Jan. 1st, 1901, which he considers the first day of the new century. It is thus a case of Protestant Emperor against Roman Pontiff re-enforced by Orthodox Czar, in which for once at least the Protestant pulls the shorter. It is not surprising that ordinary mortals should be in a dilemma. The kindergarten methods as repeated in the *Literary Digest* to make the German emperor's side ridiculous really do not touch the difficulty. Where lies the cause for this uncertainty?

The basis for solving the question is usually found in analogy. One side, in arguing for 1900 as the 1st year of a century, reasons as follows:—

First analogy.—The Christian era is like a man's age. Up to an age of full 12 months we say he is x months and y days old but not yet a year. From full 12 months to full 24 months he is 1 year x months, and y days old. Hence there is a year naturally marked 0 in stating a man's exact age. Hence also we say a man is 100 years old when he is really 100 years plus months and days and is actually in his second century. In other words from 0 to 99 is 100, by including both 0 and 99 in counting. A man's age is thus numbered by its completed year, not by the year entered upon and incomplete. If the Christian era follows this analogy,—if 1900 is in this fashion to mark Christ's age (on the assumption that Dionysius Exiguus was correct in fixing the birth of Christ, which as we know he failed in by 4 years according to some authorities or by 6 years even, according to Ramsay, the most eminent authority of to-day), then it is evident that as the era would begin with a year 0, every succeeding century would begin with the year $x00$.

Second analogy.—Again from $x01$ to $x99$ we always call the $(x+1)$th century e.g. 1801 to 1899 we call the 19th century. This is certainly correct for 99 years. Why, therefore, should we say that one more year marked with an 18 in the first two figures viz. 1800 should not also belong to the 19th century and thus preserve symmetry?

Symmetry would therefore seem to demand that 1900 belong to the 20th century and not to the 19th.

It is thus evident that several analogies may be found in favour of the German Emperor's dictum, who is said to have based his opinion on the poet Heine's claim to be one of the first men of the 19th century because he was born in 1800. Evidently also the German Emperor's order to the schools to appropriately observe the beginning of the century on Jan. 1st, 1900, was not altogether without the consent of at least some eminent scholars. This question also affects the way of counting decades. Does the beginning of the Franco-Prussian war, 1870, for instance, belong to the 7th or the 8th decade. Ordinarily, without reflecting further, most people would unhesitatingly call it the first year of the 8th decade. This would be incorrect, however, if the century and therefore also the first decade began with 1801, not 1800.

Moreover we have many large celebrations, conferences, exhibitions, &c., located purposely in 1900 under an impression among many that thus we becomingly open another century.

The other side, arguing also from analogy as a rule, says: In writing a specific date we never have a zero month or zero day, hence we ought not have a zero year. Thus May 5th means the 5th day of the 5th month, *i.e.* the incomplete period, not the completed period and a fraction thereof. But let us write May 5th 10h. 30min. 15sec., A.M. and see what this means. The month and day are the incomplete periods, while the hours minutes, and seconds are completed periods. That is, while there is no 0 mo. or 0 day, there is a 0 hr. in the day, and so with the minute and second as all well know who are at all, acquainted with astronomical statements of time. To put it in another way, the age of the year on May 5th, 10 30 a.m., is not 5 months 5 days 10 hours 30 minutes, nor yet 4 months 4 days 9 hours 29 minutes, but 4 months 4 days 10 hours 30 minutes. Hence it is evident that this analogy points both ways and can not help us over the

Digitized by Google Original from CORNELL UNIVERSITY

difficulty. For if you use the hours-minutes-seconds analogy, then 1900 is the beginning of a century; if the month and days analogy then 1901 is the beginning.

Again we say a man is 30 years old or in his 31st year, the two being equivalent expressions for the same age. Hence is 1900 to be used in the first or in the second sense? Mere analogy cannot decide this question. Disputants have as a rule rested merely on analogy instead of seeking a historical basis. The simple question is, do we write a year 0 or a year 1 as the 1st year of the Christian era? This is not a question of opinion or of analogy but of convention among historians in chronology, i.e. it is a question of fact. What does Chronology say?

Here I shall quote from the introductory note to the Chronological Essays in Andrew's Life of Christ, regarding Andrews as eminent qualified to be an authority,—"Reckoning backward from Christ, the year 1 of Rome corresponded to the year 753 B.C. The year, of Rome corresponding to the year 1 of the Christian era was 754. . . . If we would obtain the year of Rome before Christ, we must subtract the number in question from 754; thus if Herod died 4 years before the Christian era or 4 B.C., 754—4 would give 750 of Rome. Again to obtain the year of Rome after Christ we must add to 753 the number in question. Thus the year 30 A.D. would correspond to 753+30 or 783."

The following simple diagram will apply this to both sides of the dispute and show whether we have a year 0 or not in the Christian era.

B.C.	X	A.D.
753 .....4,3,2,1 equals ..... 1 A.U.C.....	1,2,3,4,5 0,1,2,3,4	.....1900 1900

The perpendicular *X* represents the moment of the beginning of the Christian era. Now it is evident that if there, be a year 0 then to get to 1 A.D. you have to count 753.....4,3,2,1, 0 1 which gives 755 A.U.C. while 30 A.D. would give 784 A. U. C. But Andrews above says that 1 A.D. is 754 A. U. C. and 30 A.D. is 783 A. U. C. Hence it is clear that our authority does not recognize a year 0 of the Christian era, and here we find then the basis for a decision. Hence, beginning with 1, the first century ends with 100, and each succeeding century with *x*00. Thus we reach a demonstrated solution of the matter, and can say without fear of successful contradiction that this year is the end of the 19th century and not the beginning of the 20th century unless indeed it could be proved that there is a year 0 in the Christian era.

There is one little point that might be raised here, which, however, does not affect the main question in dispute. If Dec. 25th, was accepted by Dionysius as the *day* of Christ's birth, did he put this one week before Jan. 1st, 1 A.D., or did he put it 51 weeks after Jan. 1st, 1 A.D.? Evidently one week before. In this case he really regarded Christ as born before the beginning of the Christian era by one week, and so according to him the 20th century would begin on Dec. 25th, 1900, not Jan. 1st, 1901. But this comes close to hairsplitting.

In conclusion let me call attention to the fact that most, if not all, eras, are begun with the year 1 not 0. Witness for example the era of Rome, the Meiji era of Japan, the Mohammedan and Grecian eras, the French era of 1792, &c.

Respectfully, H. M. LANDIS.

A CRITICISM.

We have received the following letter, which contains so many humorous points that we have decided to print it exactly as it reached us:—

AGENCE LITTÉRAIRE
BORIS POMORSKY
TRADUCTEUR JURÉ
6, RUE ARMÉNY
Marseille

TRADUCTION DE
LANGUES ÉTRANGÈRES
COURS DE RUSSE
& D'ANGLAIS

Editor Lier, *Japan Mail*, Yokohama, Japon.

Having these days received, from a friend in London, the 21st No. of Your liefull paper (Vol. XXXII.) dated November 18th and having patiently read Your article under the title South Africa, page 512, I consider it my duty for the sake of truth and of justice to invite You to read the two enclosed articles of mine written after a careful study of the different informations coming from the theatre of the God's own war against a band of thieves and gold and bloodthirsty *Brutish* scoundrels like Cecil Rhodes and Co.

If You are a Japonese I am very much surprised at finding You so ignorant of the *outward civilisation* which every Brutisher is trying to impose upon You and others.

If, however, as I suppose, you are an Englishman the more I am surprised to see you ignorant of the communications which General Buller and even Churchill have given as to the human treatment of the Brutishers by the Boers nobleminded in their patriotism and nobleacting in defense of their homes against cruel invaders,—God's own hand is raised against all such like You for I see Your brain is troubled by the terrible disease called *lie*.—It is noble on the part of every man to stand up for the honour of his and of his nation,—for the glory of the past and even for the pride with which one can boast, but it is worthless of a man's reason to stand up for acts like the acts of the Chartered African Company and their supporters and chief promoters Rothshild the Jew, Cecil Rhodes the Judas, and Jameson the highway robber.

The cruelties You dare impute to the Boers are the cruelties of the Brutishers themselves and the lies you preach are the lies of as a great scoundrel like Lucifer himself.

Take it for good son of a gun and learn to be just before you try to be wise.

I pity You the more for Your sin of lying because, if You are a Japanese, it proves to me that You are the worthy pupil of Your teachers the Brutish liars.

You cannot in justice boast very much of British civilisation if, as a man civilised by them, you show your heart and your mind so perverted and devilstamped as are the mind and the heart of Your past teachers and masters the worthless sons of the bloodthirsty and accursed Albion.

Yours truly, POMORSKY.

Marseilles, Dec. 25th, 1899.

[This is accompanied by two tissues of charges against British soldiers, who, according to Mr. Pomorsky, are veritable monsters of brutality. —ED. *J.M.*]

A LIBRARY ASSOCIATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With a view to the study of library administration and other matters relating to libraries, the first meeting of the Western Library Association, on the proposal of the librarians of the Kyoto Imperial University, was held at the University Library last Sunday. Those present numbered 50, and included librarians of Osaka, Nara, and Shiga. It was decided that such a meeting should be held four times a year, and, as soon as matters will permit, a magazine will be published. I hope and believe such an Association will be welcome to the world.

Yours truly, R. YAMAOKA.

Kyoto, February 4th, 1900.

ROMA-JI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In an editorial article published on January 24th you brought forward a subject much too important to be careles-ly or superficially treated;—namely, the reform of the Japanese language and the application of Roman characters thereto. There may be strong reasons for desiring and believing that alphabetic signs will be adopted, sooner or later, but the question of their availability cannot be settled, off hand, by conventional criticisms of the methods now followed, or by the assertion of extravagant claims on behalf of the usage prevailing in most Western countries. Many Japanese scholars cling tenaciously to their writing, and so long as there are nations on the other side of the globe which reckon time by obsolete calendars, keep their accounts in systems of computation a century behind the age, and steadily refuse to amend the absurd defects of their own orthography, Europeans have no spare stones to throw at people who adhere to forms in which they have at present implicit faith. To win them from this faith may be a difficult task, but it ought not to be hopeless. It can never be satisfactorily accomplished, however, by proclaiming that the superiority of the foreign plan is incontestable, or, to use your own words, that the Roman alphabet "has everything to commend it." The Japanese know better than that. Even those who most energetically advocate the proposed change are perfectly aware that the Roman letters are open to objections, and that the most effective arguments in favour of them have nothing to do with the question of their fitness. To say that the plan has "everything to commend it" is to invite protests from its opponents and weaken the position of its supporters.

One thing that does *not* commend the Roman alphabet is its inability to represent all the sounds of Japanese speech. It does not, in fact, represent the sounds of any modern tongue. Whether it satisfied the requirements of the ancient Latins, or not, is a matter of conjecture. But it plays the various parts imposed upon it in later years only when subjected to unnatural and arbitrary distortions which destroy much of its original integrity. A good many centuries ago the Saxons resolved to adopt it,—not because it suited their language, but for reasons similar to those which now influence the Japanese. The Saxons had an alphabet which was really akin to their speech. This they discarded, though for several of their peculiar utterances they were compelled to assign abnormal duties to the Latin characters, and in some cases invented combinations utterly without justification or sense, the separate letters of which bore no relation whatever to the sounds they were forced to indicate. Perplexities of the same nature will necessarily confront the Japanese when they undertake to adjust the alien signs to their tongue. They have also to consider that there is absolutely no standard of pronunciation for Roman letters. In France they are sounded one way, in Italy another, and in Germany (where their use is spreading) still another. The English pronounce them in all conceivable and many inconceivable ways, giving to most of the vowels at least half-a-dozen different sounds, making some of the consonants responsible for double or treble service, without the slightest regard to their real value, and—as a sort of compensation, perhaps, —relieving others from vocal duty altogether. Let us suppose that the adaptation be effected, here, with the utmost possible skill. There would still be no uniform authority of enunciation to refer to. I am ready to admit that this disadvantage is shared by all nations that depend upon the Latin emblems, but it is none the less a disadvantage, and cannot be overlooked in discussing the merits of a plan which, on examination, does not appear to have quite "everything to commend it."

Another detail in which the Roman alphabet falls short of ideal perfection is the impossibility of writing it with sufficient speed to accompany the ordinary processes of human speech, leaving mental processes out of calculation. This is a point to which scientific students are giving a great deal of attention, and it is reasonably certain that the literary world will not long be content with a medium which interposes vexatious obstacles to rapid transcription and often clogs expression to a paralyzing extent. I realize the uselessness of putting in a plea for *kana*. Cultivated Japanese, as a rule, are not fond of it, and very few have a word to say in its favour. They may, like the Indian, throw away a pearl, but the pearl is their property, and, if it does not please them, no foreigner can make it estimable in their sight. And, besides, *kana* would not advance the particular aim they have in view. It is

Digitized by Google
Original from CORNELL UNIVERSITY

nevertheless indisputable that by this despised system their language can be put on paper with extraordinary swiftness. No other civilized race possesses so facile a verbal mechanism. The feats of phonography belong to an exceptional class of craftsmen, whereas the *kana* is familiar to the entire population of these islands. No one denies it the superior merit of celerity. The *Mail*, however, condemns it in a sentence which is curiously misleading, if it can be held to have a clear meaning of any kind. It is a syllabary, and "a syllabary," says the *Mail*, "is as far behind an alphabet as ordinary long-hand is behind stenography." What is a syllabary? A set of marks each one of which signifies a complete and intelligible sound;—a sound which may be a whole word or the component part of a word. What is stenography? A system of marks which similarly signify sounds. In comparing the two with "ordinary long-hand" the same definition may stand for both. When we are told, in such a connection as this, that a syllabary is as far behind an alphabet as ordinary long-hand is behind stenography, it is like hearing that a syllabary is as far behind an alphabet as an alphabet is behind a syllabary; or that phonetic writing is as far behind long-hand as long-hand is behind phonetic writing. Reasoning by illustration which runs round in a circle is not impressive. But, setting illustration aside, on what rational ground can it be alleged that a method of syllabic writing is behind alphabetic writing? The language of a country consists of words—not of the marks upon stone, or metal, or paper, which with more or less precision indicate those words. A word is always the same, whether presented to the eye in arrow-heads, ideographic emblems, series of redundant alphabetic figures, or compact phonetic symbols. When the Latin letters were substituted for Saxon tokens, was the language of England thereby changed? Does any one imagine that the majesty of Shakespeare's diction is exalted or diminished by the *alterations of spelling* it has undergone since the *first folio* was issued? In one sense, the devices by which words are put on record are of comparatively little moment, provided the words themselves are so faithfully reproduced as to insure immediate recognition. In another sence, the scriptory form that is most expeditious and convenient is the best, if it is honest and truthful. There is no warrant for asserting that a phonetic method is "behind" an alphabetic method. Reason and common-sense point to exactly the opposite conclusion.

The Roman plan has undoubtedly one thing to commend it;—that is, Expediency. Nations, as well as individuals, are much in the habit of being guided by this consideration. It was on the ground of expediency that the number of monthly holidays in Japan was cut down, and every seventh day made a day of rest. For the sake of expediency the Gregorian calendar was introduced, notwithstanding its manifest imperfections. The acquisition of the alphabet will be an additional step towards assimilating Japanese civilization with that of the West, and this is the one substantial reason for approving it. Other benefits may incidentally ensue, but these, apparently, could be secured by less radical means. The single motive is, however, so powerful that it is sure to prevail, and the consummation is not likely to be very long deferred. But it is most essential that the reform be conducted with due regard to its great and lasting importance; that those to whom its preparation is confided shall thoroughly comprehend the gravity of an undertaking which proposes to revolutionize the entire educational system of the country. If it be approached in a frivolous spirit, mischievous results will follow. It would be a ruinous mistake to start with a supreme confidence in the merits of the scheme and an inadequate perception of its deficiencies;—to accept the optimistic theory that it has "everything to commend it," and that nothing can be urged against it. No one whose counsel has weight is justified in contributing to such a delusion.

It is to be earnestly hoped that before the time arrives for determining the letters in which the language shall be re-cast, the Government will awaken to the necessity of making proper provision for the cautious, faithful, intelligent, and thorough execution of that duty. No evidence has yet appeared that it is looked upon as a service of unusual difficulty or delicacy. The immensity of its bearing upon the future progress of the nation seems to be very dimly apprehended. The remembrance of earlier experiments in the same direction is not as reassuring as it might be. Gentlemen who enlisted as volunteers in the Romaji campaign of sixteen or seventeen years ago appeared to be more active in launching immature whims and fancies of orthography than in studiously investigating the neglected fabric of their own tongues and acquainting themselves with its most pressing needs. The *Mail* is profusely laudatory in reviewing the performances of that period, but the force of its compliments is somewhat counteracted by their excessive resplendency. The glare of superfluous gilding is especially visible in the declaration that to read the weekly record of Roma-ji proceedings "was always a liberal education." A liberal education! Such hyperboie is pretty enough when employed by a writer of an artificial age to celebrate the graces and fascinations of a fine lady, but its application in the present instance has rather a sound of "sweet bells jangled out of tune." It may be a pleasant pastime to say agreeable things that have no meaning, but the persons to whom they are addressed sometimes fail to grasp the fact that they have no meaning, and then the consequences are apt to be harmful. Indiscreet eulogy is not appropriate when circumstances call for the exercise of calm judgment and modest as well as strenuous endeavour. Here, certainly, there is too much at stake for anything but the plainest sincerity of speech. The labour of Romanizing the Japanese language is one for which the participators should be qualified by the severest scientific training, not only in all that relates to the vernacular, but also in connection with the foreign material to be handled. I am far from implying that such training is beyond the limitations of Japanese scholars. I believe that their best men are capable of rivalling the intellectual achievements of foreign experts in almost any practical field, if they put their faculties to the highest and worthiest use. But among them all, there is not one who has yet mastered the principles of European philology, and perfected himself in studies that would enable him to deal authoritatively with recondite questions that must of necessity arise in the movement now contemplated. When these present themselves, the aid of foreign scientists of unmistakeable standing must be sought, or the work will not be well done; and unless well done it had better not be done at all. Prudent delay can be turned to good account, and any amount of delay is preferable to hasty action which tends to produce an abortive measure of reform.

E. H. HOUSE.

February 1st, 1900.

THE NEW BISHOP OF KYOTO.

Consecration Ceremony in Tokyo.

An interesting ceremony took place at Trinity Cathedral, Tsukiji, Tokyo, on February 2nd, when the Rev. Sidney Catlin Partridge, D.D., was consecrated as Bishop of Kyoto. This is the first time a Bishop has been consecrated in Japan, and the ceremony attracted a very large congregation of foreigners and Japanese Christians, many journeying from Yokohama and more distant parts of Japan. Altogether there were considerably over 40 clergymen present. Among the congregation were Bishop Nicholai, of the Greek church, and Sir Ernest Satow, the British Minister. The service commenced at 10 a.m. with the singing of a processional hymn in Japanese. The long train of surpliced clergy was headed by Bishop Schereschewski, Bishop Awdry of South Tokyo; Bishop Fyson, of Hakodate, Bishop Foss of Osaka; and Bishop Evington of Kiushiu; and among those following were the Ven Archdeacon Shaw, the Revs. A. F. King, L. B. Cholmondeley, W. C. Gemmell, A. E. Webb, F. W. Kennedy, C. T. Warren, W. T. Austin, T. S. Tyng, F. L. H. Pott (of the China Mission), George Wallis, E. B. Sweat, C. H. Evans, A. Lloyd, H. S. Jefferies, James, J. Chappell, A. W. Andrews, H. G. Limric, J. C. Ambler, I. Dooman, J. I. Chapman, H. St. G. Tucker, J. A. Wellbourn, A. W. Cooke, Evans, Dr. Motoda, &c. The service was almost wholly in Japanese. The first portion consisted of the reading of the preface of the Ordinal, and the greater part of this was read by Bishop McKim; Bishop Foss read the Epistle, and Bishop Evington the Gospel; Bishop Fyson repeating the Litany.

The sermon was preached by Bishop Graves, of Shanghai, who spoke in English, Dr. Motoda interpreting. He took for his text the words "As my father hath sent me, even so send I [you." St. John xx., 21. The Bishop said they were met there for a purpose of no ordinary importance and solemnity—to consecrate a Bishop. This was the first time that a missionary Bishop had been consecrated in Japan among the people among whom he would have to spend his life, and by a service in the native language of the country. It was well at such a time that they should consider what was the nature of that office of Bishop and what was the meaning and significance of the service in which they were engaged. The office of Bishop was no new office. There was no time in the history of the Church since the ascension of our Lord when the office of Bishop had not existed. There had been a succession of men who had received the office from their predecessors and had handed it down to those who came after them. It was an office venerable from its antiquity, from the powers with which it was invested, and from the lives of the many Saintly men who had borne it from the earliest times. But when they had said that they had still fallen far short of a full appreciation of the grounds on which the office was held venerable by the church. If it were only venerable for its antiquity, or as a convenient form of church government, they would not feel as they did the solemnity of that service. The full significance of the episcopacy was not to be found in these things; they were only incidental accompaniments. The apostles were sent by Jesus Christ in the words of the text, to be as witnesses, as Ministers, to carry out the work for which he had been sent by his Father; and from the day when Our Lord ascended to Heaven the Apostles were recognised as leaders of the Church, not indeed ruling arbitrarily, but still acting as those whom the church depended for guidance. In process of time these men who had so long been the leaders passed away, but at their death there was no violent change or revolution in the government of the Church. While the Apostles were living they had been preparing men like Timothy and Titus, and these men seemed naturally and inevitably to succeed them, and ever since those days the office of Bishop had been handed down from generation to generation. Go back as far as they would, they would never find this office fail. It rested neither on popular assent nor on convenience of Church government; it rested solely on the words of the Lord. They felt that day that they were in the presence of reality and historical fact. It was sometimes objected that to seek so high a source was to exalt unduly the person who held the office, but in the noble words of an English Archbishop, it was the labours and not the honours that they lay claim to. If the Bishop was like his Lord he must toil and suffer to carry out the work to which he had been called—the glory of God and the salvation of souls. They had seen in their own times a revival of the ideal of episcopacy and a deeper conception of its meaning and duties; ease and leisure were now no part of the office. But there were some who doubted, however well episcopacy might work in the home Church,

Digitized by Google Original from CORNELL UNIVERSITY

whether it was adapted to the circumstances of evangelical work in a foreign land. Yet here, too, episcopacy had vindicated itself, and had spread from land to land with marvellous rapidity. It had been shown that it could disperse with honours and endowment and still make progress among every race, relying solely on its inherent qualities. Thus not only by its antiquity but by its power of adapting itself to new condi ions it had proved itself the greatest instrument of church government. The place of episcopacy in missionary work was a very necessary one. What converts needed to look up to was a strong, wise head, some one whom they could trust and respect as a leader, canons and rulers were of little utility compared with the man who represented eighteen centuries of Christian opinion. Again in matters of discipline there must be some one to exercise authority and to whom appeal could be made—someone with will and power and at the same time with a deep sense of his responsibility. The Bishop went on to refer to the glorious names among the roll of missionary Bishops, and concluded with a few eloquent words to the candidate for consecration.

The ceremony of consecration was then performed by Bishops Graves and Scherechewsky, who put the usual questions to Dr. Partridge. These having been answered the laying on of hands followed, and Dr. Partridge was declared to be consecrated a Bishop of the Protestant Episcopal Church of the United States of North America.

The Holy Communion was afterwards administered to the clergy present, and the service, which was a very long and impressive one, lasting nearly two hours and a half, concluded with the singing of a recessional hymn in Japanese.

AMATEUR THEATRICALS.

"DANDY DICK" AT THE PUBLIC HALL.

An amateur performance of Mr. A. W. Pinero's three-act farce, "Dandy Dick," was given on Thursday evening at the Public Hall in aid of the Ladies' Benevolent Association and the Charity Hospital (Jizen Byo-in). The hall was packed, and the affair was a thorough success.

Mr. Pinero's work is so well known that it is quite superfluous to attempt to sketch the plot of a farce already familiar, probably, to most of our play-going readers. "Dandy Dick" is an ingenious trifle of the author's anti-"Second Mrs. Tanqueray" days, and has the usual characteristics of a Pinero farce—no special brilliance of dialogue or felicity of wit, but plenty of mirthful incident, and an infinitude of those stage-tricks of which Pinero is a master. Of course no woman in this world ever talked or conducted herself as does *Georgiana Tidman*, the "horsey" lady, and part owner of "Dandy Dick;" but what would you have? A farce is something to laugh at, and, if a laugh is secured, even at sacrifice of common sense and good taste, well and good. Officers of the British Army never conducted themselves as the *Major Tarver* and *Mr. Darbey* of the —th Hussars, but it is one of the canons of farces that officers should be comic persons of weak intellect, and who can complain? One gathers from "Dandy Dick" the impression that the *summum bonum* is to own a race horse, that the next highest good is to lay money on a race, and that every being who neither owns a horse nor bets on a race is a poor-spirited creature or a hypocrite. But what reasonable-minded person will object to that so long as the main purpose is served, and some good fun is extracted from the Dean's turf experiences and *Georgie Tid's* eccentricities?

So much for the piece. As to the acting it was on the whole good—perhaps not so uniformly good as on some past occasions, but still creditable generally and in some instances excellent. Mr. G. G. Brady certainly maintained, if he did not add to, his reputation by the impersonation of the *Very Reverend Augustine Jedd, D.D.* His make-up, his unctuous accents, his comic horror at the situations in which he finds himself, were all admirable. And—what is high praise—Mr. Brady managed successfully to conceal that he was acting. Ridiculous as are the situations in which the sporting Dean finds himself, he appeared to fall into them quite naturally, and he remained the Dean throughout, not losing the manners of a gentleman even in the wildest situations. Mr. Brady has generally appeared in wild, uproarious characters demanding chiefly an abundant flow of animal spirits. His appearance last night showed that he is equal to a more restrained and higher kind of humour. Mr. Stanley Moss, as *Sir Tristram Mardom*, the sporting Baronet, is a new face on the local stage, and was naturally handicapped by the nervousness attendant on a first appearance, but he did well. One of the officers, *Major Tarver*, was well personated by Mr. E. C. Davis; Mr. L. Plummer's conception of the subaltern, *Mr. Darbey*, was, it struck us, more that of a clerkly dandy of Suburbia than that of even an officer of farcical comedy. Mr. Cecil Guinness—also, we believe—a new face, took not unsuccessfully the part of the villainous butler *Blore*; Mr. A. R. Owen was a comic constable; and Mr. A. R. Riddle, though he had little to say, was admirably made up as *Ratcham*, the groom. As to the ladies, the chief honours of the evening were secured by Mrs. McWilliams, the flashy, "horsey," masculine *Georgiana Tidman*. It would be impossible to say that Mrs. McWilliams' acting was natural or life-like, for no human being ever breathed whose conversation resembled that of the dramatist's *Georgie Tid*; but the lady to whom the part was entrusted made the character what the author intended it to be, and her personation, while in the nature of things it could not be an artistic one, developed all the humorous possibilities of the case. She fully deserved the cordial applause she received throughout. The Dean's two daughters, *Salome* and *Sheba*, were well represented by Miss Andrews and Miss Nina Smith. Miss Lloyd Thomas was capital as *Hannah Topping*, her carefully cultivated Hampshire dialect being very mirth-provoking. The ladies were presented as the close with several lovely bouquets.

Of the stage arrangements nothing but praise can be said. The scenery was admirable and the set in the second act was, we think, almost the best even arranged in Yokohama—and perhaps in the Far East. For this thanks are due to Mr. C. F. McWilliams, who was responsible for the scenery and properties. Mr. E. Beart made the most efficient of stage managers. The Town Band rendered some acceptable selections. The recent improvements which have been made under the proscenium arch and the new electric lights considerably add to the appearance and convenience of the stage.

A GERMAN VIEW OF THE SOUTH AFRICAN SITUATION.

It has repeatedly been said that, while the English pretend to have numerous reasons for complaint against the Boer Government, the Germans and other nationals are quite satisfied, and are therefore in sympathy with the Boers in their present trouble with England. That there are Germans who sympathise with the Boers is no doubt true, but it is equally true that many Germans in South Africa are in full accord with the British, and justify England's present course. A German Boer sympathiser in Cape Town, published a latter *in Das Echo* (Berlin) in October last, in which he defended the Boers in the usual manner. To this a German resident in Natal made a vigorous reply in the same paper. After saying that he must protest against the tone and contents of the letter from the gentleman in Cape Town, and that, "while leaving it to an abler pen to explain and defend the English standpoint in the Transvaal affair," he desires to record the fact that there are many good Germans there who entertain exactly the opposite view, and that they have every reason to regard their view as the correct one. "In so doing we can point to our Kaiser, who, when his English regiment left for Africa, telegraphed his good wishes. Does this not prove, at least that His Majesty entertains a very different view from that of Herr K. in Cape Town? And many Germans, living here in South Africa, are ready to contradict the statement made by this gentleman." The writer says further, "I wish to call attention to the fact that the equal rights which England demands for her subjects in the Transvaal are not more than she grants to all nationals in her South African possessions. All must admit that here in Natal, for instance, full equal rights are accorded to all white inhabitants, so that the German, Norwegian, Frenchman, &c., has the same rights as the native-born Englishman, and the same is true of the Boer here. . In order to obtain the franchise (full political rights,) a two years' residence is required, after which the oath of allegiance must be given. . One can find Germans here in high official positions. . There are Germans of high character, and proud of their descent, but highly respected. There are also native Boers in official positions. They have, in fact, been specially favoured by the Government. That the inhabitants here, under such liberal treatment, feel content, goes without saying. Grumblers, of course, there are here also, but where are they not? It is extremely regrettable that in this war there are Germans fighting on both sides; even brethren and near relatives are standing over against each other in deadly combat. Among the volunteers of Natal, there are several German divisions who have already distinguished themselves, especially those of the 'Umvoti Mounted Rifles,' and the 'Border Mounted Rifles.' Among the latter is Major Sangmeister in command, and with the former are Captain Reiche, and the two Lieutenants Moe. Alas, some of the Germans have already fallen fighting on the English side! That the English forces were not large enough when this war began, and that in consequence thereof our Colony, too, has become, as it were, a battle-field, is extremely regrettable."—*Communicated.*

A FRACAS AT HONMOKU.

A serious disturbance took place at Honmoku on the afternoon of the 7th inst. consequent on the action of some parishioners, who, in the interest of speculators in Tokyo, had signed an application for the purchase of a hill near the village shrine. It appears that Mr. Naohara of Tokyo and another gentlemen applied to the Government some time ago for permission to purchase the hill with the object of reclaiming a part of the foreshore of Honmoku. This request was granted on December 20th. The fact was, however, unknown to the villagers until some time later, when they discovered that the application was countersigned by Uyeno Eizaburo and another resident of Honmoku, purporting to represent the parishioners of the Honmoku Shrine. No authority had been given by the inhabitants at large, and the arbitrary step aroused the popular anger. The villagers met several times to consider what steps should be taken, and an indignation meeting took place on the 7th at the close of which a serious row occurred necessitating the presence of 150 policemen.

A couple of saké casks from an unknown quarter reached the party, and the liquor served as a stimulant to the more excitable to immediately demand an explanation from the Shinto priest Takemoto, Uyeno, and a third person, who had presumed to represent the parishioners. The party proceeded to the houses of the persons involved, with the intention of demanding an explanation. The priest and Uyeno refused, and a quarrel ensued, both being violently assaulted on the spot. The police hurried to the scene, but, owing to the large crowd, nothing could be done before the arrival of reinforcements. Finally Mr. Okada, Chief of the Bluff Police, accompanied by a number of constables, with difficulty dispersed the mob about 11 o'clock. Four persons were arrested.

LOCAL LAW CASE.

In the Yokohama Chiho Saibansho on Saturday morning, before Judge Fujise and two Associate Judges, Lam Pak Tsen, proprietor of the *Shingiho*, a Chinese journal published in Yokohama, sued Messrs. Bavier & Co., Yokohama, for the payment of insurance money amounting to *yen* 4,935.65. Mr. Akiyama appeared for the claimant, and Mr. Sawada, of Tokyo, for the defendants.

Mr. Akiyama stated that Lam Pak Tsen had concluded a contract on the 10th January, 1899, with the Norwich Union Fire Insurance Company, insuring a wooden building at No. 139, containing printing machines, papers, cases, etc., for *yen* 5,000, *yen* 2,500 for the machines upstairs and the balance for those downstairs in the same building, a policy being issued by J. H. Gielen, of Messrs. Bavier & Co., who are sub-agents for the Norwich Union Fire Insurance Co. On the 27th February, the same property was re-insured with the same Insurance Company, for *yen* 1,000, for one full year. A portion of the insured property left undamaged being deducted, the balance of *yen* 4,935.65 should have been paid by the Insurance Company immediately after the fire but this was refused by the Company, on the plea that the applicant, Lam Pak Tsen, was not the only representative of the concern. The policy, however, was actually made out in the name of Lam Pak Tsen, as the representative of the *Shingiho* office. Mr. Akiyama asked the Court to order a speedy payment.

Mr. Sawada, representing the defendants, replied that H. V. Gielen of Bavier & Co. was no longer agent for the Norwich Fire Insurance Company, which Company was at present represented by Mr. W. W. Till. For that reason, no such action ought to be instituted against H. V. Gielen. The complainant's name appeared in the complaint as Rin Hok Sen, while the policy was issued in the name of Lam Pak Tsen. The Company therefore had no relations whatever with the complainant. Mr. Sawada further pointed out that according to the provisions of Arts. 16 and 17 of the agreement printed on the policy, no suit nor action on the policy for the recovery of any claim should be sustainable in any Court of Law or Equity, until after full compliance by the assured with all other requirements; and also that any differences which might arise between the Company and the assured ought to be submitted to the arbitration of two independent persons to be chosen by each party. The complainant, supposing him to be the assured, brought this matter to the Court contrary to the agreement which he had concluded with the Company.

Mr. Akiyama said that the question whether or not Mr. W. W. Till was the representative for Japan of the Insurance Company had nothing to do with the matter, as it was clearly proved that the policy was issued by the defendant "duly authorised" by the Norwich Union Insurance Company, as mentioned in the policy. As to the name of the complainant mentioned in the policy as Lam Pak Tsen, the Chinese pronunciation was Lam Pak Tsen, while Japanese pronounced it Rin Hok Sen, but these two names referred to the same person. Concerning the defendant's statement that the said Lam Pak Tsen was mistaken in bringing this action into this Court, Mr. Akiyama said it would have been necessary for the claimant to place the matter before arbitrators as provided in the Rule, had it been a difference arising with respect to the amount of any loss or damage by fire, but the case was entirely different, as the Company had entirely refused to pay the Insurance money.

At this juncture, Mr. Sawada asked the Court for the production from the Noshomusho of the report which had been forwarded some time ago to that office by Mr. W. W. Till, now representative of the Insurance Company, and also of the power of attorney conferred upon Mr. Till by the Norwich Union Fire Insurance Company.

This request being granted, the Court adjourned till 11 a.m. on the 23rd February.

NEWS OF THE WEEK.

Hojo Toshiwo, better known by the name of Reimers, who was sentenced the other day by the Yokohama Chiho Saibansho, to seven years' rigorous imprisonment on a charge of forgery, appealed to the Tokyo Court of Appeal on the 31st ultimo.

A letter received from a naval officer who was standing by when Commander Egerton, of the *Powerful*, had his legs blown off, says:—"Egerton was a very keen cricketer, and his last words were, 'That's put an end to my cricket!' He lit a cigarette, and calmly smoked as he was carried away on a stretcher."

The funeral services of the late Mr. Chang Chow, the well-known tailor at No. 16 Bund, Yokohama, took place on Monday and were of a more imposing character, the Chinese community turning out in force to pay the last tribute of respect to a man who had earned their regard and esteem. A native of Ning-po, Mr. Chang Chow was about 50 years of ago. His body has been embalmed and will, as is the custom of the Chinese, be sent to his native city.

For some time past a quantity of lead has been missing from the repair shop of the Water-work's, near Hodogaya, some *yen* 760 worth being lost since December. The culprits have now been arrested by a Detective of the Kotobukicho Police. They are three *sendoos* named Saito, Suzumura and Itami, and it appears that they sold the lead to a hardware merchant in Matsukagecho, named Okano, for *yen* 150, who in turn sold it to a merchant in Tokyo for *yen* 490.

The death of Mr. Paul G. Fiedler from pneumonia came with shocking suddenness on Wednesday. Only a few days ago be returned from Nagoya, whither he had been on a business trip, complaining of a slight chill. On Saturday it was apparent that pneumonia was supervening, and he took to his bed; within four days the end came. He leaves a widow but no children. A native of Boston, U.S.A., Mr. Fiedler came to Japan about 3 years ago, and for a time was with Messrs. Walsh, Hall & Co. He then joined the China and Japan Trading Company, and was with them up to the time of his death. The body is to be cremated and the ashes sent to the States.

Amid expressions of profound regret the mortal remains of the late Mr. William Gordon were laid to rest in Yokohama cemetery on Friday afternoon. The weather turned out showery after noon day, but this did not prevent a very large number of the foreign community from attending, while the coffin and hearse were covered with many beautiful wreaths. The Rev. E. C. Irwine conducted the service, giving a short address at the close Messrs. J. H. Curtis and W. R. Bennett were chief mourners, while the pall bearers from the house to the hearse were Captain Haswell, Messrs. C M. Duff. J. J. Johnstone, C. W. Ure, N. W. McIvor, and J. Stewart; and from the hearse to the grave, Messrs. J. D. Hutchison, Geo. Philip, A. J. McGlew, J. J. Johnstone, J. Stewart, and Captain Haswell.

The Yokohama Engine and Iron Works are to be congratulated on the handsome steam launch which they have just completed for the Kobe branch of Messrs. Ahrens & Co., Nach., for service there on behalf of the N.D.L. In length 56 feet, with a beam of 11 feet, and a speed of 10½ knots, the launch, we have no doubt, will answer all expectations. The trial trip took place on Wednesday afternoon and at the invitation of Messrs. Ahrens & Co., a large number of German residents and others were present. After a delightful run down to the Honmoku Lightship and back, Mr. Coates, the German Consul-General, proposed in hearty terms success to the new launch, the *Lloyd*. The toast was drunk with enthusiasm.

AMERICAN NOTES.

It is estimated that the production of coal in the United States for the year 1899 will amount to 200,000,000 tons, an output in excess of Great Britain's probable production.

Of the 21,458,294 children of school age in the United States, 70 per cent. are in attendance in the public schools. Twenty years ago the percentage was only 61½.

The fire-loss statistics of the *Journa of Commerce and Commercial Bulletin* show for the United States and Canada a total of $136,773,200 in 1899, an increase of $17,000,000 over last year and $26,000 000 over 1897. The December loss was $13,260,650

A statement prepared by the Hawaiian Sugar Planters' Association shows the sugar output of the islands for the year ending September 30, 1899, to have been 282,807 tons, or about one-tenth the consumption of the United States. Of this total twenty-four companies on Kauai sent 65,359 tons, nine companies on Maui 54,389 tons and seven companies on Oahu 45,820 tons. The largest output of beet sugar in California in one year is 38,705 tons.

The death of Mr. Daniel S. Ford, the proprietor of *The Youth's Companion*, removes one of the leading newspaper publishers of the time. The almost unexampled success of that paper was due to his remarkable business ability. From an insignificant journal, it became one of the most prominent and profitable papers in the United States, and has for more than a generation brought pleasure and profit to the various members of the family.

Ernest Bauer, says the New York *Tribune*, an extensive poultry raiser, of Coffeyville, Kan. having read in an agricultural journal that boracic acid would preserve chicken meat almost indefinitely, assumed that the chemical should be mixed with the feed of the fowls and given to them to eat. He tried the experiment with the result that 762 of his 800 chickens died within twenty-four hours. He sued the editor of the paper, but the court held that any man of ordinary intelligence should have known better than to try to preserve the flesh of living fowls by means of chemicals.

Prosperity, remarks *Bradstreets*, is strikingly evidenced by the statistics given in the annual report of the New York Superintendent of Banking. Nothing like the development in the business of the trust companies during the past year has ever before been known. Eight new trust companies were organized during the year and five were in course of organization when the year closed, representing in capital and surplus $22,000 000. For the first six months of last year the resources of the trust companies showed an increase of $195,000,000. The State banks showed a gain of $50,000,000 in resources during the year, or over 15 per cent., and the resources of the savings banks a gain of $45 500 000 for the first six months of the year, or more than during the whole of the preceeding year.

Mr. Attorney-General Griggs has filed an answer in the Supreme Court of the District of Columbia in the proceedings for prize money for captures at Manila Bay by Admiral Dewey. The Attorney-General asks that the cause be referred to a commissioner and that Admiral Dewey, his officers and crew and also the United States may have leave to take testimony. The Attorney-General concedes that a state of war existed, but denies that the squadron under Dewey's command captured the Spanish cruisers *sla de Cuba*, *sla de Luzon* and *Don Juan de Austria*. These vessels, he says, were sunk during the engagement. He asks for fuller information in regard to the other points and says that although captures of property were made, such capture does not authorize its condemnation as prize to Dewey and his men. The Attorney-General has filed a similar answer in the case of Admiral Sampson and the destruction of Cervera's fleet.

TELEGRAMS.

(Reuter's Special Service.)

Shanghai, Feb. 2.

The total casualties since crossing the Tugela were 301 killed, 1,584 wounded, and 130 missing.

The Times understands that the Government contemplates drastic changes in the War Office.

The press generally condemns idle partisan recriminations in debating the Address to the Throne.

The completion of the list of the Spion Kop casualties show that the missing number 215.

Col. Baden Powell reports from Mafeking that he has forced the enemy to move the positions of their big guns, and he hopes shortly to shift 2 strong works with dynamite. The garrison is healthy and cheerful.

General Buller, thanking the troops after the Spion Kop operations, said that he hoped to relieve Ladysmith within a week.

Mr. G. Wyndham (Under Secretary for War) replying in the House of Commons to the criticisms of Sir Charles Dilke, defended the conduct of the war and said that within a fortnight Great Britain would have in South Africa, 180,000 troops of all arms; 48 batteries of Artillery, and 110 guns of position (seige guns). He added that he would ask the House for a further war vote and also for means to reorganize the military defences.

Shanghai, Feb. 3.

Reuter's agent telegraphs from Spearman's Camp under date of the 30th ult. that Dundonald reconnoitred on that day to Nongerpoort above Trichard's Drift, but did not see any signs of the enemy.

The Indian famine is becoming more acute. Three and three quarter millions of persons are receiving relief.

Mr. Balfour, speaking in the Commons, said that it was not intended to send any Indian troops to South Africa.

Shanghai, Feb. 4.

A fresh movement by Buller is believed to be imminent, if it has not already commenced. All accounts show that the spirit of the troops is splendid.

French is at Capetown consulting Roberts.

Methuen's command is being rapidly reinforced.

In the debate on the Address, Mr. Goschen said the Admiralty is able to assist the Army without depleting the Navy. The drainage of troops from the country requires that the Navy should watch with greater vigilance.

A French Yellow Book shows that England on the 25th December suddenly withdrew her previously determined opposition to the extension of the French Settlement at Shanghai.

Shanghai. Feb. 5.

Well accredited reports represent the Free Staters as increasingly weary of the war. Some influential leaders, including one principal commandant, are said to have entered into secret negotiations with the British, with a view to ascertaining the terms that will be accorded to them, if they quit their allies.

A later telegram says that Buller apparently has made no movement.

Reuter's agent telegraphs from Spearman's Camp under date of the 3rd that the enemy to-day fired from the hills upon our cavalry which was reconnoitering. The Boers are burning all cover along the last British line of advance.

The Boers from Vryheid have captured a British magistrate at Ingutu (?) in Zululand; also 11 white and 34 coloured policemen with horses and ammunition.

Shanghai, Feb. 6.

There is no confirmation of the reports published by the newspapers that Buller has re-crossed the Tugela and is marching to the relief of Ladysmith.

The *Daily Telegraph's* correspondent at Spearman's Camp telegraphed on the evening of the 4th inst that the infantry lining the low ridges on the north bank of the Tugela opposite Potgieter's Drift check the Boer snipers. Messages are freely interchanged between the camps of Buller and White.

The War Office has heard absolutely nothing concerning the advance of Buller. No immediate movement on his part is anticipated, the roads being rendered impracticable by the rains.

The passage of foreigners to the Transvaal from Delagoa is unceasing. The Portuguese restrictions are derisory.

In New York, Mr. Alger, late Secretary of War, strenuously denounces the growing pro-Boer agitation in the United States in oblivion of the immeasureable debt of gratitude that the Americans owe England for her attitude during the Spanish War.

Shanghai, Feb. 7.

A new American Commission sails for the Philippines in March to establish a civil government.

There is a marked change in the German press in the direction of friendliness towards England. Even the *Vossische Zeitung*, hitherto bitterly Anglophobe, says that Germany has no inducement to drive the English from Egypt to make room for the French.

A heavy cannonade has begun on Ladysmith and continues.

Shanghai, Feb. 8.

The *Standard* has a telegram from Koppiesdom, dated the 5th instant, which says that Macdonald's Highland Brigade, with a field battery and the 9th Lancers, arrived on the 4th instant at Koodvoosberg, and now holds both banks of the River. Its arrival was opportune, as it prevented two large commandos from joining. The light infantry are bivouacked on the north bank of the River.

Lord Edmond Fitzmaurice's amendment to the Address to the Throne, regretting the want of knowledge, foresight, and judgment shown by the Government in South-African affairs since 1895 and in the preparations for the War, was rejected by 352 votes to 139.

[Note.—Lord Edmond Fitzmaurice is member for North Wiltshire, and is brother to the Marquis of Lansdowne, Minister for War. He occupied the post of Under-Secretary for Foreign Affairs in the Gladstonian Administration of 1880-85.—Ed. *J.M.*]

Roberts and Kitchener have left Capetown, but the censor has cut out the date of their departure and their destination. It is believed that they have gone to supervise large general operations, extending from Sterkstroom to the Colesberg district.

It is reported that Gatacre is already engaged.

The War Office announces that Buller crossed the Tugela on the 5th, and is now advancing towards Ladysmith. The operations are proceeding, but no information has been received as to their result.

(Telegrams Received at the Legation of France in Tokyo.)

Saigon, Feb. 2.

The House of Commons is discussing the reply to the Speech from the Throne. Many speakers blame the Government.

The project of a system of French submarine cables includes a line from Hué to a point not yet fixed on the north of Hongkong.

Saigon, Feb. 4.

The French Senate has resumed its regular sittings. It is proceeding to verify the election returns.

News from London is to the effect that no intelligence has been received from the seat of war, but the public is nevertheless convinced that Buller has re-commenced his movements, and important news is to be expected immediately.

Saigon, Feb. 6.

The War Office denies that Buller has commenced any new offensive movement, as the journals announced.

Saigon, Feb. 8.

The House of Commons has rejected the amendment to the Address censuring the Government.

The French Minister of Marine, acting in conjunction with the Minister of the Colonies, has decided to organise 14 batteries of marines for service in Indo-China. They will constitute a regiment named the Regiment of Marine Artillery of Indo-China. There will be eight batteries for Tonkin and six for Cochin-China, under the command of a Lieut. Colonel.

("Hongkong Volunteer Gazette" Service specially wired to the "Japan Mail.")

Shanghai, Feb. 8.

Nothing further has been reported by General French, except that the Boers report that the British are now within seven miles of Achtertang.

During the week 13,700 men and 3,000 officers, including Cavalry, Yeomanry, Militia, and Volunteers, sail for the Cape.

Lord Roberts, replying to a communication from Presidents Kruger and Steyn, complaining that the British have caused the destruction of farmhouses, says that the charges are unproven. His Lordship accuses the Boers of barbarous practices and the spoliation and expulsion of British subjects when refusing to fight against their own countrymen.

CHESS.

All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

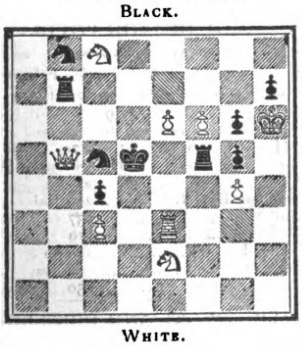
SOLUTION OF PROBLEM No. 458.

WHITE	BLACK.
1—R to Kt 8	1—Kt moves
2—R to Q R 8	2—Any move
3—R to R sq mates	
	1—P to Kt 4
2—R to B 5	2—Any move
3—R to 5 mates	
	1—P to Q 6
2—R to B 4	2—Any move
3—R to R 4 mates	

Correct solution received from "East Anglia."

PROBLEM No. 460.

BLACK.



WHITE.

White mate in three moves.

Game No. 560.

The following game was played in the Pillsbury National Correspondence Tourney, Mr. Somerville, the winner, calls especial attention to the fact that it presents the unusual feature (for a correspondence game) of an announced mate at the end of only fifteen moves.

EVANS GAMBIT.

WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	8 Kt K5	P Q4 (b)
2 Kt K B3	Kt Q B3	9 PxP	K KtxP
3 B B4	B B4	10 KtxB P	KxKt
4 P Q Kt4	BxP	11 Q B3ch	K K3
5 P B3	B R4	12 R K sq	KtxQ P (c)
6 P Q4	P Q3	13 RxPch	KxR
7 Castles	K Kt K2	14 PxKtch	KxP (d)
	(a)	15 BxKt	QxB (e)

And white announced mate in six moves.

Notes by Mr. S.

(a) Once known as the Mead Defence, but long obsolete. It permits an immediate and dangerous attack.

(b) Of course not Castles, because 9 Q to R 5 would give White an irresistible attack.

(c) Very much better seems P to Q Kt 4 first, followed by the text-move.

(d) If K to K 3, then 15 Q to K 4 ch, K to B 3; 16 B takes Kt, and Black has no resource.

(e) Black's game is irretrievable. If here R to K sq; 16 B to Kt 2 ch, K to B 4; 17 B to R 3 ch, K to Q 5; 18 Kt to B 3, B takes Kt; 19 R to Q sq ch, K to K 4; 20 Q takes B ch, and wins easily.

Black's 6th move is not a good defence. P takes P is the move.

Games No. 561 and 562.

The following games show uncommon variations of the French Defence. The first was played at Copenhagen recently, the second in the first-class tournament at the Manhattan Chess Club, New York :—

FRENCH DEFENCE.

WHITE.	BLACK.	WHITE.	BLACK.
White.—S. Pritzel.		Black.—Dr. A. Tackholm.	
1 P K4	P K3	19 Q B3	R(Q sq)Ktsq
2 P Q4	P Q4	20 K B sq	Q B2
3 PxP	PxP	21 R K5	Kt K5
4 B K3	Kt K B 3	22 PxKt	PxP
5 Kt Q2	B Q3	23 QxB P	R R8ch
6 B K2	B K3	24 K K2	RxR
7 P K R3	Q Kt Q2	25 Q K2	Q Q2
8 K Kt B3	P K R3	26 Kt B sq	R Rsq
9 P K3	P B3	27 Kt Kt3	R K R7
10 P B4	Q K2	28 B B5	Q B2
11 P B5	B B2	29 BxBch	PxB
12 Castles	P K Kt4	30 RxP	R Rsq
13 Kt R2	B B5	31 R K7	Q Q sq
24 Kt Kt4	P K R4	32 Q K5	R Q Kt8
15 KtxKt ch	KtxKt	33 Kt B5	RxPch
16 BxB	PxB	34 K Q3	R Q7ch
17 R K sq	Castles Q R	35 K R3	R R4
18 B Q3	Q Q2	36 R K8 and wins (a)	

(a) This game has provoked some discussion among the Scandinavian chess players, 3—P takes P is now somewhat uncommon, but recently has found advocates once more. It frees Black's Q R, which is the real objection to it. 7—P to K R 3 is weak generally, and seems here to be useless, besides assisting Black's attack (see moves 12, 14, 21, &c.). White appears to have had narrow escapes, and the game affords plenty of scope for analysis. A pretty point is when Black plays 34. R to Q7 ch. If White captures the rook, Black replies, Q to R4 ch, and draws.

FRENCH DEFENCE.

WHITE.	BLACK.	WHITE.	BLACK.
White—D. G. Baird.		Black—C. P. Weeks.	
1 P K4	P K3	12 R Q B sq	PxP
2 P Q4	P Q4	13 KtxP	Q Kt K4
3 Kt Q2	Kt K2	14 B Ktsq	Kt Q Bsq
4 K Kt B3	Kt K3	15 Q B2	P K4
5 P B3	PxP	16 Kt B3	P KB4
6 KtxP	P QK3	17 Kt(K4)Kt5	KtxB
7 B Q3	B Kt2	18 Kt K6	KtxKtch
8 Castles	B K2	19 PxKt	Q Q4
9 R Ksq	Kt Q2	20 KtxR	QxBP
10 P KR3	Castles	21 K B sq	Kt B5
11 B Q2	P QB4	White resigns (a)	

(a) Here the whole method of development is original and suggestive. The departure from beaten paths is refreshing. White appears to have lost the game through allowing the Black Kt to attack first at 4 and then at B 5; 14. B-B sq was better. Mr. Weeks (a new player) conducts the game in vigorous and attractive style.

One of the armed robbers who entered a house in Suyeyoshicho, 1-chome, on the night of January 12th, was on Thursday morning arrested by a defective belonging to the Isezaki-cho Police Station.

SILK.

	NEW YORK.	HARTFORD.	TOTAL.
Hongkong	50	—	50
Shanghai	—	—	—
Yokohama	—	—	—
Total	50	—	50

LATEST COMMERCIAL.

IMPORTS.

There is still a general rise in yarns and cotton fabrics, and buyers for the most part decline to enter into large transactions. Prices, however, are still below Manchester rates, and must rise further. The "country New Year" has interfered with business, which has been on a very limited scale during the past week.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½lb, 38½ yds. 39 inches	$2.85 to 2.30
Grey Shirtings—9lb, 31½ yds. 45 inches	3.30 to 3.85

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 17TH, 1900.

SUMMARY OF NEWS.

THE British are being heavily pressed at Rensberg.

A JUNK was burnt in Yokohama harbour on Wednesday.

ASAMA-YAMA is showing signs of renewed activity.

LADYSMITH, Kimberley, and Mafeking are still holding out bravely.

THE news from South Africa is less exciting this week. General Roberts has reached the Modder River.

ANOTHER disturbance is being fomented among the farmers in the Ashio Valley.

THE Children's Fancy Dress Dance at the Public Hall on Wednesday was a more successful affair.

THE Interport football match between Kobe and Yokohama will be played this afternoon at Kobe.

THE Tokyo Dramatic and Musical Society gave a successful concert at the Shorei-kai on Friday evening.

DURING next week an entertainment will be given in the Public Hall in aid of the Widows and Orphans Fund.

ON Wednesday night a house in Honmura road, Yokohama, inhabited by a Chinaman, was destroyed by fire.

THE Commission of the French Chamber of Deputies has decided to propose the removal of Déroulède from his seat as deputy.

THE body of a British seaman who fell into Yokohama harbour on Jan. 3rd, has just been recovered on the beach at Tomioka.

THE St. George's Society of Yokohama and Tokyo do not propose giving a Ball this year. The money will be sent home to England instead.

THE supplementary British Army estimates provide 14,000,000 pounds sterling and 120,000 more men, making the grand total 338,853.

LIEUT. WADE, of the Royal Lancaster Regiment, killed at Spion Kop on the 24th ult., was a son of the late Sir T. F. Wade, British Minister to China.

THE body of the British quartermaster Nicholson, which was washed ashore at Tomioka, has been buried at the expense of the village authorities of Kanazawa.

A TELEGRAM from Vancouver, British Columbia, states that the skeleton of Sir Arthur Curtis, of London, has been found in a cave near Klondike, where he perished last winter.

DURING the coaling of H.M.S. *Peacock* at Shanghai on the 6th inst., James Tozer, a chief stoker, while walking over the boats alongside, slipped and fell into the river and was drowned.

THE annual meeting of the St. George's Society was held on Thursday afternoon at Keil's Building, Mr. W. W. Till, the President, in the chair. The proceedings were of a private character.

REUTER'S agent telegraphs from Rensberg under date 11th inst., says two patrols, consisting mostly of Australians, were the previous day surrounded by the enemy. Some escaped, several were wounded, and 12 were captured.

BARON HESSE VON WARTEGG, the well known traveller, accompanied by his wife (née Minnie Hauk) are passengers by the German mail to the Far East. They intend to stay for some time in Singapore.

AN epidemic of influenza is rampant, says the *Kobe Herald*, among the foreign community of Kobe. The medical men are borne down under a burden of extra duty on its account, as many as 60 influenza patients being under one doctor's attentions.

ANOTHER effort is being made to induce the American Government to bid for the "Danish West Indies." The price expected is not known, but it is believed to be three millions. Both the Navy and State Departments are strongly in favour of the purchase.

IT is reported that Japan has allowed the Government to take over four 4.7 inch quickfirers ordered by her at Armstrong's. Other European States are acting in a similar manner regarding orders being executed at the Vickers-Maxim works, England thereby acquiring one hundred guns.

THERE is an old man named Okamura Kakuo, of Sendai, Miyagi Prefecture, now staying at Tsuchishoya, Futsuka-itsukamachi, Minami-Shinagawa, near Tokyo. He is aged 105, and is celebrated for his pictures of storks, tortoises, bamboos, plums, etc. He always walks, using neither *jinrikisha* nor railway.

THE steam yacht *Victoria*, having on board Prince and Princess de Broglie, their son, and other exalted personages, has arrived at Singapore *en route* for China and Japan. The yacht is a handsome vessel, commanded by Captain R. A. Lunham, who is English, has a crew of fifty-one, and carries two guns.

MR. GERALD WYNDHAM, Under Secretary of State for War, has announced in the House of Commons that it has been decided to send seventeen more battalions of Militia and 300 more Yeomanry to South Africa, bringing the grand total to 194,000 men, exclusive of ineffectives.

NEWS has been received in Yokohama of the death in Paris a few days ago of Mr. Pietro Beretta, who had resided for many years in this port, and who left Yokohama only last December Mr. Beretta had been an invalid for some time, suffering from an affection of the heart. He was a native of Milan, and had served with distinction in the Austrian war of 1859. He was about 60 years of age, and highly esteemed by all who knew him.

CONSIDERABLE sensation has been caused in Berlin by the publication in the *Lokal Anzeiger* of what purports to be the gist of the contents of the secret treaty between Great Britain and Germany, with respect to the Colonial possessions of Portugal. Roughly speaking it sets forth that Great Britain will purchase Delagoa Bay and all the country up to the Zambesi, while Germany will take over the small Portuguese Colonies in Asia. Germany also stipulates to secure to England the occupation of Delagoa Bay against possible objections from France, Russia, or any other Power.

IN the House of Lords last week the Marquis of Lansdowne (Minister for War) explained the Government's Army scheme. He said that the first duty was to provide a field army of 130,000 men which would form a reserve for further reinforcements for South Africa. The Government proposed to add to the Regular Army 15 battalions, 43 batteries, and seven Cavalry regiments. This proposal was changed in the sense of adding 30,000 regulars and 50,000 auxiliaries, making a total force of nearly 600,000

A JAPANESE coal lighter known as the *Mimre Maru*, of 2,800 *koku* burden, while moored opposite the Japanese hatoba at Yokohama on Thursday, was seen to be on fire. The fire brigades of the Japanese warship *Kongo Kan* and of the *Chitaya Maru*, belonging to the Communications Department, were soon on the spot, and the flames were extinguished, but not before the junk had been burnt to the water edge. A watchman was supposed to be in charge of the junk, but he went ashore at 8 p.m. and did not return after the fire broke out. The junk belonged to Messrs. Helm Bros.

MARRIAGE OF THE PRINCE IMPERIAL.

The matrimonial engagement between His Imperial Highness the CROWN PRINCE and Princess SADAKO, daughter of Prince KUJO, and niece of the deceased Empress-Dowager, was officially announced on Sunday, the 11th instant. That day was doubtless chosen as being the anniversary of the accession of the first Japanese Emperor, 2560 years ago. The exact date of the marriage is not yet published.

In a previous issue we spoke of the lineage of the lady who is to be the future Empress of Japan. Her family traces its line back to the celebrated KAMATARI, who, in the eighth century, received the title of Fujiwara for eminent services rendered to the Throne. The Fujiwara, which stands at the head of Japan's noble families, has given consort after consort to the Sovereign. Prince KUJO, whose fourth daughter's betrothal is now announced, bears a title created some nine centuries ago. He himself occupied the post of *Sa-Daijin* (Minister of the Left) during the reign of the last EMPEROR, thus ranking, at the Imperial Court, second only to the Prime Minister. Princess SADA is in her seventeenth year. She is a graduate of the Peeresses' School, and has thus received an education differing radically in many respects from that of the ladies hitherto chosen as Imperial Consorts. We respectfully offer sincere congratulations to the illustrious couple.

Attention is drawn to the fact that in connexion with the engagement of the Crown Prince, His Imperial Highness despatched an equerry in his own name to the residence of his intended father-in law, whereas, according to the custom hitherto observed, such things would have been managed solely by the Imperial Household. The *Kokumin* interprets the fact as a new departure, in the sense of indicating that the wishes of the principal parties are to be consulted hereafter in marriages of the kind. There may be something in our contemporary's inference, but we apprehend that the prospective wearers of crowns will always have to subserve personal predilections to considerations of expediency in matrimonial affairs.

It is expected that the wedding of the Prince Imperial and the Princess Sada will take place at some time between the end of April and the end of May. The ceremony will be performed in the main hall of the Palace, and it is anticipated that in connexion with it a grand entertainment will be organized, to which foreigners as well as Japanese will be invited. Tokyo newspapers say that there will be amnesty for a special class of prisoners, and that large alms will be distributed among the poor. Investigations for the latter purpose have already been commenced in Tokyo and Kyoto. It is understood that the Imperial Treasury officials have appropriated about half a million *yen* for the expenses of the ceremony. The citizens of Tokyo, also, will inaugurate a fête of some kind, and it is possible that the foreign community may think the occasion suitable for a demonstration. We offer the suggestion.

"Miyake Setsurei" writes one of his subtly worded articles in the *Nippon* with reference to the wedding. He wraps up his meaning in many pretty paraphrases, as is natural to a Japanese discussing such a subject, but the gist of what he says is a plea for more intimate intercourse between the Crown Prince and the people. Borrowing Marquis Ito's simile which compares the Emperor to the sun and the Empress to the moon, "Miyake Setsurei" admits that when either luminary has climbed high in the heavens, the majesty of its effulgence is awe-inspiring. But when it is still low upon the horizon, still in the Prince-Imperial or Princess-Imperial stage to put the matter bluntly, it shines with a soft and genial light sympathetic rather than dazzling. That is the time for the future Sovereign to study his subjects closely and obtain an intimate knowledge of their character and condition by allowing them to approach him.

SOUTH AFRICA.

Saturday, Feb. 10.

It is not possible to agree with the strictures passed by a local contemporary on the methods of the censors at the seat of war. Persistent reports were circulated that Buller had recrossed the Tugela on the 1st or 2nd of February, and our contemporary assumes that, though he had really crossed, the fact was suppressed by the censors. But Reuter's telegrams show that Buller did not resume the offensive until the 5th of February, and, as the news reached us on the 8th, it is plain that the censors did not stretch their power beyond the usual limit of prescribing a three days' interval between the commencement of operations and their public announcement. At all events we can be quite sure that the censors exercise their authority in the best interests of the nation, and that, if they keep back details, it is not merely for the sake of mystery. In this particular instance of Buller's movements, rumour was premature. The censors did not suppress anything, since there was not anything to suppress.

It is almost hopeless to attempt to form any conjecture as to the nature of the operations in which Buller is now engaged. Whether he is really delivering his attack at two points, as news from Paris suggests, or at one only, is uncertain. An interesting fact is that Dundonald's Brigade, though it consists entirely of mounted men, did not regain the main body after the retreat from Spion Kop until the 25th of January. Where was the Brigade during that interval of a day? Apparently it had moved round to the west of Spion Kop and captured Acton Homes, thus getting altogether in rear of the Boers' left. Had it been possible to push on direct from Acton Homes by the Dewdrop road, the plateau of Ladysmith would have been reached. Of course that would have involved the ascent of the Venter Spruit bluffs at the foot of which Acton Homes lies, and we can not tell what obstacles present themselves to such a movement. But there seems to be some reason for supposing that the operations now in progress include a more effective movement along the line followed by Dundonald's Brigade on the occasion of the last attack.

Lord Roberts' plan of campaign seems to be that recently suggested by us as probable. He proposes to deal with the Boers at Stormberg and Colesberg, and then, having effected a junction between the De Aar column, French's column, and Gatacre's column, he will cross the Orange River and seek to turn the Maggersfontein position, Methuen, with the Guards' Brigade and various reinforcements just received, being left to hold the Boers on the Modder. This programme commenced when French moved against Colesberg—though that operation was not directed by Lord Roberts—, and the second step was the occupation of Thebus by the Sixth Division, a strong force being thus placed on the West of Stormberg. The third measure was to move the Highland Brigade down the Orange River, so as to prevent the Free-Staters from sending reinforcements to Colesberg and Stormberg, and also to oppose the retreat of these two places' garrisons across the Orange River. These various dispositions made, the next move in natural sequence would be a simultaneous advance against Stormberg by the Sixth Division from Thebus and Gatacre's Brigade from Molteno. Thus the news that Gatacre is already engaged does not surprise us. One of the telegrams, however, says that the Boers have commenced their attack upon Gatacre. We should have expected a message with the terms reversed. If the Boers have really taken the initiative, there is a bare possibility that they have moved down from the Stormberg highlands by Pen Hoek, a pass lying east of Bushman's Hoek. Such a move would threaten Gatacre's communications and embarrass his tenure of Bushman's Hock. But we can scarcely doubt that he held Pen Hoek as well as Bushman's Hoek, and, as there is little probability of the Boers' attacking him in front, we are disposed to think that the offensive has been assumed by Gatacre, not by the Boers.

Monday, Feb. 12.

The news of General Buller's third failure to relieve Ladysmith is not accompanied by any statement of his casualties, and we shall probably be justified in concluding that they were comparatively light. Doubtless the positions on the northern slopes of the hills between the Tugela and Ladysmith are all exposed to shell fire from the Boers, whereas the positions occupied by them on the southern stopes are entrenched and have regular artillery emplacements. The difficulty in the present instance, however, seems to have been that the route to Ladysmith from Kranzkloof is so thoroughly commanded by the Boer positions that to advance by it would be a sanguinary operation. It is plain that Buller is not in possession of any accurate map of the enemy's fortifications. To compile such maps must be almost impossible under the conditions of modern warfare.

There is some uncertainty in the latest telegrams. We can not ascertain clearly whether Methuen has withdrawn from the Modder River, or whether he has ordered Macdonald to withdraw to the Modder. On the whole, the former seems the more probable hypothesis. If so, it doubtless indicates a complete change of strategy, ordered by Lord Roberts.

The fatal fault of the Boers' methods,

Digitized by Google Original from CORNELL UNIVERSITY

their invincible aversion to assume the tactical offensive, seems likely to prove the ultimate cause of their ruin. Rather than risk any attacking movements, they will allow England to mass, at her leisure, an overwhelming force. England is thoroughly roused. She is going to employ three hundred and forty thousand men to crush the Boers. It would be at least three months before the whole of such an army can be collected, but the delay will not inconvenience Great Britain in the least, and will probably embarrass the Boers considerably.

Thursday, Feb. 15.

It seems very plain that Buller's last crossing of the Tugela was a mere make-believe. There was an "off chance" that he might find an easy route, but he did not anticipate anything of the kind. His real object was to hold the Boers; to prevent their detaching any large force for operating on the South-Western frontier of the Free State. The Spion Kop affair was a genuine attempt to relieve Ladysmith; but it showed Buller very plainly that he could not hope to succeed without force large enough to attack both flanks of the Boer entrenchments while, at the same time, leaving a strong body of men in the centre. Doubtless he then concluded that another interval of waiting would be necessary, but inasmuch as complete inaction on his part would enable the Boers to withdraw a considerable part of their men for service elsewhere, he resolved to renew his attack as soon as possible, in appearance at all events. The declaration that he made when addressing his troops after Spion Kop was significant. He hoped to *relieve* Ladysmith in a week, he said. We *think* it highly improbable that had he really entertained such a hope he would have given open expression to it. The same thought doubtless occurred to Joubert, and Buller knew that it would occur to him. But Joubert can not afford to act upon conjectural inferences. Buller might have meant what he said, and if the Boers, regarding his statement as a bluff, had detached a large number of men for the Free State, the Krantzkloof affair would probably have ended in the smashing of their lines. Similarly Buller has now given out that he means to make another attempt. He will make it, not taking any needless risks, but always disposing his troops so as to be ready to utilize every opportunity. His business now is to hold the Boers in Natal. Every day they remain there is a day gained by the British for the purpose of increasing and marshalling their forces. If Roberts can smash the Boers at Maggersfontein, the whole character of the situation will be changed. We do not refer to the relief of Kimberley: that is quite a secondary consideration. What we mean is that if the Boers' lines on the Modder can be forced, Roberts will be much closer to Bloemfontein than are the Boers now operating in the Colesberg and Stormberg districts. He can easily strike at the latter's communications. We take it that he has collected all his available strength of cavalry and mounted infantry on the Modder, and that one part of his plan is to cut in between the Boers at Maggersfontein and the Boers beyond the Orange River. If that be the idea, one of his attacking columns —a very strong one, accompanied by a large body of mounted men—will strike at the Boer lines in the direction of Jacobsdal, while two others attack in the centre and on the left. We know nothing of the state of his preparations. Several days may still elapse before he undertakes anything serious. There is no hurry. In fact, there is every reason for deliberation. But we hold to the belief expressed frequently in these columns, that the first real light will be let into the situation by the operations in the Free State, and that a strong blow struck there will do more to lessen the pressure at Ladysmith than any attack Buller can deliver with his present forces.

THE RELIGIONS BILL.

Tokyo journals state that the Government is exerting its influence to hasten the discussion of the Religions Bill by the House of Peers. A long time has elapsed since the Bill was submitted to the Peers, but their committee has not yet given any sign of reporting on it, and the delay is naturally construed as a sign that the House wishes to kill the measure by neglect. Unless, however, the Diet's session be prolonged, there could not be much use in bringing forward the Bill now, as only 3 days remain.

Meanwhile the Western Hongwan-ji and its two principal affiliated temples have addressed to both Houses a letter strongly urging the passing of the Bill. The writers say that they should like to see an amendment in the sense of placing on firmer ground the relations between principal and affiliated temples, but that they are emphatically opposed to any legislation discriminating between indigenous and alien creeds. Such a law would be contrary to the spirit of the age. All the Sects, they add, were agreed upon this point until quite recently, when suddenly a meeting was convened calling itself the *Kakushuha Rinji Daikwai* (great extraordinary meeting of the various sects), at which resolutions were passed inconsistent with the previous understanding. Hence the representatives of the Nishi Hongwan-ji and its affiliated temples withdrew from the meeting. The sending of such a letter to the Diet fixes the gulf firmly between the two parties of Buddhists.

COUNT OTANI.

Count Otani, High Prelate of the Western Hongwan-ji—the Buddhist Pope, he may almost be called—is said to be dangerously ill with heart disease. He has long suffered from the malady. It was probably accentuated by recent occurrences. At all events, his condition is said to be critical. We trust that the crisis may be tided over, for the loss of the *Hossu* at this juncture would be a severe blow to the cause of religious toleration in Japan.

Count Otani's condition is evidently very critical. The most favourable accounts do not represent him as likely to survive for more than a week. On the 14th he was at death's door, but he partially recovered consciousness on the morning of the 15th. A telegram has been sent to Colombo summoning his son, who is now in Ceylon studying Buddhism.

CHINESE PARTY AT THE MAPLE CLUB

It appears that the account hitherto given of the party at the Maple Club on the 11th instant was somewhat incorrect. The Chinese were hosts, not guests. About a hundred of the leading Chinese merchants of Yokohama, Kobe, Nagasaki and Hakodate determined to organize a social gathering for the purpose of celebrating the opening of the country, and concluded that the 11th instant, being a great national holiday, would be an appropriate day for the fête. About two hundred prominent Japanese statesmen, politicians and merchants were invited. The principal Chinese promoter delivered a short speech, proposing the health of the Emperor and Empress; expressing the satisfaction felt by his nationals at having participated in the privileges secured by treaty revision, and desiring a steady growth of the friendly relations between Japan and China. Count Okuma then made one of his essentially practical speeches. He pointed out that whereas the populations of China and Japan aggregate nearly one-third of the inhabitants of the world, their trade with foreign countries is only one-tenth of the world's international commerce. While, therefore, he desired to see the friendship between the two countries grow perpetually closer, it was his earnest hope to see that friendship placed on a practical basis with a view to commercial and industrial development. Viscount Aoki followed. The gist of his remarks was that, having opened her territories to foreign trade, travel and residence, Japan had no intention of making racial distinctions. She wished it to be clearly understood that all peoples were free to live within her borders, and might count upon finding there equal security of life and property. He then spoke of the importance of combination for business purposes. In feudal times, the Japanese had been greatly deficient in the spirit of combination. The country had been divided into a large number of petty principalties, each hostile to its neighbours. But the teaching of modern experience was that cöoperation could scarcely be over-estimated for commercial or industrial purposes, and he urged that important results might be achieved by applying that principle to the case of China and Japan, especially since Chinese investments in this country would be fully and conscientiously protected just as Japanese investments are. Mr. Kioura, Minister of Justice, also spoke. He paid a high compliment to the courage, enterprise and commercial ability of the Chinese, but he ventured to offer one criticism; namely, that they relied solely on the results of their own experience, and attached no value to the civilization and organization of other peoples. They never coalesced with the nations among whom they settled, but they always clung so tenaciously to their idea of alienship that even to leave their bones in foreign soil shocked them. Such prejudice and exclusiveness seemed to the speaker a great obstacle to material success. Mr. Okura Kihachiro was the last speaker. He confined his remarks to expressions of appreciation of the compliment paid to the Japanese guests.

LAND TITLES IN YOKOHAMA.

Monday, Feb. 12.

The provisions of Japanese law, as applicable to the titles under which landed property is held by foreigners in the former settlements, seem to be still misapprehended. A local contemporary warns its readers that the leases they possess are of no value in the eyes of a law court since the latter is bound to consider the certified entry in the register only, and can not take any notice of a lease. Such an assertion is apt to create much disquiet in the minds of land-holders, and we ask them, therefore, to listen to a few plain facts.

The first of these facts is that, according to the explicit language of the 45th Article of the Law of Application of the Civil Code, the titles under which foreigners hold their Settlements lands are excluded from the scope of the Code. A court of law, asked to deal with such titles, would be clearly exceeding its powers if it attempted to apply to them the provisions of the Civil Code as they stand. An Imperial Ordinance, issued in compliance with the Government's treaty obligations, has distinctly guaranteed the titles against such treatment, and a law court is bound by the terms of the law to respect that Ordinance.

The second of these facts is that a flagrant breach of its treaty obligations on the Government's part, must precede any reference of such questions to a law court. No law court has competence to interfere arbitrarily between landlord and tenant. It has nothing whatever to do with their relations so long as its interference is not solicited by one side or the other. Now the Government has entered into a solemn international contract that it will respect the perpetuity of foreigners' titles. Does any one seriously imagine that there is the faintest danger of the Government's appealing to a Court of law to invalidate that contract? The notion seems to us quite farcical. Japan has always adhered to her treaty engagements with scrupulous good faith. Is it likely that she will now deliberately perpetrate a most iniquitous and conspicuous violation of them? So long as she does not attempt such an act of dishonesty, the law courts can never be invited to deal with the land titles, since their power to interfere can not be exercised until one of the parties makes formal application for its exercise.

The third of these facts is that if the Japanese Government is so unworthy of confidence, the idea that it could be held to its engagements by a mere distinction of phraseology is surely a little extravagant. In order to approach a law court in the sense apprehended, the Government, *qua* Government, would have to begin by rescinding its own Ordinance of last December; and then, *qua* landlord, it would have to make application to the law courts in diametrical opposition to its treaty pledges. Assuming for a moment that there is danger of such procedure, would the danger be averted by special legislation providing for the registration of foreigners' titles as "perpetual leases?" Could not a Government, so careless of its obligations, submit a Bill, at any time in the future, asking the Diet to put an end to the discrimination in favour of foreign leases? It seems to us that one danger is just as real as the other. So soon as we begin to grapple with chimæras, there is no limit to the operation.

The plain truth is that the Government has availed itself of the powers vested in it by law to give effect to its treaty engagements, and that, so long as it observes those engagements, the foreign land-holder is safe. If it ceases to respect its treaty pledges, then indeed the deluge may sweep away more things than land leases.

Wednesday, Feb. 14.

Referring to the vexed question of the registration of foreign land-holders' titles the *Japan Herald* declares it to be a fact that "the Japanese Government is virtually attempting to rescind a right guaranteed by treaty," and calls that "a more difficult thing to accomplish" than the rescinding of an Ordinance. Indeed, our contemporary goes so far as to allege that "the rescinding of one of the Government's own Ordinances, with the assent of the Diet, would not probably prove of much difficulty." We do not suppose that there is any intention on our contemporary's part of preferring an accusation of deliberate bad faith against the Japanese Government. The land-renters, at their recent meeting, were most careful to show that they did not entertain such a suspicion. Our contemporary doubtless means that the use of the term "superficies (perpetual lease)" amounts, in effect, to an abrogation of the right of "perpetual lease." In short, the addition of the word "superficies" is the whole subject of complaint. But the Japanese Government's reply, as we understand it, is that they have fully recognised, and do fully recognise, the right of "perpetual lease," and that in registering it as a "perpetual lease of the surface of the ground," they are simply adopting the most convenient nomenclature furnished by existing laws. To alter that arrangement would be to admit that it exposes the land-holder to dangers against which the Government is pledged by treaty to protect him, and we do not think it probable that such an admission will be made. If any of the persons that condemn the arrangement would take the trouble to state a case showing how the danger they apprehend can be incurred, it would be easier to understand their position. Will they say in plain terms what they fear and how their fear could be realized. A descent from the clouds of vague suspicion to the region of hard facts would be welcome.

Now, as to our contemporary's assertion that "the rescinding of one of the Government's own Ordinances, with the assent of the Diet, would not probably prove of much difficulty," we would inquire, what then is the security desired? The resolutions passed at the land-owners' meeting asked for the registration of their title in the unadulterated form of "perpetual lease." How could that be effected? Obviously by an Ordinance of the Government with the Diet's endorsement, or by a law of the Diet with the Government's endorsement. But we are now told that the rescinding of such an instrument "would not probably prove of much difficulty." What is to be done then? If neither the Government nor the Diet can be trusted to observe the country's treaty obligations, where can security be found? And what is the use of setting so much store by a particular form of phraseology if the ordinance or law embodying it may be at any moment annulled without "much difficulty"? Discuss this question how we may, the point of departure and the point of arrival must always be Japan's Conventional *bona fides*. If that be a myth, then no Japanese ordinance or law can transmute it into a reality.

AGE OF JAPANESE OFFICIALS.

Some interesting remarks appear in the columns of the *Jimmin* with reference to the age of Japanese officials. The *Fiji Shimpo* recently expressed the opinion that the time had come for the elder statesmen to make room for the younger, its idea being that the former, though useful in their generation, have fallen behind the rate of the era's progress. To that we demurred, and we accompanied our objection with the remark that there seems to be a tendency in Japan to undervalue the advantages of ripe experience, and to thrust young men to the front merely because they are young. The *Jimmin* joins the controversy. Its view is that we formulated the general rule as to the value of age and experience, but that Japan's case is exceptional, and that the *Fiji Shimpo* recognised its exceptional character. To put the matter briefly, the *Jimmin* thinks that, considering the extraordinary nature of the problem Japan has to solve, and considering the fact that she may be said to have approached it seriously not more than thirty years ago, it must be quite obvious that the young men are better equipped than the old for undertaking the solution. In fact, according to the *Jimmin's* estimate, the young men alone have received the necessary training and education. We quite admit the truth of that view. It accounts for the fact that many posts in Japan's public service, especially in the Army, the Navy, and the Judiciary, are filled by men who, in an European country, would not have attained, or nearly attained, such positions at their age. More than once in the past, when the extreme youth of the Japanese official has been criticised in foreign journals or books, we have pointed out that in this matter the country had no choice, and that the fault will gradually be corrected as the nation grows older in its adoption of Occidental systems. But it is our conviction that the present tenure of authority by young men is apt to educate an unjust and unwise irreverence towards age, and thus to intensify the evil which it represents. Looking at the various Japanese services, we see that the average age of the prominent office-holder is far below the average for corresponding officials in Europe and America, and when, in spite of that fact, we hear a cry that the time has come for the old to make way for the young, we can not but feel astonished. Another point to be noted is that it has always been the custom in Japan to put men on the shelf at an age when in the Occident they would be said to have barely passed middle life. nA official or the head of a family, or the master of a business, often became *inkyo* at 50 or 55, and seldom remained in harness after 60. That is a fact quite independent of the exceptional conditions of modern times. It may be true that the Japanese matures at an earlier age than the Occidental, but surely he does not decay so much more quickly?

THE ROMA-JI QUESTION.

Mr. E. H. House writes again about the Romaji. He sets out by charging us with misinterpreting him. We said that he "called stenography a syllabary." He denies having done anything of the kind, and explains that what he did intend to say was:—"A syllabary is a set of marks each one of which signifies a complete and intelligible sound; stenography is likewise a system of marks which signify sounds." Well, if that does not mean that stenography is to be regarded as a syllabary for the purposes of comparison with an alphabet, we really do not know what it does mean. Even by the light of Mr. House's second definition, we fail to discover the "misapprehension" of which he complains. And if we go back to his original language, on which alone our comments were based, our justification seems still more complete. Here are his words:—

> The *Mail*, however, condemns it (the *Kana*) in a sentence which is curiously misleading, if it can be held to have a clear meaning of any kind. It is a syllabary, and "a syllabary," says the *Mail*, "is as far behind an alphabet as ordinary long hand is behind stenography." What is a syllabary? A set of marks each one of which signifies a complete and intelligible sound?—a sound which may be a whole word or the component part of a word. What is stenography? A system of marks which similarly signify sounds. In comparing the two with "ordinary long-hand" the same definition may stand for both. When we are told, in such a connection as this, that a syllabary is as far behind an alphabet as ordinary long-hand is behind stenography, it is like hearing that a syllabary is as far behind an alphabet as an *alphabet is behind a syllabary*; or that phonetic *writing is as far* behind long hand as long-hand is behind phonetic writing. Reasoning by illustration which runs round in a circle is not impressive.

If that is not calling stenography a syllabary for the purposes of the comparison, we do not know what our correspondent intended to say. He accuses us of an "illustration which runs round in a circle," the point of departure being the *kana*, and the point of arrival, stenography; he finds that we have thus set out with phonetic writing and arrived at phonetic writing, yet he complains that we misinterpret him when we suppose him to have called stenography a syllabary. Even in his protest he says that "the same definition may stand for both" stenography and a syllabary, yet in applying the same definition to them we misinterpreted him, it seems. And all this, too, when we were the originally assailed party, and when it was because we ventured to set up a distinction between stenography and a syllabary that we were accused of writing in a "curiously misleading strain" and using an "illustration which runs round in a circle." Mr. House's own illustration appears to obscure the matter still more. He claims that the same definition may stand for a steamship and a propeller for the purpose of comparing their speed with that of a sailing vessel, but that, he argues, "is very far from asserting that the steamship is a propeller." We are unable to perceive how any comparison can be set up between the speeds of a steamship and a sailing vessel unless the reference is to the propelling machinery of the steamship, and it therefore appears to us that the propelling machinery can not possibly be a third object of comparison. Separate it from the ship and the latter becomes a hull incapable of any motion at all. So if we separate from stenography the syllabic element which Mr. House himself assigned to it originally, it declines to move into place in his argument.

These things, however, are mere controversial subtleties to which Mr. House doubtless attaches as little importance as we do. Perhaps the same comment applies to the question of our reference to different ways of spelling English words which have the same sound. Mr. House originally asserted that "the English pronounce the Roman letters in all conceivable and in many inconceivable ways, making some of them consonants responsible for double or treble service, without the slightest regard to their real value, and—as a sort of compensation, perhaps—relieving others from vocal duty altogether." We naturally supposed that our correspondent was here speaking of the vagaries of English spelling, which uses different combinations of letters to convey identical sounds, and we ventured to object that the fault does not lie with the alphabet itself, but mainly with the forced uses to which it is applied for the purpose of distinguishing homonyms. Mr. House now says that "the circumstance that English words pronounced alike are differently written is entirely aside from the present purpose," and adds, "all that you say on that head is as wide of the mark as it would be to talk of the relative propriety of using capitals or small letters, italics or German text." Yet he himself set out by alleging that "the English pronounce the Roman letters in all conceivable and in many inconceivable ways." What does that mean if it does not mean that different combinations of letters are used in English to represent the same sounds? Mr. House erects an unmistakable finger-post, and then declares that to follow the route indicated by it is wholly irrelevant.

But our correspondent now takes the plain ground that the Roman alphabet is inherently unable to represent all the sounds of modern tongues, including the Japanese, and he adduces certain instances of the arbitrary devices employed to supplement its deficiencies. That objection does not appear to us to have any practical importance. The Roman alphabet has for many centuries served the uses of nearly all Occidental languages. Were there the smallest prospect of its being replaced by some better system of writing, the imperfections of the alphabet would become an interesting study. But there is no such prospect. The wit of man has hitherto failed to invent anything superior to the alphabet. Imperfections may be found in it: nothing human is perfect. But the hard fact remains that the civilized world, by a virtually unanimous verdict, has declared the Roman alphabet to be the best available medium for transcribing the great majority of languages. Is it suggested that Japan should seek to improve upon the Roman alphabet? If not, what useful purpose is served by discussing the insignificant defects of the alphabet in connexion with the question of its adoption by the Japanese?

We pass now to another point. Mr. House is "struck with amazement" by our assertion that "the *kana* syllabary does not produce Japanese sounds by any means as successfully as the Roman alphabet produces them." He doubts whether we can have "put forward so extraordinary a declaration with deliberate intent." He need not be under any doubt whatever. We did put it forward most deliberately and we continue to do so. But before stating our reasons we have one remark to make. Mr. House alleges that "the *kana* syllabary could never have had an existence except as an exact and absolute representation of Japanese sounds," and that it "reflects them as faithfully as a mirror gives back the objects set before it." If such propositions were exact, Mr. House's amazement would be warranted. But we find them very inexact. The *kana* is not an exact and accurate representation of Japanese sounds. The *kana* does not reflect Japanese sounds as faithfully as a mirror gives back the objects set before it. The *kana* can not truly be called "a set of symbols expressly created by the Japanese to stand as signs for the sounds of their speech, not merely to resemble them, but to be identical with them, so far as written marks can be identical with articulate utterances." The constructor of the *kana* syllabary did not have a free hand. What he did was to go to the Sanscrit language for vowel sounds. He found *a, i, u, e, o*; that is to say, he found vowel sounds identical with those of the Roman alphabet pronounced as the Romans are believed to have pronounced it. Then, with those vowel sounds he constructed a number of syllables, representing as nearly as might be, the sounds of the Japanese tongue. Then he selected Chinese ideographs having sounds as nearly as possible equivalent to the sounds of these syllables. Then he reduced the ideographs thus selected to skeleton forms, and the final result was the *kana* syllabary. But it was very far from being a satisfactory result. The Japanese language abounds in long vowel sounds. The *kana* provides no means of representing such vowels except by combinations of syllables which, if pronounced as they are written, would bear no resemblance whatever to the sounds they are intended to represent. The Japanese language abounds in heavy consonants. The *kana* provides no means of representing such consonants except by combinations of syllables which, if pronounced as they are written, would bear no resemblance whatever to the sounds they are intended to represent. Did Mr. House consider these points before he declared the *kana* to be "an exact and absolute representation of Japanese sounds," and before he concluded that as "an incontrovertible fact," "the syllabary takes in the whole range of Japanese speech?"

We now state our reasons for giving preference to the alphabet. First, whatever phonographic facilities the *kana* furnishes belong equally to the alphabet, since all *kana* syllables may be written with the alphabet, and the transcription can be effected without any appreciable impairment of representative efficiency. Secondly, many sounds which can not be even appreciably represented by the *kana*, may be accurately represented by the alphabet with the addition of two simple diacritics. Thirdly, the duty performed by 48 *kana* syllables, many of them written in two or three different ways, together with two diacritical signs, can be at least equally well performed by the 26 letters of the alphabet with the addition of two diacritical signs. Mr. House will, of course, demur to these propositions. He finds that *chi* does not express the *kana*

Digitized by Google Original from CORNELL UNIVERSITY

sound for which it is used; he advances a similar objection to *shi*, and he declares that the articulation of *ro* begins with a sound which is exclusively Japanese and which is produced by a vocal process quite different from that required by *r*. Without by any means endorsing these assertions in their entirety, we would ask, of what practical importance are they. A Japanese can not experience any difficulty in giving to *ro* the sound that he associates with the symbol ロ, or to *shi* the sound he associates with シ. He does, in fact, find no difficulty.

And the conclusion—what does it all come to? For what is Mr. House pleading? Merely, it would seem, for caution and deliberation. He evidently admits that the Roman letters should be introduced, for he says "when the time comes for introducing them." All that he wants is that "no effort should be spared to secure an orthographic system that shall conform as strictly as circumstances will allow to natural and scientific laws," and that "every step in the reform shall be carefully inspected by experts." With these suggestions and with everything following them in Mr. House's letter we cordially agree. Our only comment is that the experts have been pondering for a quarter of a century; that to the Roman alphabet they must inevitably come, and that we do not want to see them perplexed any longer by prettily worded platitudes.

A STRANGE MISCONCEPTION.

A very singular story appears in the columns of the *Jiji Shimpo*. It is to the effect that the promoters of the recent concert in Tokyo, in aid of the widows and orphans of British soldiers engaged in the South-African war, made application originally for the use of the *Shorei-kai* at Tora-no-mon. Their application being refused, they next tried the Imperial Hotel, but they were equally unsuccessful. Finally, they had to fall back on the British Legation. The *Jiji* adds that these obstacles were placed in the way of the promoters by Viscount Aoki, in his capacity of Minister of State for Foreign Affairs, and that they became the subject of official remonstrances from the British Representative, who has with difficulty been placated. We can assure our contemporary—and we speak from personal knowledge—that this story is absolutely baseless. The idea of asking for the *Shorei-kai* never occurred to the promoters; or, if it occurred to them, was immediately dismissed, for the *Shorei-kai*, being in the possession of the Imperial Household Department, could not, with any semblance of propriety, have been used for such a purpose. Application might have been made for the salon of the Imperial Hotel, and would doubtless have met with favourable response. But the British Legation was placed at the disposal of the promoters from the very outset, and as it satisfied all purposes, beside having the advantage of entailing no expense whatever, it was at once chosen. Our contemporary will of course appreciate the extremely mischievous tendency of the story it has been betrayed into circulating, and will lose no time in contradicting it, for we affirm with absolute certainty that every detail of the narrative is untrue.

A CRY FOR A SPEECH.

In an article, the first part of which is highly eulogistic of Viscount Aoki's foreign policy, the editor of the *Mainichi Shimbun*, writing over his own signature, suggests that the Minister shows a want of courage in not coming forward and making a plain statement in answer to the challenge of Mr. Oishi Masami. The writer of the article finds in recent European history a precedent for the course he advocates. Russia, he says, on the outbreak of the South-African War, endeavoured to form an European combination against England, but could not obtain the desired cōoperation. Thereafter M. Delcassé, the French Minister for Foreign Affairs, delivered a long speech in the Chamber, explaining that France's aim must be to retain what she already possesses, not to extend her possessions. Similarly Mr. Chamberlain, in the House of Commons, gave a full exposé of his views. In short, open and exhaustive pronouncements have been, and are, the rule with European statesmen, whereas they are altogether the exception with Japanese Ministers, and the *Mainichi* arrives at the conclusion that in this particular case Viscount Aoki shrinks from crossing lances with Mr. Oishi. Surely our contemporary is comparing great things with small? The occasions that evoked public statements from M. Delcassé and Mr. Chamberlain can scarcely be said to rank with an occasion created by a question presented in the House of Representatives. Mr. Oishi Masami is not without weight in Japanese politics, but that a question propounded by him should be placed in the same category with an European crisis or a great war between two foreign countries, is more than can be claimed. Questions presented in the British House of Commons do not elicit general declarations of policy from Her Majesty's Ministers. They elicit very brief answers, and truly it appears to foreigners that Mr. Oishi's queries do not demand greater consideration.

MR. KATO ON ENGLISHMEN.

Mr. Kato, formerly Japanese Representative in London, has delivered another of his very interesting addresses. On this occasion his audience consisted of about 350 members of the *Kokka Gakkai*. He took for his subject the character of Englishmen, and dwelt, at the outset, on their high conception of business obligations, and on the moral qualities inseparable from the term "gentleman." He also spoke in very eulogistic terms of the English home, and the mutual confidence and helpfulness that exist between an English husband and an English wife. In England, he said, the husband tells his wife everything about his affairs. She takes her part in the struggles of his life, is at once his counsellor, his comforter, and his supporter, and makes his family circle such that he finds there the sweetest moments of his existence. A conspicuous contrast, that, to the custom in Japan, where a man leaves his house in the early morning and returns to it late at night, never tells his wife anything of the affairs he is engaged in or the difficulties he has to surmount, and rarely sees his children except by lamp-light. The home, according to Mr. Kato, is the basis of society; the latter can never be in a satisfactory condition unless the former is graced by virtues and enlightened by the display of qualities which unfortunately are not seen in Japan. Another point on which Mr. Kato dwelt was the large-minded cosmopolitanism of the Englishman in England. There all differences of race are ignored. Whatever a man's nationality, he is treated in England as an Englishman. "When I walked in the London parks, it happened not infrequently that an English rustic asked me to tell him the way to a place, taking no account at all of the fact that I was not English." Very different is the state of affairs in Japan, where the children call out names as the foreigner passes, and many people still regard the alien as a kind of strange animal. But Mr. Kato had not praise alone for the Englishman. He spoke also of that unsightly quality which we are all beginning to recognise, overweening self-confidence, often taking the form of most offensive conceit. It was that which betrayed the Englishman into resting content with an army not much better than the force which Wellington commanded. This South-African war will bring a rude awakening, Mr. Kato thinks, and we think with him.

THE JAPAN RAILWAY COMPANY.

The Nippon Tetsudo Kaisha has held its half-yearly meeting for the second half of last year, and passed the following accounts:—

Net Profit	2,485,265
Government Subsidy	439.587
Proceeds from the sale of useless articles	12,688
Brought over from last account	51,034
Total	2,988,574
Distributed:—	
To Reserve	121,163
To Rewards to officials	86,980
To Discharge of Liabilities	21,838
To Interest and Sinking Fund for Debt	21,807
Sub-Total	254,888
Balance	2 733 685
Distributed:—	
To dividend (10 per cent. per annum)	2,235,000
Carried to next account	498,685

The mileage of the company's lines open to traffic totals 855; the gross receipts were 4,417,283 *yen*, and the working expenses 1,932,018 *yen*, or 43½ per cent. The following are the names of the principal shareholders:—

305.223 Shares...XV. Bank.
33 482 Shares...Iwasaki Hisaya.
24.422 Shares...Imperial Treasury.
17.947 Shares...Asano Nagakoto, Marquis.
13.848 Shares...Tokugawa Mosho, Marquis.
12,782 Shares...Mitsui Bank.
12,348 Shares...Mayeda Toshitsugu, Prince.
11.583 Shares...Shimazu Tadashige, Prince.
10 076 Shares...Tokugawa Girei, Marquis.

It will be observed that, after paying a dividend of 10 per cent. and making ample additions to its reserve and to its fund for discharging liabilities, the Company was able to carry over to its next account a sum of nearly half a million *yen*, or sixty thousand *yen* more than the Government subsidy of which it is still in receipt. The Nippon Tetsudo Kaisha is reaping the advantage of having been the pioneer private railway company of Japan. The temptations offered by the Government to induce private capitalists to enter the field of railway enterprise in 1881, look somewhat excessive in 1900.

THE RAILWAY BILL.

Saturday, Feb. 10.

The project for the State purchase of private railways is understood to have been examined by the Cabinet at a special meeting, and to have been approved, with slight modifications. According to newspaper reports, the Minister of Finance was believed to object strongly to the fixing of a period of years for completing the operation of purchase, on the ground that such a limit would certainly disturb the market to an injurious degree. But it is now stated that His Excellency did not enter any strong objection at the Cabinet meeting, his opinion being that the difficulty might be overcome by leaving to the Government discretionary power to extend or reduce the time. Further, the assertion that the order of purchase was to be determined by the *kana* syllabary is now contradicted: the present idea is that this should be left to the Government's discretion. For the rest, the total purchase price is put at 200 million *yen*, and the bonds are to bear 5 per cent. interest, or less. It is not clear how the total figure has been calculated, since the price of each railway has to be determined by independent negotiation, but we presume that the idea is to limit the issue of bonds to 200 million *yen*. As we have already stated, there does not appear to be the least probability of the Bill's passing the Diet this session, unless the sitting of the Houses be prolonged beyond the 19th instant. The Sovereign's consent to the introduction of such a measure must first be obtained; then the Bill has to be drafted, and then it has to be debated in each House, with the usual formalities of Special Committee's reports. Very likely the opinion of the Privy Council also will have to be sought by way of preliminary, which would entail another delay.

Wednesday, Feb. 14.

The Bill for the State purchase of private railways has been actually submitted to the House of Representatives, and will doubtless be pushed through its various stages with all possible alacrity, though it cannot possible become law unless the session be prolonged. Such a measure can wait, however. Ten years are allowed for carrying it into operation, and the term may be extended at the Government's option, with the consent of the Diet. The railways indicated are the Nippon, the Nishinari the Hokkaido Tanko, the Hokuyetsu, the Kobu, the Kwansei, the Sanyo, the Kiushiu and the Kyoto. Their total purchase price must not exceed 200 million *yen*. It will be paid with Government bonds bearing interest at 5 per cent. or less, but the Government is to have competence to buy up the shares of companies if it finds that plan economical. Another important power is vested in it. If terms of purchase can not be arranged satisfactorily with a company, the Government may proceed to construct, on its own account, an alternative line over the same route. This operation, as well as the purchase of shares, would be effected with funds obtained under the Railway Construction Loan.

Early on the morning of the 14th inst., Asama Yama again erupted, and ashes fell in Mayebashi, Tochigi, and Mito.

MARINE PRODUCTS OF HOKKAIDO

In session after session of the Diet attempts have been made to procure the abolition of the tax upon marine products of Hokkaido. Last session the House of Representatives passed a Bill in that sense, but the House of Peers rejected it, on the ground that the income derived from the tax had already been included in the Budget. This session, however, the Representatives have met that difficulty by voting for the abolition of the tax, but appending a rider that the change shall not become operative before the year 1901. The proceeds of the tax are only 360,000 *yen* yearly, but the total burden to the tax-payers is about 400,000 *yen*, the expense connected with paying the impost being estimated at from 30,000 to 40,000. It appears that the number of persons liable for the tax is 10,000, so that each pays 4 *yen* a head, which is some seven or eight times the tax imposed on the agricultural class generally throughout the empire. Moreover, 260,000 *yen* of the total falls upon fish manure, and since the policy of the Government is to exempt from import tax all fertilizers coming from abroad, it is unjust and inconsistent that an exception should be made to the disadvantage of the Hokkaido product. These arguments, together with a contention founded on the manner of assessing the tax, are marshalled by the *Shogyo Shimpo*, which strongly advocates the abolition of the impost.

THE ASHIWO AFFAIR.

Another invasion of Tokyo by folks from the prefectures of Tachigi and Gumma is threatened. It is the old story of the poisonous refuse from the Ashio Copper mine. In spite of all Mr. Tanaka Shozo's agitation, and in spite of the steps taken by the Government, the people seem to be still discontented. Two thousand of them assembled, provided themselves with 10 pairs of straw sandals each and a stock of dried rice (*hoshi i*) sufficient for 10 days' consumption, and set out for Tokyo on the 8th instant.

The Ashiwo-mine trouble seems to be assuming quite serious dimensions. In consequence of the evident determination of the sufferers to proceed to Tokyo in great numbers for the purpose of making a demonstration, the local police determined to try to check their progress at Tatebayashi, where they had to cross the Tonegawa. Recourse was had to violent measures, and over fifty of the peasants are said to have been wounded. Their irruption into Tokyo is thought to be nevertheless inevitable, and the police of the capital are making preparations to preserve good order.

Tokyo journals contain long accounts of the collision between the police and the Ashiwo-mine complainants. The police claim that they refrained as long as possible from the use of physical force; that three warnings were given to the peasants, and that no attempts to effect any arrests were made until the peasants tried to break through the cordon of constables placed on the river bank. Two newspapers allege, on the contrary, that needless and excessive cruelty was shown by the police, and that the flying peasants were pursued, struck down and maltreated long after all idea of advancing towards Tokyo had been abandoned. The discrepancy in the stories may be estimated when we say that whereas the *Asahi* puts the number of wounded peasants at fifty, the *Yomiuri* declares them to be over three hundred. What may be accepted as certain is that the peasants tried to cross the Tonegawa at two places, with the object of proceeding to Tokyo *en masse*; that the police resisted their passage; that a struggle ensued, and that several were injured on both sides. There is always room for recrimination in such incidents, but the peasants stand in the position of aggressors. There can be no mistake, however, about the reality of their grievances. It is possible that the rights which they claim as agriculturists can not be fully asserted without unfair discrimination against the rights of the miners, but it is not possible that all this discontent and agitation can have continued for so many years without any reason whatever. The affair has now become a public scandal, and continued failure to adjust it will reflect badly upon the Government's competence.

ANOTHER STUDENT'S DUEL.

There has been another student's duel. It was fought on Tuesday night near the Toyama rifle-range. Only two combatants were engaged, lads of the Waseda Semmon-gakko. It appears that they had becomed involved in a dispute about the rights and wrongs of the recent fracas between the Medical students and the Military students, and that they finally agreed to submit their difference to the arbitrament, not of sticks or swords, but of brick-bats. One of the combatants, unable to leave the field of action, was arrested by the police, together with three comrades who were dressing his wounds. If the newspaper accounts of this affair are correct, the police behaved with singular ineptitude. The station where the news of an impending combat was first received, telephoned to the local head-quarters, and the latter passed the message on to the Chief of Police, so that before any preventive steps were taken, the fight was over.

THE HOUSE TAX.

With regard to the question of the House Tax, a plausible case in favour of either view can be made out of the records. But there is one general argument that deserves consideration. Does there exist in the civilized world any intelligent system of local government under which the contributions of householders to the municipal treasury are independent of the quality and dimensions of their houses? Yet it is to such a system that we come when we claim that an uniform land tax includes all charges on account of municipal outlays. Two landholders may have lots of exactly the same size in the former foreign settlement. One builds on his lot a handsome pile of edifices, mercantile offices, a warehouse, and what not. The other limits himself to a cheap shanty. Yet, if we take the view that the land rent includes the municipal taxes, each of these landholders makes exactly the same contribution. Surely that can not be considered a rational system, neither can we conceive that such a system was ever seriously contemplated by the framers of the various treaties and conventions.

COUNT KABAYAMA ON EDUCATIONAL TOPICS.

Speaking to a representative of the *Kokumin Shimbun*, Count Kabayama made it clear that the policy of the Department over which he presides is to encourage private enterprise in the educational field as far as possible. His Excellency evidently does not think that the restriction with reference to religious teaching or religious exercises ought to operate injuriously. He points out that the veto is strictly limited to instruction or ceremonials conducted by the school as a corporate body. With the religious views and professions of individual teachers or students, or with the methods they adopt as individuals to propagate or inculcate their views, no official interference is contemplated, provided only that the requirements of law and order are satisfied. This means, apparently, that religious instruction may be given or religious exercises conducted so long as such things do not form part of the school course and so long as they are organized on absolutely voluntary lines.

The Minister further protests against the very severe strictures passed upon the conduct of the student class in connexion with the recent duel between the Saisei-gakko and the Kanjo-gakko. No general theory should be based on an isolated affair of that kind, and, further, the mere fact of the fight is comparatively trivial. The one really evil feature was the bad faith shown by the medical students in arming themselves with cutting weapons, after having promised to use sticks only. It is against that act that the public should protest. There we (*Japan Mail*) entirely agree with Count Kabayama. We attach no importance to the fight itself. There is not a school in England where stand-up fights do not take place between students, many of them being duly preceded by challenge and deliberate arrangement. But if one of the lads engaged in such a fight were to produce a knife and slash his opponent, expulsion and perpetual execration would be his certain fate.

Concerning this affair, it would seem that the lads of the Kanjo-gakko harbour no ill-will towards their treacherous opponents. They sent deputies to visit the medical students who are in prison and to commiserate with them. The prison authorities would not permit a meeting, but the intention, at all events, found expression. We may add that there are still hopes for the lives of the two brothers whose wounds were originally reported to be fatal.

THE NARA AND NAGOYA AFFAIRS.

We have already spoken, from time to time, of the association formed in Nagoya by certain philanthropists, under the inspiration chiefly of the Rev. U. G. Murphy, having for its object the release of unfortunate women who have pledged themselves to a life of ill-fame in order to procure money for parents or family. The case of one of these women, Koroku by name, came before the law courts, and led to various complications, the final result being, we believe, that the girl obtained her liberty. Another instance is now reported from Nara. A woman called Umeko —her real name is Toki—of the Hosoyaro in that town, expressed her determination of following Koroku's example. The proprietors of the brothel, however, foreseeing that if further publicity were given to such attempts their business would be seriously imperilled, thought it wiser to set the girl free by mutual agreement before she had recourse to the law. We gather these facts from a Tokyo contemporary. If they are correct, it would seem that the Nagoya Association has accomplished a great deal more than the liberation of a single girl. Of course the keepers of brothels will find means to protect themselves against such incidents, for as the matter now stands they are liable to be made the victims of extensive frauds. Still the system has been shaken.

POSTAL RATES FOR NEWSPAPERS AND PERIODICALS.

A Bill relating to posts and telegraphs, submitted by the Government to the Diet this session, was amended by the House of Representatives in the sense of increasing from 16 *momme* to 25 *momme* the weight of newspapers and periodicals carried by post at a charge of 5 *rin*. But the House of Peers, at the instance of the Government, has rejected the amendment. This subject evokes some very severe strictures from the *Jiji Shimpo*. Our contemporary says that the 16-*momme* limit was fixed in 1883, when no newspaper consisted of more than 2 sheets, whereas 6 or even 7 sheets have now become a common size. The Government claims that to raise the weight limit to 25 *momme* would involve a loss of 15,000 *yen* of revenue, and an additional expense of 480,000 *yen* on account of carriage. But the *Jiji* traverses the latter estimate. The Government reached it by applying the correction of 56½ per cent. to the total number of newspapers and periodicals now passing through the post in one year —namely, 915,000,000—, whereas it is obvious that only a very small fraction of the total would benefit by the change. It is admitted, however, that there would be a loss of 15,000 *yen* to the Treasury at least. In point of fact there are very few journals in Japan which are so large as to exceed the 16-*momme* limit. The *Jiji* itself is the most voluminous of all.

SAGHALIEN FISHERY QUESTION.

Wednesday Feb. 14.

The new regulations issued by Russia for the control of fishing enterprise in the Saghalien waters are said to be causing much hardship to Japanese fishermen. According to the *Yomiuri Shimbun*, upwards of sixty Japanese stations have had to be closed, involving a loss of 706,620 *yen*, and it is probable that a further number of 145 stations will share the same fate. It is also alleged that some important provisions of the regulations are ambiguous. They can be read so as to recognise the priority of all Russian subject's claims, thus differentiating against Japanese subjects even in cases where the latter's right seems to be guaranteed by ordinary principles of justice. We do not by any means accept these statements in their entirety, but the fact that friction and dissatisfaction have been caused can not be doubted.

Friaay, Feb. 16.

The grievance that principally evokes protest in connexion with the new Russian regulations for the control of the Saghalien fisheries is that a right of priority is given to Russian subjects as against all other nationals. That would not present itself in the light of a serious cause of complaint were there question only of engaging in fishing enterprise for the first time. The real irksomeness of the regulation consists in its application to persons who have been residing in Saghalien for some time, and earning a livelihood by fishing. It would seem that if Russian subjects come to settle in such places, the regulations will enable them to monopolise the fishery grounds to the exclusion of the Japanese who have been living on the spot for years. The *Yomiuri*, which publishes a full account of the affair —though we can not by any means vouch for its accuracy—alleges that great difficulty was experienced in ascertaining the exact official interpretation of the regulations, but that no doubt exists any longer as to their conferring this prior right on Russian subjects. Our contemporary affirms that the regulations were inspired by observing the prosperity of the Japanese fishing operations, and that no hope remains except of the possibility that the Russian Authorities may be induced to postpone the operation of the obnoxious provision for three years, so as to allow the Japanese to wind up their affairs and retire quietly from the scene of their labours.

KOREAN NOTES.

The Peddlers are said to be again *en evidence* in Söul. They are agitating in the case of Mr. An Keiju, who recently surrendered himself to justice and made confession of his political offences. The Emperor is said to be strongly disposed to show clemency towards An, but some members of the Cabinet are pressing for his severe punishment.

An, the Korean refugee, whose career has been giving some occupation to the wires during the past few days, fled from Söul last year under suspicion of complicity with the plot for the dethronement of the present Emperor and his replacement by a more competent ruler. It appears, however, that An was not really connected with the conspiracy, and that his fault was limited to a knowledge of what was going forward. Hence he concluded that, instead of lying *perdu* in Japan, his better plan would be to proceed to Söul and surrender himself to justice, as there was not much apprehension of capital punishment, and a sentence of banishment might easily be commuted by the aid of money. It remains to be seen whether he judged wisely. He is now lying in prison, and the Peddlers' Guild, who seemed disposed at first to come to his rescue, have been persuaded to remain quiet. The *Jiji Shimpo*, commenting on An's procedure, says that it shows the Koreans to be possessed of a spirit of daring for which the general public are not disposed to give them credit.

The Japanese Representative in Söul is said to be lending his good offices on behalf of Mr. Kawakita Kanshichi, who desires to obtain whaling concessions in Korean waters. The concessions sought being of a maritime character only, do not fall under the same category as the concessions recently ob-

Digitized by Google Original from CORNELL UNIVERSITY

tained by Russian subjects for the establishment of fishing stations on shore. Hence the benefit of the most-favoured-nation clause can not be claimed on Mr. Kawakita's behalf.

It is now stated that the company of Russian soldiers whose presence in the Yalu district and at Wiju was recently reported, are a sanitary corps *en route* for Port Arthur. The explanation leaves us still in doubt as to the reason of their presence in that part of the Far East, though it is conceivable that a journey through Manchuria for the purpose of observing climatic conditions and taking other observations relating to hygiene, may have been considered necessary.

It would be indeed a pitiable thing if, having left a place of perfect safety for the purpose of surrendering himself to justice, An Keiju should be punished with death. Telegrams from Söul show, however, that his fate is still in abeyance. A section of the Imperial Household officials is said to be strongly in favour of executing him, and one of the leading judicial officers has resigned, though his reason for doing so is not apparent. It is further alleged that attempts have been made to stir up some of the Peddlers' Guild to assassinate An—a curious idea, seeing that the Peddlers are supposed to be his political partizans. There is hope, however, that the upshot of it all will be the adoption of a merciful course. Justice seems to be administered in a miserable manner in Korea.

NOTES ON CURRENT EVENTS.

From Taipeh, in Formosa, one fresh case is reported and one death. The record for that town since the outbreak of the malady is 67 cases and 57 deaths.

The French Government, we read in the *Shogyo Shimpo*, has given notice that France's possessions in India and the West Indies desire to adhere to the Revised Treaty.

Our readers will be glad to learn that the supposed case of Pest on the steamer *Kinshiu Maru* proves to have been a false alarm. After the fullest investigations medical experts have decided that there were no Pest symptoms.

Captain Sakamoto, of the Navy, has been ordered to make arrangements for the reception of Prince Wlademar of Denmark, in conjunction with Viscount Inaba, of the Board of Ceremonies. The Prince is expected to arrive on the 24th instant.

A company calling itself the "Imperial Gold Dust Company" has been organized in Tokyo with a capital of 100,000 *yen*. Its object is to exploit the mineral wealth which has been discovered in the Esashi district of Hokkaido, and people speak largely of its prospects.

In spite of the determined opposition of Viscount Tani, the House of Peers yesterday endorsed the Representatives' amendment of the Mining Regulations, in the sense of granting mining privileges to companies organized by foreigners according to the provisions of Japanese law. Viscount Tani argued that the time had not come for such a concession. Probably it would never come in his opinion. But the House was against him. This is the wedge and no mistake. We ourselves anticipated that mining concessions would follow the ownership of real estate.

The latest statistics are said to show that 270 foreigners are in Japanese employment for educational purposes. Of these, 177 are engaged in private schools, 68 in Government schools, 23 in technical schools, and 2 in elementary schools. The great majority of these teachers are American, English, and French.

The Tokyo Police have announced that from the 15th instant, the purchase of rats ceases, in consideration of the fact that the danger of an epidemic of Pest seems to be averted, for the present at all events. The citizens are, however, strongly recommended to continue their crusade against rats, since these animals have been clearly proved to be most efficient agents in propagating the disease.

Five of the six men who made a wholesale robbery of wearing apparel, etc., from a lady-passenger's baggage on board the *Nippon Maru*, were quickly apprehended. But the sixth—Nagai Jusaku—effected his escape to the United States. News has now come that he was arrested at the moment of disembarking, and that he is on his way back to Japan.

Fifteen *geisha* are starting for Paris. They are under the care of an enterprising dame, the landlady of the *Sempo-tei*, a well-known restaurant at Karasumori-cho in Tokyo. This lady intends to open a puppet stall at the Exposition and the fifteen *geisha* will dance by way of accompaniment to the sale of dolls. The *Chiuo*, in publishing the news, says that it hopes there will not be anything *jumeiyo* about the affair. Vain hope.

The electric railway between Odawara and Yumoto has been finished and successful trials have been made, but it is stated that the line will not be open for traffic until the 1st of March. The carriages are to come into the immediate vicinity of the platform of the Tokaido railway, so that passengers by the latter for Hakone or Miyanoshita will be able to step from one train into the other. This will be an immense improvement on the present system.

Count Inouye has given his decision as arbitrator in the Kiushiu-Railway dispute. He does not declare unequivocally in favour of either side. Briefly speaking, the gist of his judgment is that, owing to the difficulties experienced by the company originally in obtaining capital, there had been much scamping of work, with the inevitable result that extensive and costly repairs subsequently became necessary. He recommends that the contemplated extensions be abandoned, with the exception of the Hakata-Shinakuri line, that the staff be reduced, and that retrenchment be practised in every branch according to a detailed scheme sketched by him.

We have now arranged to have the Hongkong Volunteer Service of Telegrams wired direct from Shanghai. This is the only available course to improve the news previously received, and we have adopted it in consideration of the special subscription recently forwarded by a correspondent. The cost of the extra service, however, will be more than twice the amount of the subscription in question, and we shall be glad to know whether any additional support is forthcoming. Our readers can judge after a few days whether the Volunteer telegrams are worth procuring. Probably they are. At all events, they place Yokohama on the same level with Hongkong.

The Minister of State for Foreign Affairs has considered it necessary to issue a notification forbidding free emigration to Hawaii for the present. The obvious reason of the veto is that the privilege has been abused, so that from three thousand to four thousand Japanese, who went to Hawaii without any contract or any certain prospect of employment, now find themselves in a state of distress. It is probable, also, that the complications in connection with the sanitary proceedings of the Hawaiian Authorities have had some influence in determining the Minister's action, since one result of the trouble has been to add about a thousand Japanese subjects to the number of those threatened with indigence.

A Japanese traveller, who has just returned from Manchuria, informs a representative of the *Chuo Shimbun* that the methods followed in laying the Russian railway through Manchuria to Port Arthur and Talien, are based upon considerations of speed rather than of good work. Across the plains, he says, the engineers simply lay sleepers and bolt the rails to them, the outcome being a terribly bad road and frequent accidents. He further alleges that no detour is considered too great if it enables the engineers to dispense with tunnelling or bridging. Thus the length of the line immensely exceeds the distance between its terminal points. It may be assumed, however, that the Russian experts know what they are about, and are proceeding with a full appreciation of what is wanted.

Mr. Takano's case against Count Matsukata, as Premier of the Cabinet under which Mr. Takano was removed from the Bench, has been rejected by the Court of Appeal. It is impossible not to feel a great deal of sympathy with Mr. Takano. We never believed in the legality of his claims, because they rested on the contention that Formosa was an integral part of Japan for legislative purposes, a doctrine not observed by any State in the world under similar circumstances. But he certainly labours under a deep sense of grievance, and our admiration is commanded by the stout perseverance he has shown in standing to his guns through all these years.

The project for establishing railway communication across the Shimonoseki Strait appears to have been revived in a very practical form. Hitherto the only idea mooted has been a bridge; an undertaking that presents many difficulties. Now, however, we read that a submarine electric railway is planned by Mr. Yamagata. Its terminal points would be Chofu, on the Sanyo line, and Osato in Kiushiu, a distance of 16,152 yards, 7,040 of which would be tunnelling. Nothing is stated as to the expense, but the impression is that such an enterprise would certainly pay. Kiushiu, as the *Jiji Shimpo* justly remarks, has a popula-

Digitized by Google Original from CORNELL UNIVERSITY

tion of eight millions, or nearly one-eighth of the total population of Japan, and from every point of view it is entitled to be connected by rail with the main island.

THE BOOK-SHELF.

Valda Hânem; the Romance of a Turkish Harîm, by DAISY HUGH PRYCE. London, Messrs. Macmillan & Co., Ltd.; Yokohama, Messrs. Kelly and Walsh, Ltd.

THE preface to this most interesting book says that the writer has based her work on "a careful study and intimate personal knowledge of the Osmanlis and their ways." The declaration is so well borne out that when the time comes for laying down the volume the reader is in possession of facts and observations that will enable him, or her, to better realise the position of the Turkish lady of the present day and the relation she bears to her husband, her children, and the other inhabitants of "the hushed Seraglio."

The Lady Valda is the beautiful wife of a Turkish Pasha of some renown in the military circles of the Ottoman Empire, with a large acquaintance of female friends both in Constantinople and Cairo. Married at 15, the only men-folk who have ever seen her unveiled after she reached a marriageable age, are her brother, her husband, and her own little son. Surrounded with every luxury, with troops of friends; worshipped by her husband, a Turkish gentleman with chivalrous ideas on the subject of monogamy; and loving with a passionate devotion her only child, the Lady Valda seemed blessed above most ordinary mortals. But there was a crumpled roseleaf even in her luxurious couch. Vain, scarcely tangible, longings to mix with the bustling, free, and seemingly unfettered life which flowed incessantly beyond the gates of her *harîm*, gradually lead her to almost desire partial emancipation from the restraints which Turkish custom, etiquette, and the Islamic law have gradually woven around Mohammedan ladies of the higher classes. When this deep unrest is at its strongest, Fate throws across her path the handsome figure of an English officer attached to the Kedive's Court. An accident allows him to see her face unveiled, and, though it was only for a moment, her wondrous beauty causes him to make endeavours to bring about another meeting. What stratagems he uses, how accident, or unlucky chance, befriends him, and how he succeeds in destroying the Lady Valda's peace of mind and ultimately wrecks the happy household of the Pasha—all these incidents are told in clean-cut, graphic English. The characters of the Pasha, Valda Hanêm and Miss Grey, the English governess, who so unwittingly plays such a sinister part in the tragedy, are all well drawn; while the descriptions of life in Cairo inside as well as outside the *harîm*; the life of the foreign colony, and the many happy descriptions of Osmanli customs, observances, and religious festivals—all these things go to make up a book which rises high above the level of the average commonplace novel.

Via Crucis, a Romance of the Second Crusade; by FRANCIS MARION CRAWFORD. London, MacMillan and Co., Ltd.; Yokohama, Messrs. Kelly and Walsh, Ltd.

MR. MARION CRAWFORD has departed altogether from his usual fields of study in the volume under review, and the departure, we venture to think, will not be regretted by his admirers. In the stirring story of the ill-starred second crusade, the historical novel writer has opportunities of no mean order, and Mr. Crawford has availed himself as only a skilful story-teller can of the materials that he found at hand.

The narrative chiefly concerns Gilbert Warde, a young Norman gentlemen whose father, espousing the cause of the Empress Maud against King Stephen, falls in the fight at Faringdon by the hand of a whilom friend. Thereafter the son loses his estates by the base intrigues of this same man, who marries his mother, and has to seek his fortune in lands beyond the sea. His quest leads him into the society of such distinguished people as Queen Eleanor of France and Aquitaine (afterwards the wife of Henry Plantagenet), of St. Louis of France, Bernard of Clairvaux, Arnold of Brescia, and later still among the paladins and knights who fought with Frederick Barbarossa and the Emperor Conrad for the repossession of the Holy Places. Throughout the book a vivid impression is given of the rough and boisterous character of the age; and of the simple ideals of chivalry which some gentlemen strove to carry out, but so seldom managed to achieve. But the clash of arms, the doing of knightly deeds, the day-dreams of fanatic monks and soldiers, the pageantry of Kings and Queens and the disasters that befel the Crusaders, are not the only subjects of the novel. A noble lady has to be wooed and won, and thus the golden thread of a well-told love-story runs through the book. And then when the lady has plighted her troth and both are back in Merrie England, we come gradually to see how Gilbert Warde realised the true inwardness of the lesson which the Crusades have impressed upon a gentler age: "That the cause of God lies not buried among stones in any city, nor even in the most holy city of all; for the place of Christ's suffering is in men's sinful hearts, and the glory of His resurrection is the saving of a soul from death to everlasting life, in refreshment and light and peace."

AGRICULTURE IN JAPAN.

The *Jimmin* dwells at considerable length upon the condition of agriculture in Japan. A brief summary of its arguments may be of interest to our readers. Though Japan's future should be sought in commercial and manufacturing industries, agriculture at present constitutes the principal occupation of the people, farmers being still regarded as the foundation the nation. The period which has elapsed since the opening of the country has brought about marked progress in all branches of industry and commerce; but, strange to say, agriculture has failed to keep pace. Statistics show that the land owned by private individuals in the 15th year of *Meiji* comprised an area of 12,708,547 *cho*; in the 20th year 13,368,560 *cho*; in the 25th year 12,849,250; and in the 30th year 13,788,448. From these figures it may be inferred that agriculture has made little or no progress during the past fifteen years. As to dry and wet fields the record is still more remarkable, the figures being as follows:—

Year.	Wet fields. cho.	Dry fields, cho.
1882	2,630,889	1,875,878
1887	2,697,726	1,987,033
1892	2,602,164	2,175,070
1897	2,736,268	2,736,268

As to forests, uncultivated land, pastures, mineral springs, marshes, and swamps, and other miscellaneous classes of land, the figures stood as follows:—

Year.	Forests. cho.	Other Classes of land, &c. cho.
1882	6,220,521	1,629,347
1887	7,291,794	1,037,568
1892	6,638,882	1,075,096
1897	7,298,092	1,107,645

Thus, although more or less increase has taken place in wet fields, no increement is noticeable in regard to forests, dry fields, &c. The above statistics, however, are still insufficient to show clearly the lack of development of forestry and agriculture. To demonstrate this, the area of land yielding agricultural products must be given. It is as follows, the two staples, rice and wheat, being taken as the basis of illustration:—

	Rice. cho.	What. cho.
1882	2,580,255	1,468,694
1887	2,637,069	1,591,374
1892	2,755,101	1,737,373
1897	2,788,845	1,749,571

With regard to the area devoted to other agricultural staples, especially tea and mulberries, the following figures are given:—

Year.	Tea. cho.	Mulberry. cho.
1882	42,023	112,413
1887	46,043	—
1892	63,648	231,400
1897	58,888	298,596

As regards food products other than rice and wheat, and special products other than tea and mulberries, the figures stood as follows:—

Year.	Agricultural produce for food. cho.	Special agricultural products.
1882.....	1,066,641	—
1887.....	1,220,185	352,571
1892.....	1,227,701	328,974
1897.....	1,359,816	303,150

Thus in mulberry farms a certain degree of progress is noticeable, and also in wheat and other food products. But in comparison with the development in commerce and manufacturing industry, there is really no cause for gratification. Advancing a step further, if we investigate the amount of agricultural produce for the four periods under review, we are struck by the insignificance of the figures. Thus:—

Year.	Rice. Koku.	Wheat. Koku.	Tea. Kwan.	Cocoons. Koku.
1882...	30,692,327	12,938,952	5,514,678	—
1887...	39,999,199	15,823,144	7,111,221	1,224,478
1892...	41,378,956	15,941,276	7,211,865	1,480,705
1897...	23,039,293	18,005,490	8,470,182	2,124,238

These figures, compared with some of the products of manufacture, show little or no progress. Take for example cotton yarns. In the 20th year of *Meiji* the output amounted to 1,165,073 *kwan*; in the 25th year it increased to 9,987,208 *kwan*, and by the 30th year the figure had swelled to 26,555,495 *kwan*. In the case of raw silk the aggregate total for the 15th year of *Meiji* stood at 495,037 *kwan*; in the 20th year at 819,966; in the 25th year at 1,096,088; in the 30th year at 1,537,561. As regards woven goods, the output in the 20th year reached 27,475,408 *yen* in value; in the 25th year 48,940,536 *yen*; in the 30th year 104,977,691. From these facts it is clear that Japanese agriculture is by no means in a hopeful condition.

The *Echo de Chine* states that a project has been formed by M. Doumer, Governor-General of French Indo-China, for connecting the French and Russian telegraph system in China. The project includes the laying of a short cable to connect Cape St. Jacques, at the mouth of Don-Hsi, a river in Saigon, with Pulo Condor, an island about 80 miles from the mouth of Mekong, on the route from Bangkok to Singapore. The English cable connecting Haiphong and Feichow would be repurchased, and prolonged by an overhead wire to Kwang-chow-wan, and thence a submarine cable would connect with the Russian system at Amoy.

JAPANESE OPINION ON THE SOUTH AFRICAN WAR.

IT has been very interesting to watch the effect produced by the South-African war upon the Japanese public, as represented in the columns of the press. All the Tokyo journals, with one exception, have shown great staunchness to England, and while not extenuating her reverses, have said what could be said in her favour, at the same time wishing her final and speedy success. The *Nippon* has not hitherto differed from its contemporaries in that respect. But it now publishes an article which suggests a change of view. The writer makes a comparison and draws a conclusion. His comparison is between the situation in Japan at the fall of the Tokugawa Shogunate and the position in South Africa. Just as large numbers of Japanese *samurai* from Kiushiu, Shikoku and elsewhere made their way *viâ* Mitajiri to Choshiu in the days of the latter's complication with the Tokugawa, and added such an element of strength to the southern clan that its subjugation by the Tokugawa troops became a matter of exceeding difficulty and ultimate impossibility, so the large accessions of strength that the South African Republics are receiving from France, Russia and Germany *via* Lorenzo Marquez, have raised the Boers' forces to an altogether unexpected figure, and rendered the task lying *before England* one of stupendous dimensions. Of course, if this comparison has any validity, it must be interpreted to mean that as the Tokugawa fell, so England will now fall. The *Nippon*, however, does not go so far as that. It does not foresee the fall of England, but it does think that, even if she ultimately succeeds in overcoming the two Republics, her weakness will have been so fully exposed that she will no longer occupy her old place among the nations, and that the dawn of the twentieth century will consequently see a new ranking of the great Powers. Our contemporary hints very plainly that the question has much importance for Japan, since she has hitherto regarded Great Britain as her main support, if not her prospective ally.

We can not deny that these ideas of our contemporary seem very just from a superficial point of view. But we do not think that they will bear close examination. In the first place, what this war has demonstrated thus far is, not England's weakness, but the fact that modern weapons are chiefly effective for purposes of defence. It is an old mathematical truism that what is gained in one direction is lost in another. The rifle of the present day has gained enormously in range and accuracy as well as in rapidity of fire, but in order to utilize those properties fully, there must be correspondingly greater skill of marksmanship. Now it is evident that there can be no comparison between the aids to skill possessed by a man firing from behind a parapet, or out of a trench, at objects approaching him over accurately ascertained distances, and the obstacles to skill that present themselves to a man advancing over ground quite new to him, under fire all the while, and having to aim at objects the distances of which he is obliged to guess as he proceeds. The Boers occupying a position like Spion Kop, for example, know the exact distances of all points within range of their weapons, and from the security of shelter can direct their rifle-bullets or cannon-balls with a degree of precision impossible to an assailing force. In the old days, good marksmanship was valuable, of course. But before the soldier's weapon began to be really effective, his assailant could get so close that the distance still separating them was generally traversable without fatal disaster. Now, on the contrary, the limits of the deadly zone have been enormously extended. But it is precisely in the outer annuli of the zone that the skill of the marksman tells most, for while it is comparatively easy to shoot straight at a range of from 300 to 600 yards, the difficulty of getting in one's bullets when the latter distance is passed increases out of all proportion to the mere arithmetic of the matter. It appears to us, looking calmly at the events of this war, that the British reverses have been due almost entirely to their want of perception of the altered conditions resulting from the use of modern weapons. The Boers themselves probably had no idea of the immense value of protecting cover under the circumstances. They set out with the purpose of an offensive campaign, but Glencoe and Elandslaagte taught them that they must change their tactics, and since then they have acted almost uniformly on the defensive. It can not be denied that the story of the war has furnished no fiascos on the British side comparable with those made by the Boers at Kimberley and Mafeking, and, we may even add, at Ladysmith. If they have themselves shown defensive strength when attacked by the British, the British in Ladysmith, Kimberley and Mafeking have displayed far greater defensive strength when attacked by the Boers. That must be admitted by all observers. The net result is that the victory, thus far, rests with the defence, and what the war has shown is, not the weakness of England, but the wholly unanticipated strength of modern weapons for purposes of defence. We do not mean to deny that there may have been strategical mistakes on the British side. If there have been such mistakes, it will be found, we think, that the British themselves will be the first to recognise them. But it is an old experience that the more profound a critic's ignorance of the art of war, the less diffident does he show himself in pronouncing wholesale judgments on the operations of armies. The prudent man suspends his verdict until the facts are fully known. It is possible to draw with confidence deductions based on the evidence of the two belligerents' experiences, when such evidence is fully collected, but to estimate the exact nature of one side's operation, when we have only vague telegrams and amateur correspondence to guide us, in mere presumption. Were we ourselves required to pronounce an opinion at this stage, we should say that had the conduct of the two forces been reversed, had British forces played the part that Boer forces have played and *vice versâ*, we should frankly acknowledge that the traditions of the English army were upset. But we shall not here elaborate that point.

The most interesting question is, what effect will this war have upon England's position among the nations. Will it impair her prestige and lower her rank among the Powers? Undoubtedly it will, if she emerges completely vanquished; if she has to retire from South Africa defeated. But since, knowing the stuff of which Englishmen are made, we do not anticipate that issue for a moment, we may be permitted to put the question in this form: after England is victorious, will her international rank be lowered: will it be considered that she has shown weakness? The answer seems to be that this war will prove to have been of enormous advantage to Great Britain. The English are an intensely self-opinionated people. That is the great fault of their character, though, in certain circumstances, it is a source of strength. They have such overweening confidence in themselves that they are almost wholly unable to profit by the experience of others. Had it fallen to the lot of Germany, or of France, or of Russia to fight this South-African campaign, Englishmen, instead of appreciating its teachings, would have attributed the results to German, or French or Russian shortcomings, and would have rested happy in the conviction that had they themselves been charged with the same task, they would have excuted it differently. But the bitter experience is now their own. They will feel it and profit by it. One is tempted often to wish that some other country could have been the *corpus vile* of this experiment; but then comes the inevitable reflection that all other countries would have taken the vicarious object lesson more thoroughly to heart than England would. It can not be doubted that the issue of the war will be to bring about very great changes in England's military system. We believe that it will also produce a radical effect on the military systems of the Continental Powers of Europe, for it has shown that offensive warfare, and therefore the invasion of a neighbouring country must be regarded in a new light. Passing by that phase of the matter, however, we would ask, in conclusion, whether England has really shown

Digitized by Google Original from CORNELL UNIVERSITY

herself weak in the matter. Would it have been supposed possible, a year ago, that she should make the effort she is now making? We say nothing of the qualities she has displayed in the face of adversity. Even to us the columns of *The Times* are at present a source of astonishment, for they show that throughout the length and breadth of the country men are everywhere putting up great sums of money to equip troops, and everywhere volunteering for service in South Africa. As a national display, these things appear to us to be of incomparably greater significance than a few reverses to our arms. What we suggest, however, as a practical fact, is that Great Britain will soon have nearly 340,000 men fighting under her banners in South Africa. Could any one, speaking a year ago, have ventured to predict the possibility of such an achievement? Surely not. And equally sure is the fact that no other Power in the world could begin to do anything of the kind. The Governments of Europe, and the nations, will give due weight to these facts when they come to cast up the balance.

CORRUPT PRACTICES.

WHILE we admire the motives of Mr. OZAKI YUKIO in introducing a Bill for making members of the House of Representatives amenable to ordinary courts of justice in respect of bribery and corruption, we can not feel at all surprised that the House rejected the Bill. After all is said and done, the fact remains that the House of Representatives itself is the proper tribunal to examine and punish immoralities committed by its members in the discharge of their legislative duties. It has ample power to do so. True, it can not pronounce a sentence of imprisonment or fine, but it can publicly expel a member from its precincts, and there can scarcely be any severer penalty than that. Every one must agree with the contention that the dignity of the House would be impaired if it transferred to the law courts a part of the jurisdiction it possesses for restraining the *laches* of its own members. Mr. SHIMADA SABURO argued that since the law courts are already competent to try cases arising out of election disputes, and since the offence of bribery and corruption thus comes under their purview in connexion with contests for a seat in the House, there would be nothing incongruous in extending their jurisdiction to offences of the same kind committed by members sitting in the House. But that argument seems to be based on imperfect consideration of the facts. The British House of Commons used to exercise jurisdiction in the matter of election petitions, but it deliberately divested itself of that power and transferred it to the law courts—much to the latter's disgust—because, since election petitions must, in the nature of things, be party questions, their investigation by a House divided into parties must always be at least invidious, if not inimical to the strict execution of justice. But the sin a member's receiving bribes on account of the functions he has to discharge in the House belongs to a different category, and its trial and punishment by the House itself is not open to any objection, unless we admit the inadmissable theory that party politicians, sitting as members of the Legislature, are prepared to condone even bribery and corruption in party interests. It is a fair and proper supposition that no member of the House, whatever his political complexion, is willing to tolerate the abuse of bribery and corruption within its walls, and the reasons which recommend the trial of election petitions by ordinary law courts have consequently no validity in the case of the sin of corrupt practices among the members. These considerations are so obvious, and the House's deliberate resignation of its judicial powers in this matter would be such a plain acknowledgment of want of confidence in its own ability to discharge elementary functions of justice, that the rejection of the Bill by a majority of only 12 is surprising. The Special Committee appointed to examine and report upon it could not muster more than a majority of one against it, and 121 members of the House actually recorded their votes in its favour. These figures seem to indicate the existence of a strong feeling that the House has failed to do its duty in matters of bribery and corruption. Undoubtedly a similar feeling exists among foreigners. Apart from the ugly rumours recently circulated with reference to the Yokohama reclamation scheme and other matters, there is the plain and flagrant case of Mr. KOYAMA KINNOSUKE, who still sits as a member of the House, though he has openly admitted the receipt of bribes, and though he has had the consummate shamelessness to institute a law suit for the recovery of a claim arising out of a corrupt transaction. It may be that rumour has exaggerated Mr. KOYAMA'S doings, but we can confidently affirm that neither in America nor in England would such a volume of accusation have been allowed to pass without parliamentary notice being taken of it. The inevitable impression produced is that Mr. KOYAMA is sheltered by the ægis of party politics. The Progressists, to whom he belongs, will not arraign him because he does belong to them, and the Liberals will not arraign him because he is understood to have been bribed in their interests. Thus we arrive at the unwelcome conclusion that even in the case of such a sin against common morality as bribery and corruption, party politics obscure the House's sense of justice. All will be disposed to endorse the contention that to resign its jurisdiction to the law courts would be an open confession of the House's inability to enforce the practice of elementary virtue among its members, but no one can fail to see that the House has furnished solid materials for constructing a charge against its ability in that respect.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

Last month we gave an epitome of Dr. Inoue Tetsujirō's important address on religion. Other learned men have been turning their attention to the same subject and have published their views in various magazines. Among them Dr. Motora's contribution to the Comparative Religion Society's Transactions, entitled *Shūkyō Kwannen no Kenkyū* (An Investigation of the Religious Idea), reported fully in the *Tetsugaku Zasshi*, is specially worthy of reproduction. It seems to us highly important that the precise attitude towards religion of Japan's leading men should be known. They are all apt to be classed in the same category, but in reality their views differ on very essential points. The following is the gist of Dr. Motora's answer to the question "What is religion?" The headings given are those of the original essay.

1. THE INVESTIGATION OF RELIGION CONSISTS OF THE ANALYSIS OF VARIOUS ELEMENTS.—Speaking generally the difference between religion and morality is this. Morality has to do with the relation of men to each other, is the embodiment of what is considered by society to be the correct way of acting towards others under various circumstances. It is custom founded on sentiment in the relations we bear to each other. But religion is connected with man's attitude to nature. In the language of the biologist, it is an instance of adaptation in nature.

2. RELIGION MUST BE CONSIDERED UNDER TWO ASPECTS, THE OBJECTIVE AND THE SUBJECTIVE.—What is called the religious idea is an extremely complex thing and it is not easy to find any formula that shall describe it accurately and comprehensively. There is great variety among religions, some profess to rely entirely on influence external to man's mind. When I speak of objective and subjective religion, I mean by the former religion that has in itself the power to affect man's whole mind even against his will; by the latter, religion which man adopts voluntarily as a precautionary measure or with a view to obtaining comfort.

3. RELIGION REGARDED OBJECTIVELY. Belief in a power external to man that is capable of moulding his actions has gradually declined with the progress of science. In our country at one time such a power was ascribed to the fox. In the West for a long time men believed in an anthropomorphic Deity that could weep, laugh, or grow angry as human beings do, who was represented as wielding great power. But as knowledge advanced it was perceived that this conception of deity was crude in the extreme and faith in the personality of God gradually died out.

4. RELIGION REGARDED SUBJECTIVELY. Religion in the heart of man is the result of vigorous mental powers. Man's mind is so active that it explores all kinds of

Digitized by Google Original from CORNELL UNIVERSITY

distant regions of thought. But eventually man has to draw a line between what he knows and what he simply believes. Knowledge is founded on the experience of mankind. Faith is founded on assumptions that have never been disproved, but yet are incapable of logical proof. Though from the scientific point of view there is an enormous difference between knowledge and mere assumptions, in the minds of many persons the two are so mixed as to be undistinguishable, and this is one reason why religion has such a hold on them. Doubt is to be regarded as the friend of science, as it leads to endless investigations resulting in the discovery of new facts, but it is an enemy of religious faith, as perpetual questioning when no satisfactory answer can be given undermines religious belief altogether.

(5) RELIGION CONSISTS IN ADAPTING ONESELF TO AN IDEAL, hence it concerns us as individuals principally. The public methods it adopts to express itself are mere adjuncts and do not constitute its essence. A man's ideal is quite a separate entity from the *ego* of will and feelings; and the work of his life consists in bringing the latter into conformity with the former. A man's ideal changes with the advance of his knowledge and the development of character. What satisfies him at one stage of his career seems inferior at another.

(6) THE VALUE OF THE IDEAL CALLED RELIGION IS NOT AFFECTED BY THE METHOD IN WHICH THIS IDEAL IS DEVELOPED.—It is said that with a great many people religion begins with fear. They wish to make peace with a power or with *powers that* may punish them. With others a certain superstitious credulity is the beginning of religious belief. Christianity seems to labour to remove the feeling of fear in man by teaching that God is love and that he should not be regarded as an object of fear. But it seems to me a matter of little consequence as to what first induces a man to set up an ideal for himself. If he has that ideal and strives to follow it, he is a religious man.

(7) RELIGIOUS IDEALS REVEAL THEMSELVES IN VARIOUS WAYS. The great religions of the modern world may be classified as forms of faith in which self-reliance is the leading feature and forms of faith in which the soul is saved by relying on another. These two modes are tersely expressed in Japanese as the 自力, *Jiriki*, method and the 他力, *Tariki*, method. In Europe there are a large number of devout souls who believe that what atonement can be made for past sins must be made by those who commit them and that the notion that the penalty should be borne by another is contrary to strict justice. In Asia there are numerous thinkers who maintain that by solitary contemplation and self examination a knowledge of the highest truths may be obtained. In both these instances the devotee relies on his own efforts alone for salvation. But in the case of orthodox Christianity and Buddhism the teaching is that by reliance on another salvation is to be obtained; the one preaches belief in Christ, the other belief in Amida. But the extent to which reliance on external help should be placed is very different according to the teaching of the two religions. The Buddhist Shin Sect go to the extremity of saying that a feeling of gratitude only for what Amida has done for mankind, even without uttering special prayers, suffices for salvation. But Christians teach that a certain amount of effort on the part of the suppliant is necessary to insure a favourable answer to his prayers.

(8) IN ALL RELIGIONS OF ANY VALUE AND PERMANENCE THREE DISTINCT ELEMENTS ARE PRESENT.—(*a*) There must be a scientific view of the origin of the Universe and of the laws of nature. In olden times, before science had developed, philosophy and mythology supplied thinking men with theories respecting the origin of the world. In these modern days we have a knowledge of the great law of evolution, which is a key to unlock the door of nature's treasure house and reveal to us her wondrous stores. The study of the laws of nature is essential as a basis of religious belief. (*b*) There must be what I would call cosmic emotion, that is, a feeling of awe, admiration and wonder produced by the vastness, the majesty, the sublimity of nature. (*c*) In order that the constitution of the universe may have due effect on the mind it is necessary that all our mental faculties should be concentrated on nature as an object of contemplation. The mind, should be thoroughly absorbed by the thoughts suggested by nature. As in Shintō, Buddhism, and Christianity, so even in Confucianism there is this bowing before the greatness of nature, and hence, though Confucianism bears none of the outward marks of a religion and lacks the organisation which characterises other creeds, she has that important element, cosmic emotion, as shown by so many of the sayings of Confucius and Mencius. The above remarks are only an analysis of the chief elements of religion, treating it as a subject of study, and are not to be interpreted as recommending any special creed or system of teaching.

* * *

In the *Shinri* the Rev. H. Minami discusses with his usual broad-mindedness the subject of Christian education. The recent action of the Mombushō has altered the situation somewhat, but Mr. Minami's general observations, coming as they do from an earnest Christian worker, are of considerable value. He says that mission schools are objected to by many on two grounds. First, the general education imparted at them is said to be inferior. Secondly, it is asserted that the students they turn out are lacking in independence of spirit. Mr. Minami does not tell us whether he endorse these charges or not. He then goes on to comment on the action of the Mombushō respecting Private Schools, which has since been much modified, dwelling on the importance to be henceforth attached to Sunday Schools and to Confirmation Classes. Discussing the former, he says that hitherto too great an importance has been attached to memorising. This method of teaching no longer finds favour among the best teachers in the West. The child's mind is too much occupied with forms to the neglect of the substance of Scriptural history. Mr. Minami is in favour of teaching both Old and New Testament history, but with certain limitations. No child, Mr. Minami thinks, should be allowed to read such a passage as is found in Gen XIX. 31-38. He is in favour of publishing an expurgated edition of the Japanese Bible, for use in families, like that possessed by the Germans. Even with such an edition in use great care would need to be exercised lest the children carry away wrong notions. Modern science has shown the impossibility of giving the traditional interpretation to Gen. I. The belief in dreams so prominent in the story of Joseph's life can not be held up as a type of ordinary life without sowing the seeds of silly superstition in the child's mind. The story of Adam's fall needs to be very delicately handled by the teacher. In dealing with the New Testament the same amount of care is required. The story of the miraculous birth of Christ cannot be explained as a fact in the light of modern science.

Turning to another subject, the instruction of candidates for confirmation, Mr. Minami points out that the number of persons who have been baptised in infancy is now very large in Japan, and he goes on to say that many of these are very inadequately taught, so that they grow up to be a source of weakness to the churches to which they nominally belong. There is far more energy shown in the work of Sunday Schools than in the training of boys and girls who have reached the age of 14 or 15, says Mr. Minami. Made Christians when they were quite unconscious, it is quite possible for these young folks to grow up to be unbelievers. The responsibility of the Church in this matter is very great, and hitherto has not been fully realised.

* * *

A writer signing himself "Hokuriku Inshi" writes in the *Tenchijin* on Buddhism of the Hongwanji type. The purport of his article is that the Otani sect is about as corrupt as it can be; that thorough worldliness permeates everything. The relation of what are called *matsuji*, branch temples, to the *honsan*, or main temples, is simply an affair of money. The subject-temples are regarded as the merchant regards his branch offices, as the means of enriching the head temple. When the payment of money becomes slack, the Chief Abbot sets out on a kind of begging expedition, and donations then flow in at a great rate. On these occasions the Chief Abbot pays most attention to the large donors. There is no feeling of regard for the ruling body as chief instructors or as a set of holy men. This sentiment has quite gone. In the collecting of money the priests insist on commissions. It is unnecessary to give every detail of "Hokuriku Inshi's" picture. Suffice it to say that it accords with what the *Fiji Shimpō* and other newspapers have been saying about Buddhism. It is impossible to believe that writers of widely different opinions should agree so precisely in the representations of the internal state of Buddhism were these representations not based on truth.

* * *

The *Bukkyō* writes in a very liberal and a very discerning manner on the attitude of the Mombushō to religious schools. It says that the blow struck was designed to injure the Buddhist as well as the Christian cause, but that Christians felt it most, as they have so largely relied on education as a method of propagating their religion. This mode of propagation cannot be regarded as normal, says the *Bukkyō*. Preaching and holding services are no doubt the chief means of spreading a knowledge of any religion, and had the Christian Missionaries confined themselves to these from the beginning they would have been saved their present distress. But the raid against religion

Digitized by Google Original from CORNELL UNIVERSITY

instituted by the Mombushō is highly discreditable to the nation, and we Buddhists feel quite ashamed of it. But the point of view of the authorities was that these schools are dependent on foreign money, and that therefore they are in a measure placed beyond the control of the State. To take them over and maintain them on their present lines was of course out of the question. They were felt to be an anomaly in our system of education and hence could no longer be allowed to go on.

* * *

The *Sangan* (Three Eyes) continues to give Count Okuma's views on religion. In the number before us the following is what the Count is made to say:—The fundamental idea of Confucianism is 仁, *jin*, benevolence, that of Buddhism is compassion or mercy, and that of Christianity, love. These feelings form the basis of all religion. The founders of the different religions knew their own people and their own part of the world only, and hence could not devise any system of teaching that should suit all countries alike, but they did an immense deal in the way of drawing attention to the importance of certain principles. For the multiplication of sects their disciples are resposible. Their interpretation of the meaning of the words said to be used by the founders differed widely and each variation was perpetuated by special forms and ceremonies. What is most desirable now is to get rid of the superstructure and lay bare the foundation. Benevolence, compassion, and love!—cannot Buddhists, Christians, and Confucianists come together on these principles and work in harmony? This union may not be witnessed in my time, but it will come some day. Even now there is no such spirit of persecution as existed a century or two ago.

The *Sangan* comments in its usual spirit on the Nagoya prostitute case, reported in these columns some weeks ago by the Rev. U. G. Murphy. This gentleman's action is grossly misrepresented by the *Sangan*, and bad motives are imputed to him. Whilst on this subject, it may be well to mention that the *Rikugō Zasshi* states very clearly the facts of the case and discusses the legal questions involved in it. The *Rikugō* expresses the opinion that legally there is nothing to prevent any number of prostitutes applying for release from the service in which they are engaged and that the police cannot refuse their requests. The pecuniary obligation of these women to their masters is quite another question, and there is no law in Japan sanctioning their being held in bondage as security for the money loaned. It is generally understood by the parties who engage in these transactions that each side shall be true to its word and that there shall be no resort to the law. The question which Mr. Murphy tested, according to the *Rikugō Zasshi*, need not have been tested, as it was certain beforehand what the decision of the court would be. But there was great difficulty in getting the sentence carried out, because the police found themselves confronted by an established custom, namely, that the release of a prostitute from service in a brothel is only effected by payment of the money lent by the brothel-keeper on her account. Does it not seem anomalous, asks the *Rikugō*, that the police should be allowed to use any discretion in the carrying out of the order of a Court? Why did not the Minister of Justice insist on the supremacy of the Court's authority? It is establishing a serious precedent for the police to be allowed to act as they did in Nagoya on this occasion.

* * *

To the *Rikugō Zasshi* Mr. Matsumura Kaiseki contributes a remarkably thoughtful article on "Missions and Territory-grabbing" in which the moral effect on the minds of Orientals of the recent action of Western powers in the Far East is fully and carefully discussed. This is a subject which calls for the most serious consideration of all missionaries. We give an epitome of Mr. Matsumura's article:—Nobody pretends that the excellent men who have gone to benighted regions and, in addition to preaching the gospel of Christ, have brought Africans and Asiatics into contact with numerous elevating influences have ever intended to be in any way the means of placing the people among whom they have laboured under the yoke of a Western power. Yet this in not a few instances has been what has happened. To think that this fact is not plain to all intelligent Christian converts throughout the whole of Asia, even if not in Africa, shows ignorance of the deeper feelings of these converts. I have talked with Christians from India and from China, and they invariably have mourned over the fact that the countries from which the Missionaries hail should on one plea or another rob them and their fellow-countrymen of their political independence. Though the missionaries cannot in any way be held responsible for the course of events, it is impossible to conceal the fact that the action of so-called Christian Governments has been most detrimental to the success of their work. It does not in any way lessen the difficulty, from a missionary point of view, to say that India is better under English rule than she would be under any kind of native rule, and that China would be immensely benefited by the establishment of Western government throughout her empire. To the Oriental Christian there seems to be something absolutely contradictory in the gospel preached by the missionaries and the action of their Governments. They say, naturally, the very sins which you denounce are committed by your own authorities. You say that Christianity has done such wonders among the nations of the West, but the action of your Christian Governments tell a different story. It is a case of "physician heal thyself." You preach to us a doctrine that your own people do not act on. The use of force in connection with missions under any circumstances does irreparable harm to the cause of religion. To say that any earnest Oriental can regard with indifference the subjection of his country to foreign rule shows ignorance of Oriental feeling. . . . Coming to Japan, from year to year I observe in the published reports of the missionaries endless excuses for want of success. Japan is said to be unfavourable for missions. The people are declared to be conceited and what not. Or it is, "this year a wave of conservatism has swept over the land." Next year it is something else. It is plain that Christianity is not making headway. Does it not occur to these missionaries that the cause of failure may be in the discrepancy that exists between practice and preaching? The first propagators of Christianity, men like Paul and Barnabas, underwent untold hardships in the propagation of their faith. Their devotion and self-denial attracted the attention and drew forth the admiration of all with whom they came into contact. But the lives led by foreign Missionaries in Japan to us Japanese appear luxurious and we cannot help feeling that preaching and practice are not in harmony. Take the missionaries labouring in semi-civilised countries; ought they not to be prepared to suffer violence for the sake of the gospel? Paul had no men-of-war at his beck and call, and would not have used them if he had. The events of the last few years have done inreparable harm to the Christian cause, and under existing circumstances the Missionaries would do better were they to become naturalised in the countries where they are labouring. They would thus effectually put a stop to the practice of making their special grievances an excuse for foreign interference.

* * *

Under the title of "Solid Progress" the *Tōkyō Maishū Shimpō* (hitherto the *Kirisuto-Kyō Shimbun*) reviews the state of Christianity in Japan at the present time, reaching the conclusion that past progress has been anything but steady. Periods of earnestness have been followed by periods of sluggishness and indifference. Religious development, says this organ, in individual Christians must consist of the strengthening of three distinct powers of the mind, namely, the intellect, the will, and the emotions. The excessive development of one of these at the expense of the others is an evil which we frequently see exemplified in the lives of Japanese Christians. Then the long-standing cause of weakness in our Churches, dependence on foreign aid, still exists to a large extent.

Discussing the subject of Christian education, the *Tōkyō Maishū Shimpō* says the hostile action of the Mombushō in August last has led to a very strong coalition of persons interested in Christian education, and the final result of the present deliberations is likely to be the establishment of non-sectarian Christian schools that will be more efficient than any that have hitherto been in existence. What the *Maishū Shimpō* advises is that Japanese Christians should take the lead in furthering the cause and not allow the foreign missionaries to do all the organising. If the plan now under consideration is carried out, the action of the Mombushō will prove to have been a blessing in disguise.

According to the magazine from which we are quoting, the Kumiai Churches are taking steps to open a new Divinity School to take the place of the Dōshisha Divinity Hall, which has been closed. Hitherto the American Board of Foreign Missions and the Japanese Churches have been acting separately, but since the object in view is the same, efforts are being made to unite the two classes of workers. A meeting was announced to be held in Tōkyō on January 30th to discuss preliminaries, the result of which has not yet been reported. Whether the doctrinal differences between the parties are too great to make a union of strength impossible, we are not in a position to say.

* * *

In the *Tōkyō Dokuritsu Zasshi*, Mr. Uchimura Kanzō, the editor, uses very strong language in reference to the desi-

Digitized by Google Original from CORNELL UNIVERSITY

rability of totally disconnecting Japanese churches from foreigners. These are his words:—"What Japan needs at the present time is Christianity that is not dependent on foreigners. Whether Congregationalist, Methodist, Presbyterian, Episcopalian, Unitarian, or Universalist, Churches that rely on foreign help can never save the nation. I am a Christian, but I don't believe in Missionary Christianity (*Senkyōshi teki Kirisutokyō wo shinzezaru mono nari*). To believe in Christ is one thing, to subject oneself to a missionary is quite another. It is because we believe in (the real) Christianity that we refuse to accept Missionary Christianity." (*Warera wa Kirisutokyō wo shinzuru mono naru ga yuye, senkyōshi teki Kirisutokyō wo shirizokuru mono nari*).

* * *

The January number of the *Taiyō* has a very thoughtful article entitled "The Conflict between Buddhism and Christianity, and two great influences in the Religious World," of which the following in an abstract. Buddhism has declined and become corrupt in many ways, but the fact remains that two-thirds of the Japanese people are Buddhists. Christianity is only professed by one fortieth of the population (?) of this empire, but it has European civilisation at its back from which it receives great prestige. The two religions have competed with each other for years and will doubtless still go on doing so. It may be well to try and discover what precisely is the cause of the perpetual strife between them. It is not so much a matter of doctrine as a question of authority. The extreme sections of each party denounce each other as usurpers of religious authority. The followers of the Pope of Rome and the Greek Patriarch claim supreme authority for their leaders. The same may be said of the Shinshū Buddhists. When we get away from these sticklers for authority and consider the sentiments of those Buddhists and Christians who think that faith, devotion, and the moral truths taught and enforced by their creeds only are of paramount importance and that all else is insignificant, we find a large amount of agreement and harmony. Does not the conflict over authority savour of wordliness as well as show a want of confidence in the inherent power of religious truth to make its influence predominant? The present conflict then resolves itself into deeply seated hostility between the extremists among Christians and Buddhists, and nothing more. And this hostility is not caused by difference in doctrines so much as by resentment against authority claimed. On this question of authority it seems to us, says the *Taiyō*, that the contests within the Christian pale on the one hand and the Buddhist pale on the other are quite as bitter as those carried on by one sect with the other. The Roman Catholics and the Greek Church Christians are always at war, and the same may be said of the Eastern and Western Hongwan sects and of the two great sections of the Shingonshū. There are no doubt disputes about forms, about objects of worship and the like, but these all fall into the shade when compared with the question of authority. But still more important than the conflict between the two great sects on the subject of authority is the fight between the conservatives and the liberals, the rationalists and the traditionalists that is going on within the precincts of each sect. The ideas that form the basis of this disagreement can never be reconciled. One party maintains that in religion there can be no such thing as change, development, or improvement, that the highest excellence was attained hundreds of years ago, and that faithful transmission of doctrinal heirlooms is all that is required. The other party holds that the faith delivered to the saints of old was in the form of germs that are capable of endless development; that nothing in the sacred books is binding on the present generation but the truths which they embody, and that these truths were not invented by the writers nor did they receive authority from them. What is called religious strife resolves itself into a conflict between two principles that are in their very nature antagonistic to each other.

CORRESPONDENCE.

THE CENTURY QUESTION.

To the Editor of the "Japan Mail."

Sir,—As every century contains one hundred years, the first century ended with the last day of the *first* hundred years; and as nineteen centuries contain nineteen hundred years, the nineteeth century will end with the last day of the *nineteen* hundred years. It would seem that this should be accepted as true in any æon of time or any region of space in which arithmetic is taught in the Primary Schools.

The precise date of the birth of Christ, and therefore the precise date at which the Christian era actually began, is a question that has never been settled, and is not likely to be settled until after time shall have ceased to be reckoned by centuries. Rightly or wrongly, however, the world has agreed to *regard* the present year as the year of our Lord 1900; and, so long as that is true, it must also *regard* it as the last year of the nineteeth century.

The Emperor of Germany, however, and Miss Caroline Hazard, the President of Wellesley College, have decided that the present year is the first year of the twentieth century. Historically they may, or they may not, be correct. But if they are to persuade men generally to accept their decision, they must also persuade them to regard the present year as 1901. This is not likely to happen outside of Germany and the precincts of Wellesley College; excepting perhaps among the 16 to 1 silver men in the U.S., whom partiality for fiat money may lead them to look with favour upon fiat centuries.

Yours, DIONYSIUS EXIGUUS.

To the Editor of the "Japan Mail."

Sir,—I read in the *Mail* of the 6th inst., under the above heading, that the Pope is somewhat confused in his arithmetic with regard to the beginning of the twentieth Century. I should rather think that the translator of the Decree alluded to has forgotten his Latin. The Decree, a printed copy of which is before me, is dated November 13th, 1899, and says:—

".....Cum media nocte postremæ diei mensis Decembris futuri anni præsens absolvatur sæculum novumque habeat initium....."

Which means:—

".....Whereas the present Century will come to an end at midnight on the last day of December of the next year, and then will a new Century begin....." In other words, the XIXth Century will end on Dec. 31st, 1900, at midnight, and the 1st January, 1901, will be the beginning of the XXth.

Yours truly, CENTURY.

Yokohama, 8th Feb., 1900.

ECCLESIASTICAL INCONSISTENCY.

To the Editor of the "Japan Mail."

Sir,—Although I do not desire to pose as a pedantic fault-finder or supercilious critic of the misdoings of others, I may perhaps be allowed to suggest that our local ecclesiastical "powers that be" appear to possess peculiarly distorted vision, which prevents them appreciating their own idiosyncracies and incongruous arrangements.

Granted that some narrow-minded folk (among whom I am content to be numbered) cannot be quite reconciled to the scheme of supporting the Church by Balls, Fancy-Dress Dances, and the like (which point can pass for the moment,—abler pens than mine being engaged thereon), I am tempted to enquire whether the weekly desecration of the Sabbath, which must be laid to the charge of a local ecclesiastical organization, can be as readily defended,—for to me it seems flagrantly inconsistent for Christian Church-goers to listen to the reading of the fourth Commandment, and respond to the same by praying that their hearts may be inclined to "keep this law", while they are practically hiring labourers just round the corner to build them a new church, employing them for the full seven days per week. True, some protest has already been lodged against this point, and has had the eminently practical result of arranging for the gate of the new compound to be closed on the Sabbath, although any ordinarily observant passer-by will note that the work-men are shut within, and are chipping stones, arranging bricks, etc., with exceptional industry. For my part I should prefer to see the gate open, and the work performed publicly if it has to be done at all, but apparently we do not all see alike on this point.

Whether a Ball is, or is not, an appropriate method of raising the ecclesiastical wind may still be an open question, but can there be two opinions about the incongruity of preparing the Ball-room, or hall, on Sunday? Even admitting that the theatrical performance of Saturday evening prevented the preparatory committee from starting their work in the previous week, my narrow vision prevents me from appreciating the necessity of employing labourers to clean the hall, raise the floor, commence the decorations, etc., on Sunday,—while under identically the same roof, (in a different apartment, I will allow), Divine Service was being held by the same body of Christians, who were thus sanctimoniously observing the Day of Rest, and actively preparing for the frivolities of the week at one and the same time. Blissful breadth of vision,—I would that I could smother conscience as readily!

A liberal allowance must be made for human inconsistency (in which imperfection we all share), but when a public ecclesiastical body so flagrantly disregards one of its primary tenets, one may perhaps be pardoned for soliciting enlightenment, and it is in the hope that the apparent incongruity will be satisfactorily explained that I have ventured to intrude upon your space at this length.

Yours faithfully, A: B. C.

Yokohama, Feb. 12th 1900.

EDUCATIONAL REFORM IN JAPAN.

To the Editor of the "Japan Mail."

Sir,—I notice that many Japanese are discussing questions of educational reform. That is a good sign. There is great hope for an individual or for a nation that realizes its own defects and wants to do better. And perhaps a suggestion here might be helpful. I would like to suggest a reform in the construction of school-room seats and desks. I visited a new Middle School not long since and was struck with a question asked by one of the ladies in the inspecting party. She had not seen much of Japanese school rooms, so when we were shown one of the class rooms, she innocently asked if that was for the infant class. She did not know that Chugakko students would resent being called infants. But she was judging from the seats. But I should pity any infants who had to sit on them. They were made on the gridiron principle about a foot square, and for a back two cross pieces fastened to perpendicular posts. Some of the boys carry cushions with them from one class room to

Digitized by Google Original from CORNELL UNIVERSITY

another. It is difficult to conceive of anything more unscientific, more unhygienic, than to compel children to sit on such benches for four or five hours every day.

Then, too, outside of the larger cities nothing is done to warm school rooms unless it be with a *hibachi*. In the primary schools little children sit for hours on the miserable benches, with their legs bare—the little girls especially wear nothing on their lower limbs—for their little loose *kimono* is no protection against the cold while sitting on benches. The little things shiver all day and go home looking as if their blood had almost stopped circulating. It seems to me that unless they propose to have stoves in their school rooms and furnish more comfortable seats it would be far better for them to have *tatami* and sit Japanese style. They could thus keep their bodies warm. Japanese can never adopt the western method of sitting in chairs till they also arrange to warm their houses. I called at a Japanese house a few days ago to see a gentleman who had just returned from America. It was a freezing cold day, but, it being a Japanese house, I had to take off my shoes as I went in. But I found some comfort in sitting down on a good *za-buton*, thus hiding my stocking feet under my body and keeping them warm. In a moment, however, a table and chairs were brought in and in spite of my protests we were compelled to occupy those chairs and warm our finger tips over a *hibachi* on the table, while our toe tips were freezing on the floor. Of all the uncomfortable experiences I've had this sitting in a cold Japanese room, on a narrow chair with a straight back, is one of the worst. And the comical part of it is that the Japanese who thus entertains a foreigner thinks he is doing the proper thing. There are some Japanese customs that are not capable of a half-way reform: they must be let alone or else done away with altogether. *Hibachi* don't sort up with tables and chairs, and benches are out of place in any room that is not capable of being heated.

Yours truly, WILL PATTILLO.

RESIDENTIAL RHYMES.

To the Editor of the "Japan Mail."

Sir,—You have probably forgotten your condescending notice of that "humble author" who wrote *Residential Rhymes*. He does not dispute your verdict that he is "good humoured and sometimes funny," but wishes to correct your error in supposing that the verses were "evidently intended to accompany the efforts of the publisher rather than to be accompanied by them." The publisher did, indeed, desire "doggrel," which could be set to well-known tunes, but the pictures were in every case suggested in every detail (though not, of course, drawn) by

Yours faithfully, OSMAN EDWARDS.

11 Eldon Road, Kensington, London,

Dec. 26th, 1899.

CHRISTIANITY AND EDUCATION IN FRANCE.

To the Editor of the "Japan Mail."

Sir,—M. Inoue Tetsujiro said:—"In the west, with the exception of France and Switzerland, Christianity is the basis of ethical teaching"—(*Japan Daily Mail*, January 29th.)

In France Christianity is not so separated from ethical teaching and education as M Inoue and some other folks seem to suppose.

In France there are two kinds of schools, public and free ones of every degree (viz, primary, middle, and high).

Free schools are more prosperous every year, as statistics show, and this ever increasing prosperity is due to the fact that Christianity is quite the basis of ethical teaching and education in those schools. There are now 92 368 pupils in free middle schools only. Public middle schools do not number so many. I think.

But even in public middle schools Christianity is not absent. In every school a Catholic priest is appointed and paid by Government to teach religion to the pupils whose parents desire, and so great is the number of those so desirous that the majority of pupils, even in public middle schools, are taught Christianity.

Conclusion: Perhaps religious liberty is not yet so great in France as in America, the classical land of liberty; but, as for the connection of religion and education, as for the moral efficacy of Christianity (namely in high class), France is practically about the same as other great civilised nations, and is quite different from Japan, where Christianity is prohibited even in private schools.

Your Obedient Servant,
A FRENCHMAN.

MOVEMENTS OF TRANSPORTS AND WAR DIARY.

To the Editor of the "Japan Mail."

Sir,—I enclose movements of transports and diary for November, 1899. I have omitted the detachments of the Royal Army Medical Corps and Army Pay Department and Corps which accompanied nearly every Transport.

Yours faithfully, A. G. CHURCHILL,
Lieut.-Colonel.

Tokyo, February 9th, 1900.

SHORT DIARY.

Nov. 1.—Ladysmith isolated. Telegraph wires cut. Free State Boers invade Cape Colony.

Nov. 2.—Colenso evacuated. Stormberg Junction abandoned.

Nov. 3.—A special Army Order was issued embodying 38 Militia units. Cavalry action to the South of Ladysmith.

Nov. 10.—Skirmish at Belmont. British casualties, 5.

Nov. 11.—An Army Order was issued for the mobilisation of a 5th Division for service in S. Africa.

Nov. 13.—500 Boers attacked Kuruman, but were beaten off with an estimated loss of 30 killed and 28 wounded.

Nov. 15.—Armoured train from Estcourt shelled by Boers. British casualties, 1 killed, 18 wounded, 43 missing.

Nov. 17.—Boers advance on Estcourt and reach Ennersdale.

Nov. 19.—Skirmish at Mooi river. British casualties, 3 wounded.

Nov. 20.—An Army Order was issued for the mobilisation of a 6th Division for service in S. Africa.

Nov. 23.—General Lord Methuen attacked and defeated 5,000 Boers entrenched at Belmont. British casualties, 52 killed, 245 wounded, 2 missing. Boer casualties estimated at 140 and 51 prisoners.

General Hildyard attacked Beacon Hill from Estcourt and drove off the Boers.

Nov. 24.—A special Army Order was issued embodying 8 more Militia units.

Nov. 25.—General Lord Methuen attacked and defeated the Boers at Gras Pan. British casualties, 24 killed, 163 wounded, 7 missing. Boer casualties estimated at 400. Sortie from Kimberley in which 29 Boers were captured. British casualties, 5 killed and 26 wounded.

Nov. 26.—British advanced from Estcourt.

Nov. 28.—General Lord Methuen attacked and defeated 11,000 Boers entrenched on the Modder river. British casualties, 72 killed, 396 wounded, 7 missing. Boer casualties estimated at 500.

Sortie from Kimberley in which a Boer laager and 4 redoubts were captured. British casualties, 22 killed and 31 wounded.

A PROTEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In case Colonel Churchill should imagine that the remarks made in the *Japan Herald* yesterday, represent in the slightest degree the feelings of the subscribers to that paper, I take this opportunity of saying that I have heard from many of them nothing but expressions of profound disgust at such an utterly unreasonable and malicious attack, which is as equally devoid of foundation as of decorum.

Should, however, it be considered that the very nature of the article renders condemnation or mere reference unnecessary, my letter may, at least, serve the purpose of disabusing the minds of many of the idea that the *Herald* is the accorded mouthpiece of Yokohama opinion, or that its sentiments on this, as well as on many other subjects, reflect the views of its readers.

Yours, etc., A MERCHANT.

Yokohama, Feb. 14th, 1900.

"ROMA-JI."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Discussions relating to the reform of the Japanese language are probably dull and unattractive to most readers, but the great importance of the subject is my excuse for asking permission to resume it, and to correct your misapprehension of certain passages in my previous letter,—passages which I thought were too clearly written to leave any reasonable doubt as to their meaning. Since you do not take pains to reproduce your own editorial words with liberal exactness, even though using quotation marks, it is perhaps expecting too much to look for accuracy in the interpretation of a correspondent's ideas; but I am nevertheless disinclined to be made responsible for opinions which I have not expressed. You say that Mr. House "calls stenography a syllabary," and that you are "astonished by his statement" I should be astonished, myself, if I had made it. What I said, in answer to a proposition which seemed to me untenable, was that a syllabary is a set of marks each one of which signifies a complete and intelligible sound; that stenography is likewise a system of marks which signify sounds; and that in comparing the two with ordinary longhand, the same definition might stand for both. I may speak of a steam-ship as designed to expedite travelling upon the water, and of a propeller as similarly designed; and say that in comparing their speed with that of a sailing vessel the same description stands for both. That is very far from asserting that a steam-ship is a propeller, or that the two objects are identical. It may be a singular weakness, but I really do dislike to be credited with absurd remarks which I have not made, and could not make, by any possibility.

My references to the Roman alphabet were connected solely with its inherent inability to represent all the sounds of modern tongues, including the Japanese. I did not touch the question of irregular or contradictory spelling, in English or any other language. The circumstance that English words pronounced alike are differently written is entirely aside from the present purpose. All that you say on that head is as wide of the mark as it would be to talk of the relative propriety of using capitals or small letters, italics or German text. The question in debate has nothing to do with vagaries of spelling. It concerns only the legitimate pronunciation of individual letters. The fact to be considered is that many of the *sounds* belonging to living languages cannot be properly indicated by the Latin characters. The English sounds for which the combination "th" is used (as in *then* and *thin*), have no suggestion of either "t" or "h" about them. The device is purely arbitrary, and as obviously a makeshift as "p q" or "x z" would be for the same articulation. Another illogical combination is "ch" (as in *church*). An Englishman applies this conjunction of letters to one sound, a Frenchman to another, and a German to a third. Each country does what it pleases with the Roman signs, without pretending to find authority for its manipulations in the signs themselves. The absence of uniform values constitutes one of the scientific objections to the general use of these characters. They do not and cannot satisfy the actual requirements of a single language, and they appear to do so only when some of them are distorted from their original purpose. Yet you do not hesitate to affirm that the *kana* syllabary, which could never have had an existence except as an exact and absolute representation of Japanese sounds,—which reflects them as faithfully as a mirror gives back the object set before it,—"does not produce them" (that is to say, does not represent them) "by any means as successfully as the Roman alphabet produces them"—(*i.e.*, represents them).

I confess that this statement strikes me with such amazement that I scarcely know how to frame a reply to it. Is it credible, Mr. Editor, that you have put forward so extraordinary a declaration with deliberate intent;—that you are prepared to place yourself on record as averring that a set of symbols expressly created by Japanese to stand as signs for the sounds of their speech, and for no other end,—not merely to resemble them, but to be identical with them, so far as written marks can be identical with articulate utterances,—are less successful in performing their special duty than an alien alphabet constructed thousands of years ago as the scriptory medium for a language not allied to the Japanese, and lacking some of the elementary sounds of the Eastern tongue? I cannot believe that, upon reflection, you will adhere to a proposition which appears to have been too hastily conceived and too incautiously expressed to be seriously regarded. Think what it means. What was the origin of the *kana* emblems? The man (or the men) who invented them certainly knew the sounds of his (or their) own speech. He (or they) gave to each of these sounds a particular written character, and the complete set fulfilled all the requirements of the language. It has never ceased to fulfill them. There may have been shades of change in pronunciation in the course of centuries, but at no time has the *kana* been invalidated by such alterations. Vocal modifications have been inevitable, as with all languages, but the symbols have always represented the current utterance, in successive periods, as they represent it at this day. The theory that they are intrinsically less appropriate than an alphabet which does not cover all Japanese sounds, or fails to account for even a single one of them, has no foundation to rest upon. It might as confidently be alleged that a person's natural eyes are inferior, as organs of sight, to a pair of artificial eyes; or that his own skin does not fit him as well as would the skin of another man, unlike himself in size, colour and shape. The circumstance that the signs are, or have been, irregularly employed, has no bearing whatever. The inquiry is not whether "taiko" and other words are logically or illogically written but whether the syllabary does or does not include signs which accurately indicate the pronunciation of those words. Your allusion to "strange combinations," in "taiko," etc., has, I submit, no more to do with the broad issue than the inconsistent spelling of English words has to do with the question of affinity between Roman letters and English sounds. The incontrovertible fact remains, that the syllabary takes in the whole range of Japanese speech, which the Latin emblems cannot do in their ordinary capacity, since they can be made serviceable only, in several instances, by a despotic perversion of their true attributes. Look at the second character of the *kana* system.—that which becomes "ro" in foreign guise. Its articulation begins with a sound which is exclusively Japanese, and which is repeated in several other syllables. It has no counterpart in any European tongue. Foreigners, as a rule, do not attempt to pronounce it. They are generally content to get as near it as they can by giving the sound of "r."

Digitized by Google Original from CORNELL UNIVERSITY

I am aware that a recently published dictionary states that its usual pronunciation is really like "r," but this is a mistake for which no excuse can be admitted. It is produced by a vocal process quite different from that required for "r." This is one of the cases in which the Roman alphabet, however tried, is found wanting. Look at the *kana* sign to which the transcription "chi" is applied. There is, as I have mentioned above, no authority, outside of England and America, for the employment of "chi" to express the sound here aimed at, and neither "c" nor "h" suggests it in the slightest degree. In Italy, "c" alone sometimes stands for it, but not always. Again, take the syllable to which the letters "shi" are assigned. The combination "shi" is an arbitrary English device, not recognised everywhere, for which the original Latin characters afford no sufficient warrant. It is of course understood the Roman alphabet, pure and simple, is here discussed,—not the alphabet tinkered and corrupted to suit the exigencies of this or that modern tongue. It will not do to say that Japan may adopt the compulsory usage of England as regards some sounds, and of continental countries as regards others. Nor will it, I presume, be proposed that the existing English practices should be copied wholesale, for "that way madness lies." Of the twenty-six alphabetical letters, more than half are used in England to indicate two or three different sounds, while some are saddled with not less than half a dozen With the Roman alphabet, we at least know where we are, and—which is perhaps more essential—where we are not.

Concerning the relative efficiency of a syllabary and an alphabet "as a phonographic vehicle," you are pleased to say that the advantages of the former over the latter "will scarcely be disputed." I, for one, dispute them most emphatically. I am willing to go farther, and declare my conviction that an alphabet without fixed and unalterable rules for the enunciation of each letter is practically valueless as a phonographic vehicle. Its deficiencies, in this respect, would be aggravated by its application to the Japanese language. But its employment in this country, will not be, primarily, with a view to phonographic service. It will be a measure of political expediency, and as such the question of fitness will not have the first consideration. I observe that in one part of your latest article on the subject you use the modified phrase that the Latin signs "can be made" to do the required work,—that is, to represent Japanese sounds. There, indeed, you are on comparatively safe ground. Undoubtedly they can be "made" to represent anything you like, if you choose to disregard what they actually signify, and impose upon them duties for which they have no proper qualification. They have been made to do numerous eccentric things all over Europe, and the process will have to be repeated in Japan. But when the time comes for introducing them, no effort should be spared to secure an orthographic system that shall conform as strictly as circumstances will allow to natural and scientific laws. Every step in the reform should be carefully inspected by experts competent to investigate all branches of the subject. The native scholars who uphold the ideographic system should not be antagonized, but the coöperation of the foremost among them should be invited, if possible, for the reason—(as I am informed and believe, though my own knowledge on this point is necessarily imperfect)—that they are best acquainted with the history of the language, and can throw light on many debatable questions of construction and legitimate pronunciation. The prejudices of the few who cling to *kana* should be respected, and not intensified by unjust disparagement of the method they prefer; that course is not likely to persuade them that their convictions ought to be sacrificed for the common welfare. The requisite investigations should be conducted with the determination to leave no field of pertinent inquiry unexplored, and no conclusions should be taken for granted, no matter how plausibly they may appeal to the imagination, without rigid scrutiny on all sides. In this way, and in no other, can a result be achieved that will deserve to be permanent, or even approximately satisfy the conflicting demands of the arduous enterprise.

Your, &c., E. H. HOUSE.
February, 1900.

TRIALS BY JAPANESE CRIMINAL COURTS.

To the Editor of the "Japan Mail."

Sir,—Although somewhat late, may I venture a few comments on a paragraph in your columns entitled "Trials by Japanese Criminal Courts?" It appeared in the *Weekly Mail* of January thirteenth.

You wrote, "We are very far from thinking that Japanese judicial procedure is secure against just accusations of tardiness, but we do not believe that it is much worse than legal procedure in our own country, and, before condemning it in wholesale terms, some comparative statistics should be furnished."

The remarks which called forth this paragraph I have not seen, and will not take it upon myself to say how far your rebuke may have been deserved. Certainly I have no sympathy with merely captious criticism; but in view of the large influence the *Japan Mail* has deservedly won, I regret that you should even seem to make light of the very serious hardship to so many, technically speaking at least, presumably innocent persons entailed by the slow movement of the Japanese criminal courts.

It is impossible at short notice to obtain complete statistics for the Courts of Great Britain with which to compare the report of the Kajibashi House of Detention which you give in the first few lines of your note, but in the *Spectator* of July first, 1899, it is said that, "reckoning prisoners tried at the Assizes only, there were [in 1897] one hundred and twenty cases in which the imprisonment before trial exceeded sixteen weeks."

As I understand the matter, aside from London, Middlesex, and certain parts of Kent, Surrey, and Essex which are within the jurisdiction of the so-called Central Criminal Court, the entire criminal business of England is committed to the Assizes. The Central Criminal Court sits, I am informed, twelve times a year, and judging by the *Spectator's* article, cases of hardship under that jurisdiction are not numerous enough, or striking enough, to demand special remedial legislation. Hence the writer, taking his figures from Mr. Montagu Crackenthorpe, directs his attention to the Assizes, which he regards as responsible for the hardship imposed upon the presumably innocent persons represented by the one hundred and twenty mentioned above. He closes his plea with these words:—

"Of all the subjects which call for inquiry as a prelude to legislation, none seems so urgent as this, and we greatly hope that Ministers will not allow the session to come to an end without an announcement that such a commission is to be appointed."

Now, as I have intimated, the cases in which prisoners were obliged to wait trial for more than sixteen weeks, for all England, save London, Middlesex, and certain parts of Kent, Surrey, and Essex, during the entire year, 1897, numbered one hundred and twenty. According to the figures you quote from the report of the Kajibashi House of Detention, there were confined there *at a given time* twenty-eight persons who had waited six months or over, and fifty-five who had waited three months and over. This, I suppose, means eighty-three persons in all who have waited more than three months. What the statistics of this single house of detention would be for a whole year, one can only conjecture, but it could hardly be an exaggeration to say that the number of cases of extreme hardship would prove several times greater than for the whole of that large fraction of England committed to the Courts of Assize. Moreover, it seems probable that Kajibashi, being in an especial degree under the stimulati g influence of the central Government, would compare favourably with the houses of detention in other prefectures.

So far as I can see, there is no escape from the conviction that the Criminal Courts of Japan stand at a very great distance behind those of Great Britain as regards the prompt administration of justice. How great that distance seems to me, I dare not trust myself to say. This unfortunate condition of affairs surely deserves the careful and immediate attention of His Imperial Majesty's Government.

There are many reasons for this grave contrast, no doubt, but I will mention only two. They are,

(1) The relatively large place which summary procedure plays in the English system.

(2) The readiness with which bail is accepted even in very grave cases by the English judges.

How far these causes of difference may suggest the path to reform, I will not say.

Pardon me if I have written too strongly. My estimate of what has already been accomplished in Japan in the way of judicial reform is so high, that I am ready to pay a large tribute to the philanthropy and intelligent public spirit of those to whom this reform is due; but I should be sorry to have them or their successors content with any standards but the highest, or remit in any degree their efforts in behalf of these untried prisoners, among whom there will always be a considerable number of innocent persons.

I remain, yours, etc. D. C. GREENE.
Tokyo, Ichgaya, Feb. 12th, 1900.

THE TANKO IEISUDO KAISHA.

This Company held its general meeting (semi-annual) on the 13th instant, when the following statement of accounts was presented and passed:—

	Yen.
Total net Profits	708.648
Brought forward from previous account	46,714
Total	755.362
To Reserve	36,000
Rewards to officials, &c	60,235
Liquidation of Debentures	10,000
Dividend (at the rate of 12½ per cent. annually)	633,180
Carried over	15 947
Total	755.362

An extraordinary meeting was then organized, when it was determined to construct an extension of the main line of railway for 38 miles, from Momijiyama to Kanayama, and also to build a two mile branch. The expenditure is estimated at 2,700,000 *yen*. The meeting further voted to spend 800,000 *yen* in developing the coal beds rendered accessible by the new road. The total amount, 3½ million *yen*, is to be obtained by issuing debentures.

NEWS OF THE WEEK.

The fine plum-trees at Sugita will shortly be in full bloom.

Fire broke out in a house, No. 165, Honmura-road, about 9 o'clock Wednesday evening, but was quickly got under control, there being a plentiful supply of water. The occupier of the burnt house is a British Indian.

There will be a special service at the Union Church at 11 o'clock on Sunday morning to install the Rev. E. S. Booth, M.A., who has been chosen as Pastor. Addresses will be given by the Rev. G. M. Meacham, D.D., and the Rev. A. A. Bennett. All will receive a cordial welcome.

Sir William MacCormac's references to the rapid recovery of the British wounded are con-

Digitized by Google Original from CORNELL UNIVERSITY

firmed. Thanks to good climate, doctors, nurses, and appliances, men wounded in early actions are returning to duty in hundreds. The Bishop of Lebombo has shown a splendid spirit of devotion. His episcopal bed and the whole house are given up to the use of the wounded and refugees.

General Macdonald, whose name figured so largely in South African news, was presented with a sword of honour at the Hotel Cecil last May. With the modesty of a brave man, he declined to have all the credit that had been bestowed upon him for Omdurman, and called attention to the fact that the three batteries of artillery which Lord Kitchener had, with wisdom and foresight, placed under his command, had greatly contributed to the victory.

A badly decomposed corpse was found on the beach at Tomioka on Wednesday. Papers on the body showed it to be that of Andrew Nicholson of the British ship *Cowrie*. This was the seamen who fell into Yokohama harbour on the night of January 3rd while returning to his ship in a sampan. The body was temporarily taken in charge by the Headman of Kanagawa, but an Inspector of the Water Police went to Tomioka to make the necessary investigation before handing over the body to the British authorities.

A Naval Court of Inquiry has been held at H.B.M. Consulate, Nagasaki, into the circumstances attending the stranding of the steamer *Energia*. Mr. J. H. Longford, British Consul, presided and was assisted by three assessors. The finding of the Court was that the casualty was owing to the pilot not exercising sufficient caution in approaching the Obri Channel at full speed in the darkest part of the night and failing to observe the land-marks; that the master was justified in leaving the navigation wholly in the pilot's hands, but that he should have been on the bridge, though the casualty could not be in *any sense ascribed* to his absence; that no *blame* could be attached to the mate; that the steps taken by the master after the stranding were prudent and seamanlike, and that discipline was properly maintained. The Court ordered that the certificates of the master and first mate should be returned to them. The Court regretted that pilotage licenses had ceased to be issued by the Imperial Japanese Government for the district between Rokuren and the entrance to Nagasaki Harbour, this being one on which it was customary for the masters of ocean-going steamers to employ pilots, most of them believing the latter continued as formerly to be fully licensed for it.

JAPANESE STEAMSHIP SERVICES IN THE FAR EAST.

Mr. Kondo, President of the Nippon Yusen Kaisha, is represented by the *Hochi* as having forwarded to each of the Ministers of State a document embodying his opinions in regard to the necessity of extending steamship services to those Oriental countries through which he lately made a tour of inspection. He asserts that if Japan desires to extend her commercial advantage in China and augment her influence in the interior of that country, she must take steps at once to improve her steamship communication and at the same time establish a Japan-China Bank in order to afford facilities to traders. His programme in regard to the extension of the steamship service is stated to be as follows:—

1. Yokohama-Shanghai line.—Two ports, Kobe and Shimonoseki, to be called at *en route*. Voyages from Nagasaki to be undertaken twice a week. Six ships to be placed on the service, each having a gross tonnage of over 3,000 tons and an ordinary speed of 13 knots, with a maximum of 16 knots. All to be passenger ships.

The above line would be of the greatest importance in the Chinese coastwise trade, as it might be connected not only with the Yangtsze lines and the North and South China lines, but also with those to America and Australia. The necessity of connection with these lines is imperfectly recognised at present, inasmuch as connection is now made with the European lines at Shanghai. The weekly service hitherto undertaken by the Nippon Yusen Kaisha is not sufficient to meet present requirements, and the number of voyages should be increased to two a week.

2. Yangtsze line.—(a) The service on this line to be chiefly between Shanghai and Hankow, via open ports. Voyages to be undertaken every other day. Number of ships, 5, each of 2,000 gross tonnage and ordinary speed of 12.5 knots, the maximum speed not exceeding 15. All to be passenger ships. Hankow is a most important place, and promises to be the centre of Chinese commerce when the railways in Lohan and Hanwat are completed. That passengers and freight will greatly increase in future is beyond doubt. Passengers and cargo coming from the interior to Shanghai through Hankow would be transported by the Yokohama Shanghai or South China lines or thence to Europe, America, or Australia, while freight for the interior through Hankow would be brought to Shanghai by the various lines above mentioned, and thence transported to Hankow. To increase the efficiency of the existing lines to China it is absolutely indispensable to establish a service to Hankow, which is likely to be the great emporium of the empire. Various steamship companies have already opened services to that port, and it is advisable that Japan should attempt to secure equal advantage to herself by establishing a frequent service between Shanghai and Hankow.

(b) Hankow Gichiong branch.—To call at Sachi *en route*. Voyage once in five days. Two passenger ships of over 1,500 tons each, with an ordinary speed of 10 knots and a maximum speed of 12. Gichiong is next in importance to Hankow, being a convenient point of connection for passengers and freight coming from, and going to, Tiongkeng, which is also one of the great commercial towns of the west of China. Not a single company engaged in marine enterprises seems to be inactive in opening service to Gichiong. In connection with the service to Hankow a regular voyage to Gichiong is absolutely essential. The number of voyages should not be less than one every five days.

(c) Branches of the Yangtsze line should be established as follows:—

1. Hansui Section.—This line would extend from Hankow to the north of Opok, Honam, and Hiapha provinces, and a part of Bongchwan.

2. Tongteng-o Section.—This line would run from Hankow as far as Tongteng o, whence one of its branches would reach Tiongsa and Siongtam by way of Siongkong on the south, and the other would reach Kuichiu through Gwankong on the west.

3. Pwanyang o Section.—The starting point of this line would be Kuikong. Steamers would run up the river via Tongteng-o, and finally reach province.

4. Lines to the vicinity of Chinkiang.
(*a*) From Chinkiang to Namking along Soiho.
(*b*) From Chinkiang to Yongchiu.
(*c*) From Chinkiang to Chengkong-po.
(*d*) From Chinkiang to Suchow.

5. Lines to the vicinity of Sohong.
(*a*) From Shanghai to Suchow or Hongshiu.
(*b*) From Suchow to Hougshiu.
(*c*) From Suchow to Namking via Buseku.

NOTE.—Many of the lines that should be established along the tributaries of the river Yangtsze have not yet been surveyed.

The five sections above enumerated are the most important branches of the Yangtsze line with regard to passengers and goods from Hankow, Kiukiang, Chinkiang and Shanghai. The necessity of opening or extending a service to the tributaries of the Yangtzekiang is obvious.

3. Shanghai-Chefoo-Tientsin line.—Voyages to be made at weekly intervals, and two vessels of 2,000 tons each, with a speed of from 12 to 15 knots, to be placed on the service. These vessels to be both cargo and passenger boats.

The importance of this line is clear from the fact of its securing communication between Peking, Tientsin, and Shanghai, three of the emporia of China. Provisions from the south of Peking as well as foreign imported articles, passengers, and freight for the south, depend for transport upon the facilities afforded by the line under notice, while the Yokohama-Shanghai line and other important lines are connected with it.

4. Shanghai-Chefoo (or Talienwan)—Newchang line.—Weekly voyage with two vessels of about 2,000 tons each and a speed of from 12 to 15 knots. These vessels to be passenger and cargo boats. Newchwang and Talienwan will become important places for the export of merchandise from Manchuria and Siberia, and for the import from Shanghai of goods from South China, on the completion of the East China railways. That those two places will be developed to an extraordinary extent in the future its beyond doubt, and the expediency of opening a weekly service on the part of Japan is evident.

5. Hongkong-Shanghai and Nagasaki-Vladivostock lines.—Weekly service with four vessels of 2,500 tons each and a speed of from 13 to 16 knots. Ships to be available for passengers and cargo.

The completion of the Siberian and East China Railways is likely to make Vladivostock one of the most flourishing ports in the north. The service to Vladivostock hitherto maintained by the Yusen Kaisha with steamers calling at the various ports in Korea and China is ineffective to compete with other companies. The number of voyages with calls at intermediate ports ought therefore to be reduced, so that the passage between Vladivostock, Hongkong, Shanghai, and Nagasaki may be more quickly performed.

6. Kobe-Vladivostock line.—The intermediate ports of call to be Shimonoseki, Nagasaki, Fusan, and Wonsan; the service to be weekly; three steamers for passengers and cargo to be provided, each of about 3,000 gross tonnage and a speed of 13 knots, with a maximum speed not exceeding 16 knots.

As stated above, the development of Vladivostock is likely to increase the number of passengers and the quantities of freight from America, and also from Europe and Hongkong. The Nippon Yusen Kaisha's fortnightly service is utterly insufficient to meet the case, and a weekly service is absolutely necessary.

7. Kobe-Chin-nampho line.—Ports of call—Shimonoseki, Nagasaki, Tsushima, Fusan, Mokpho, and Inchhon. Weekly voyages to be maintained by four vessels of about 1,000 tons each and a speed of from 11 to 13 knots, available for passengers and cargo.

The Korean service so far carried on by the Nippon Yusen Kaisha has secured connection with the North China line, but in order to guarantee greater expedition in the voyages to North China, it is necessary to establish a distinct service to Korea and North China. Since the Sōul-Inchhon railway and the Sōul-Fusan line are likely to secure for Japan the advantages of inland communication in Korea, it is highly advisable that measures should be adopted towards securing also the coasting trade of the peninsula. Hence the necessity of maintaining a weekly service to Korea.

(8) Kobe-Tientsin line.—Ports of call—Shimonoseki, Nagasaki, and Chefoo (the last-mentioned port only on the outward voyage). Weekly service to be maintained by four vessels of about 2,000 tons each and a speed of from 12 to 14 knots. The vessels to be passenger and cargo boats. Japan's share of transport business in connection with Tientsin has recently shown a marked development and still greater progress is to be reasonably anticipated. If the service to Tientsin is to be hampered by calling at the various ports in Korea, as hitherto, no small inconvenience will be entailed. It is therefore advisable to establish a direct service at weekly intervals.

(9) Kobe-Newchwang line.—Shimonoseki and Chefoo to be ports of call (the last mentioned only on the outward voyage). Weekly service to be inaugurated, with four vessels of

Digitized by Google Original from CORNELL UNIVERSITY

2,000 tons each and a speed of from 12 to 14 knots. The ships to be available for passengers and cargo.

The reasons given in the case of the Kobe-Tientsin service apply with equal force in this case.

10. Hakodate-Otaru-Vladivostock line. — A weekly service with two vessels of about 1,000 tons each and of a speed of from 12 to 14 knots. Passenger and cargo boats.

To provide ample communication between Japan and Vladivostock it is necessary to establish a weekly service to Hakodate and Otaru for mails, passengers, and freight, avoiding the delay inevitable by the Kobe-Vladivostock line, the steamers on which call at the Korean ports. The new line under notice would be connected with the Yokohama-Hakodate line.

CHINA NOTES.

A Wuchang dispatch, printed in the same paper, states that Viceroy Chang Chih-tung of that city received lately a private telegram from one of the Princes of the Empress Dowager's party, advising him to apply for permission to proceed to Peking for an audience, "thereby saving the Empress Dowager from the necessity of commanding his presence in the Capital, a step which would raise much talk and conjecture amongst the people of the empire." Viceroy Chang, it is averred, will not, however, take the hint, and if invited by Imperial decree to go up to Peking intends to reply that many of his public works and factories demand his presence in Wuchang, which will therefore prevent his leaving his post at present.

Shanghai has got hold of another bunder to the effect that a young Manchu who recently visited Wuchang was the Emperor Kuang Hsü. The authorities at Wuchang, says a contemporary, tried to hush the matter up, but Chang Chih-tung's excitement was intense, and an endeavour was made to stifle discussion by substituting a young man who somewhat resembled the "stranger." The latter, however, had a Pekingese accent, and signed his name in English "Wang K. S." on a registration slip. The "stranger" was taken to Nanking, but many of the coolest-headed Chinese at Wuchang are convinced that he is really the Emperor Kuang Hsu, who has succeeded in escaping from the clutches of the Empress Dowager, and is biding his time.

There are numerous telegrams in the Japanese vernacular papers giving conflicting accounts of the situation at Mr. Pritchard-Morgan's concession in Korea. The fact is, remarks the *N.-C. Daily News*, that the Unsan mines are now in Mr. Pritchard-Morgan's possession, some four or five of his European representatives being on the spot with a sufficiently strong force of Japanese; and as the Korean miners and the inhabitants of the villages round about are all most friendly with Mr. Pritchard-Morgan and his people, there is no fear of his being dispossessed of the concession that he has secured in proper form and with the full approval of the British representative at Sōul. No credence need be attached to the reports current in the Japanese Press of German or Russian opposition to Mr. Pritchard-Morgan's operations in Korea.

On the 26th January King Lien-shan, manager of the Imperial Chinese Telegraphs and 1,231 other signatories, on receipt of the news of the deposition of H.M. Kuang Hsü, sent the following telegram to the Princes and Ministers of the Tsungli Yamen :—When we received the edict of the 24th instant, in which the Emperor proposed to abdicate on account of illness, we were amazed, and the mandarins, gentry and merchants from all the provinces residing in Shanghai became full of anxiety and discussed the matter everywhere in the streets. We, therefore, wire to you to beg of you to be loyal and faithful, and on behalf of the nation to implore the Emperor not to think of abdicating, though he should be unwell, so that the Empress Dowager at her advanced age may not have the extra burden of ruling a distracted Empire, and so that the spirits of our ancestors may be at rest and the people live in peace. Signed by King Lien-shan, prefect, and by 1,231 in all, 12th moon, 26th day.

To judge from the following telegram, which our senior Shanghai contemporary prints, the Reform Party in Peking have found it advisable to "bide a wee":—Since the receipt by the Tsungli Yamên of such a large number of protests from the provinces against the appointment of an Heir-Apparent to the late Tung Chih's Throne, ignoring the right heir, Kuang Hsü, his Majesty seems to be treated with more consideration now by the Empress Dowager who also congratulates herself that she did not follow the advice of Prince Ch'ing and his faction in accepting point blank the so-called resignation of Kuang Hsü and placing the six-year old son of Prince Tuan on the Throne. It has shown her also that the country is still faithful to the Manchu dynasty in the person of Kuang Hsü. It would not be good policy, therefore, to be hard upon the Empress-Dowager, at present, and drive her to extremities, but she should be allowed in her own person to counteract the intrigues of his Majesty's bitterest enemies, Prince Ch'ing, Prince Tuan, Kang Yi, Huai Tapu, Wang Wên-shao, etc. The Empress-Dowager seems to have availed herself of the loop-hole given her in the various protests, namely, laying all the blame on her advisers, and it is right that we should let well alone for the time being. There is yet time to devise stringent measures when she allows herself to be unduly influenced by those inimical to the Emperor.

AMERICAN NOTES.

The New York Board of Rapid Transit Commissioners on Jan. 16th awarded the contract for the building of the underground railway in New York to J. B. McDonald of 100 Broadway, one of the two bidders. His price was $35,000,000.

The Auditorium tower, 320 feet high, and the Masonic Temple, 302 feet high, hitherto the tallest structures in Chicago, are now overtopped by the tower of a new business building on Michigan Avenue, 385 feet high. A searchlight will be put on the tower as a help to lake vessels.

The city of New York has Bonds outstanding to the amount of $358,104,307, which, less $105,435,841 in the sinking funds, leaves a net funded debt to provide for of $252,668,436. Chicago owes $34,527,000, of which $11,000,000 grew out of the construction of the drainage canal.

The removal of a few shovelfuls of earth on the second day of the new year, letting the waters of the Chicago River into the great drainage canal begun over seven years ago, marked the practical completion of what *The Outlook* says is "the largest purely artificial canal in the world." Intended at first merely as a channel to carry off impurities, the idea and the work have grown until it is now predicted that it will some day be a great commercial waterway, connecting the busy ports of the lakes and the Mississipi, and making Chicago the country's commercial centre. Although it has cost one third as much as the Suez canal, it has been built by the municipal corporation.

On October 8, 1898, Harada Jiro was crossing the railroad track at the crossing of Park and Everett streets in Alameda, California, when he was run over by a local train. Harada alleged that the train was running at great speed and that the bell on the engine was silent. As a result of the accident he lost a leg and three fingers. He began a suit against the railroad company for $20,000 damages, and his case was presented in the United States Circuit Court by Mr. Schlesinger and Assistant United States District Attorney Marshall B. Woodworth. On the first trial the jury disagreed on the extent of damages, but at the second trial the jury awarded him $5000. The jurors stood ten for $10,000 damages, but they compromised with the minority for the sum stated.

A dreadful tragedy is reported to have taken place at North Brookfield, Mass., on January 19th. Martin Bergen, late catcher of the Boston baseball team of the National League, who had been mentally unsound for some time, killed his wife and two children and then committed suicide. Mrs. Bergen and one child were killed with an axe, and then Bergen used a razor to cut the throat of his other child and his own. The affair was discovered by the neighbours, who found the body of Bergen and his little girl by the kitchen door. The bodies of Mrs. Bergen and the little body were in the bed. Bergen was 29 years old, his wife about the same age, his girl 8 or 9 years old, and the boy a little younger. Bergen had a prosperous farm and considerable livestock. He began playing with the Wilkesbarre Club in 1893, and later held positions n teams of Pittsburg, Kansas City, and Boston.

Replying recently to inquiries from the Industrial Commission, Mr. John Rockefeller said that "it is too late to argue about advantages of industrial combinations. They are a necessity, and if Americans are to have the privilege of extending their business in all the States of the Union and into foreign countries as well, they are a necessity on a large scale and require the agency of more than one corporation." Mr. Rockefeller makes these suggestions regarding legislation to control trusts:—First, federal legislation, under which corporations may be created and regulated, if that be possible. Second, in lieu thereof, state legislation as nearly uniform as possible, encouraging combinations of persons and capital for the purpose of carrying on industries, but permitting state supervision, not of a character to hamper industries, but sufficient to prevent frauds upon the public.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The following is the sixty-ninth report of the Court of Directors to the ordinary half-yearly general meeting of shareholders to be held at the City Hall, Hongkong, on Saturday, the 17th February, 1900, at noon.

To the proprietors of the Hongkong and Shanghai Banking Corporation.

Gentlemen,—The directors have now to submit to you a general statement of the affairs of the Bank, and balance-sheet for the half year ending 31st December, 1899.

The net profits for that period, including $963,532.06, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provisions for bad and doubtful accounts, amount to $3,118,624.31.

The directors recommend the transfer of $500,000 from the profit and loss account to credit of reserve fund, which fund will then stand at $11,500,000.

After making this transfer and deducting remuneration to directors there remains for appropriation $2,603,624 31, out of which the directors recommend the payment of a dividend of one pound and ten shillings per share, which at 4/6 will absorb $533,333,33, and a bonus of ten shillings sterling per share, which at 4/6 will absorb $177,777,78.

The difference in exchange between 4/6, the rate at which the dividend and bonus are declared, and 1/11⅛, the rate of the day, amounts to $931,669.64.

The balance, $960.843,56, to be carried to new profit and loss account.

DIRECTORS.

Mr. N. A. Siebs has been elected chairman for the year 1900 and Mr. R. Shewan deputy chairman.

Mr. E. Shellim and Mr. Robert H. Hill having resigned their seats, Mr. D. M. Moses and Mr. R. L. Richardson have been invited to fill the vacancies; these appointments require confirmation at this meeting.

Mr. A. Haupt, Mr. A. McConachie, and Mr. P. Sachse retire in rotation, but, being eligible for re-election, offer themselves accordingly.

Digitized by Google Original from CORNELL UNIVERSITY

AUDITORS.

The accounts have been audited by Mr. F. Henderson and Mr. A. G. Wood, the latter acting for Mr. C. S. Sharp, who is absent from the colony.

Mr. F. Henderson offers himself for re election, so also does Mr. C. S. Sharp, who is shortly returning to the colony.

R. M. GRAY, Chairman.

Hongkong, 29th January, 1900.

ST. GEORGE'S SOCIETY OF YOKOHAMA AND TOKYO.

The following report was submitted to the annual meeting held on Thursday evening :—

St. George's Day was celebrated by a very successful Ball last year, and the Society, in conjunction with the St. Andrew's Society, arranged a very successful Entertainment, the entire proceeds of which, yen 1,513.00, were devoted to the *Daily Telegraph* Shilling Fund in aid of the Widows and Orphans of British Soldiers.

The combined Societies have also opened Subscription Lists in aid of this Fund and are pleased to report that yen 2,953.84=£300 have been remitted home, and there is still an available balance of yen 832 000.

E. & O. E.

F. J. HALL, Hon. Treasurer.

February 10th, 1900.

ROMAN CATHOLICS AND THE WAR.

Cardinal Vaughan has issued the following circular letter :—

Archbishop's House, Westminster, Dec. 20, 1899.

Rev. dear Father,—The fortune of war in South Africa fills the public mind with justifiable anxiety.

While the negotiations were proceeding public prayers *pro pace* were offered throughout the diocese in every Mass when the rubric permitted. Since the declaration of war prayers have been offered in like manner *pro tempore belli*. These prayers continue.

A solemn requiem was sung last month at the Pro-Cathedral for the souls of those who had fallen in battle. A second public requiem will be sung at the Oratory on the first day available. Functions in other churches will be duly announced.

In addition to prayers for the dead, we should now offer public and united supplications for our Army, officers and men, and for speedy success to the British arms.

Whatever doubt was entertained as to the lawfulness of enforcing the British demands by recourse to the sword, there can be no doubt now that we have been forced into war, and that justice is on our side.

It has been clearly ascertained that Boer leaders in both Republics had long since determined to strike for the establishment of the Boer supremacy throughout South Africa; that military preparations on a large scale had been secretly carried out for that purpose. It is also clear that the negotiations for a peaceable solution of the difficulties that had arisen were suddenly broken off by the ultimatum declaring war within a few hours, unless England at once withdrew her soldiers from her own colony or forbade her troopships to enter her own African ports. There can be no mistake as to the intention; the invasion of British territory has been accompanied by a formal and repeated declaration of the annexation of the invaded territory to the Boer Republic. It is always lawful and sometimes necessary to resist invasion and annexation *vi et armis*.

It is now a question of something more than of what is lawful. The question is, Shall the British Empire be allowed to fall to pieces by supineness and by want of determination and self-denial? The answer is, No.

This Empire has been raised up by the same Providence that called the Roman Empire into existence, and, as God used the one towards the attainment of His own Divine purposes of mercy, so does He seem to be using the other.

In spite of the blunders and crimes committed by many of her sons in building up the Empire, the Empire has made for peace, for liberty, for law and order. An Empire that has power to establish these conditions, which are preliminary to the spread of Christianity, is possessed of a great and sacred trust, not to be surrendered until God Himself shall demand the surrender. At the present moment countless millions in the Dark Continent depend for their temporal and external salvation upon the establishment of that reign of law which usually follows British supremacy.

Let us remember that we are "as a drop of a bucket," that we are His instruments to be used or cast aside at His good pleasure. Let us not provoke Him to reject us by pride, self-righteousness, and contempt of others. Rather let us humble ourselves as a nation before Him, confess our sins, and repent.

While we realize with grateful confidence the most honourable mission with which God seems to have entrusted us, we must endeavour not to be altogether unworthy of it, and must determine to make God, both in national and private life, the first object of our love and service. And then, we must be ready personally and collectively to make every sacrifice necessary or useful for the fulfilment of His trust.

For these purposes, you will please to recite on Sundays, until further orders, after the principal Mass or at Benediction, the prayers to be found in the Manual among the "Occasional Prayers," and headed "In times of Calamity."

Believe me, Rev. dear Father, to be your faithful and devoted servant,

HERBERT CARDINAL VAUGHAN.

THE BURMO-CHINESE RAILWAY QUESTION.

A correspondent learns that Captain Wingate's recent journey from China into Burmah has led him to take the same views as to a railway extension from Burmah into Yunnan as those of another recent traveller, Mr. Carey. Captain Wingate has been in eleven out of the eighteen provinces of China, and thinks Yunnan and the adjacent Kweichow the poorest of the whole. It would be much better, he thinks, for those concerned in the extension of railways in Burmah to turn their attention to the vast tracts still existing in an undeveloped state in that province and to Siam. If in place of dreaming about railways to cities in South Western China the line now in course of construction to Lashio, in the Northern Shan States, were completed, and the line extended to Bhamo and thence to Momein, they would, Captain Wingate says, attract almost all the trade that is likely to pass through Burmah for many years to come. Such a line would be of value politically as well as commercially. He regards the natural trade routes of a large part of Yunnan as being by Canton, Hankow, and Tong-king, and not by Burmah at all; and no railways will alter this. As to mineral wealth, this has never been investigated by experts. It is curious how unanimous all competent travellers in this region are against railway extension from Burmah into Yunnan.

The same correspondent states that he has seen an Indian authority who assures him that the Viceroy's Government have at this moment no intention of proposing any extension of railway policy in the immediate future. The whole matter, it seems, has been carefully considered since Lord Curzon went to India, and the conclusion is that the country can do much better with railways within its own borders. In particular, the statistics of the existing trade between Burmah and South-western China show that its volume is very small and is diminishing, while the trade with all the States adjacent to Burmah is increasing, in some instance by leaps and bounds. The correspondent adds that he believes Lord Curzon entertains the opinion that there is no trade worth speaking of in Yunnan, that Szechuen trade will always use the Yangtzse, and that railway development in Burmah is badly required and will be followed by a large increase of trade in such regions as the northern and southern Shan States and in the Chin country. It is probable that the line now being completed from Mandalay north-eastward to the Salween will stop at the Kunlon Ferry, and that its extension northwards into China will be left for some future time.

SIR WILLIAM BUTLER.

A DEFENCE AND AN EXPLANATION.

"X" writing in *The Westminster Budget*, says Sir William Butler is probably at the present time the best-abused man in the British Isles. Ignorant people call him a "Pro-Boer." The amateur strategists at the club—and for the nonce the clubs seem to be peopled exclusively by amateur-strategists—say roundly, from their posts on the hearthrug, that "Butler" (they never allow the unfortunate gentlemen any title or prefix to his name) is to blame for this, that, and the other; for the inaccurate counting of the Boer guns, for the underestimate which was formed of the forces which the enemy could put into the field, for the numerical weakness of our army in South Africa at the outbreak of hostilities, and for a thousand other things besides. The wild accusations hurled at Napoleon in the delightful parody of the verses of a forgotten poet, preserved to us in "Rejected Addresses," are scarcely more exaggerated than some of the complaints preferred against Sir William Butler to-day. Many people appear to believe that this fine soldier is quite capable of "filling the butchers' shops with large blue flies," and of

Digitized by Google Original from CORNELL UNIVERSITY

committing every other atrocity possible and impossible.

A rush of "patriotism" to the head is perhaps accountable for this, as for many other things; but as the bulk of the Press in England has seen fit to join its voice in this senseless clamour—contenting itself with telling people what they want to hear, rather than what they ought to know—I think that the time has come to place the public in possession of a few facts concerning the brave man who has been thus mercilessly thrust into the pillory, while his official position renders it impossible for him to defend himself from the calumny and insult to which he is daily exposed.

To begin with, then, I state fearlessly—and the Blue-books which must eventually appear, if printed *in extenso*, will certainly bear out my contention—that Sir William Butler's sole offence lies in the fact that he failed to estimate rightly the pugnacity of the Cabinet, and, further, that he, more clearly than any other man, foresaw the magnitude of the struggle in which we were engaging with so light a heart, and the strain which would be put upon our national resources before we could hope to bring it to a successful issue.

Everybody knows that Sir William Butler was appointed to act as Governor of Cape Colony and High Commissioner of South Africa during Sir Alfred Milner's short visit to England. Everybody does not know, or, having known, has forgotten, that up to the time of his departure for Europe Sir Alfred Milner had scrupulously refrained from adopting any strong line of policy as regards the Transvaal and the grievances of the Uitlanders. Sir William Butler, to whom no definite instructions were given, was left to fill Sir Alfred Milner's place, and he proceeded to do what in nine cases out of ten would have been the thing most earnestly desired by the Government which he was serving. That is to say, he did all in his power to keep things quiet, and to avoid what in common parlance we term a "row." Everyone who has served in outlying portions of the Empire is aware that this is the line which most generally commends itself to the authorities in Downing Street; and if any blame attaches to Sir William Butler in this matter, it is that he was somewhat more outspoken in the cause of peace, somewhat more definitely opposed to magnifying grievances than a more reticent man would have been. This is to be accounted for in two ways. To begin with, Sir William belongs to a race which has the gift of speech in a marked degree, and his blood undoubtedly led him to say more than was strictly necessary. Also, Sir William Butler distrusted the capitalists of South Africa and all their ways and works. That monstrous monument of criminality and ineptitude, the Jameson Raid, was to him a thing impossible to forgive. That the men who lent themselves to such an undertaking were capable of driving the Imperial Government into hasty, ill-considered, and unjustifiable action seemed to him to be certain; and, believing this, he was determined that, come what might, he would not aid them in any of their schemes. But behind all this there lay one other reasons for the maintenance of peace, if peace could by any means be maintained. Sir William Butler saw only too clearly what the public at large is beginning to realise at last by the aid of a humiliating experience, that the Government in England and the authorities at the War Office failed utterly to appreciate the magnitude of the campaign which would be needed to subdue the Boer Republics, the disabilities under which our troops would labour, and the difficulties which would be experienced in fighting with our infantry against so warlike and so mobile a foe.

Meanwhile, Sir Alfred Milner—a wise man in his generation—was personally acquainting himself with the views of the Cabinet, before committing himself to a policy so momentous, and when he at length returned to South Africa he knew that he would be backed by the Government were he to decide to bring all pending questions to the grim arbitrament of war. Landing in Cape Colony with his mind practically made up as to the course of future events, he found that the speeches of his *locum tenens* were incidents hampering his actions. His own views and those of Sir William Butler on all the question at which we have glanced were widely opposed, and in the end he made representations upon the subject to the Colonial Office. The cogs of the machine clutched one another, and the War Office was set in motion. Something resembling a reprimand was addressed to Sir William Butler, who at once acted in the generous and unselfish manner which was to be expected from him. He pointed out that he had done what he believed to be the thing most desired by the Imperial Government; that he had every right to believe that he would be supported in such action, both on account of all that had gone before and from the absence of any definite instruction as to the line which it was desired that he should take; and he wound up by offering to resign his command if his presence in South Africa in any way hampered the executive. As we all know, his resignation was accepted by the War Office, though as a proof that his action had not been of a kind incapable of defence, he was promptly gazetted to a command which is technically superior to that from which he was removed. This move had also the effect of preventing Sir William Butler from uttering a word in explanation or defence of the conduct which, during the last few months, has been made the object of so much thoughtless abuse.

But before he left the Cape Sir William Butler gave some advice which, if followed, might well have altered the whole course of the present campaign. Natal must be abandoned so far as its northern districts were concerned, he said. A force of some twenty thousand men must be placed to guard the line of the Tugela, and an army of not less than a hundred thousand more must be employed in the advance on Bloemfontein through Cape Colony. At the time the figures were regarded as ridiculously large. The experience of the past few weeks show only too plainly how accurately Sir William Butler gauged the seriousness of the situation with which the Government was confronted.

Sir William Butler had not been at the Cape for a very long time before the War Office took the disastrous step of accepting his resignation, and the shortcomings of the local Intelligence Department must be attributed to the neglect of his predecessors rather than to any failure upon his part. When all is known it will be found that he estimated the task before us with a sure accuracy in which our other military authorities have been sadly lacking; that the loss of his advice and local knowledge at a critical moment is a price paid for prejudice which is positively incalculable; and that the senseless outcry raised against him by the Press, which renders it practically impossible for a weak-kneed Department to send him back to a place where the want of a really scientific general is making itself so wofully felt, is robbing the country of one of its best weapons. England is rightly proud of her soldiers in South Africa, but the actions of her generals have not hitherto been of a character to make her throb with enthusiasm. We are waiting breathlessly to see what Sir Redvers Buller can do; Sir Charles Warren, in whom many of those who know centre their best hopes, only landed in Capetown a day or two ago; Sir William Butler, who knows the tricks of the difficult game better, perhaps, than either, is eating his heart out in England, scorned, abused and slandered, because he foresaw more clearly than his fellows the horrors of the present, and strove valiantly to avert what he believed to be a nationaly calamity.

CHINESE TURKESTAN.

Captain H. H. P. Deasy recently arrived in London after spending two years in exploring and survey work in Central Asia. Some particulars have been published of Captain Deasy's various journeys, and of the results which he has obtained. Throughout his travels he met with the greatest obstruction from the Chinese. In spite of this, however, he succeeded in accurately surveying all but a few miles of the unknown parts of the Yarkand River. After completing his survey of the Yarkand River, Captain Deasy went to Kashgar, in order, if possible, to arrange for another journey in the mountains to the south of Polu. In the negotiations with the Taotai, Captain Deasy received every assistance from Mr. Macartney, but, unfortunately for British interests, and for the comfort of British travellers in Chinese Turkestan, Mr. Macartney's official position is not such as to lend authority to any representations which he may make to the Chinese officials. Mr. Macartney is officially designated "Special Assistant for Chinese Affairs to the Resident in Kashmir," and his official status is, to to say the least, somewhat doubtful. But what is perhaps of more practical importance is that Mr. Macartney is not provided with even a single Sepoy by way of escort, while Russia is represented at Kashgar by a Consul General with an escort of nearly a hundred Cossacks under the command of a Russian officer. It may easily be imagined how difficult is the situation in which Mr. Macartney at times finds himself placed. The Taotai, and even subordinate officials, do not hesitate to remind Mr. Macartney of his want of official status, and of the fact that he has no escort, when it is convenient for them to do so, and it says much for Mr. Macartney's personal influence that he has been able to do as much as he has in fact done to maintain British interests at Kashgar. The system of government in Chinese Turkestan is simplicity itself. The officials receive no salaries from the State. The Taotai, or Governor, must send a certain tribute to Peking. He orders the Ambans, or district magistrates, to collect a certain amount in their districts, the amount in each case being considerably in excess of the sum remitted to Peking. The Ambans instruct the Begs to collect a certain amount of revenue which will leave them a considerable surplus after satisfying the Taotai. The Begs, in their turn, repeat the process with their subordinate officials, and so the process goes on.

SPION KOP.

New York, January 17.

A *Sun* cable from Spearman's Farm, Natal, dated January 17, 9.10 p.m., says:—Lord Dundonald, with a mounted brigade, pushed suddenly forward on Thursday last and seized the Springfield ridge. Then, hurrying forward, he took a very strong position at Zwartskop, commanding Potgieter's Drift, finding the Boers totally unprepared for the British advance. A number of the enemy were bathing in the river when Lord Dundonald's force appeared.

General Lyttelton's brigade was sent to hold the position. The whole British force, with the exception of a garrison to hold Colenso, advanced without delay. General Hildyard's command is now at Springfield. The South African Light Horse desired to bring a port or ferry-boat to the south side of the river and six men of that command therefore swam the river and brought the boat over under Lieutenant Carlyle.

After a wait of four days the British advance was resumed yesterday. Lyttelton's brigade crossed the drift in the evening and is now holding the kopjes on the British right. Warren's division made a left flank attack on the enemy. The remainder of the column is now crossing the river.

The second edition of the London *Telegraph* publishes a dispatch from Spearman, or Spearman's Farm, which says that General Lyttelton, after he crossed the Tugela, seized with little opposition a line of low ridges a mile from Potgieter's Drift. Howitzers were carried across the river during the night. Naval guns and howitzers effectively shelled the Boer position from Mount Alice, near Swartzkop.

General Warren crossed the river six miles farther west, near Wagon Drift, in the face of a hot and heavy fire from Boer cannon and rifles. He has effected a most satisfactory lodgment two miles farther toward Sproenkop.

The difficulties in crossing the swollen river are great. The wagons are quite covered.

New York, January 21.

A cable from Spearman's Camp, dated January 21, 8.35 p.m., says:—To-day there was another stubborn fight from dawn to dark, the British slowly gaining ground. There has been constant musketry firing to the northwest. The British gained the position the Boers were holding on the rocky ground beyond. There is fighting in front and on both flanks, covering a very wide range of territory.

At 10 'clock this morning the Dublin Regiment carried a strong position at the point of the bayonet. A correspondent to-day visited a field hospital on the battlefield on Coventry's farm. The buildings were full of wounded, about 200 men. None of them are seriously wounded. Colonel Hamilton, attached to Clery's Staff, Captain Vaughan, and Captain Muriel are among the slightly wounded. Warren is confident and careful. He prefers taking five days to accomplish his object than to risk defeat by attempting to make too fast an advance.

The British casualties in yesterday's fighting were 279. Captain Hensley of the Dublin Regiment was shot in the forehead and killed.

Spearman's Camp, January 21, 10 20 p.m.

After ten hours of continuous fighting and terrible fire Generals Hart and Clery yesterday advanced 1000 yards. The Boers maintained an irregular fire during the night, but the British outposts did not reply.

This morning at daybreak the Boers opened a stiff fire. The British stood to the guns where they had slept and the engagement was renewed vigorously. The field artillery poured shrapnel into the enemy's trenches.

A rumour that Ladysmith had been relieved enlivened the British, who sent up a ringing cheer. This was taken for an advance. The first kopje was carried at the point of the bayonet, and the Boers retreated to the next kopje, which, like most others, was strewn with immense boulders, surmounted by mounds on the summit.

The British advanced steadily and the Boers relaxed slightly. The latter did not show such tenacity as previously. Their Nordenfeldts were

Digitized by Google Original from CORNELL UNIVERSITY

fired at long intervals and their cannon but seldom. Apparently the Boers were short of ammunition. All day the roar of musketry fire continued. The British took three Boer positions on the mountain and found shelter behind the boulders.

London, Jan. 22.

The *Telegraph* has the following dispatch dated Saturday from Spearman's Camp:

"General Warren's forces have fought a deliberately planned and successful battle. This important engagement occurred to the west of Spion Kop and practically resulted in our securing the rough tableland which constituted the key of the Boer position.

"After a fierce cannonade had been directed against the enemy's line for some time, the British troops assembled near an eminence known as Three Tree Hill, which forms the centre of a semi circle of crests, crowned with the enemy's works and some six miles long. Steadily and with great dash the British infantry went forward in the face of a heavy fusillade from Mauser rifles. Our troops were disposed as follows: Major General Woodgate's brigade on the right, Major-General Hart's brigade in the centre and Major-General Hildyard's brigade on the left.

"Soon after midday the battle on the hill became furious, and from 3 in the afternoon until 6 the fire from cannon and rifles was extremely heavy. Point after point of the enemy's positions were seized by the British troops and eventually the Boer right broke and was forced back toward Spion Kop.

"Our force is bivouacking upon the ground it captured so gallantly. During the action the enemy brought into play new guns, one of which was a quick-firer. In to-day's fighting our losses were trifling, but the Boers suffered heavily.

"While General Warren was fighting an effectual demonstration was proceeding at Potgieter's Drift, the enemy's positions near there being vigorously shelled by the British batteries."

London, January 22.

The Times has the following, dated Sunday evening from Spearman's Camp:

"All yesterday and to-day General Warren has been attacking the Boers. Their position is a long ridge, four miles northwest of Trichard's Drift. Ascending from the river at dawn yesterday Saturday) our guns occupied a kopje on the east of the range.

"The enemy's defences were chiefly stone sangars extending forward and right along the spur, making the position semi-circular. At 11 o'clock General Hart's brigade advanced on the left along a rocky, uneven spur, into the semi-circle, until he could fire from three directions. Taking advantage of all possible cover the troops advanced to a point within 500 yards of the enemy's right wing, but they did not advance beyond the edge of the cover. There they remained until dark and bivouacked.

"In addition to Maxim-Nordenfeldts the enemy fired shrapnel captured at Colenso. Their fire was intermittent and always temporarily silenced by our masked batteries. At night the enemy's right wing evacuated its position."

London, January 22.

The *Daily Chronicle* has received the following dated January 22d, 4.10 p.m., from Spearman's Camp:—"The Boers admit twenty-one casualties during General Lyttelton's skirmish on Saturday. General Warren continues pushing forward, though he is necessarily making very slow progress, as the Boers are numerous and strongly intrenched. Our infantry are working over parallel ridges, with Lord Dundonald's cavalry lying well out on the left flank and awaiting developments. The Boers contest every inch of the ground.

"This morning General Warren's artillery reopened fire, but the Boers did not reply and our fire became less hot. The naval guns in front have been quiet. A Boer prisoner who was brought in boasted that it would take us three months to reach Ladysmith."

The Times publishes the following from Frere Camp, dated yesterday (Monday):—"On Friday General Warren began a long, circuitous march from Trichard's Drift westward. This was abandoned owing to the fact that the long ridge which runs from Spion Kop was occupied by the enemy, who commanded the route, rendering the maintenance of communications for transports impossible. He therefore returned and camped for the night about two miles from Trichard's Drift. On Saturday a frontal attack on the ridges was ordered."

The correspondent then describes Saturday's fighting (already cabled) and adds: "The men behaved splendidly under an incessant heavy cross fire in a burning sun for seven hours. Our casualties were for the most part slight, the proportion of killed and wounded being extremely small."

Just before midnight the War Office issued the following dispatch from General Buller:

"Spearman's Camp, Jan. 22, 6 p.m.

The following casualties are reported in General Hart's brigade as the result of yesterday's fighting:

"Killed:—Captain Ryall, Yorkshire Regiment and five men.

"Wounded:—Second Lieutenant Andrews, Border Regiment; Captain MacLaughlan, Inniskillings; Lieutenant Barlow, Yorkshire Regiment and seventy-five men; missing, eight men. Other casualties will be forwarded when received."

London, January 24, 2.15 a.m.

The following dispatch from General Buller, dated Spearman's Camp, January 23, 6.20 p.m. has just been posted:

"Warren holds the position he gained two days ago. In front of him, at about 1400 yards, is the enemy's position, west of Spion Kop. It is higher ground than Warren's position, so it is impossible to see into it properly. It can be approached only over bare open slopes and the ridges held by Warren are so steep that guns cannot be placed on them. But we are shelling the enemy's position with our howitzers and field artillery, placed on lower ground behind infantry. The enemy is replying with Creusot and other artillery. In this duel the advantage rests with us, as we appear to be searching his trenches and his artillery fire is not causing us much loss.

"An attempt will be made to seize Spion Kop, which forms the left of the enemy's position facing Trichard's Drift and which divides it from the position facing Potgieter's Drift. It has considerable command over all the enemy's intrenchment."

The *Daily Chronicle* publishes the following heliographed message from Ladysmith, dated January 22d, by way of Swartz Kop, January 23d: "Yesterday we could see British shells bursting close to the Boer camp on the plateau this side of Potgieter's Drift, but the camp still remains in position there to-day. We heard very heavy firing all this morning. The bombardment here is slack, but the Boer big gun on Mount Bulwana is still firing."

The Times publishes a letter from Ladysmith, dated December 19th, the writer of which says that the besieged have been on half rations for at least two months.

As we know, the position, when gained, proved valueless, and was evacuated.

TELEGRAMS.

(Reuter's Special Service.)

THE BOER WAR.

Shanghai, Feb. 9.

Buller has captured a kopje called Krantzploof, which commands the shortest road to Ladysmith, and it is unlikely that the Boers will succeed in dislodging us. The enemy on Tuesday endeavoured to retake the position, but were repulsed. MacDonald is holding the highest part of the kopje and the Boers are on the lower part. Unfortunately the slope is too steep to mount artillery.

The Boers are very active about Colesberg, shelling the convoys to the British camps.

Gatacre's fighting yesterday was chiefly an affair of outport. The Boers retired on the British reinforcing the outlying camps.

Mr. Gerald Wyndham, Under Secretary of State for War, has announced that it has been decided to send seventeen more battalions of Militia and 300 more Yeomanry to South Africa, bringing the grand total to 194,000 men, exclusive of ineffectives.

The casualties at Potgieter's Drift up to noon on Tuesday, were two officers killed, 15 wounded, and about 216 men killed and wounded.

Shanghai, Feb. 10.

A Boer despatch from Ladysmith dated the 8th instant says that the British retired across the Tugela that morning, abandoning the position after the Boer bombardment.

Later.

Macdonald was engaged on the whole of Wednesday repelling a series of attacks at Koodoosberg. His casualties were 50. Methuen ordered him to retire to the Modder River. (This is obscure.)

It is understood that the British Government's plans include the addition of 37 batteries and of a third battalion to numerous regiments, as well as the erection of a barracks for artillery headquarters on Salisbury Plain.

Shanghai, Feb. 11.

Reuter's Agent telegraphs from Rensberg that it is a mistake to suppose that the British had in any wise surrounded the Boers in the Colesberg district. The enemy occupy a wide semi-circle on the north of the town, including all the avenues to the Free State. The Boers are very active, threatening our right flank and stopping our wagon traffic.

Reuter telegraphs from Springfield Camp, under date of the 9th inst., that finding the enemy in great strength on the Brakfontein Hills to the left, and the position exposed to convergent fire, Buller decided that it was impossible to advance by this route without needless sacrifice of life and ordered a retreat on Wednesday night under cover of the big guns on Zwarts Kop. The superiority of the enemy's shell fire rendered an advance impracticable.

The House of Commons have adopted the Address to the Throne by 229 votes to 39.

The supplementary Army estimates provide 14,000,000 pounds sterling and 120,000 more men, making the grand total 339,853.

Shanghai, Feb. 11.

The Times correspondent, wiring from Springfield, says that although the infantry, by a very determined assault, might have forced a way through the Boers' centre, it would have been impossible to secure the lines of communication and therefore a retreat was decided upon. After crossing the river the whole force moved beyond the range of the enemy's guns.

Shanghai, Feb. 12.

It is reported from Pretoria that the Ladysmith garrison on Wednesday night tried to force a passage in the direction of the Free State laager. No details are given.

Roberts has arrived at the Modder River, where he had an enthusiastic reception. He inspected the Highlanders in camp and congratulated the Brigade on the steadiness shown by it at Koodoosberg.

Skirmishes continue at Colesberg.

News from Kimberley, dated the 6th inst., says that the Boers continue bombarding the place. The women and children are bravely bearing the hardships of the siege.

Sir M. Moses has been named a member of the Bombay Council.

Shanghai, Feb. 13.

There are various indications that the Boers are fully prepared to meet Roberts when his plans have developed.

There is increased activity round Methuen and at Colesberg.

The advance of the Boers towards Zululand is causing some anxiety.

Digitized by Google Original from CORNELL UNIVERSITY

Buller's casualties were mostly slight wounds.

Reuter's agent telegraphs from Rensberg under date 11th inst. that two patrols, consisting mostly of Australians, were the previous day surrounded by the enemy. Some escaped, several were wounded, and 12 were captured.

Later.

In the House of Peers the Marquis of Lansdowne (Minister for War) explained the Government's Army scheme. He said that the first duty was to provide a field army of 130,000 men which would form a reservoir for further reinforcements for South Africa. The Government proposed to add to the Regular Army 15 battalions, 43 batteries, and seven Cavalry regiments. This proposal was changed in the sense of adding 30,000 regulars and 50,000 auxiliaries, making a total force of nearly 600,000.

[Note.—This telegram is somewhat obscure. The figures are unmistakeable, but the wording as to the "proposal" and the "change" effected in it is not clear.—Ed. *J. M.*]

Shanghai, Feb. 14.

Kimberley was severely bombarded on the 8th inst.

The Boers have driven in our outposts on the west flank at Rensberg. There were some casualties.

Lord Wemyss, speaking in the House of Lords, gave notice of a motion in favour of a modified form of compulsory service for home defence.

Mr. Wyndham, Under Secretary for War, speaking in the House of Commons, stated that the Government had been urged to adopt a modified form of conscription, but this was not intended. It seemed unnecessary in view of the volume of volunteer effort in every part of the Empire.

Later.

The eastern flank of the British position at Rensberg being threatened, our force at Slingersfontein has been obliged to retire to Rensberg.

Shanghai, Feb. 15.

Reuter's agent telegraphs from Rensburg, dated the 13th instant, that under pressure of a strong force of Boers, who likewise mounted big guns on Bustardnek, commanding the surrounding country, the British evacuated every post westward of Rensburg, including Coleskop.

Later.

The *Daily Mail's* correspondent telegraphs from Rensburg that there is severe fighting with heavy losses on both sides. It is doubtful whether it will be possible to hold Rensburg.

Buller's casualties from the 5th to the 7th were 26 killed and 324 wounded.

The Eighth Division has been ordered to get ready its clothing and equipment immediately for South Africa.

Orders have been received at Woolwich to despatch to Africa several batteries of Maxim-Nordenfeldts.

("Hongkong Volunteer Gazette" Service specially wired to the "Japan Mail.")

Shanghai, February 9.

A Boer despatch from the neighbourhood of Ladysmith, dated the 6th, says that on the 5th the British crossed the Tugela at Pont Drift and Mollen Drift under cover of a furious bombardment. The burghers repulsed the British at Pont Drift, causing them to re-cross in great confusion. The cannonade was of unprecedented fierceness on the 5th, and was resumed on the 6th with more guns.

Shanghai, Feb. 10.

The *Standard's* correspondent says that Lyttleton's Brigade were engaged in the main attack. The Durhams and the Rifle Brigade carried two Kopjes at the point of the bayonet and bivouacked there.

The Times' correspondent says that the enemy on Tuesday were successful at the northern end of the Kopje, but reinforcements arriving, the position was recarried at the point of the bayonet.

General Buller on Wednesday began to advance, making a feint frontal attack. He advanced to Brakfontein where the Boer artillery opened fire, sending several shells amongst the artillery, who retired an hour later. Meanwhile the British attacked vigorously the enemy's right. The Royal Engineers quickly constructed a pontoon bridge, and the cannon, hidden by the trees, bombarded the Boers heavily, surprising them. The high hill, the continuation of the Brakfontein range, was captured.

Shanghai, Feb. 14.

Colonel Clements, at Rensberg, reports that the Boers on the 9th inst. tried to turn the British right flank, but were repulsed, and the position was maintained. The casualties were small.

Reports from Kimberley state that the Boer force is increasing. On the 7th the enemy were constructing trenches to the eastward, having arrived from Mafeking with additional guns.

It is reported that Japan has allowed the Government to take over four 4.7 inch quickfirers ordered by her at Armstrong's. Other European States are acting in a similar manner regarding orders being executed at the Vickers-Maxim works, England thereby acquiring one hundred guns.

(Telegrams Received at the Legation of France in Tokyo)

Saigon, Feb. 9.

General Buller crossed the Tugela at two points on the 5th, marching on Ladysmith. The English attack has failed at one of the points, but they succeeded in getting possession of a hill called Brankfontein. The final result is unknown, but it is believed that the march of the British is arrested.

Saigon, Feb. 10.

Buller was engaged during the whole of the day on Tuesday, and the combat continued on Wednesday morning.

Saigon, Feb. 11.

From the Head Quarters at Springfield, 9th Feb:—

"The position to the north of the Tugela being exposed to cannonade by the Boers, General Buller decided that to continue the forward march would involve useless sacrifice of life. In consequence, the English retired on Wednesday to the south of the Tugela, under cover of his artillery."

Saigon, Feb. 12.

The London journals are unanimous in asserting that the retreat of Buller is due to the superiority of the Boer guns.

The Commission of the Chamber of Deputies has decided to propose the removal of Déroulède from his seat as deputy.

Saigon, Feb. 14.

In consequence of the attack of the Boers the English have had to fall back on Rensberg.

Lord Roberts has assumed the command at the Modder River.

The French Senate will reform itself into a High Court to adjudicate the affair of Marcel-Hebert.

WATERING APPARATUS

Non-freezing & Ordinary Hydrants and Street Washers.
Garden Watering Boxes and Apparatus.
Gun-Metal, Copper, and Cast-Iron Cocks and Valves.

E. GUESNIER, E.C.P.,
Engineer and Cock Manfr.,
(Successor of ACHILLE CADET)
27, Rue des Taillandiers,
PARIS.

Hydropathic and Massage Apparatus supplied to the Vichy Co. Vapour Baths (Berthe system).

Apply to BOYES & Co., agents for M. OFFENHEIMER & Co., PARIS.

ONE NIGHT TREATMENT FOR SORE HANDS

Bathe and soak the hands, on retiring, in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear, during the night, old, loose, kid gloves, with the finger ends cut off and holes cut in the palms. For red, rough, chapped, and discoloured hands, dry, fissured, itching, feverish palms, shapeless nails with painful finger ends, this one night treatment is simply wonderful.

FOR BABY'S SKIN Scalp, and hair, no other soap is so cleansing, purifying, and beautifying as CUTICURA SOAP, the most effective of skin and complexion soaps, as well as purest and sweetest for toilet, bath, and nursery. For infantile rashes, chafings, inflammations, and eruptions, for crusted, itching irritations of the scalp, with dry, thin, and falling hair, for red, rough hands with shapeless nails, and simple blemishes of infancy, when assisted by gentle anointings with CUTICURA Ointment, it is absolutely without a rival.

Sold throughout the world. British depot: F. NEWBERY & SONS, London. French depot: L. MIDY, Paris. Australian depot: R. TOWNS & Co., Sydney. POTTER D. AND C. CORP., Sole Props., Boston, U. S. A.

YOKOHAMA: SATURDAY, FEB. 24TH, 1900.

BIRTH.

On the 18th instant, at 109-B Bluff, the wife of MONTAGUE BEART, of a Son.

SUMMARY OF NEWS.

MARSHALL MACMAHON is dead.

THE Diet will be prorogued to-day.

THE Straits and Malayan South African War Relief Fund amounted to $103,383 on the 1st instant.

LATEST news from the Transvaal says that General Knox and General MacDonald have both been wounded.

THE interport football match played at Kobe last Saturday, resulted in a defeat for Yokohama by one goal to nothing.

THE Emperor of China is still alive, for on the 19th he received the Foreign Ministers in audience at the Palace in Peking.

KIPLING'S "Absent-Minded Beggar" had realised £55,000 for the War Relief Fund when the last mail left England.

THE dance recently given in the Public Hall realised some 700 *yen*, which have been handed over to the Treasurer of Christ Church.

A VERY successful series of *tableaux vivants* were given in the Public Hall on Tuesday, in aid of the South African war relief funds.

AN earthquake occurred on 2nd Jan. in the district of Achalkalak, Government of Tiflis, by which ten small villages were almost entirely destroyed.

THE number in receipt of relief in India, calculated on telegrams received up to Jan. 19, has reached the alarming figure of three and a half millions.

GEORGE WASHINGTON'S birthday on Wednesday was quietly celebrated by the American community. The U.S.S. *Oregon* fired a salute at noon.

ON January 5th the War Relief Fund at the Mansion House reached £492,000. The *Daily Telegraph* had received 1,973,378 shillings for their Relief Fund.

FOUR seamen on the U. S. Hospital ship *Solace*, who over-stayed their leave on the 19th inst., were on Tuesday arrested by the Settlement Police and taken on board.

THE success of General Roberts' advance on the Modder River has led to a retreat of the Boers from Colenso and neighbourhood, and general Buller has occupied the place.

AMONGST the New Year promotions we note Commanders Slade (*Algerine*) Luscombe (*Immortalité*) and Patey (*Barfleur*) and Lieut. Jackson (*Victorious*), who each get a step.

CRONJE'S retreat into the Free State after the relief of Kimberley was hotly contested by the British Cavalry, and he had to abandon many wagons, oxen, and stores of ammunition.

ABOUT 6 p.m. on the 21st a gambling dispute at a restaurant in Shiba, Tokyo, resulted in one *jinrikisha* man being killed and another injured. The guilty parties made their escape.

THE new Russian fishery regulations relating to the waters of Saghalien have prompted the Diet to pass retaliatory measures, by which heavy import duties are placed on Russian marine products.

A DINNER was given on Monday evening at the Grand Hotel to His Honour Mr. Justice Wilkinson and the officers of the British Court by the members of the local Bar and the Inns of Court Association.

KIMBERLEY has been relieved by General French after a series of brilliant manœuvres in the neighbourhood of the Modder River, and General Cronje and 10,000 men are in full retreat on Bloemfontein.

A FIRE broke out early on the morning of the 20th inst., at Sakamotocho, Shitaya, Tokyo, in a house belonging to a confectioner named Nishimaki Ishizo. Fourteen houses were destroyed; 6 men were injured.

A WOMAN was seen to jump from the Oye bridge, Yokohama, about 9 a.m. on the 16th. When she was rescued by passers by, life was found to be extinct. She was one Tanaka Tome, aged 27, and a native of Chiba Ken.

MR. E. F. ALFORD, late of Jardine, Matheson and Co., has joined the board of the Chartered Bank of India, Australia and China, in succession to Mr. A. P. Cameron, who has resigned his directorship in consequence of his retirement from business.

THE French gunboats *Lion* and *Surprise*, having been replaced by more modern vessels, will be detached from the Indo-China squadron and leave for France shortly. Two specially constructed gunboats are expected soon to represent France on the West River.

THE new battleship *Montague*, now in course of construction at Devonport dockyards, will be equipped with the most complete propelling machinery ever placed in a modern man-of-war. The engines will be of 18,000 horse power, or 3,000 in excess of the engines of the other ships of the *Bulwark* class, they being the largest and most powerful in the service of Great Britain.

THE German Order of the Red Eagle, fourth class, has been conferred on Consul Krüger, at Manila; Mr. Philip Arnhold, at present in London; Graf von Butler, at Shanghai; Mr. Joseph Welch, recently Chairman of the Shanghai Municipal Council; Mr. A. Korff (Melchers & Co.), Shanghai; Pastor Hackmann, of the German Church, Shanghai, and Consul Zimmermann, at Canton.

THE Inspector of the Kagacho Police has made a new rule for the arrest of all *jinrikisha* drawers who force sailors to take their vehicles or entice them to saloons, and other places. On arrival of the hospital ship *Solace*, the coolies were pursuing their usual practices when some fourteen, all belonging to the Hatoba, were arrested. They were sentenced to from three to five days' detention.

A SWEEPER in the employ of the Customs House, named Ito was arrested on Tuesday by the Iszakicho Police, for having stolen some 2,000 pounds of nails valued at *yen* 190, by means of breaking the nail-kegs. He sold the nails to a hardware merchant in Tobe for *yen* 48, and the latter in turn sold them to another hardware merchant for *yen* 95. The buyers of the stolen nails were also arrested.

A MAN was seen trying to dispose of a bicycle at various stores on Sunday afternoon. Suspicion being aroused, he was taken in charge by a detective of the Kotobukicho Police, and confessed to having stolen the same from a restaurant in Chojamachi Go-chome. He also confessed to having stolen two tea sets which were in cases lying outside a porcelain store on the night of the 13th inst. His name is Shiosaka Minokichi.

THE *Gyosho* ("Morning Bell"), a daily recently published in Aomori, urges the necessity of improving the steamboat service from Hakodate to Muroran, on the ground that the improvement of the latter harbour is absolutely essential for the development of the resources of Hokkaido. Statistics show that the amount of goods shipped from Aomori to the North for the year ending September, 1898, did not fall short of 27,910 bales, while by September, 1899, the figure had increased to 31,405. Among the goods thus transported, straw ropes and mats occupy the most conspicuous place. This class of cargo amounted in the former year to 2,021 tons, and in the latter to 2,245, while the figures for passengers were 3,940 and 6,908 respectively. These facts are more than sufficient to show, adds our contemporary, the vital importance of the Nippon Yusen Kaisha's increasing its steamship communication with the North.

SOUTH AFRICA.

Monday, Feb. 19.

The situation in South Africa has now become interesting. It appears plain that while Cronje was attempting to carry out a brilliant manœuvre on the south of the Orange River, Roberts has stepped in and completely dislocated his plans. More than a fortnight ago, Cronje began to detach men from Maggersfontein for the purpose of operating at Colesberg and Rensburg. It will be remembered that on December 31st at 5 p.m., French, with five squadrons of cavalry, half a battalion of infantry carried in wagons, 80 mounted infantry and 10 guns, moved in the direction of Colesberg, and reaching Maider's Farm at 11 p.m., halted for four hours, after which he occupied a kopje overlooking Colesberg on the west, and shelled the enemy's position. That was the beginning of a series of skirmishes in which, though no very signal advantages were gained, the Boers were greatly harrassed, and an impression went abroad that a serious movement was contemplated by the British from De Aar and Naauwpoort against Colesberg and finally Stormberg. That impression was strengthened by the publication of intelligence that Roberts had sent the Sixth Division to Thebus, which is on the line of railway in the vicinity of Stormberg. Everything, indeed, seemed to indicate that Roberts' plan was to try to drive back the Boers from the south of the Orange River and follow them up, invading the Free State from the direction of Norval's Pont. That method of procedure would have the great advantage of clearing away the Rensburg and Colesberg Boers, who are a constant menace to Roberts' railway communications in the neighbourhood of De Aar. Cronje, therefore, keeping some ten thousand men at Maggersfontein, sent the whole of the remainder of his force southward. He appears to have received a considerable accession of strength from Mafeking, and it is probable that he was able to despatch about seven or eight thousand men to the Orange River. These, with six thousand Boers already at Colesberg, made a total of, say, thirteen thousand. But Roberts did not send the Sixth Division to Thebus, and a campaign on the south of the Orange River, for the purpose of clearing out the Colesberg and Stormberg Boers and gathering up Gatacre and French, did not enter into his programme. The position that presented itself to him was that the Boer army of the Free State was now divided into two portions, operating at a distance of nearly 150 miles, whereas he himself, from his place on the Modder River, was within 80 miles of the two sections' communications with Bloemfontein. He probably did not know the dimensions of the force that Cronje had detached for operations south of the Orange River, neither did Cronje know that the Sixth Division had not gone to Thebus. Apart from such questions, the British General resolved to strike at the Maggersfontein army's communications, since, if successful, he would not only relieve Kimberley, but also place himself between the two sections of the Boers, whatever their relative strength. He has succeeded. Immediately eastward of the point where the railway crosses the Modder River, the latter divides into two streams, the Riet on the south the Modder on the north. The Boers line of defences encircling Methuen did not extend beyond the Modder, and into the space between the two rivers, Roberts marched the Sixth and Seventh Divisions in readiness for a northward advance over the Modder. Then he sent French with a strong force of cavalry, artillery and mounted infantry, to force the passage of the Modder near or beyond the enemy's left flank, while the Highland Brigade performed a similar operation further west. The Boers seem to have been taken by surprise. Five of their laagers were captured with scarcely any loss on our side, and then the Sixth Division, moving up, occupied the heights captured by French, the Seventh Division following the same afternoon and doubtless crossing by the westward drifts. Thereafter French pushed on rapidly, and reached Kimberley apparently without encountering any serious resistance. In fact, the Boers were completely out-manœuvred. Their communications with Bloemfontein would be cut if they remained any longer at Maggersfontein, and there was nothing for it but to beat a hasty retreat, which they are now doing with the Sixth Division hanging on their heels. We should have expected to hear that French was pursuing them, but the probability is that French has been sent eastward to seize the line of railway from Bloemfontein to the Orange River. A march of 65 miles will accomplish that object, and the Boers at Rensberg, Colesberg and Stormberg will then be deprived of all supplies from the Free State. In fact, their position will be scarcely less untenable than was that of Cronje when Roberts crossed the Modder.

Meanwhile the British troops at Rensburg have had to suffer severely. We do not know their numbers. When French began his operations on the last day of December, he had two half battalions of infantry, five squadrons of cavalry, two batteries of Horse Artillery and 80 mounted infantry. He was subsequently reinforced from De Aar, but to what extent there has not been any intelligence. It is not likely, however, that Colonel Clements had more than three or four thousand men at Rensburg. He has therefore been obliged to retreat before an overwhelming force, and it is possible that if the Boers succeed in pushing him westward, they may get within striking distance of Roberts' communications. That, doubtless, was Cronje's plan. He expected Roberts to concentrate all his strength for a frontal attack at Maggersfontein; he expected to be able to repel the attack, and, in the meanwhile, the force he had detached, cöoperating with the Colesberg troops, would menace Roberts' communications. But as things now stand, Cronje's army has been cut in two, and though he himself, with ten thousand men, will probably reach Bloemfontein safely, the position of his forces south of the Orange River is very critical.

Roberts, of course, has been able to make this *coup* chiefly because he possesses a flying column of cavalry, artillery, and mounted infantry. With the troops available before the organization of such a column, he could never have crossed the Modder by surprise, or, if he succeeded in crossing it, could never have reached Kimberley without a battle.

The great question now is, what effect will this produce upon the Boers investing Ladysmith? Roberts has three full Divisions as well as his flying column—an army of fully thirty thousand combatants. Cronje is said to have only ten thousand, and the Boers south of the Orange River are cut off. It will be strange if the Free-Staters at Ladysmith remain quietly in the trenches opposite Buller.

Wednesday, Feb. 21.

The *Jiji Shimpo* and the *Kokumin Shimbun* refer in eulogistic terms to the latest news from South-Africa. The former journal is particularly pleased by the promptitude shown by the British Government in recognizing the services of French and Kekewich. The English have shown that defeat does not daunt them, but they had demonstrated that fact before, and it is tolerably certain that they do not fight for the sake of reward. Still the wisdom shown by Her Majesty's Government in this quick recognition of merit is most wise, and furnishes an example which might be followed by other nations with advantage. Our contemporary refers also to the Queen's message to Lady White after the retreat from Glencoe. Such an expression of sympathy and unshaken confidence under such circumstances must have a most inspiriting effect. The *Kokumin* speaks chiefly and briefly of the change that the general complexion of the war has undergone in consequence of Roberts' brilliant operations. The British, who have hitherto been standing on the defensive, have now assumed the offensive, and, if Roberts succeeds in occupying Bloemfontein, the action of the Orange Free State will be paralysed. It is true that from Bloemfontein to Pretoria is still a long distance, but the country does not present any very serious obstacles to an advancing army.

TOKYO HARBOUR.

The particulars of Mr. Furuichi's plan for the construction of a Tokyo harbour are published, apparently on good authority. The entrance would be at Haneda, and the port would take the form of a large canal, extending for a distance of 5 miles, to Shiba-ura. The dredgings would be used to reclaim the fore-shore and to construct an embankment for preventing silting. The depth of the canal is 27 feet at low water, and its width is 25 metres (?), so as to allow two vessels of from 1,800 to 8,000 tons to pass each other. A dock forms part of the plan, and from the centre of the canal to the dock, warehouses stand on the banks. Since the position of the canal would be on the shore side of the route now taken by junks and small steamers plying to Tokyo, there would be no obstacle to present traffic. The site of the dock is at Kanasugi, and there is ample provision for railway traffic. Ten years is the time estimated for the work. As for cost, the canal and dock are put down for 34 million *yen* and the other outlays at 15 millions, making a total of 49 millions. The method of financing is (1) loan bonds; (2) State aid; (3) sale of the reclaimed land, the area of which is put at 1,100,000 *tsubo* and the value at 20 *yen* per *tsubo*, giving a total of some twenty millions. State aid is counted on for 10 millions, and thus there would remain some 20 millions to be raised by loan. It is expected that this project will receive the approval of the City Council.

A CURIOUS CHARGE.

Monday, Feb. 19.

In a recent issue we traversed a criticism published by the *Mainichi Shimbun* with reference to the supposed reticence of the present Minister of State for Foreign Affairs. Our contemporary's accusation was connected with Mr. Oishi Masami's questions in the House of Representatives, and a comparison was drawn between Viscount Aoki's silence and the explicitness of M. Delcassè and Mr. Chamberlain when explaining the policies of their respective countries during the present crisis. We ventured to suggest that a question propounded by a member of the Opposition at a time when the country's foreign policy is not confronted by any special embarrassment could scarcely rank with the issues of a great war such as is now being fought in Africa; and we also expressed the opinion that it would be a most mischievous practice for the Minister of Foreign Affairs to allow himself to be drawn into public expositions of policy whenever any one chose to stand up in the Diet and attack him. To this the *Mainichi* replies in a peculiar manner—a manner which has come to characterise all its writings now-a-days, and which suggests a mood of much unhappiness. We are sorry that our contemporary should find the world such a murky, miserable place as it is now reflected in his columns, and we are sorry, also, that he should resort to the very poor device of denouncing all that disagree with him as interested and dishonest persons. Even at the risk of deepening his discontent, however, we must point out that preachers of homilies upon honesty should themselves try to be honest. The *Mainichi* endeavours to persuade itself and its readers that we drew a comparison between the Far-Eastern question and the South-African war, and that we dismissed the former as too insignificant to deserve a ministerial utterance, whereas we pronounced the latter to be a worthy theme for the eloquence of European statesmen. That may be smart on the part of the *Mainichi*, but it is clumsily disingenuous. We never made the remotest comparison between South Africa and the Far-Eastern Question, not is it for one instant possible that the *Mainichi* can have received such an impression from our writing. It recommends us to expunge the word "Japan" from the title of our journal. We recommend it to lower the sign-board of candour and Christian honesty under which it carries on its present business of defamation and pessimistic preaching.

Tuesday, Feb. 20.

A naughty boy had his book torn into shreds by an indignant foreigner. in the vicinity of the Yokohama railway station, a few days ago. The incident is recounted in the columns of the *Mainichi Shimbun*, the name and address of the foreigner being given. It appears that the child hastened to make tearful complaint to a policeman, and the latter, following the foreigner, inquired the reason of the outrage. A simple explanation was forthcoming. The boy, supposing, as he alleged, that the foreigner did not understand Japanese, greeted him with a shout of *baka yaro*, whereupon the foreigner seized a book that the child was carrying, and rent it in twain. The constable admonished the boy severely, and there the incident closed. Certainly it would not be worth reference in these columns did not the *Mainichi Shimbun* append the following comment to its account of the facts:—*Gwaikokujin wo baka ni suru koso mo koso naredo kodomo wo aite ni ikaru gwaikokujin mo gwaikokujin* (the urchin that made a fool of the foreigner was an urchin, but the foreigner that lost his temper with a child was a foreigner). The *Mainichi Shimbun* has of late distinguished itself by printing a great many valuable, if somewhat pessimistic, homilies upon things in general. We should like to ask it what course it advocates with regard to these courteous Japanese children who throw opprobrious epithets at the head of the passing foreigner. How are they to be restrained? The writer of this note has been addressed as *tojin baka*, or greeted with cries of *ketojin*, or *ijin papa neko papa*, by Japanese children pretty frequently—probably from three thousand to five thousand times—during his residence in Japan, but he can recall only one instance of a child's being spontaneously reproved by a Japanese adult for such a display of politeness. What is the foreigner to do? Go on quietly from year's end to year's end enduring these displays of highly civilized courtesy, and waiting until some Japanese philosopher like the editor of the *Mainichi Shimbun* comes forward to mend the evil? We do not ourselves feel offended or annoyed when a Japanese child calls us names in the presence of parents or elders who intimate their acquiescence by silence. Our sentiment is only one of pity for people so ignorant of the world and so unacquainted with the amenities of human intercourse. But we do experience a feeling of resentment when we read a comment like that quoted above from the *Mainichi Shimbun*, because the editor of an important Tokyo journal can not hope to be treated with the indifference that men of mature years extend to the doings and sayings of mud-pie gamins, unfortunate in their opportunities and still more unfortunate in the possession of parents who encourage their barbarism. The editor of the *Mainichi Shimbun* has to accept some, at any rate, of the responsibilities attaching to his position, and when his principal comment on an incident like the above is a general sneer at the unreasoning irascibility of foreigners, there is no alternative except to rank him with the road-side urchins or to conclude that even the upper classes in Japan do not appreciate the duties of civilization.

HOME MANUFACTURES v. FOREIGN.

Count Inouye's recent deliverances in connexion with trade and industry have induced some persons to attribute to him an anti-foreign bias. Such a suspicion with regard to such a man is ludicrous. He refers to it, however, in an interview with a representative of the *Kokumin Shimbun*, and with his wonted good humour observes that if to be anxious that Japan should make the most of her opportunities is to be anti-foreign, then he must even rest under the imputation. But he finds it very lamentable that the Japanese should be beaten by foreign competition in fields where nature has given them every advantage. For example, here is a country with splendid forests of its own, and yet builders find it far cheaper to import timber from America than to use that grown in Japan. Then again, the seas and rivers of Hokkaido are abundantly stocked with salmon, yet the salted salmon of Hokkaido costs 100 *sen* a catty in Tokyo whereas American salted salmon can be had for 70 or 80 *sen*. As a matter of fact, considerable quantities of American salmon are actually imported into Hokkaido and despatched thence to Tokyo as Japanese fish. The whole fault lies with want of organization and cöoperation. The same defect meets us everywhere. The War Department, the Railway Department, and the Department of Agriculture and Commerce are all engaged in the iron manufacturing industry, and it does not appear to occur to them that by joining forces they might conduct their operations on a far more economical scale. The Count also referred to the Lower House's refusal to sanction a trifling outlay for purposes of harbour construction at Wakamatsu. The result is that coal for the use of the iron foundry on which such large sums have been spent, will have to be carried, in the first place, to Moji, and thence forwarded by lighters to Wakamatsu, operations which will involve an additional outlay of something like 2 *yen* per ton. The same remark applies to the manufactured products of the Foundry. Since they can not be put on board ship at Wakamatsu, they will have to be stored there and subsequently carried to Moji for shipment, at great and needless expense. Count Inouye justly denounces such defective economy.

A SPENDTHRIFT DIET.

Even without paying minute attention to the proceedings of the Diet during the present session, every one must have been struck by the extraordinary number of Representations that were introduced. The total reached 59, of which 2 were withdrawn, 2 rejected, 37 adopted for presentation, and the remainder did not come up for discussion. The great majority of these documents advocated expenditures of money by the Treasury for the purpose of fostering some private enterprise. It has been roughly calculated that if the Government acted in accordance with the recommendations embodied in the 37 Representations adopted by the Houses, an expenditure of something like thirty million *yen* would be required. The *Kokumin Shimbun* has a scathing article on the subject. It says that a Parliament, if it abuses its position, is apt to become a mere vehicle for squandering the State's resources. Its responsibilities towards the country are hidden under its numbers. With a non-representative form of Government the area of responsibility is so greatly narrowed that the fear of public censure serves as a wholesome check upon the acts of those in power, but where there are 300 legislators all calling themselves delegates of the people and all equally responsible, no restraints are available. That, of course, is a very familiar criticism of parliamentary institutions. But the blemish disappears, or, at any rate, ceases to be formidable, in the face of a strong opposition. It is Japan's misfortune at present to be without a really efficient opposition. The Progressists are temporarily so weak that they can do nothing to check the majority's abuse of its power.

VISCOUNT TANI AND THE SINEWS OF WAR.

Viscount Tani has just delivered a very interesting lecture to the members of the Economical Society in Tokyo. He took for his theme the expansion of the Japanese Army and Navy, and the gist of his comments was that to multiply men and ships without a supply of money to utilize them is a vain proceeding. He thinks that Japan should have a war chest of at least 30 or 35 million *yen*. Russia and Germany are understood to have large war funds stored away. England and France have not. But there is a radical difference between the conditions existing in England and France and the conditions existing in Japan. The former two countries have great quantities of hard money in circulation, whereas, from end to end of the country, Japan has paper currency only. Viscount Tani says that he has not yet had the pleasure of seeing even one of the new gold coins, and it must be confessed that a great many people are in the same position. Japan is a gold-monometallic country nominally at all events, but such a thing as a piece of gold seems to be unknown in the monetary transactions of every-day life. Bank notes and silver subsidiary coins discharge the whole duties of circulating media. If war had to be undertaken, it is not from the people that a stock of hard money could be procured, and no one will argue that the specie reserve held by the Treasury to secure the convertibility of the paper issues is available for military purposes. As for the capital funds whose interest is devoted to famine relief, education, and naval maintenance, Viscount Tani believes that the money is in the form of paper, and that, consequently, it can not serve the purpose in question. Of course he was able to draw from history many illustrations of the importance of money to a belligerent, since that is a lesson taught by universal experience. But, in truth, from Viscount Tani's point of view, there can no second opinion about the importance of a war fund. The Government, instead of being able to push the China War with vigour from the very outset, would have found itself considerably embarrassed had it not been so fortunate as to possess accumulations of surplus revenue totalling some 30 million *yen*, and the friends of the country would sleep more easily if the Treasury held a similar sum in hand now.

THE LIGHTNING BURGLAR.

Sakamoto Keijiro, nicknamed the "Lightning Burglar," has been executed in Tokyo. How many persons he killed or wounded, how many houses he robbed, it is difficult to ascertain, rumour having busied itself to exaggerate the totals. But it may be stated, at least, that the list is quite extraordinary. He met his death with the utmost composure, averring that fate could not bring him anything more than he had always anticipated. It appears, however, that in one sense he was penitent: he appreciated that his expectations of leading a life—long or short—of ease and pleasure had been founded on a false basis. No such thing as happiness had come to him. Hiding in out-of-the-way places and perpetually fleeing from the pursuit of justice, he had learned that the existence of a malefactor is about as miserable as possible. This conclusion, announced in very clear terms to the Buddhist priest who attended him in his last moments—when did Buddhist priests begin to perform this office, we wonder?—is also reflected in one of two verselets composed by Sakamoto at the foot of the gallows:—

Kuyuru tomo
Itsumi no mukui wa
Nogareneba
Ashiki wasa su na
Nochi no yo no hito.

Repentance does not
Bring escape from the reward
Of sin. Therefore ye
That follow after, see that
Your actions be not evil

Sakamoto explained his reason for having made Ibaraki Prefecture the principal scene of his exploits. It was because he had been cruelly treated by the police and prison officials of that district when first arrested. The people of Ibaraki are said to have held an *Anshinkai*, or "meeting of peace of mind," to commemorate the death of this arch-villain, and to have subscribed funds for the purpose of presenting gold and silver cups to the police who were instrumental in effecting his capture. Sakamoto confessed to a small supplementary list of seventy crimes shortly before his execution.

A STRANGE COMPACT.

A singular charge is brought by the *Chiuo Shimbun* against the Osaka Shosen Kaisha, and, what is more, it seems to be a well substantiated charge, for our contemporary gives the text of the document upon which it is based. The directors of the Company have entered into a compact with a large association of Chinese merchants in Kobe and Osaka, promising, first, that preference shall always be given to the goods of Chinese shippers, no other cargo being received until that sent by the Chinese shall have been accommodated; secondly, that a freight advantage of 20 per cent. shall be allowed on all goods shipped by Chinese; and thirdly, that, after the expiration of a year, this agreement shall be subject to revision by mutual arrangement. The service to which these conditions apply is that to North-China ports: in other words, it is a service for which the Osaka shipping company is seeking to obtain a subsidy from the Government. A few days ago, an announcement appeared in a Tokyo journal to the effect that the Osaka Shosen Kaisha had determined to run its North-China line of steamers whether the subsidy was forthcoming or not—a natural resolution, if the agreement published by the *Chiuo* be a *bonâ fide* document. It may well be supposed that the *Chiuo* is very indignant, and that it invites the Diet to investigate this question carefully before taking any final action with regard to the Subsidies Bill now awaiting discussion.

Since writing the above we have received the report of the proceedings in the Lower House on Wednesday, and find that Mr. Hoshi Toru raised the question, but the Government Delegate explained that the line in question was not among those to be subsidized.

POLITICAL CONNEXIONS.

The editor of the *Niroku Shimbun* has compiled an interesting paradigm setting forth the relations that exist in Japanese political circles at present. He puts the results in a diagram which takes the form of four concentric circles, having the Throne in the centre. The innermost circle contains His Majesty's immediate *entourage*; opposite them, in the innermost annulus, are the principal *Meiji* statesmen; then, in the next annulus, come their respective followers among the junior statesmen, and, finally, the outermost annulus contains their supporters in the ranks of political parties. The whole may be tabulated thus:—

Throne Entourage.	Senior Statesmen.	Junior Statesmen.	Party Politicians.
Hirohashi Viscount Tanaka Kawaguchi	Marquis Yamagata	Viscount Yoshikawa Viscount Katsura Mr. Kamatsubara Mr. Hirata Mr Yasuhiro Mr. Oura Mr. Sone Mr. Kioura Mr. Matsudaira Mr. Funakoshi Mr. Shinagawa	Mr. Sasa Mr. Mitoda Mr Arakawa Baron Suyematsu Count Itagaki Mr. Hoshi Mr. Hayashi Mr. Matsuda Mr. Kataoka
Iwanaga Watanabe Marquis Saionji	Marquis Ito	Baron Ito Mr. Kaneko Viscount Watanabe Admiral Yamamoto Mr. Watanabe Mr. Sonoda	
Baron Sannomiya	Count Inouye	Mr. Tsuzuki Mr Saito Mr. Naniwa Mr. Masuda Mr. Shibusawa Baron Senge Mr. Matsuoka Mr. Fujita	
Baron Sannomiya	Marquis Saigo	Baron Anraku	
Baron Sannomiya	Count Kabayama	Mr. Isaki	
Marquis Tokudaiji	Viscount Takashima	Mr. Terahara Mr. Murekata Mr. Kashiwada	Mr. Arai Shogo
Marquis Tokudaiji	Count Matsukata	Mr Kawashima Baron Tajiri Mr. Nakamura Mr. Hirayama Mr Sakatani	Mr Haseba
Prince Iwakura	Count Okuma		Mr. Osaki Mr. Inukai Mr. Oishi Mr. Taketomi Mr. Daito Mr. Kono

It is easy to see that the compiler of this table is not free from political bias.

MARITIME ENTERPRISE IN JAPAN.

We learn from the *Chiuo* that Japan's fleet of iron or steel steam-ships totals only 138 vessels. The statement is made in the context of some remarks on the Government's Bill for subsidizing mail-boat lines (*Yusen-koro joseikin-ho-an*). That measure is framed on the assumptions that vessels for the Hokkaido service may be as small as 500 tons and as slow as 10 knots; that those for the Shanghai service need not exceed 2,500 tons or have a higher speed than 14 knots; and that for those on the North-China line 1,400 tons and 12 knots suffice. Our contemporary is very much opposed to such assumptions, and contends that such vessels are not fit to engage in the keen competition to which they are exposed by the concurrence of the N.-D. Lloyds, Messageries Maritimes, and P. and O. boats. The argument certainly seems just. We may add the comment that Japan is making very rapid advances in the matter of maritime enterprise. One is inclined to speculate what her position at sea would have been now had not the crippling legislation of Iyemitsu practically closed the ocean to her as a field of enterprise for 230 years.

QUESTIONS IN THE HOUSE.

It is indeed astonishing, as the *Nichi Nichi Shimbun* justly remarks, to see a responsible politician like Mr. Oishi stand up in the House of Representatives and present Questions like those recently submitted to the Government on the subject of the Government's foreign policy. Mr. Oishi asks, among other things, whether Baron Nishi has had audience with the Empress Dowager in Peking, and whether he has remonstrated with her with reference to the nomination of the Heir Apparent. He also asks whether the Japanese Government believes the statement of the Korean Government that the latter intends to build its own railways. By what right could Baron Nishi venture to remonstrate with the Empress Dowager on such a subject? What business has Japan to interfere with the choice of an heir to the Chinese Crown, especially when the choice is made and announced in strict accord with orthodox forms and usages? And how can Mr. Oishi expect the Japanese Government to make an open declaration as to the amount of trust it reposes in the official statements of a friendly Power? Questions of that nature are evidently propounded merely for the sake of creating a sensation and baiting the Cabinet. It is a good thing that the Diet should scrutinize the acts of the Government and endeavour to stiffen its vertebræ, but to propound questions which can not be answered with any propriety is at once futile and mischievous.

EMOTIONALISM.

That Mr. Tanaka Shozo is a man of exceptionally emotional nature can not be doubted by any one who has followed his career in the House of Representatives. But we were not prepared to find him surrendering himself completely to a fit of hysteria as he seems to have now done. In order to carry on his Ashiwo-mine agitation with greater effect, he has announced his intention of resigning his membership not only of the Progressive Party but also of the House of Representatives. His reasons, assigned by himself, are that he wishes to be absolutely beyond the range of any kind of political association or suspicion of such. In short, he has determined to tie his own hands in order that he may wield his weapons with better effect. What will his constituents think of this we wonder. They sent him to the Diet in order that he might plead their cause, and now he steps out of the Diet in order to plead it more efficiently! Mr. Tanaka has certainly made a fiasco of his parliamentary career. In one thing only has he succeeded, namely, in affording to the House of Representatives an opportunity to show much good humour and forbearance.

With regard to the Ashiwo affair, most conflicting accounts are published. The *Yomiuri Shimbun* alleges that the police drew their swords against the peasants and even used rifles against them, wounding more than fifty. The police reports, forwarded to the Government from Gumma, Tochigi, and Saitama, concur in declaring that no constable or gendarme drew his sword. In Gumma, where the only serious fracas occurred, the swords of the police were tied in the scabbards so as to preclude the possibility of employment in a moment of excitement. Fifteen police and about as many peasants received injuries, but their hurts were all of the nature of contusions. There were no casualties among the gendarmes. Tochigi and Saitama report that no one was hurt. The very striking discrepancy between these stories is difficult to understand. Credit must be given to the official report of the police, yet it is not easy to imagine that press correspondents can have been so greatly misinformed.

THE GOVERNOR OF TOKYO.

The most blue-blooded family in Japan is considered to be that of Baron Senge, now Governor of Tokyo. The great Fujiwara nobles trace their descent without a break to Kamatari, who distinguished himself conspicuously in the seventh century, and Kamatari is understood to have claimed that he "came over with the conqueror" Jimmu, a trifle of thirteen hundred years earlier. But the founder of the Fujiwara did not dress his genealogical tree with convincing accuracy, and historians are not unanimously agreed that his progenitors were divine. The Senge family, however, goes right back without any dissolution to continuity to Amatsu Koyane-no-Mikoto, and from generation to generation has discharged the high-priestly functions at the shrine of Oyashiro in Izumo. Baron Senge himself was Kannushi of the Shrine before he descended into the troubled arena of politics and officialdom. The newspapers now state that, a few days ago, he tendered his resignation of the post of Governor, because his convictions forbade him to support the Government's Bill for the control of Religions, and he did not feel justified in serving under a cabinet with which he disagreed upon such a subject. The story is hard to credit, for we find Baron Senge's name on the list of those that voted for the measure when it came up for discussion in the House of Peers.

"TO NIPPON."

Mr. W. Le Couteur has published a little volume of much attractiveness under the above title. It contains an account of a trip made by him last year from Australia to Japan and back again by the Nippon Yusen Kaisha's steamers. The book is evidently not intended to constitute any notable addition to the literature already inspired by Japan, but is merely designed as a *vade mecum* for the use of the rapidly increasing stream of passengers between Japan and Australia. Mr. Le Couteur has a light, attractive style. Although the subjects discussed by him are in many cases quite familiar, and although his very brief stay in the country did not enable him to collect any novel information, the story that he has to tell is so well told as not to pall even upon the jaded appetite of the proverbial "old resident." One rises from a perusal of the book with a longing to traverse the routes described by Mr. Le Couteur, and, above all, to traverse them in the same company and with the same accommodation that he enjoyed. We presume that it was his intention to produce that impression and he has succeeded very well. Evidently the Nippon Yusen Kaisha's fine new steamers have made the trip to Australia a veritable holiday outing.

THE NEW RUSSIAN MINISTER.

The pending change of Russian Representatives in Tokyo is beginning to inspire newspaper comment. Happily in this instance the general tone is very different from that which greeted the coming of M. Hitrovo some years ago. But it is singular to observe what an inveterate tendency rumour has to go astray. The paragraphs now appearing actually suggest that Russia is desirous of cementing with Japan more friendly relations than those that could be established under Baron Rosen's direction. That is a very entertaining version of the facts. Russia produces many diplomatists who possess the happy faculty of combining the *suaviter in modo* with the *fortiter in re*, but she has not many who excel Baron Rosen in that respect. He contrives to achieve the feat of winning the warm friendship even of those from whom he has to obtain recognition of his country's rights, and if his successor can do better than that, he must be a phenomenal official.

COLLISION.

The *Akagi* came into collision with a coal-carrying steamer in the river at Shanghai on the 5th instant. The Japanese gun-boat was lying at anchor near the Ewo wharf when the steamer—the *Nanyetsu*, with a cargo of coal from Moji—crashed into her, smashing her boats and otherwise injuring her. The cost of repairs is estimated at from five thousand to six thousand *yen*, and the *Osaka Asahi*, from which we take the news, says that as the work would be three or four times as expensive if executed in Shanghai as if executed in Japan, the commander of the *Akagi* has suggested the propriety of bringing the vessel to this country for the purpose. But that is scarcely credible, if the amount in question is so small, especially in view of the fact that the *Akagi* having been at anchor in a duly selected berth, the responsibility for the collision can not rest with her. The incident is interesting chiefly in connexion with the statement that ship-carpentering is so much more costly in Shanghai than in Japan. Is that really the case, we wonder?

THE DEFEATED BILL.

There is naturally a great deal of talk about the rejection of the Religions Bill in the House of Peers. The Government evidently exerted itself to secure the passage of the measure, and the failure must therefore be regarded as a Ministerial defeat. Such incidents, however, do not entail in Japan the consequences that would attend them in countries where the principle of constitutional government is more firmly established. The impression conveyed by current rumour and by remarks appearing in the columns of vernacular papers is that the main object of the Bill—namely, the placing of all religions on the same footing *vis-à-vis* the law—was not objected to, but that the elaborate character of the measure presented points with which several of the supporters of the general purpose could not agree. Among some there appears to have been an idea that such legislation is unnecessary, since the freedom of conscience guaranteed by the Constitution can be fully enjoyed under the existing condition of the law.

JAPAN AND RUSSIA.

Wednesday, Feb. 21.

The persistence of the rumour about strained relations between Japan and Russia is very remarkable. *The Independent* of January 25th says:—

The reports increase as to the tension between the Governments of Japan and Russia. The Japanese papers are full of predictions of war at an early date and chronicle the rapid movement of troops. As indicative of the preparations, it is said that Japan has placed an order for 100,000 winter uniforms with a British firm, while at the same time large supplies of campaign foods have been purchased by the commissary department, and hundreds of horses are being mustered and trained for service. One paper says that a few days since a steamer left a Japanese port under sealed orders with a large force of soldiers equipped for the field. It is also stated that the British Government recently applied to the Japanese steamer company to charter some of their steamers as transports, and this application was refused on the ground that the Government thought it might need the steamers. Excellent maps of China have been distributed, it is said, among all non-commissioned officers in the Japanese army, and not long ago the heads of all private railway concerns were invited to a conference on railway accomodation for mobilization purposes at the War Office. While nothing of this is official much of it is based on excellent authority and indicates very clearly the prevalent opinion in Japan. It is also reported from Vladivostock that there are at least 50,000 troops in that neighbourhood and that every effort is being made to increase their number. Barracks are being constructed in all Manchurian centres with amazing rapidity. Meanwhile the situation in Korea, which is after all the centre of all this political activity, seems to be growing worse. The condition of the people is not improving, although trade is very brisk. Speculators have bought up the harvests and are shipping food to Japan in such quantities as really to endanger the food supply of the country itself. Smuggling all along the coast is rife and the methods adopted by the Government to prevent it are almost ludicrous in their inadequacy. The Emperor shuts himself up in his palace, guarded by quick-firing guns at the door, and never allows any one to know beforehand what room he is to occupy for the night. Government favours or concessions seem to be going to the highest bidder and bribery to be ruling absolutely.

Who can have manufactured this farrago of inventions? "The Japanese papers are full of predictions of war at an early date and chronicle the rapid movement of troops!" Where are they, these papers? We have not seen one of them. The paragraph contain thirteen flagrant falsehoods, which is a tolerable supply for such a brief composition.

Thursday, Feb. 22.

It is very regrettable that Russia and Japan should enter upon a war of retaliatory restrictions. That kind of thing has been tried by European States, but its results have never been satisfactory to either party. The trouble that has roused Japan's indignation is the affair of the Saghalien fisheries. There is no longer any room for doubt that owing to recent legislation by the Russian Authorities, not only will Japanese fishing enterprise be hereafter excluded from Saghalien waters, but the vested interests already acquired by Japanese subjects in that district will be sacrificed in a harsh and arbitrary manner. Diplomacy having failed to procure any modification of this suddenly adopted policy of exclusion on Russia's side, Japanese politicians of all parties seem to have agreed that the only resource is retaliation. They therefore introduced in the House of Representatives on the 19th inst. a Bill for imposing a duty of sixty-five per cent. *ad valorem* upon dried and smoked salmon, and fifty per cent. upon fish manure imported into this country from Russian waters. The House passed the Bill *nem. con*, and it is stated that the House of Peers will endorse the measure. Doubtless this would have the effect of closing Japan's markets to Russian maritime products, but whether the resulting disadvantage to Japanese consumers would not greatly outweigh the inconvenience suffered by Russian fishermen, is a point well worthy of consideration.

Friday, Feb. 23.

There is evidently a good deal of excitement in some quarters about the question of Japanese fishing privileges in Saghalien. The matter is of considerable importance, for the number of fishing stations worked by Japanese subjects is 222, the number of persons employed over 5,000, and the yearly take between one and two millions of *yen*. Japanese subjects have been engaged in the industry for a very long period. They were engaged in it prior to the cession of Chishima to Russia, and their operations have continued without interruption ever since. In 1895, the first sign of restrictive legislation was given by Russia. Regulations then issued by the Governor of the Amur District provided that Russian subjects should have a prior claim to all fishing privileges except in the case of vested interests, which should be respected. Under that arrangement Russians seeking to engage in fishing enterprise would have an advantage, but Japanese subjects who had already established themselves would remain undisturbed. The newly issued regulations, however, make a radical change, for they confer a prior right on Russian subjects irrespectively of the vested interests of other nationals, and the consequence is that Japanese subjects hitherto engaged in the occupation have no choice but to wind up their affairs, dispose of their belongings, and return home. It is justly pointed out that Russia is quite within her strict rights in taking this action. She is not bound by any treaty and has power to deal with her possessions according to her own fancy. But there can be no question that her procedure involves a great hardship. Japanese subjects have been engaged in the fishing industry without disturbance for nearly half a century, and they have a natural right to expect that no violent change will be made in the privileges hitherto enjoyed by them. The House of Representatives, as our readers are aware, took very prompt action with regard to a project of retaliatory legislation; namely, a bill imposing virtually prohibitive duties on salt fish, smoked fish, and fish-manure imported from Russian waters. The measure was passed through all its readings and sent up to the Peers within half an hour of the time when it came before the House. It will probably be passed by the Peers with scarcely less alacrity, though the *Yomiuri Shimbun* publishes a singular story that Russian money has been freely used to bar the progress of the measure, and that Mr. Sasa, leader of the Imperialist Party, proceeded to the Upper House on Wednesday, and interviewed the Ministers—who happened to be assembled in the waiting room—, urging the necessity of keeping strict watch over the doings of the Peers. Our contemporary appears to believe that Mr. Murata Tamotsu is lending his aid to the Russian intriguers, but as Mr. Murata has always distinguished himself by his keen and intelligent interest in everything connected with marine products, it is difficult to credit the *Yomiuri's* statement. At all events some sensation has been caused by this Saghalien incident, and we fear that its effect upon the relations between Japan and Russia will not be wholesome.

ONE-YEN NOTES.

It is not surprising that complaints are heard about the scarcity of one-*yen* notes in circulation. In nine cases out of ten silver alone has come to be used for transactions not involving an amount as large as five *yen*. The *Jiji* has an article on the subject. Of course this state of affairs has been brought about by the deliberate action of the Treasury. One-*yen* notes have been withdrawn and subsidiary silver coins substituted. Two considerations recommended that course. The first was a desire to utilize the stores of silver that the Treasury had in its possession at the time of introducing gold monometallism. The second was the expediency of putting into circulation the largest possible quantities of hard money in such a form that, on the one hand, it would be available in time of urgency, and, on the other, would be beyond the reach of the influences that tend to drive specie out of a country. The *Jiji* thinks that the latter object might be better attained by issuing gold subsidiary coins heavily alloyed, but, under any circumstances, the public ought to have one-*yen* notes if it wants them. The calculation at present is that only 40 millions of such notes remain in circulation out of a total currency of 195 millions, whereas there used to be 65 millions out of a total currency of 230 millions. If the Treasury thinks it inadvisable to issue notes of small denominations without some precaution, why not issue them only in exchange for specie? That is our contemporary's question.

FOREIGN MERCHANTS AND ADULTERATED GOODS.

In a slightly mysterious paragraph the *Hochi Shimbun* advances a statement that considerable quantities of very inferior *habutaye* have been manufactured to the order, or under the direction, of a foreign firm in Yokohama, and calls upon the police to exert themselves for the detection of the offender. Under the old system of Consular Jurisdiction it was impossible for the Japanese police to conduct any efficient investigations within the Foreign Settlements, owing to the necessity of appealing to the authority of a Consular warrant, and owing to the comparative uselessness of one such warrant where an inquiry has to be conducted among the subjects and citizens of many different nationalities. But these obstacles to the pursuit of justice have now been removed, and our contemporary hopes that Japanese detectives will contrive to locate the guilt of the recent fraud, since such practices are calculated to seriously injure the trade. The *Hochi* may rest assured that the foreign merchants of Yokohama will be disposed to assist rather than to impede the police in such a matter. It is in the interest of all parties that evil practices of the kind should be checked.

IMPORTANT MEASURES.

It appears certain that the Bill for amending the Law of Elections and the Bill for the Nationalization of Private Railways will both fail to become law this session. With regard to the former, a conference of the two Houses is supposed to be in progress, but the Managers appointed by each branch of the Legislature did not meet on the 21st instant, although the session ends on the 24th. The plain inference is that no hope of getting the Bill finally passed is now entertained. Some say that the difficulty is on the side of the Peers, who deem it advisable to postpone conclusive action until next session. Others allege that since no basis of compromise can be found between the amendments of the two Houses, a conference is felt to be futile. As to the Railways Bill, we do not know what obstacles present themselves, but rumour has it that Mr. Hoshi Toru, on being asked when the Bill would come up for discussion, laughingly replied, "on the day of the Diet's prorogation."

The Lower House, however, has passed an important law with reference to Japanese railway enterprise in foreign countries. The effect of the law is to invest the Cabinet with competence to make grants in aid of such enterprises without seeking parliamentary consent. That is a very unusual kind of legislation, but the motive of its proposers is avowedly stated to be the provision of State encouragement for the Söul-Fusan Railway. All political parties seem to be united in the conviction that public assistance must be given to that enterprise; the Bill bore the signatures of the leaders of the Liberals, the Progressists, and the Imperialists. On the other hand, at this late period of the session there is no time to enact a law providing satisfactorily for the general manner of dealing with Japanese railway undertakings in foreign countries, and the House consequently deemed it advisable to delegate discretionary competence to the Government for the time being. That must be taken, of course, as a distinct declaration on the part of the House that it recommends the granting of State aid for the building of the Söul-Fusan Railway.

The House, on the motion of the Government, has also voted a sum of 1,013,307 *yen* for making roads and drains in, and otherwise putting into order for residential purposes, the Special Japanese Settlements in China. If this step be necessary, it ought to have been taken at an earlier date. The Government's opponents will now have it in their power to claim that, had it not been for their agitation and criticisms, nothing would have been done to make the Settlements habitable.

A CHINA-JAPAN BANK.

One of the results of the entertainment recently given by leading Chinese residents of Yokohama, Kobe, Nagasaki, and Hakodate, at the Maple Club in Tokyo, to celebrate the opening of the country, was the definite inception of a scheme for establishing a China-Japan Bank. It was decided at the meeting that an association should be organized, calling itself the *Aiia Tsushō Kyowa-kai* (Asiatic Commercial Co operative Society), and in connexion with that scheme the idea of a China-Japan Bank seems to have been brought forward by the Chinese. Of course the project has long been on the *tapis* in an academical sense, but it appears to have now entered the region of practical economics. There is, however, a rather serious difference of opinion: The Chinese projectors expect the Japanese to put up the bulk of the capital and also desire that the Bank's principal field of operations should be Southern China; the Japanese, on the contrary, look to the Chinese to find most of the money, and wish to work mainly in Northern China, which is the great field for this country's products and manufactures.

TOKYO DRAMATIC AND MUSICAL ASSOCIATION.

A concert was given, for charitable purposes as usual, by the Tokyo Dramatic and Musical Association in the *Shorei Kai* hall, Tokyo, on Friday evening, the 16th inst. The audience was good, and the programme, which we append, is sufficient evidence of the quality of the music. It was, indeed, the best concert ever given by the Association, the only subject for regret being that Professor Koeber did not play a solo.

PROGRAMME.

Part I.

1—Trio, in "C Minor".....Mendelssohn
for Piano, Violin, and Violoncello.
(*a*) "Andante expressivo."
(*b*) "Allegro energico e con fuoco."
Dr. von Koeber, Prof. Junker, and Mr. Davis.

2—Alto Solo..." Longing at Rest".....Brahms
with Viola obligato.
Mr. Payne.

3—Violoncello Solo..." Tarantelle".....Popper
Mr. Davis.

4—String Quartette
(*a*) "Angelus".....Liszt
(*b*) "Serenade".....Haydn
Junker String Quartette.

Part II.

1—Alto Solo.
(*a*) "Der treue Jonnie".....Beethoven
(*b*) "Ye who have yearned alone" Tschaikowsky
Mr. Payne.

2—Piano Solo
(*a*) "Romanze" in F sharp major ...Schumann
(*b*) "Menuett" in B minor .....Schubert
(*c*) "Scherzo" in E minor .....Mendelssohn
Dr. Crusen.

3—String Quartette
(*a*) "Andante cantabile" .....Tschaikowsky
(*b*) "Canzonetta" .....Mendelssohn
Junker String Quartette.

4—Symphony.. ..." Concertante" .....Alard
Prof. Junker, Mr. Casares, and Miss Koda

YECHIGO KEROSENE WELLS.

It may be well, perhaps, to explain that although the Houses of the Diet have passed the amendment of the Mining Law providing that mining privileges shall be extended to companies organized by foreigners in accordance with Japanese law, the measure has not yet received Imperial sanction and is therefore not actually law. There can be no reasonable doubt, however, that it will be duly sanctioned and promulgated at an early date. The time fixed for its going into force is April 1st, 1900. After that day, any association of foreigners, registered as a juridical person in Japan, will be competent to engage in mining enterprise.

With reference to this matter, we read in the *Chiuo* that arrangements are in progress on behalf of American capitalists, represented by Mr. J. R. Morse, to form a company for exploiting the kerosene oil wells in the Nagaoka district of Yechigo. Our contemporary explains that this venture is independent of the project entertained by Mr. Asano to organise a trust in conjunction with Messrs. Samuel Samuel and Company.

THE BANK OF JAPAN.

The regular half-yearly meeting of the Bank of Japan took place on the 17th instant, when the following accounts were presented and passed:—

	Yen.
Net *Profit for* the half year	3,116,869
Regular Dividend (at rate of 6 o/o)	900,000
Second Dividend (at rate of 6 o/o).	900,000
To Reserve	680 000
Rewards to officers, &c.....	170,000
Depreciation of Properties	30,000
Carried over to next account.....	436,869
Total	3,116,869

The following are the names of the principal shareholders:—

	Shares.
Imperial Estate.....	69 660
Yokohama Bank	1,780
Mitsui Bank	1,682
Marquis Nabeshima Naohiro	1,500
Mr. Wakao Ikuzo	1,500
Prince Shimazu Tadanari	1,050
Mr. Hara Zenzaburo	1,050
Marquis Tokugawa Fusako (Mito)...	1,001
Mr. Yasuda Zenjiro.....	1,000
Mr. Nakamura Seizo	1,000
Prince Mayeda Toshitsugu	1,000

The shares of the Bank (200 *yen* paid up) are now quoted at 444 *yen*, so that they represent an investment paying somewhatless than 5½ per cent.

THE RICE CROP.

It appears that in spite of the very unfavourable weather during the autumn of last year and the consequent predictions of a defective rice crop, the yield of the cereal was above the average. Investigations now completed by the Departments of Agriculture and Finance show that the crop measured 39,586,769 *koku*, which is 283,808 *koku* above the average, though it is 7,800,897 *koku* less than the splendid crop of 1898. The estimate published by the Department of Agriculture and Commerce last October put the figure at 39,149,600 *koku*, or 437,169 *koku* less than the total now definitely ascertained. That was a remarkably close approximation.

CHINA.

From a telegram in the *Jimmin* we learn that Taotai Kung, of Amoy, against whom the Japanese preferred a complaint in connexion with the riot last fall, has been deprived of office and reduced two steps in rank. His immediate subordinate has also lost his post.

The *Nichi Nichi's* telegrams say that the Chinese Government has offered a reward of ten thousand taels for the capture of either Kang Yu-wei or Leung Kei-chiu. It was probably because he received news of this new effort to apprehend him that Kang recently took his departure from Hongkong in haste.

DISTURBANCE IN KOREA

Correspondence to the *Nichi Nichi Shimbun* from Korea says that disaffection has occurred in Söngchin. Two thousand rioters have taken the field, and it is feared that they may make a descent upon Yuensan.

THE DIET.

Saturday, Feb. 17.

At the moment of its pending dissolution the Diet has suddenly become active. It has attacked the Law of Elections and the Law of Religions in a manner that seems to indicate some idea of passing them.

The Committee of the Upper House has treated the Law of Elections much as was anticipated. It has declined to endorse the amendments of the Representatives. In one respect, indeed, it shows itself less liberal than the Government, for whereas the latter was willing to lower the franchise to 5 *yen*, and to dispense with any property qualification in the case of candidates for election, the Committee of the Peers raise the voter's qualification to 10 *yen* of annual taxes paid during two consecutive years, and the qualification for candidates to 10 *yen* paid during one year. The other important differences are that the Upper House wants to have large electoral districts as proposed by the Government, that it advocates unsigned, uninominal ballots, and that it would enfranchise any urban district having upwards of 50,000 of population, giving an additional member for every additional 100,000, or fraction of 100,000 larger than 50,000, whereas the unit in the case of rural population would be 140,000, with an additional member for every additional 140,000, or fraction over 70,000. This would mean an increase of only 30 members in the House, bringing its total number to 330, but we do not yet know what would be the relative proportion of urban and rural seats.

The Bill embodying a project of Religions Law has also been examined by a Special Committee, and subjected to various amendments, one of which is said to be that exemption from military service will not be granted to religious teachers or preachers.

The Upper House has very wisely restored the Government's supplementary budget providing an appropriation for the construction of a harbour at Wakamatsu, in connexion with the new iron foundry. We quote elsewhere some interesting remarks by Count Inouye on this subject. It is very doubtful, we imagine, whether the Lower House will be persuaded to abandon its attitude of opposition in this matter.

Monday, Feb. 19.

The House of Peers presented an unusually animated scene on Saturday last, a scene contrasting remarkably with the apathetic character of its proceedings during the previous part of the session. The strangers' gallery was filled to overflowing, chiefly with Buddhist priests, whose tonsured heads and brilliant vestments gave the House an unusual appearance. Marquis Kuroda, on behalf of the Special Committee, reported in favour of the Religions Bill, though himself opposed to it, but explained that the Committee had inserted numerous amendments. They had agreed, for example, that the Government should not interfere with the relations between a principal and an affiliated temple or church; that instead of interdicting all interference in politics on the part of religious teachers, the veto should apply only to becoming a member of a political party or taking a public part in a political demonstration; that the regulation providing for the punishment of persons slandering a religion should be deleted; that Japanese subjects alone should come under the denomination of "religious teachers," unless official sanction were obtained; that religious teachers should not be exempt from conscription, and so on. No sooner had Marquis Kuroda taken his seat than questions began to be propounded from all parts of the House. Never before was there such a volley of queries. Three Government Delegates were kept busy answering them, and it soon became plain that the Bill was regarded as a badly drafted and unsatisfactory measure. The principal speakers against it were Viscount Soga and Mr. Tsuzuki Keiroku. Neither of them condemned the purpose of the measure, but both concurred in denouncing it as ill-considered and defective. Professor Hozumi and Mr. Matsuoka made powerful speeches in its support, the former gentleman especially distinguishing himself by lucid arguments and learned expositions. The House, however, listened with evident impatience, and the priests in the gallery were attacked with most demonstrative fits of coughing whenever an advocate of the measure made a telling point. Finally, after a sitting of unusual length, much of which had been taken up with questions, a closed ballot was taken, when 121 voted against, and 100 for, the Second Reading. The announcement of the numbers was greeted with vehement applause from the strangers' gallery, and the sergeants considered it necessary to remove some of the reverend gentlemen, who probably had no objection to going, as the excitement was over. This, of course, is a very signal defeat for the Government. We presume that a similar measure in a simpler form will be introduced next session.

The Upper House have amended the Posts and Telegraphs Bill, in the sense of reducing the postal charge for newspapers and periodicals from 5 *rin* for a weight of 16 *momme* to 5 *rin* for 25 *momme*, and, the Lower House having refused to endorse the amendment, a conference of the Houses was held, resulting, as usual, in a compromise. The Managers agreed to a rate of 5 *rin* for 20 *momme*. That is not a very large concession, but it will probably entail a considerable addition to the outlays of the Communications Department.

Tuesday, Feb. 20.

The Diet's session has been extended until the 23rd instant, an interval of five days. It is understood that this extension is for the purpose of passing some supplementary budgets which are considered important. Otherwise the Diet's proceedings are not regarded very seriously. It has paltered with its duties this session in a flagrant manner, and treated the business of legislation so lightly that the nation's estimate of parliamentary institutions will not be enhanced. The *Fiji's* caricaturist sums up the situation very cleverly. He represents a wagon piled with packages, on the top of which is perched a very vacuous-looking person. The wagon is drawn by a sightless, broken-down horse. On the horizon the sun is setting, its disc already half-concealed, and towards it the dilapidated person on the packages is waving a frantic fan to stay the orb's disappearance. The *Fiji* doubtless borrows this idea from the legend of the Japanese Joshua, Taira-no-Kiyomori, who, by a wave of his fan, arrested the setting sun until the building of his new palace was completed.

Wednesday, Feb. 21.

The two Houses of the Diet now find themselves in their old positions towards each other with regard to the Law of Elections. The Lower House having changed the Government draft of an amended Law of Elections in such a manner as to deprive it of nearly all its value for the purposes of its compilation, the Upper House has restored most of the Government's proposals, and the question has now to be determined by a conference of the two branches of the Legislature. This complication has been witnessed twice previously, and on each occasion the result was failure on the part of the Houses to come to any agreement. The Government's objects may be briefly summed up. They are, first, to redress the inequality that now exists between the representation of the urban and the representation of the rural population; secondly, to secure purity of election by substituting unsigned uninominal ballots for the present system of signed ballots, and by greatly extending the limits of election districts; thirdly, to reduce the property qualification so as to enfranchise a much larger section of the nation. Speaking again briefly, the House of Representatives may be said to endorse the third only of these purposes, whereas the House of Peers endorses all three. There can be no question that the Lower House is allowing itself to be swayed by party interests. It consists almost entirely of men elected by rural constituencies, and it believes that the return of a large number of urban members would bring a corresponding increase to the ranks of the so-called "business men," who have always shown themselves disposed to support the Government and to stand aloof from party politics. The Peers, in this instance, are ranged on the side of public justice. They stand for the reality of representative institutions against the politicians of the Lower House, whose proceedings amount to a declaration that Parliaments are intended simply as instruments to promote party ambitions. Perhaps, on this third occasion, the Houses may be able to come to some compromise, but we trust that it will not be a compromise sacrificing the principles on which the Bill is based.

Friday, Feb. 23

The Bill just passed by the Lower House for granting subsidies for steamship services reduces the amount hitherto received by the Nippon Yusen Kaisha from 880,000 *yen* to 580,000 *yen* annually, a difference of 300,000 *yen*. The new grant is to continue for five years, from Oct. 1st, 1900, to Sept. 30th, 1905, and is to be on account of the following lines:—

	Annual Services.
Yokohama-Shanghai	52
Kobe Korea	26
Kobe-Northern-China direct	39
Kobe-Northern China via Korea	13
Kobe-Vladivostock	13
Kobe Otaru (eastern route)	120
Do. (western route)	52
Aomori-Muroran	365

The Company will continue to receive a subsidy of 127,331 *yen* on account of its Hokkaido services, but these are now to

Digitized by Google Original from CORNELL UNIVERSITY

become regular services instead of occasional, as hitherto. They are :—

	Annual Services.
Hakodate-Nemuro	60
Otaru Osanai	52
Nemuro-Abashiri	23
Nemuro Etrup	21

In the case of the Osaka Shosen Kaisha the grant for the Yang-tsé-kiang service is complicated. Commencing from April 1st, 1901, and continuing for one year, the Company will receive 291,848 *yen*; then from April 1st, 1902, until March 31st, 1906, it will receive 354,942 *yen* annually, and from April 1st, 1906, to March 31st, 1907, the grant will be 266,206 *yen*. The services to be undertaken are :—

	Services Yearly.
Shanghai-Hankow	96
Hangkow	60

There is finally a subsidy to the Taito Kisen Kaisha for a Shanghai-Suchow-Hangkow service. The amounts are, from April 1st, 1901, to March 31st, 1903, an annual amount of 57,873 *yen*, and from April 1st, 1903 to March 31st, 1904, a grant of 14,468 *yen*. The services are to be :

	Annual Services.
Shanghai-Suchow	300
Shanghai-Hangkow	120
Suchow-Hangkow	124

With reference to the Osaka Shosen Kaisha, there is some comment on the curious fact that, although the leader of the Liberals opposed the grant in the Lower House, he was outvoted. In fact the affair was a victory for the Opposition, who voted *en masse* for the subsidy. We need scarcely say that sinister inferences are drawn from this fact, but since the Osaka Company's agreement with a Chinese guild to give preference to Chinese goods applies to a line of steamers not included in those subsidized, it seems unnecessary to go far afield in search of a motive for the House's vote.

THE VERACIOUS BOERS.

It is a good sign, we take it, that the Boers find themselves compelled to fall back on lies in default of victories. A telegram received at the Legation of France in Tokyo, and published on Monday in these columns, represents them as making out an enormous list of British losses compared with their own. They must have all the proverbial stupidity of mendacious folks if they are not aware that the world has nothing to learn about the British casualties. The name and regimental number of every British soldier, killed, wounded, or dead of disease, are posted at the War Office in London without delay, and published in the columns of all the leading papers. There is not, and can not be, the smallest concealment. An interesting illustration of the difference between Boer versions and British versions is furnished by the following :—

THE OPERATIONS ROUND COLESBERG.

The following telegrams have been received at the War Office from the General commanding at Cape Town :—

Cape Town, Jan. 5.

French reports 4th January :—Left flank about three miles from Colesberg to the north attacked by 1,000 of the enemy early in the morning, squadron of 6th Dragoon Guards furnishing picket charged effectively, but large number of Boers gaining ground by opening fire with rifles and quick-firing artillery guns, two companies of the 2nd Berkshire and four companies of the 1st Suffolk, expeditiously assisted by Royal Horse Artillery (attacked them).

Meantime 10th Hussars and section of Royal Horse Artillery on the right flank by their combination caused withdrawal of many, but few hundreds held out on kopje.

Our heavy fire prepared the advance of 150 mounted infantry, who pushed on under cover of ground, and, dismounting, captured kopje and 19 prisoners. Enemy's loss 50.

Boers disclosed to-day fresh position five miles from Colesberg, to the north, with two heavy guns. Enemy's evident effort to-day was to reopen communication with Bactu.

Casualties :—10th Hussars, killed, Major Alexander. A few men hit.

6th Dragoons, only known casualty, dangerously wounded, 2nd Lieut. Gibson. Three men hit.

1st Suffolk.—Two men slightly wounded.

Boers still in force on hills to south-east of Colesberg.

Enemy's loss 1st Jan. more than 50, including two Field Cornets, many wounded, one gun damaged.

Enemy reoccupied Dordrecht.

Galacie reports Boers withdrew to Stormberg. Elsewhere no change.

Cape Town, Jan. 6.

French reports, January 6 :—Situation much the same as yesterday; but I regret to report that serious accident has happened to the 1st Suffolk Regiment.

From news just come to hand from them I gather that, with the authority and with the knowledge of French, four companies of the 1st Suffolk advanced by night against low hill, one mile from their camp. They attacked at dawn. Lieutenant-Colonel Watson, commanding, gave orders to charge. He was at once wounded. Orders for retirement were given it is said by the enemy. Three-quarters of the force retreated to camp. Remainder held their ground till, overpowered by grater numbers, they surrendered.

Seventy taken prisoners, including seven officers.

French reports that commando which attacked on January 4 lost 50 killed, besides wounded and prisoners, and dispersed.

Lorenzo Marques, Jan. 8.

Despatches from the Boer position at Colesberg, dated the 6th inst., have been received containing details of the Boer version of the fighting there.

General Schoeman had been defending the ridge of hills surrounding Colesberg for five days, which finished with heavy fighting mixed with artillery fire for 36 hours continuously. The movements of the British on Friday developed into a determined assault upon the Boer trenches, when the nasers (? Mausers), assisted by the Transvaal Maxim battery, decided the day in favour of the forces of the Federals along the whole line.

The trenches and kopjes occupied by the Boers were stormed gallantly by the Australians, but a useless sacrifice of men ensued. A terrific dash was made upon the Boer position near Colesberg by a company of Lancers. They manœuvred with the greatest boldness, but met with heavy loss, leaving nearly half of their entire squadron on the field during their wild attack. The British infantry followed up, but the Boers' sharpshooters played great havoc among them at close range. Sixty bodies were found below the position, and their colonel, mortally wounded, was also found. The Rand Mounted Police behaved admirably.

At the time the message was despatched the firing was slackening, but the Boers reported that so far they had over 100 prisoners, including eight officers. The Boer losses amounted to 30 killed and wounded.

NOTES ON CURRENT EVENTS.

We were mistaken in saying that the Odawara Electric Railway runs to Yumoto. The section just finished does not go farther than Kozu.

The *Fiji Shimpo* publishes a telegram stating that a disturbance has taken place on the Chinese frontier of Burmah, resulting in the wounding of two employés of the British Consulate and two Burmese. Chinese bandits are supposed to have been responsible.

A terrible rumour is published to the effect that 130 miners of the Kame-Abukawa mine in Akita prefecture have been frozen to death. A Tokyo contemporary, in publishing the story, alleges that the managers of this mine are proverbial for the indifference they show to the welfare of their *employés*, but we trust that the grounds for the accusation may prove to have been greatly exaggerated.

The reported murder of a Japanese in Amoy by Chinese soldiers assumes, on farther inquiry, the comparatively insignificant dimensions of the wounding of two men in a brothel squabble. Things are said to be perfectly quiet in Amoy from an international point of view.

The total number of rats brought to the Tokyo police from January 15th to February 15th, when the system of purchase ceased to be operative, was 110,078, on account of which a sum of 5,500.70 *yen* was paid. The Kyobashi district headed the list with 13,877.

The little village of Yokogawa has been nearly wiped out by a conflagration. Fire broke out on the 15th instant in one of the railway stores, destroyed the store, 8 railway buildings and 35 houses. There was one death. As yet the cause of the disaster is not stated.

The reported outrage on the Burmese frontier is said to have been of a rather serious character. According to the *Asahi's* telegram, two members of a British consulate were killed by their Chinese guards. That version of the story appears very improbable. It is difficult to believe that, had such an event occurred, no statement would have been wired to the East by Reuter or some of the other agencies that supply news.

Kirishima Volcano developed exceptional activity on the 19th instant, at 12.55 p.m. Two hunters, who happened to be on the mountain at the time, were killed, and three were severely injured. Asama-yama also emitted local rumblings and great quantities of smoke and ashes on the 19th instant. In connexion, doubtless, with the latter phenomenon, news comes from Chiba prefecture that a shower of ashes fell there at 9 p.m. on the 19th instant.

The battle-ship *Shikishima* has passed safely through the Canal. She reached Suez on the 15th instant, the transit having occupied four days. The feat seems to be regarded with much satisfaction in Japan. No vessel of the *Shikishima's* size (14,850 tons) had ever previously passed the Canal, and the quick time in which the passage was accomplished is certainly a subject for congratulation.

Japan has already sent Captain Hiraoka to South Africa to accompany the British force throughout the campaign, but since the war promises to be much more protracted and on a much larger scale than was originally anticipated, she is now about to send two more officers, one to observe the commissariat arrangements and the other to perform a similar duty with regard to the medical department. There will be a very great deal to observe, we imagine.

His Majesty the Emperor of Japan has conferred the Order of the Rising Sun, 5th class, on Mr. Brindley, in recognition of the services rendered by him in the capacity of Engineering Instructor at the Kosakubun-kyoku, Akabane. Many people in Japan will learn with much pleasure that Mr. Brindley has received this well-merited recognition, for during his long

Digitized by Google Original from CORNELL UNIVERSITY

residence in Japan he won not only respect for his abilities and conscientious assiduity, but also warm friendship and esteem for his genial and sterling disposition.

A telegram to the *Nichi Nichi* from Söul says that Mr. Kawakita's application for permission to establish whaling stations in three districts of Korea has been sanctioned. We recently published particulars of this enterprise. It is not on a large scale, the capital being only a hundred thousand *yen*, but the promoters paint a very rosy picture of their prospects. The districts are Kyöngsang-do, Kangwön-do and Hamgyöng-do.

Another outrage against the persons of foreigners is reported to have occurred in China. On the 3rd of December last, Major Takenouchi and Captain Hashimoto of the Japanese Army, with 17 Chinese attendants, set out from Fuchow for Kiukiang, on a surveying expedition. They had reached Namchong when, on the 7th instant, they were attacked by a party of Chinese roughs, and Major Takenouchi was severely wounded. A physician has been despatched from Hankow to attend to his injuries. The *Hochi*, which publishes the news, represents the affair as very grave.

Congratulatory messages are reaching the Court of Japan in great numbers, from private individuals, both Japanese and foreign, and from European Courts, with reference to the betrothal of the Prince Imperial. It is stated that the members of the Corps Diplomatique in Tokyo have resolved to present a pair of silver vases inlaid with gold to the Imperial couple, and that the shapes and decorative designs are taken from vases used on the occasion of the Emperor's marriage. Baron d'Anethan, in his capacity of Doyen of the Corps, is said to have placed the order with the Gyokuho-do.

The Liberals have decided to make the nationalization of railways a party question. This decision was adopted unanimously at a general meeting of the Party, when 83 members attended. There was not by any means corresponding unanimity with reference to the method of purchase, but the main proposal passed virtually *nem. con.* Hitherto the Liberals' method with regard to this question has been to leave their members free to adopt whatever attitude each individual's judgment recommended, but it will now be necessary for every member to support the Bill or to answer to his Party for failing to do so.

The projectors of the Söul-Fusan Railway have issued a circular which contains a very clear statement of their programme. They put the capital of the undertaking at 25 million *yen*, to be raised in instalment of 5 millions each. So soon as one-tenth of the first installment is paid—in other words, when five hundred thousand *yen* have been put up—the company is to be entitled to commence work. It is further to have power to issue debentures to an amount not exceeding 10 million *yen*. The Government is asked to do two things: first, to make itself responsible for the payment of the debentures; secondly, to guarantee 6 per cent. interest on the company's paid up capital; not an actual disbursement of 6 per cent., but such a sum as shall bring the company's net profit to 6 per cent. Of course, until the line begins to be operated the whole of the 6 per cent. would have to be disbursed by the Treasury.

It turns out that there is no truth in the story of a duel between two lads of the Waseda Semmon Gakko. What really happened was that one of the students, driven wild by the taunts of his comrades that he was a bastard, ran off in a distraught condition with the apparent idea of committing suicide. Three students followed him, being solicitous for his safety, but it would seem that he misinterpreted their intention, for when they attempted to approach him, he pelted them with brickbats. They finally had recourse to violence in order to restrain him, and in the course of the struggle he received an unintended injury. That is the version now published.

A middy of 16, now serving in the *Terrible*, writes to his mother under date of December 19th from Durban:—"As you see by the heading, I am back in the *Terrible*. When I and the three other mids rejoined we found, much to our disgust, that all the mids had gone to the front. I am expecting and praying that I will go also, as I believe they want some more. If I don't go I shall call it the biggest piece of ill-luck that I have ever had . . . I hope that I shall be able to write you a joyous letter in a couple of days saying that I am off to the front." It is pleasant to find that the plucky lad had his wish. On the 20th he writes:—"I am quite well and am off to the front to-morrow." The second letter consists of one sentence.

The *Fiji Shimpo's* cartoonist draws a witty picture, a combination of art, mathematics, and politics. It takes the form of three equations, the members of which are cleverly drawn caricatures. Translated into words, the sketch runs thus:—

The Liberals+the Government=the State Purchase of Private Railways.

The State Purchase of Private Railways+the Stock Exchange=a wine-and-geisha jollification held by members of the House of Representatives and speculators in shares.

(The Liberals+the House of Representatives+the Speculators in shares)—(the State Purchase of Railways+the masks of gentlemen)=three skeletons struggling for a pot of money.

A telegram from Amoy says that a Japanese subject has been assassinated there by Chinese soldiers. The murder took place on the night of the 16th instant, but no particulars are given.

Japan will, of course, suffer much inconvenience if the United States applies its coasting-trade system to Hawaii, as seems very probable according to present appearances. Japanese steamers would then be precluded from calling at Honolulu *en route* for the Western ports of America, since by so doing they would fall under the regulation which forbids any foreign vessel to carry cargo from one American port to another. Similarly it would be impossible for Japanese steamers to carry cargo from the Philippines to America. We observe that the *Chiuwo Shimbun* writes in very strong terms about this subject, and is disposed to regard the American system as uncivilized. We do not believe in the American system, but it is necessary to remind our contemporary that there is an obstacle to the Japanese Government's adopting the course it recommends, namely, addressing an official remonstrance to the United States Government. The obstacle is that Japan herself closes her coast-wise trade to vessels owned by foreigners.

A correspondent draws attention to the following extract from Mr. Frederick Harrison's New-Year Address to the Positivist Society in London:—

Being so helplessly split up, our gallant soldiers fought several stiff battles, but while the checks they had met might be called reverses, they were certainly not routs, nor were they defeats. An army was defeated when it was driven back from its positions disorganised and demoralised. Nothing of the kind had occurred in any single engagement, unless it were in the small affair at Stormberg. *The gallant Boers had been many times driven from their positions, the British forces never once.* The heroic devotion of the British soldier and his officers had been proved on a dozen bloody fields. The total loss, sad as it was, had really been very moderate. In the general result, if the campaign had hitherto been a failure and a cruel disappoin ment, it had not been inglorious and had not been calamitous.

A Frenchman is said to have purchased a portion of Mr. Hirose's gold-dust claim in Esashi, the transaction, necessarily of an indirect nature, being concluded in the name of Mr. Akiyama, the well-known barrister. Such, at any rate, is the assertion of the *Shogyo Shimpo*. We do not vouch for its accuracy. The dimensions of the Hirose claim, as given by our contemporary, are peculiar: a width of 10 yards and a length of 6,000 yards. The Frenchman's lot is said to measure 10 yards by 1920. He purposes employing the best modern machinery, an example which, if its results prove encouraging, will be followed by Mr. Hirose in working the rest of the area. The price paid by the Frenchman is said to have been 8,000 *yen*, or a little less than a *yen* per *tsubo*. If the district really has auriferous qualities, that price is not ruinous.

INTEREST RATES.

According to investigations completed by the Finance Department and published in the *Official Gazette*, the rate of interest throughout the empire during December last was as follows:—

	On Loans.		On Deposits.	
	Max. per cent.	Min.	Max.	Min.
Hokkaido	12	10	6	6
Tokyo	9.9	8.8	6.5	5.8
Kyoto	12	8.7	6	4.5
Osaka	1.08	8.5	6.8	3
Kanagawa	1.02	8.4	7	5.5
Hiogo	11	8.7	5.5	5.5
Nagasaki	1.08	1.02	6	5.5
Niigata	11	9.9	6	5
Aichi	8.8	8.4	6	5.2
Miyagi	12.7	9.5	7	6
Aomori	13.7	12.1	6	6
Hiroshima	12.7	1.06	6	5.5
Kumamoto	13.1	1.09	7.5	6.5
Kagoshima	12	8	6	4.5

RAILWAY DISASTERS.

The *Hochi* complains of the frequency of railway disasters in Japan. It asserts that during the 65 days from the 3rd December last to the 6th February this year sixty-four persons have sustained more or less injury on the government and private railways, the rate of accidents being one per day. England is now possessed of 22,000 miles of railway, but the casualties during the first half of last year did not exceed 7 killed and 240 injured. The railways in Japan extend over only 3,600 miles, and the casualties are more than five times those of England.

Digitized by Google Original from CORNELL UNIVERSITY

CORRESPONDENCE.

ECCLESIASTICAL INCONSISTENCY.

SIR,—Will you kindly allow me space to refer to the communication which appears in your issue of the 13th inst. under the above heading.

I have no desire to discuss the propriety of giving a Ball in aid of the Church Funds, as it is purely a matter of opinion, and possibly your correspondent is one of those who would advocate a Café Chantant as more appropriate.

As regards the allegation made that preparations for the Ball were started on Sunday, I am authorized by the Ladies who organized the entertainment, to say, that neither at their request, nor with their knowledge or consent, was work commenced on that day.

The Public Hall Momban received orders to start work on Monday morning, which left ample time for decorations, etc.

Then as to the new Church Building, I may state that at the time the contract was made it was stipulated that no work was to be done on Sunday, but this engagement was evaded by the Japanese contractor. Attention having been called to the fact, strong representations were made some weeks ago through the Architect, Mr. Conder; and he assures me that upon further enquiry, he finds that since that date the Committee's wishes have been observed; although he cannot prevent the builder discharging material should it happen to arrive from the country on Sunday.

These explanations will, I trust, Mr. Editor, be satisfactory to A. B. C., whom I should, but for the denial, class as a pedantic fault-finder, particularly as the information that I now give might have been had for the asking.

Yours truly, W. F. MITCHELL,
Chairman, Christ Church Committee.

15th February, 1900.

[*It is obviously* quite impossible to provide against *the arrival of* material on Sunday. Timber, stones, and so on may be sent by boat or other means of conveyance, starting from the point of departure on a week day, and, if they arrive on Sunday, they must be unloaded. It seems to us that the Committee have made every endeavour to prevent anything like desecration of the Sabbath.—ED. *J. M.*]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to Mr. Mitchell's letter in your issue of this morning I may add that the question of the expediency or propriety of a ball in aid of the funds of the Church never came before the Church Committee. As I understand the ball was voluntarily organized by a few ladies, well wishers of the Church, who acted quite independently of the Church Committee in the matter.

Yours truly, JAS. DODDS,
Member of Committee, Christ Church.

Yokohama, February 17th.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In order to remove what might otherwise convey an erroneous impression in reading Mr. Dodd's letter in your to-day's issue, I beg to refer to the following paragraph, which appears in the report given at the Annual General Meeting of Christ Church, held on Monday, the 29th of January:—

"We have the promise of a similar entertainment this year (that is a Ball) and hope, etc.:"

The report was passed; most of the members of the Committee being present, with the exception of Mr. Dodds, who was elected at that meeting.

Yours truly, F. W. MITCHELL.

Yokohama, 19th February, 1900.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—As I am rightly regarded as having some responsibility, not very easy to define or to discharge, in matters affecting the English Church in Yokohama, may I ask you to let it be known that the subject of the balls has not been allowed to pass without notice.

Yours faithfully, WM. AWDRY,
Bishop.

Tokyo, February 19th, 1900.

THE "JAPAN HERALD" AND LIEUT. COL. CHURCHILL.

SIR,—Enclosed I hand you copy of a letter addressed to the Editor of the *Japan Herald*. You will see from the foot note that I asked for publication, but seeing that I sent the letter during the afternoon of the 14th instant, and no notice has been taken by the Editor, although he found space to insert a letter signed "Palmam Qui Meruit Ferat," dated 15th instant, I shall be glad if you will kindly insert the letter in your paper.

I am, sir, W. W. TILL.

Yokohama, Feb. 16th, 1900.

TO THE EDITOR OF THE "JAPAN DAILY HERALD."

SIR,—I have been a subscriber to your paper for a number of years and have become accustomed to reading articles on various topics, but I have never read anything so cowardly and offensive as the paragraph referring to Lt. Colonel Churchill which appeared in your issue of the 13th instant.

I am sure that in writing this I am only voicing the unanimous opinion of the Yokohama British community.

I am, Sir, W. W. TILL.

Yokohama, February 14th, 1900.

SIR,—I shall be glad if you will insert the above in an early issue of your paper.

W. W. TILL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. W. W. Till is not singular in his experience. On the 14th I, too, addressed to the *Japan Herald* a letter protesting strongly against the gratuitous attack of that paper on Lieut. Col. Churchill; but up to date no space has apparently been available for my communication; neither have I noticed in the columns of the *Japan Herald* any apology for, or even explanation of, the offensive paragraph against which every gentleman in Yokohama protests.

Your obedient servant, F.

[COPY.]

TO THE EDITOR OF THE "JAPAN HERALD."

SIR,—I have read with absolute astonishment your scurrilous paragraph having reference to a contribution of Lieut. Col. Churchill to the *Japan Mail*. To me it is insufferable that an officer and a gentleman cannot write a letter to one of your contemporaries without being made the target of your vulgar abuse; and as a subscriber to your paper I hasten to let you know this.

Your obedient servant, F.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In his letter to you of yesterday I think Mr. Till might have gone further and ventured to say that he voiced the opinion of every fair and right-minded man in the *community* with regard to the dastardly attack made on Colonel Churchill in the columns of the *Herald*

I have heard many American friends who have no personal acquaintance with Colonel Churchill express themselves quite as indignantly as any Britisher on the subject, the personal nature of the attack being, of course, a question quite apart from that of any public services rendered in the past by the Editor of the *Herald*. It appears to me that his apologists wander from the point at issue.

Yours truly, JAS. DODDS.

Yokohama, Feb. 17, 1900.

THE OTHER SIDE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I beg the indulgence of your columns to make a few remarks, called forth by the article: "American Sympathy?"

Naturally you and many of the readers of your paper look at the "Boer War" from an English stand-point, while others just as naturally see that there is another point of view.

"G" undertakes to say what "the great mass of Americans" feel about this war, which is rather a rash proceeding for any one living in Japan, who must get his information "at second hand."

The *Independent* and *Outlook, in some articles*, may look upon British rule in the Transvaal as "desirable in the interests of progress;" other periodicals equally influential think that England's attitude toward this South African Republic is both morally and politically wrong. Some of the contributors on this subject, to such magazines as the *North American Review* and *Review of Reviews* and others, are among the worthiest not only of America but of the *British Isles*.

However much Americans may love their English friends, as I do; however, much they may admire their fortitude; though they may be grateful for their sympathy last year and rejoice because of the present amicable relations of the two nations, to take it for granted that they must necessarily wish for English victory would be an arrogant assumption that we believe many of the best of both Great Britain and the United States are not ready to make.

Ought a loyal American, even while his heart bleeds for the terrible sorrow and loss to England, to forget his other brothers who are fighting for the same liberty and independence he fought for, only a little over a century ago?

Are there not many of the proudest and most excellent blood in America's great metropolis, and yet others scattered throughout the Republic, having the very same ancestry as not a few of these despised Boers, who did as much as any of the patriots of 1776 to give a stable foundation to their new country and to help bring about her present prosperity? As far as one is able to ascertain from published reports, concerning characteristics of "Oom Paul's people," the innuendoes flung at them from some quarters are very unfair. Their ancestry, French Huguenot, Hollandaise &c. is as worthy as that of their enemy; they are an honest religious, well-educated people, and if they do lack some of the conventionalities of their European and American brothers, it is because they have been driven into or fled "to the wilderness" in order to maintain their religious and civil freedom—Heaven born rights.

We do not believe that "might makes right" nor that "the best interests of the world" are ever obtained by "crushing" one Christian nation that another may add to her power and possessions.

With great sympathy for our English friends who suffer needlessly, and with a greater sympathy for the Boers who, we believe, suffer not only needlessly but unjustly,

I am, very sincerely,
MARY BROKAW JONES.

Fukui, Echizen, Feb. 14th, 1900.

[How is it proved that the Boers are fighting for their independence? How was their independence threatened? They were simply asked to grant to British subjects in the Transvaal the privileges that they themselves receive in British dominions; the privileges that British subjects receive in the Orange Free State; the privileges that British subject were entitled by convention to claim. Was the independence of the Free State threatened by granting those privileges? If ever a war was inspired by aggression it is this war, and the Boers are the aggressors.—ED. *J. M.*]

MR. FUKUZAWA AND THE NON-CHURCHED.

TO THE EDITOR OF THE "JAPAN MAIL."

The readers of the *Mail* have to thank you for the very full and clear review of the writings of Mr. Fukuzawa, the last installment of which is printed in to-day's issue of your paper. In the opinion of the writer you fail to make a very important distinction when you compare Mr. Fukuzawa's teachings with the attitude of the

Digitized by Google Original from CORNELL UNIVERSITY

great number of the unchurched in Western countries. With your permission I should like to call your attention to this distinction.

In referring to Mr. Fukuzawa's doctrine that religion is a useful falsehood, that while it is a good restraining influence and incentive for the uneducated, the educated have grown beyond it, you say, "After all is not this just the very attitude tacitly assumed by the majority of thinkers in Europe and America? Thousands, we may perhaps say millions, of men steer quite clear of religion themselves, never entering a church except for a funeral, a wedding, or a baptism, but they think it but natural that their women folk should go to church, and that even a certain class of men should find religion helpful to them. The only difference between Mr. Fukuzawa and the majority of Western thinkers is this. He states in plainest language his opinion on the subject of religion and its function in the world; they usually maintain a discreet silence. But their practice and their confidential communications made by them to friends conclusively show that in reality their attitude to religion is precisely that of Mr. Fukuzawa."

The fact that a man does not go to church does not prove that he is not a religious man. This is the distinction which you fail to make. A man may believe in religion and be religious in his life and for other reasons absent himself from church. For some years the writer has mingled socially and somewhat extensively with the non-churched men in different cities of the West, and has almost universally found them to be men who believe in religion. He has been surprised to find in many cases that they were men of devout spirit and daily religious habits, and yet they do not go to church. Why? There are many reasons. We shall call attention to but two or three of them.

One reason is that they have been taught to identify the church with the dogmas of Orthodoxy, that is, with the doctrine of verbal inspiration of the Bible, total depravity, endless misery in the next life for the sins of this, and other kindred doctrines. They know that things so contradictory to reason, so revolting to their better manhood, can not be true, and therefore they absent themselves from the church which they understand represents these ideas. They know they have a better religion in their own hearts.

Another reason is that they have identified the church with ecclesiasticism. Ecclesiasticism, especially as it is often exercised, is repellent to the liberty-loving and growing mind. There are many other influences, such as the mad rush for wealth and the craze for amusement so prevalent in the Western world, which prevent church attendance with men who thoroughly and honestly believe Christian ideas. You must not conclude, Mr. Editor, that because a man does not go to church he is not a religious man. It is a generalization which is far from correct. The fact is that a belief in rational religious ideas is vastly on the increase in the Western world. Instead of Mr. Fukuzawa having the "courage" to say what the men of the West believe tacitly but are not brave enough to advocate, his ideas would find few adherents among the more intelligent; and the higher the class in intelligence and education the less sympathy would be found for such teaching. This opinion I offer after years of careful study and observation bearing upon the subject.

Neither Mr. Fukuzawa's philosophy nor Orthodoxy is the growing thought of America, for which country the writer feels himself best qualified to speak. The thinking world is coming back to the rational religion of Christ. When Japan comes to know that liberal Christianity is the real Christianity taught by Christ, this land will be the land of faith as is the Western world of to-day.

WESTERNER.

Tokyo, Feb. 15th, 1900.

DEATH AND LIFE.

To the Editor of the "Japan Mail."

Sir,—Your most interesting paper has always offered an arena for the free and full expression of opinion, especially upon such subjects as you bring to the attention of your readers from time to time. I have been much interested by your editorial in the *Weekly Mail* of Jan. 20th entitled "Death and life" and beg space to make note of a few thoughts suggested by the same.

For some years past I have been interested in the chemical theory of life. It is therefore with unusual pleasure I learn that:—

"Prof. Loeb of the University of California claims to have discovered the way of producing life. He has chemically fertilized the eggs of sea urchins and has hatched these eggs. The feat was achieved by subjecting the unfertilized eggs to a solution of sodium and magnesium. Prof. Loeb says, 'We have drawn a great step nearer the chemical theory of life and already see ahead of us the day when a scientist experimenting with chemicals in a test tube may see them unite and form a substance which shall live and move and reproduce itself. It will be the first protoplasmic cell, the origin of all life which was produced in the test tube of nature ages ago by the union in the course of the world's evolution of the same chemical substances with which he will have worked.'"

The latter part of the Professor's prophecy seems a little involved, for how can the substance which the chemist of the future *will see* forming in his tube, be 'the first protoplasmic cell, the origin of all life which was produced in the test tube of nature *ages ago?*" But this of course is a mere matter of figure of speech which can be easily corrected when theory shall become fact. The great thought to which the scientist would draw our attention is, apparently, this. Having now discovered the hidden powers of a solution of sodium and magnesium the next great step is to manufacture by chemical process the eggs upon which to operate with the solution. Only this would now seem to stand between the chemical theory of life and assured fact. For it is so *infra dig.* for a scientist every time he wishes to obtain specimens of eggs for fertilization to have to be dependent upon sea urchins, or the birds of the air, it might be, or, horror of horrors! an ordinary barnyard fowl. For this of course exposes him to the doubts of the sceptical who will be prone to think only of the fact that he has had to apply to previous life for aid in his operations and absolutely ignore the wonders of a solution of sodium and magnesium. Hence this trumpet call to a new industry, the manufacture of eggs, which from now on may become the chief pursuit of the scientific world. And the Japanese who advertises these usefularticles of consumption as "abstract of fowl" will change his sign to read "evolution of test tube for sale here!" Having discovered the process of manufacturing eggs the chemist will only have to mix a few chemicals in a test tube, submit it to a solution of sodium and magnesium, and from it will come forth a sea urchin, a hen, or a man, as the will of the manipulator may determine.

By the time this has been discovered, the soul or spiritual nature of man will no longer present any difficulties. I notice that in your comments you called attention to these difficulties and suggested that in the chemical theory of life the soul is lost sight of. These fears are ungrounded, I assure you, for it will probably have been discovered that the psychical part of man is also resolvable to a chemical formula, the intellect consisting of (for instance) two parts hydrogen to seven parts bichloric acid, the sensibilities being made up largely of bismuth and antimony, and the will of equal parts of raw lobster, salad oil, shrimps, and fried oysters!

At last the chemical theory of life is a fact, and how men will hail it! How many difficulties it will solve! How many perplexing problems it will clear up! There is that old metaphysical problem of the Middle Ages; was the egg first, or the hen? The scholars of former days, not knowing the possibilities of a test tube and the virtues of a solution of sodium and magnesium, never settled the question, but the golden key is in our hands and we now unhesitatingly pronounce in favour of the egg—a sea urchin's egg.

Then it solves some of the vexing problems of myth and folk lore. There is that old story of Minerva springing full armed from the head of Jove. In these days when scholarship is marked by such ghastly ways of unbelief there has been a disposition to relegate this to the limbo of the incredible. But in this we are wrong, for scientists who hold to the chemical theory of life will unhesitatingly assure us that this story is a priceless treasure, for in it is hidden one of the earliest references in human traditions to the test tube sodium-magnesium process. Old Jove was only that "test tube of nature ages ago" and Minerva was simply "the union in the course of the world's development of chemical substances." There can be no doubt of this, for the references to Jove's head clearly points to the top of a tube.

Social problems likewise give way before the all-engrossing sway of the chemical theory of life. The inequalities which exist among men, the diversities of mental and physical constitution, these are all referable to the test tube sodium-magnesium process. This is clearly shown in those traditions of the infancy of the human race called Hindu. To explain social problems they invented the story of Brahma, which is only a test tube sodium-magnesium tragedy expressed in poetry. You remember that in the story of Brahma creating the race the Brahmins came from his head, the soldiers from his thighs, and the lower orders from his feet, or a scheme to that effect. What is Brahma but this old "test tube of nature ages ago;" and it was working smoothly and excellently producing group after group of Brahmins, the finished product of a proper union of chemical substances, when alas! one day the tube burst and there fell out on the earth the imperfectly united chemicals contained in the tube, some as soldiers, others as merchants, farmers, and artisans as the process was more or less complete.

But what have we to hope for from the test tube sodium magnesium process? Has it any utilitarian aspects? Certainly. How could it be otherwise? Just apply it to the problem of colonization. Instead of sending *people* to settle in territory where disease and climatic conditions are a menace to life and health the Government will only send a number of test tubes and a sufficient quantity of sodium and magnesium. They will then wait for the fortuitous union in these tubes of quantities of the soil in each locality, which being innoculated with malaria, fever and small pox, there will immediately come forth a race of sturdy colonists equipped physically, mentally, and morally for the battle of life.

May we not hope, further, that this test tube sodium-magnesium process will result in a complete revolution of our methods of treating criminals? How barbaric is our present way of treating the incorrigibly bad, sometimes imprisoning them for life, or even killing them and putting them under the sod. Instead of this they will then be sentenced to the great government test tube. Here they will be "reduced" to their chemical elements, the quantities will be readjusted, some of the bismuth and potassium removed, so to speak, and the will, as it were, reinforced with salad oil and shrimps, and he who went into the tube an incorrigible criminal will come out triplets morally and physically perfect.

Truly, great will be science, so called.

Yours cordially,

GEO. HEBER JONES.

Chemulpo, Korea, Feb. 1st, 1900.

A small fire occurred at forty-five minutes past twelve on Sunday night, at Uchidacho Gochome. It originated at a dying establishment, and was confined to the premises where it broke out.

SPEECH BY THE GOVERNOR OF THE BANK OF JAPAN.

(AT THE SHAREHOLDERS' GENERAL MEETING ON SATURDAY, FEBRUARY 17, 1900.)

GENTLEMEN,—Before submitting to you the general business report of the Bank for the 32nd year of Meiji (1899), I wish to avail myself of this opportunity to offer for your consideration a few remarks on the general condition of the economic world of Japan and the more important of the Bank's affairs during the year under review.

Looking back over the general monetary situation during the past year, it will be remembered that in the early part of the year the market was characterized by a general tone of depression, attended by the immobility of articles of commerce, and business continued to be dull —a state of affairs which was but a natural sequel of the industrial inactivity and business stagnancy observed towards the close of the preceding year. The situation was rendered worse by the steady fall in the price of rice, resulting in a diminution of purchasing power on the part of the rural population. At the same time, as a result of the inducements offered by all banking institutions during the past few years for deposits of all kinds, the money that had been dispersed in the country began to find its way to the coffers of the banks, thereby contributing to accelerate the general tendency to sluggishness in the money market. Under the circumstances the money accumulated in the banks in a remarkable manner. At this Bank, for instance, the return of money amounted to several million *yen* every month during the period from January to May inclusive. The inevitable result was a gradual rise in the quotations of public bonds and stocks and a constant fall in the market rate of interest. Such being the case, notwithstanding the fact that this Bank had twice revised its rate of interest in the last quarter of the preceding year, reducing it to two *cents* per 100 *yen* per diem, it was thought advisable, in consideration of the steady depreciation of the market rate, to lower our rate on four occasions between the months of February and July last year.

Subsequently, however, the silk season fortunately happened to coincide with the reviving activity of business in European and American markets, and the price of this staple article of our exports rose in consequence and silk continued to find ready sale. By about August or September, the export trade of the country had made so much progress that its stimulating effect began to be felt in the general business of the country. Then, again, with the approach of the harvest season it became possible, on the strength of reports pouring in from all parts of the country, to estimate with tolerable accuracy the probable shortage of the year's rice crop, about which some apprehensions had generally been entertained in consequence of the unfavourable weather and other untoward natural calamities, so that in the month of October the price of rice began to go up, which as usual led to a keen competition for laying in stocks of the cereal. The demand for money thus created was still more augmented by the increasing briskness of business on account of the returning prosperity in provincial centres and the steady appreciation of prices. It thus becoming apparent that a signal change was overtaking the money market of the country, it was considered necessary for this Bank to be prepared against future contingencies. Consequently the rate of interest was raised by one *rin* (1/10 *sen*) in the course of November, and the process had to be subsequently repeated twice over before the end of the year. These repeated elevations of rate were, however, unable to check the general demand for money, which continued increasing, and the volume of loans advanced at such a pace that by the end of the year it became necessary for the Bank, in order to meet the requirements of the market, to have recourse to an excess-issue of over twenty million *yen*.

The year under review, as you will have remarked, witnessed most extraordinary fluctuations in the condition of the money market. By way of illustration let me quote some statistics. The volume of loans of the Bank was at its lowest ebb in May, when it went down as low as 46,460,000 *yen*, and its highest limit was reached at the close of the year, when it went up as high as 121,090,000 *yen*, thus showing a difference of 74,630,000 *yen* between the two extremes. As to the volume of notes in circulation, the lowest limit was similarly recorded in May with 165,620,000 *yen*, while at the end of the year it footed up to 250,560,000 *yen*, showing an increase of as much as 84,940,000 *yen*. So large an expansion of the volume of loans or of note circulation in the short space of a few months has indeed been seldom witnessed. This remarkable phenomenon was, I believe, principally due to a sudden change in the condition of the money market in consequence of the increased prosperity of the export trade and the upward movement in the price of rice.

As to the general economic situation I am gratified to notice of late a tendency towards gradual improvement. Of the signs of improvement observable during the year under review the most remarkable were the increase of deposits at the banks and the circulation of commercial bills. Statistics for the whole country are not yet forthcoming, but referring to the returns of the Associated Banks of Tokyo and Osaka the aggregate amount of deposits at the end of the year stood at 148,040,000 *yen*, showing an increase of upwards of forty million *yen* over the figure for the corresponding period of the preceding year. This was in one sense the result of the general tendency of the money market, but it should at the same time be regarded as an indication of the general improvement of the monetary organs and the consequent development of facilities for the accumulation of money. With regard to the circulation of bills, the statistics for Tokyo and Osaka during the past year show that the value of bills cleared in those two cities amounted to 1,438,790,000 *yen*, which meant an increase of over 420 million *yen* as compared with the preceding year—a circumstance clearly indicating the degree of development attained by the system of credit transactions. These are facts on which the monetary world of Japan may be heartily congratulated. Turning now to the record of the foreign trade during the past year, we observe that the exports and imports amounted altogether to 435,100,000. Compared with the figures for the preceding year the above sum shows a decrease of 8,140,000 *yen*, but looking more closely at it we notice that there was an increase of 48,990,000 *yen* in exports against a decrease of 57,140,000 *yen* in imports, resulting in an excess of imports over exports to the moderate amount of something like 5,610,000 *yen*. It will thus be observed that the balance between the exports and imports, which had persistently been so greatly in favour of the latter since the late war, has nearly recovered its normal condition. Among the various causes which conspired to bring about such a result, mention may be made, on the one hand, of the lively demand at high prices for silk and silk fabrics in consequence of a favourable turn in the Western markets, and of the prosperous trade in some other articles like cotton goods and copper, and, on the other hand, of the decrease of the importation of rice as the result of the previous year's plentiful harvest and of the cessation of the speculative importation so extensively resorted to in the previous year in anticipation of the coming in force of the revised tariff. It is, however, a matter for regret that so unusually prosperous a trade in exports as that witnessed last year was not sufficient to prevent an ultimate excess of imports over exports.

I next wish to say a word about some changes introduced in the note issuing system. I allude to the amendment of the Convertible Notes Regulations and the enactment of a law for taxing the Bank of Japan. The result of these legislative measures has been, on the one hand, the expansion of the limit of issue on security, which means a corresponding increase in the responsibility of the Bank as the supplier of funds for purposes of domestic and foreign trade. On the other hand a tax has newly been imposed upon the Bank on the issue of notes, thus adding to its obligations.

With regard to the more important affairs of the Bank during the year under consideration, I may be allowed to call your attention to the establishment of a branch at Fukushima, and the closing of that at Tai-Hoku (Tai-peh). The north-eastern districts of the main island produce a number of valuable commodities like silk, rice and other cereals, and so forth, yet complaints have been heard of frequent stringency of the money market there. In order to remedy this state of things the need of a branch somewhere in that part of the country had for some time been recognized, and, taking advantage of the opening in May last year of the Yonezawa-Fukushima section of the O-u railway, the town of Fukushima was selected as the seat of the proposed branch, which was opened for business from the 17th of July. The branch at Taihoku having been established for the sole purpose of managing Government funds in Formosa, the necessity for its continued maintenance ceased to exist with the organization in September last of the Formosan Bank, which was charged with the business in question. The business was accordingly handed over to that Bank, and our Branch was closed on the 30th of the same month.

When the Imperial Government raised the loan of 10 million pounds in London, the affairs connected with that operation were conducted by this Bank in obedience to the instructions of the Minister of Finance. Besides, the Bank undertook to subscribe two million pounds to that loan, and the reason was twofold. In the first place it was aimed thereby to obtain the facilities for securing satisfactory results in the arrangement of conditions for the floating of the loan. In the next place, our step in question was the result of the recognition on the Bank's part of the necessity, for the protection of our monetary system, of possessing a supply of securities that may at moment be converted into specie in foreign markets.

A word about the redemption of the National Bank notes. The operation was first entrusted to this Bank in the 16th year of Meiji (1883) in virtue of the Minister of Finance's Instructions on "the Combined Redemption of the National Bank notes." The business connected with the operation was since then conducted at the Bank until February last year, when it was brought to a conclusion simultaneously with the final disappearance of the National Banks, which had by that time been either dissolved altogether or recognized as private concerns.

In conclusion I trust you will join with me in congratulating ourselves upon the fact that, notwithstanding extraordinary fluctuations in the monetary situations to which I have already alluded, the year under review was, from the general economic point of view, on the whole tranquil and free from any particular disturbance. As to the prospects during the present year, there are certain aspects demanding careful attention on our part. At home, for instance, some anxiety is caused by the possible effects of the rise of prices and the poor crop of rice upon the balance of foreign trade, while abroad hostilities in South-Africa still remain unterminated.

I beg to assure you that my efforts, to the utmost extent of my humble capacity, shall be devoted to securing the satisfactory discharge of the Bank's functions as the central organ of the country's credit system.

It appears, remarks the *N.-C. Daily News*, that the five dollar and one dollar notes ordered last year from Japan by Viceroy Chang Chih-tung for the Hupeh Provincial Bank, for circulation in Wuchang and all parts of Hupeh province, have become so popular amongst the people there that H.E. has ordered a million more one dollar notes from the same source. The new notes are to be stamped as usual with the great seal of the Provincial Treasurer and of the Board of Reorganization of Hupeh.

FAREWELL DINNER TO MR. JUSTICE WILKINSON.

A dinner was given by the members of both the British Bar and the Inns of Court Association, in honour of Mr. Justice Wilkinson and officers of the British Court for Japan, at the Grand Hotel, Yokohama, on Monday, 19th February, at 7.30 p.m., when the following gentlemen were present, Viscount Nagaoka presiding:—Judge Wilkinson, Mr. H. A. C. Bonar, Mr. H. G. Parlett, Mr. C. D. Moss, Judge Watanabe, Mr. Holmes, Mr. H. C. Litchfield, Mr. J. F. Lowder, Mr. E. Terry, Mr. A. B. Walford, Mr. Masujima, Mr. G. H. Scidmore, and Mr. Akiyama.

After Mr. H. C. LITCHFIELD, late Crown Prosecutor for our Lady the Queen in Japan, had given the toast of "The Rulers of our respective countries,"

Viscount NAGAOKA said:—I rise to propose the toast of our friend Judge Wilkinson and Her Majesty's Court for Japan, and I feel proud in having to do so. The high integrity of the Bench is the glory of the administration of the law in England, and in the dispensation of justice in this country the Queen's Court at Yokohama has always maintained a very high character indeed for enlightenment and for perfect equity. When Foreign Powers entered into early Treaties with my country which preserved for them what are known as extraterritorial rights, it followed that foreign subjects had for criminal offences to be tried by their own officials applying their laws, and that when they were defendants in civil proceedings a similar mode of procedure had to be followed. Then all the Foreign Powers with the exception of Great Britain left the administration of justice to their Consuls, but England thought such a course insufficient, and in 1865, if I recollect rightly, a Court was established at Yokohama which was a branch of Her Majesty's Supreme Court for China and Japan, and which was presided over by a trained lawyer. This arrangement was, however, still found insufficient and unsatisfactory, at least so I presume, for in 1878 the Court here was given fuller powers, was separated from the Supreme Court, was to be called in future Her Majesty's Court for Japan, and had Sir Richard Rennie appointed as its first Judge. Sir Richard Rennie was succeeded by Sir Nicholas Hannen, who was in turn succeeded by Mr. Mowat, and then by the present occupant, our guest of to-night, Mr. Wilkinson. Gentlemen, the distinguished services of these Judges are very well known to you, and are also familiar to my country men. Both Sir Richard Rennie and Sir Nicholas Hannen passed to the Chief Justiceship in Shanghai, and Mr. Mowat had to retire from ill-health. Now, owing to the revised Treaties having come into force, the services of Judge Wilkinson are no longer necessary in Japan, and he is soon to leave us, but of this we feel sure, that his distinguished career in the public service is not yet to end, and I think it is the hope of us all that he in his turn will preside over the highest Court of the Queen in the neighbouring Empire. Should this be so, I can only say that his fellow countrymen will be very fortunate, for we can assure them that he will ever dispense justice with gracious urbanity and with that perfect impartiality and learning which have made him so loved and respected in Japan. Brother barristers, I ask you to join me in drinking the health of Mr. Justice Wilkinson and officers of the British Court, to thank them for services rendered by them in the administration of justice, in H.B.M.'s Court for Japan.

Mr. JUSTICE WILKINSON in reply said—Viscount Nagaoka and Gentlemen, I thank you most sincerely for your kindness in inviting me here this evening, and giving me the opportunity of meeting you all once more before my departure. I thank you, Viscount Nagaoka, for the terms of friendly appreciation in which you have referred to Her Britannic Majesty's Court for Japan, and the Judges who have presided over it, and you, gentlemen, for your hearty response. I hope before long to meet all my three predecessors on the bench, and it will give me very great pleasure to inform them of the kindly sentiments you have expressed with regard to them. While I feel that you have referred to myself in too flattering terms, I welcome and highly appreciate your kind words, as showing that you believe that I, like my predecessors, have striven to do my duty, and that I have not been altogether unsuccessful. It is a great source of gratification, now when our work is about to end, to feel that it has been one of usefulness, and that its usefulness has been appreciated. It is particularly pleasing to receive that assurance from fellow barristers who of all others are best able to form a just opinion. Viscount Nagaoka and gentlemen, I regret that this should be farewell. Again, in my own name, in the name of my predecessors, and in the name of all connected with the Court, I most heartily thank you. Fellow guests, I wish you to drink with me the health of our hosts. We are indebted to them for a very pleasant reunion, tinged though it may be with sadness. Our hosts, the members of the Bar, and the members of the Inns of Court Association, are now the representatives in Japan of British jurisprudence, and I hope they will make their influence felt. It can only be exercised for good. We wish them success in their individual capacity and success in spreading the high principles which as English barristers they have been taught should animate those concerned in the administration of Justice. Gentlemen. "Our hosts!"

Mr. MASUJIMA responded to the toast, on behalf of the British Bar and the Inns of Court Association, as follows.—It has been a very great pleasure to us to have been able to arrange for this function to-night, but at the same time we regret that we are entertaining our guests on such an occasion as the present when H.B.M.'s Court will soon be no more. It is one thing to rejoice with the Japanese Government in its taking foreigners in Japan under its judicial protection; it is quite a different thing to reflect that the Japanese have to say farewell to the British Court. The Law Court of England is a perfect and enlightened model of judicial administration, and H.B.M.'s Court for Japan has shown itself to be worthy of the tribute paid to it in such fitting terms by the much beloved president of the Inns of Court Association. Nothing is like a living example. In men or institutions a living monument only can effectively bestow its beneficient influence. Nothing is so far-reaching as real advantages conferred by illustrations laid before you. It is in this respect that we have to mourn over the honourable death of the British Court. When it is no longer among us, where can we find in this country such a noble and perfect model of judical administration? The existence of the British Court has also exerted a restraining influence over lawyers and advocates in this country. The traditions of the British Bar have controlled the conduct of many among us. I am sure that none of us who have been educated at the British Bar would or can ever forget its teachings, but where shall we look for their beneficent guidance when the Bar is gone with the Court of which it forms such an integral part, for men are often tempted without some actual moral pressure. In losing its co-operator, the British Bar, the Inns of Court Association will have hereafter to discharge an additional responsibility as an auxiliary educational machine for the advancement of legal science and judicial administration in thiscountry. Japan has much to learn from British example in improving her jurisprudence and her courts of law. Did not Mr. Miyoshi, late President of our Supreme Court, say that it was the English lawyers who have mainly contributed to the real improvement of the Japanese Law Courts? May the members of the British Bar individually and the Inns of Court Association long remain to render that very real and valuable assistance which they have done in the past, and to influence largely in the future the reforms and improvements that are still needed in the administration of jnstice and in the working of the Codes in Japan.

TABLEAUX VIVANTS.

The entertainment organized by the British Women's Patriotic Association, given in the Public Hall on Tuesday evening, fully deserved the hearty support accorded it. The proceedings opened with a pretty overture by the Misses Page, and then the curtain rose on the first tableau "United Services," a band of sturdy young Britons in the red tunics of the Line and the blue jackets of the Na y, who proudly stood at guard while "God save the Queen" was sung, and then saluted when the White Ensign and the Union Jack were unfurled. They were the Masters Guiness, Dinsdale (2), Hutchison (2), Parsons, Cahusac, and Talbot. Next Miss Beatrice Ross gave some admirable recitations, the first dealing with a bush-ranger's adventure in Australia. The two tableaux from Tennyson's "Princess" were very pretty, the antique Greek dresses and the admirable posing-making pictures which the audience were loth to part with. The young ladies taking part were, in the Tent Scene, Miss Moss (yellow), Miss Bishop, Miss A. Page, Miss Thomas (mauve) Miss M. Thomas (white and gold), Miss W. Mitchell, Miss Helena Page, Miss Dolly Page, Miss A. Strome (mauve), and Miss Nina Smith (yellow). In "The Kiss," the *Princess* was Miss M. Thomas, the *Prince* Miss H. Lloyd Thomas, and the *Statue* Miss Page. Mrs. Melhuish's glorious voice was heard to advantage in the next selection, and again later in the evening, and she was naturally recalled. Mrs. P. S. Bent's selection was most appropriate, "Jessie's Dream," which describes so effectively Havelock's relief of Lucknow—a story that surely will never die. The clear, pure notes of the singer and the stirring accompaniment of the Highland Airs, woke sympathetic chords in the hearts of the audience which found expression in rounds of applause. Another charming tableau, "Orientale," was then disclosed. It comprised Miss Nina Smith, Miss Mabel Sharp, and Miss Helena Page. After this Miss Helena Page, still in her pretty costume, gave a violin solo, and the first part concluded with the tableau "Sisters of Succour"—a hospital ward, with the sick in their cots, the nursing sisters in attendance, and the surgeon-in-charge going the rounds—a most effective, if rather gruesome, piece of realism. The nurses were Mrs. Healing, Mrs. Dinsdale, Mrs. Showler, and Mrs. Dunlop.

On resuming, after the interval, an amusing tableau was disclosed. In the words of the programme—"Perambulation. 'In the Park,' by the Girls they left behind them." Tommy Atkins' *penchant*, according to the British comic papers, is a neat nursemaid in charge of a perambulator—well, there were plenty of neat nursemaids and plenty of children on the stage—(though some of the caps, we must own, looked rather too much like "widders' weeds," and some of the "babies" were very wooden, but these are details). The young ladies sang "Oh, Tommy, Tommy Atkins," in the chorus of which they were assisted by the house. The nursemaids were the Misses Page (5), Miss Squire, Miss A. Strome, Miss Bishop, and Miss Ross; Miss Winifred Sharp, Miss Tresize and Master Hutchison played the natural parts of children. The skirt dancing of Miss Nita Strome was very graceful and thoroughly earned the applause which a delighted audience freely accorded. Master Ewen Steele, in the costume of Paddy of Killaloe, was recalled for his Irish jig, into the spirit of which he fully entered. After an exquisite violin trio by the Misses Page, the last tableau was disclosed, "Britannia," surrounded by her fair daughters, the Colonial possessions of the British Empire. Miss Lloyd Thomas was Britannia, a striking figure; and her attendants were Miss Moss (Canada), Miss Bishop (Cape Colony), Miss M. Thomas (India), Miss Mabel Sharp (Australia), Miss D. Page (New Zealand), and Miss A. Strome (Straits Settlements). "Rule Britannia" was sung during this piece; and then "God Save the Queen," brought an enjoyable evening to a close.

LETTER FROM AMERICA.

The controversies as to when the century begins have about closed, and the practical and satisfactory solution has been reached by most people, namely, that while all the astronomers have agreed that the 19th century is not finished until the last second of the last minute of the last hour and day of the year 1900, yet that the popular traditions and ideas, to say nothing of the opinions of the German emperor, have their rights, and so most people think they are within the 20th century. I remember years ago George Bancroft the historian remarked that he was born in the 18th century but had lived most of his life in the 19th century, for he saw the light during the year 1800, and he left himself on record as to his belief that the 20th century would not dawn until Jan. 1, 1901.

It has been a solemn thought to many, however, that we have passed by and are beyond a whole century from the death of Washington. To mature people in the present century it was quite common to have met and talked with those who saw or knew the father of his country. How we are sobered to think we are so far on our national way. The meetings called this year *in memoriam* of his decease, and the issues of the press and magazines, show that neither time nor scrutiny of facts and publicity of details regarding Washington have done other than set him in clearer light, beside giving him definiteness of position in the popular imagination. Mr. Paul Leicester Ford's book "The True George Washington," so far from creating contemptuous merriment or causing detraction, seems to have acted as a great stimulant to research and further study. Most striking this year have been the many tributes to the character of Washington at banquets, in the press, and offered in formal addresses, in England the mother country and among English-speaking peoples.

After more than a century's absence from us in the flesh, Washington appears more than ever as a saviour, an interpreter, and a prophet. He not only saved his country when he stood for rights as dear to an Englishman as to an American, and resisted revolution from without in the form of the aggressions of King George and his corrupt Parliament, but when the colonies, having become states, notwithstanding their independence, were, through sectional jealousies, degenerating into chaos, Washington again became the saviour and unifier. It was through his personality and poise that these jealousies were soothed and the people of the United States were through their constitution able to form a more perfect union and a strong government—a government that has changed in its essential features less than that of any country in Europe, that has a flag older than any other, and which is in temper one of the most conservative in the world.

For the third time Washington saved his country when the sentiment of gratitude towards France threatened to lead the nation into a hopeless vortex or to land it upon a rock. He not only, in the face of tempests of abuse, made the new treaty of 1794 with Great Britain, but he refused to see in the French revolution what some Americans saw in it. He knew the French people too well to suppose that the interests of any Latin people that should cling to Latin ideals were identical with those of English-speaking people. Washington doubtless felt that the Revolution was rather in the nature of a civil war, and that in the developments of history those who inherited the same ideas of safeguarded freedom, the same law, the same literature, and the same outlook upon the world, must be one, and that in the world's broader field British and Americans must work together. While the American gratefully remembers how the First Consul of the infant Republic of France draped the French standards in crape for ten days, he sees in the lowering at half-mast of the British flag of the fleet at Torbay, a more significant manifestation; for, only seventeen years before, the British Government had known Washington only as a rebel. To honour him in death was a sure sign that the past was forgotten, except as its memory could work for good. From this and from other precedents in British history, Americans draw hopeful auguries for South Africa.

In the events of the last two years Americans feel that Washington was not only the saviour of his country but that he was a true interpreter of his race, and, being an interpreter of such deep insight, he must needs be in a measure a prophet. His Farewell Address showed clearly that he was this. Americans are to-day as little inclined as ever to enter into "entangling alliances," or to have any connection whatever with what is known as "the balance of power." If the recent diplomatic victory of Secretary John Hay be confirmed, and I doubt not that in the main it is substantially true, that the United States has secured in China an "open door" of unrestricted trade, we can see here the carrying out of the traditions embodied by Washington in his Address, which calls for a reasonable maintenance of rights, both natural and those guaranteed by the written laws of nations, without joining in military schemes of conquest and spoliation.

Such a time as this, when Boer and Briton are at war with each other, tests strongly the real temper of the American people. Our nation is certainly not English in blood. Personally, I do not believe that even a majority of the American people are descended from English ancestors, though it is quite possible that a large majority is descended from the Four Nations in the British Islands, English, Welsh, Scottish, and Irish. To-day, probably, the overwhelming majority of our people believe that the war in South Africa is unjust, unnecessary, and the work of the worse elements in British society and government. They have an intense sympathy with the little republic in South Africa whose ancestors were Dutch, German, and Huguenots, who, being intense Protestants, were united by a common religion. They have taken up a fair portion of the earth, utterly unlike the founders of the American republic, have tried to shut out the rest of the world, have not encouraged education or the spread of liberal ideas, and, with all their virtues, are manifestly different in spirit and temper from the ancestors of the people of the United States. While few Americans wish to see Great Britain win too easily, and while they sympathize with the Boers or Africanders both in their position and claims, I am inclined to believe that should the question be put to each person individually, "What kind of a world would you wish to live in, such a world as the Boers apparently wish to make, or such a one as the British have made and are making," that, in overwhelming majority, the answer would be in favour of the British.

W.E.G.

PATRIOTIC FUND.

Amount received by the Chartered Bank of India, Australia, and China on account of the Lord Mayor's funds for the widows and orphans of the officers and men of Her Majesty's forces who may lose their lives from the war in South Africa :—

Yokohama, 17 February.

THE BOER WAR AS VIEWED BY CAPTAIN MAHAN.

We have been asked to publish the following :—

EDITOR OF THE "NEW YORK TIMES."

Sir,—Mr. Shearman's excellent letter in your issue of the 17th inst. upon the merits of the controversy between the Transvaal and Great Britain, which has issued in the present war, does not mention one point of considerable importance in itself, but still more as illustrative of the Boers' ideas of justice.

When the population now known as the Uitlanders were encouraged by the Boer Government to enter the Transvaal and to develop the gold fields, the period for naturalization, fixed by the law of 1882, was five years; but before the time came that the new-comers could avail themselves of this right the law was, in 1890, changed, the period being extended to fourteen years, with further restrictions of method which made the franchise still more illusory. Whether this was strictly *ex post facto* legislation I am not lawyer enough to know, but it is clearly a violation of fair dealing and is wholly characteristic.

May I suggest to our citizens generally, and to the Boer sympathizers especially, the inadvisability of public meetings on this question. There are very many among us, myself certainly one, who feel as strongly in favour of Great Britain as others do of her opponents. Let us all be careful not to provoke one another by immoderate expression of opinion, to which public meetings tend. Those on one side provoke retaliation on the other. Nay, they may make it necessary; for in the problems of the near future good understanding with Great Britain is too important for us to permit the impression that we are all against her here, and we may find ourselves in the unseemly state of party divisions for and against foreign States, as in the beginning of this century between the French and British parties. I avail myself of this opportunity to say that, in my judgment, not only is the cause of Great Britain just, but to have failed to uphold it would have been to fail in national honour.

A. T. MAHAN.

New York, Jan. 20th, 1900.

CHINA NOTES.

The Hongkong Government has voted fifty thousand dollars to the Soldiers' Fund.

Prince Waldemar seems to have had a very pleasant time in Shanghai, with luncheons, dinners, receptions, and balls.

The U. S. Naval Department has sent a telegram to Admiral Watson, U S.N., asking him to express the Department's high appreciation of the generosity shown by Hongkong residents to the sufferers by the accident on the U.S.S *Wheeling*.

The following telegram appears in the *Ostasiatische Lloyd* :—

Tsingtao, February 11.

A detachment of 180 men, with two field guns and two maxim-guns under command of Major Dürr, have left Tsingtao to-day for Kiaochou in order to protect the lives and property of Germans in the *hinterland*.

The mandarins at Shanghai have received orders from the acting Viceroy at Nanking to give every assistance to the military and inland naval authorities of Sungkiang and Soochow prefectures for the proposed capture of the leaders of two rival bands of salt smugglers and rowdies who have lately been making Choup'u and Nanhui (*coll.* Nay-way)—places not many miles from Shanghai—their battlefields against each other. Two battalions of infantry and twenty-two gunboats from Sungkiang and fifteen twelve-oared fast gun-boats from Soochow have been ordered to rendezvous near Choup'u to cut off the retreat of the smugglers and rowdies, while the land troops advance into the disturbed districts to give battle to them. It is reliably stated, remarks a contemporary, that the gangs of rowdies who have been recently infesting and robbing Pootung villages are merely foraging bands of the rival smuggler chiefs.

AMERICAN NOTES.

A statement made by Mr. S. C. Todd, attorney for the Standard Oil Company, in reply to the request made by the Industrial Commission, shows that the dividends of that giganiic concern varied from 5½ per cent. per annum in 1882, to 33 per cent in 1897.

It is generally understood that the new Philippine Commission will consist of five members, and that Colonel Denby and Dean Worcester will be the only members of the old Commission to be reappointed. Several prominent men are named in connection with the other places, among the number being Professor J. B. Angell, of Michigan University.

The Governor of Massachusetts and his council have agreed upon a proposition for the sale of the State's stock in the Fitchburg Railroad at par, ($5,000,000), taking in exchange 3 per cent. bonds of the Boston & Maine Railroad. Under this agreement, if ratified by the legislature, the Fitchburg will become part of the Boston & Maine system.

The House committee of eight members which has been investigating the case of Brigham H. Roberts, Congressman-elect from Utah, reached a decision on the 17th January, six of the members (four Republicans and two Democrats) voting to prohibit Roberts from taking the oath. Two members of the committee, Littlefield (Rep. Me.) and De Armond (Dem. Mo.), favour the seating of Roberts and his subsequent exclusion.

Imports of wheat and flour by principal importing countries of the world for the five months ended December 30 were 153,500,000 bushels, against 174,500,000 bushels last year. In these imports the British were 9,000,000 bushels less than the preceding year, Holland 8,000,000 less, while the balance of the decrease was scattered.

There are fourteen Harvard graduates in the fifty-sixth Congress, now in session, of whom four are senators and ten representatives. They are as follows: Senators, E. O. Wolcott, Law, '75, of Colorado; George F. Hoar, '46, and H. C. Lodge, '71, of Massachusetts, and Boies Penrose, '81, of Pennsylvania. Representatives, H. S Boutell, '76; G. E. Foss, '85, and Vespasian Warner, Law, '68, of Illinois; W. H. Moody, '76 ; H. F. Naphen, Law, '78, and Charles F. Sprague, '79, of Massachusetts; William A. Chanler, '85, and L. N. Littauer, '78, of New York; S. A. Davenport, Law, '55, Pennsylvania, and Melville Bull, 77, of Rhode Island.

Considerable uneasiness is felt by officials of the War Department, at Washington, over the fate of First Lieutenant Joseph H. Herron of the Eighth Cavalry; Dr. Carter, physician; nine packers and thirteen animals, composing a party which started out last April to explore Sushitina river, Alaska. Nothing has been heard from the party since last summer, and it is feared they may have perished. They accompanied the expedition led by Captain E. F. Glenn of the Twenty-fifth Infantry several hundred miles up the Sushitina, and at that point Lieutenant Herron and his party started up Tanana river for the Yukon river, expecting to come out by the Yukon route. Since then, however, nothing has been heard from them.

The past year has not been a good one for the Baptist, Methodist, Presbyterian, and Reformed Churches in New York. All of them, according to their own records, have lost in the membership of both church and Sunday-school. On the other hand the Protestant Episcopal Church, though it has lost Dr. De Costa, has made larger gains that any other religious organization. Its total advance in the borough of Manhattan, according to the New York *Evening Post* (January 6), was 5 870. The Lutheran Church also gained in all the boroughs of the city. This would apparently indicate what has often been claimed—that the liturgic churches are more adapted to meet the needs or the tastes of urban congregations than are the non-liturgic bodies.

A negative decision sometimes helps to define or illustrate a principle as well as one of a positive character, remarks *Bradstreets*, and this seems to be the case with the decision rendered by the Supreme Court of the United States in the case of The States of Louisiana vs. The State of Texas. This case involved the right of the latter State to institute such a rigorous quarantine as was put in force during the prevalence of yellow fever in New Orleans. It was alleged by the former State that the Texas quarantine was so strict as to place an embargo on all interstate commerce between the city of New Orleans and the State of Texas and to benefit the commerce of Galveston and other Texas cities at the expense of New Orleans, and was in violation of the Constitution of the United States. The State of Texas demurred on the ground that the Supreme Court of the United States had no jurisdiction in the case. The view was sustained by the Supreme Court, which held that it was not within the judicial function to inquire into the motives of a State legislature in passing a law or of a chief magistrate in enforcing it in the exercise of his discretion and judgment, and that the case could not be regarded as presenting a controversy between the States. The decision is one of a number going to illustrate the reluctance of the court of last resort to interfere with the exercise of the police power of the States.

"The Great Lakes have become a great artery of our richest commercial blood," says *Ainslee's Magasine*. "One-third of the population of the United States is dependent on these lakes for their export trade. This waterway taps the richest and most prosperous agricultural territory on this continent of ours, together with our most productive mines, and it is worth while noting that within a radius of 400 miles of Cleveland lies one-half the population of the United States. It is a well-established fact that deep-water transportation is, and necessarily must be, far below the cost of transportation by rail; indeed, it is computed that the cost or water transportation by steam, when the voyage is of any considerable length, is about one-quarter of the average cost of transportation by rail, while by sail-boat it is only one-eighth of the latter. As this question of transportation determines to a great extent the existence or non-existence of a possible industry, and enhances or diminishes the value of every article of export in proportion to its efficiency and economy, the battle cry of the west for 'twenty feet of water between Duluth and the sea' is no great problem to account for. In the year 1898 there passed through the Sault Ste. Marie canals no less than 21,234,664 tons of Canadian freight, alone having a value of $200,000,000, while American ships moved some 168,000,000 tons through the same waters for the same length of time."

NEWS OF THE WEEK.

The Manila contribution to the South African War Relief Fund now amounts to $7,977.

A 28-pounder gun has just been constructed at Kimberley, firing 8,000 yards accurately.

Miss Bloxham, late of Yokohama, is settling in Shanghai as a teacher of music, tonic sol fa, etc., for a while.

We have received from the Rev. W. T. Austen a cheque for *yen* 10 in aid of the work of the Army and Navy Mission Club at Yokosuka.

On the 6th inst. fire broke out at the village of Shinoncho, Tainan prefecture, Formosa, and over a hundred houses were destroyed.

On the 19th instant at 7 p.m. ashes fell at Okegawa, Kasukabe, and Yoshikawa, Saitama prefecture. The fall lasted about 30 minutes.

An official despatch from Formosa says that on the 18th inst. there was one new case of plague and one death at Taipeh, and one new case at Giran. This makes 82 cases and 69 deaths from the new year.

A fire broke out in Sevastopol naval dockyard a few weeks ago, and, notwithstanding all the efforts of the naval and military authorities, it was not got under before damage had been caused to the extent of 1,000,000 roubles.

On the 18th inst., two armed robbers entered a store in Tsutsugi-gun, Futamatagawa, Kanagawa Prefecture. They stole 6 *yen* in cash and 20 pieces of clothing. The men were arrested on Wednesday by the Tobe Police, but one of them, Sato Futaizo, managed to escape, during the absence of the Inspector in charge. The other, named Yoshida Kikujiro, was sent to the Saibansho on Thursday morning.

The U.S. gunboat *Isla de Luson* was placed in commission on January 31, with the following complement of officers:—Commander J. V. R. Bleecker, Lieutenant P. J. Werlick, Lieutenant J. A. Dougherty, Lieutenant U. T. Holmes, Asst. Paymaster G. C. Schafer, Asst. Surgeon B. L. Wright, Ensign D. F. Boyd, Naval Cadet J. A. Schofield, Naval Cadet F. O. Branch.

An unpleasant incident occurred at the recent opening of the Portuguese Cortes. When the Viscondessa da Varzea approached the throne to make her obeisance to their Majesties, her foot caught in something, and she fell back, and is said to have broken her leg. She was carried out to her carriage in great pain.

The Russian Imperial Ministry of Marine has issued its Budget for 1900. According to the *Kotlin*, the Naval Estimates for the present year amount to 87,564,700 roubles as compared with the Naval Budget for 1899. The chief item of expenditure is the sum of 38,023,351 roubles for shipbuilding and artillery; the next important item is that of 14,357,769 roubles to meet the cost of voyages undertaken by the

Digitized by Google Original from CORNELL UNIVERSITY

men-of-war; 3,200,000 roubles are assigned for the works at the new naval station at Libau, in the Baltic; while Vladivostock and Port Arthur will each receive 3,000,000 roubles to be expended in improving and fortifying their harbours.

The case brought by the Public Procurator against Umeseko Toyomatsu for assaulting Mr. Kent, came on for hearing in the Yokohama Chiho Saibansho on Wednesday, but owing to the absence of the Procurator was adjourned *sine die*.

At Union Church on Sunday morning the Rev. E. S. Booth was formally installed as the new Pastor. The service opened with the invocation and the singing of a hymn. The lesson, taken from II. Timothy was read by Mr. F. Staniland, and the Rev. H. Loomis put the usual questions to the candidate, and con gregation. The prayer of installation was offered by the Rev. J. H. Ballagh, and an anthem was then sung. The charge to the pastor was delivered by the Rev. G. M. Meacham, D.D., and the charge to the people by the Rev. A. A. Bennett. Prayer followed, and the offertory was taken, the service closing with the Benediction, pronounced by the Rev. E. S. Booth.

At no period of history has the valour of British officers and men reached a higher point than during the present campaign. Captain Marchant, Royal Marine Light Infantry, who was left in command of the Naval Brigade with Lord Methuen's force after the action at Graspan, reported as follows:—"It is with deep regret that I have to report the death of Midshipman Huddart, who behaved magnificently, and still advanced after he had been twice wounded, until he was finally struck down, mortally wounded." A brother naval officer also writes:—"At the bottom of the hill Huddart was hit in the arm, and half-way up he was shot in the leg, but still he pressed on. On reaching the top of the kopje he was shot through the stomach, and fell."

On December 28th the last rails were laid on the Trans-Baikal section of the Siberian Railway, thus completing for the present the great enterprise begun in 1891, and establishing uninterrupted steam communication between Western Europe, St. Petersburg, and the extreme eastern limits of the Russian Empire on the Pacific Coast. The length of this last section just finished is 693 miles, from the eastern shores of Lake Baikal, going through Chita to Stretensk on the river Shilka, a tributary of the Amur. The trains are transported across the Baikal Lake on the ice-breaking ferry-boat built by Sir William Armstrong and Co., and from Stretensk the river route must be used to arrive at Khabarovsk, whence the Usuri section of the railway runs on to Vladivostock.

Recently a fatal accident happened on board the U. S. S. *Wheeling* in Hongkong harbour, while firing a salute in honour of the Emperor of Germany, whereby Gunner's Mate Campbell was killed and Lieut.-Commander Beatty, Gunners Conray, Nelson and Bite were injured. H. E. Sir Henry A Blake, G.C.M.G., the Governor, and a few friends have given practical expression to the fellow-feeling entertained for Americans in the British Colony by reason of this said disaster, in transmitting a cheque for $1000 for the use of the relatives of the deceased and the sufferers from the accident. Captain Burwel received the money, and he at once communicated with Admiral Watson, and both the Admiral and the Captain and officers of the *Wheeling* immediately wrote letters of thanks. Admiral Watson, Captain Burwel and officers afterwards paid an official call at Government House and expressed their sincere thanks for the kindness displayed by His Excellency and friends.

After the passing of the representation urging the speedy completion of the Soul-Fusan Railway, the promoters of the scheme held a meeting on the 12th instant. The authorities, says a vernacular paper, who are now attacked by the "disease of regarding Russia with undue apprehension," have found cause for anxiety in regard to the personal character of the two gentlemen, Messrs. Oye and Omiwa, who are shortly to proceed to Korea to open negotiations as to the surveys to be undertaken. The promoters therefore were implicitly cautioned on this point, and took steps during their conference to select other suitable persons for carrying out the scheme under contemplation. It was ultimately decided that one more gentleman should be added to the number of commissioners already appointed. Mr. Takenouchi was nominated for the purpose, and the party, now consisting of three gentlemen, is to start for Korea at the end of this month.

The contract for the extension of the Royal Naval Dockyard in Hongkong had been placed with the firm of Messrs. Punchard McTaggart, Lowther and Co., 151 Cannon Street, London, E.C. The firm is practically unknown in Hongkong. It is one of the few firms of contractors that did not send a representative to Hongkong to collect information on the spot regarding the local conditions, and the amount of their tender, says the *China Mail*, was considerably below that of the other competing firms. The work will probably be commenced at an early date, as the engineers of the firm will leave England with all despatch, bringing European foremen and plant to be used in the work. It may be mentioned that in addition to a dry dock capable of docking vessels of the *Powerful* and *Victorious* classes—indeed any ship in the British or any other navy—there will be a tidal basin of 9½ acres in extent, with 30 feet of water at the lowest state of the tide, in which four or five vessels can be sheltered while undergoing repairs; and a boat basin will be constructed for the accommodation of the military boats and launches. The cost of the reclamation of the dockyard foreshore, and the construction of sea walls, the Admiralty dock, tidal basin and workshops, will be over £1,000,000 sterling.

LOCAL LAW CASES.

In the Yokohama Chiho Saibansho on Friday, before Judge Fujise and two Associate Judges, Mr. Akiyama, representing M. Z. Martin, of Calcutta, applied for execution of the judgment delivered in the Bengal Supreme Court, on November 21st, 1898, ordering A. M. Apcar, No. 49, Settlement, Yokohama, to pay the sum of 9,215 rupees 6 annas in settlement of his account with M. Z. Martin, of Calcutta.

Mr. Sawada, for the defence, stated that it was necessary for him to ask the Court to order the plaintiff to give security for costs, as the defendant had no property in his possession, having also no fixed domicile in Japan. Moreover, the defendant was not an Englishman as mentioned by the plaintiff's representative, but a Persian—a subject of a non-treaty power.

Mr. Akiyama opposed these contentions.

The Court adjourned *sine die*.

On Monday in the Yokohama-ku Saibansho, before Judge Shimamura, the case of Mr. A. L. Manley against Hatano Hidekichi, a laundryman, for *yen* 20.50 medical expenses for the treatment of wounds received by plaintiff's dog at the hands of the defendant, was heard. The defendant stated that some time in January a dog belonging to the plaintiff came into his yard, and got hold of a chicken. Seeing this defendant threw a knife at the dog. Defendant produced a lame chicken in support of his statement.

Mr. Inouye, for the plaintiff, said a lame chicken could be produced at any time and therefore this evidence was valueless. It was impossible for the dog to have got hold of the chicken as the dog was muzzled. A wound 9 inches long could not have been inflicted with a knife thrown at the dog. The dog must have been deliberately cut with a sharp weapon.

The case was adjourned to March 9th.

The case of an Otaru merchant against Mr. W. S. Stone, claiming a sum of money alleged to be due and the return of a promissor note for *yen* 4,000, guarantee money deposited with the defendant, came up again in the Chiho Saibansho, before Judge Fujise, on Tuesday morning. The Judge read a protest by the defendant, and the case was adjourned sine die.

In the Yokohama Chiho Saibansho, on Tuesday, before Judge Fujise and Assistant Judges Odamura and Fujii, the case of Lam-Pak-Tsen, proprietor of a Chinese magazine, who was burnt out at a fire at No. 136, against Messrs. Bavier & Co., representing the Norwich Fire Insurance Company, came up again for hearing.

Judgment was given in favour of the defendants, the plaintiff to pay all costs of the Court.

In the Yokohama Chiho Saibansho, on Tuesday the case of Mochida Tanajiro, a brick-mason, claiming 148.46 *yen* for enlarging an oven in Mr. M. Dentici's bakery, came before Judge Fujise. Mr. Tamada represented Mr. Dentici. The agreed price for making the oven was 1,100 *yen* and this had been paid to the plaintiff. He, however, claimed *yen* 148.46 for extra work done to the oven, beyond the terms of the agreement.

The case was adjourned to the 23rd instant at 10 a.m.

THE LITTLE BRITISH ARMY.

ITS PRESENT DISTRIBUTION.

Some people, at home as well as abroad, seem to be under the impression that nearly the whole of the British Army is in South Africa or on the way, and that the war has practically exhausted our regular military resources. It may be well therefore, to show what is the strength of our army and how it was disposed on January 5th:—

(1) SOUTH AFRICA.

Troops marked (*) are on the way out or ordered to embark:—

CAVALRY (13 REGIMENTS).

5th Dragoon Guards.	10th Hussars.
6th Carabiniers.	12th Lancers.
1st Royal Dragoons.	13th Hussars.
2nd Dragoons (The Greys).	*14th Hussars.
5th Lancers.	18th Hussars.
6th Inniskilling Dragoons.	19th Hussars.

And the Household Cavalry Composite Regiment*, made up of one squadron from each of the three Household Regiments.

ROYAL HORSE ARTILLERY (7 BATTERIES).

G, O, P, *Q, R, *T, and *U Batteries.

ROYAL FIELD ARTILLERY (33 FIELD BATTERIES).

Batteries.	Brigade Divisions.
7,14,66.....1st	Divisional Artillery.
63,64,73.....2nd	
74,77,79.....3rd	
4,38,78.....	Corps Artillery.
37,61,65.....	
13,67,69.....	Natal Field Force, under Sir George White.
21,42,53.....	
19,20,28.....5th	Divisional Artillery.
18,62,75.....	With Lord Methuen.
*19,20,28.....6th	Divisional Artillery.
*83,84,85.....7th	

GARRISON ARTILLERY.

Six Companies from the three Divisions (Eastern, Southern, and Western). One of these, converted into a Field Battery, is in Kimberley.

MOUNTAIN BATTERIES (2).

10th. Part captured at Nicholson's Nek.
4th. With Sir Redvers Buller's Force.

INFANTRY.

Guards.

3rd Grenadiers.	2nd Coldstreams.
1st Coldstreams.	1st Scots Guards.

Line Battalions.

2nd Royal West Surrey.	2nd West Yorkshire.
2nd Devonshire.	2nd East Surrey.
2nd Royal Highlanders.	2nd Seaforth Highlanders.
1st Highland L. I.	1st Argyll and Sutherland.
2nd Cameronians.	1st Durham L.I.
3rd King's Royal Rifles.	1st Rifle Brigade.
1st Royal Inniskilling Fusiliers.	1st Connaught Rangers.
2nd Royal Irish Rifles.	1st Royal Dublin Fusiliers.

2nd Royal Fusiliers.	1st Royal Welsh Fusiliers.
2nd Royal Scots Fusiliers.	2nd Royal Irish Fusiliers.
1st Royal Scots.	
1st King's Liverpool.	2nd Rifle Brigade.
2nd King's Royal Rifles.	1st Border Regiment.
1st Leicester Regiment.	1st Royal Irish Fusiliers.
1st King's Royal Rifles.	2nd Royal Dublin Fusiliers.
1st Devonshire.	1st Manchester.
1st Gloucestershire.	2nd Gordon Highlanders.
2nd Northumberland Fusiliers.	2nd Northamptonshire.
2nd Somerset L.I.	2nd Shropshire L.I.
2nd Duke of Cornwall's L.I.	1st Gordon Highlanders
1st Welsh Regiment.	
1st Northumberland Fusiliers.	2nd Yorkshire L.I.
1st Loyal North Lancashire.	1st Royal Munster Fusiliers.
2nd Royal Berkshire.	
1st Suffolk Regiment.	1st Essex,
1st Sherwood Foresters.	
Royal Warwick.	Dorsetshire,
Yorkshire.	Lancashire Fusiliers.
*King's Own (Royal Lancaster) Regiment.	*Middlesex.
*York and Lancaster.	*South Lancashire.
*2nd Norfolk Regiment.	*1st K. O. Borderers.
*2nd Lincolnshire.	*2nd Hampshire.
*2nd Cheshire Regiment	*2nd South Wales Borderers.
*1st East Lancashire.	*2nd North Staffordshire

(2) In India.

CAVALRY.

4th Dragoon Guards, Punjab.	4th Hussars in Madras.
16th Lancers, Punjab.	20th Hussars in Bombay.
3rd Hussars, 15th Hussars } Bengal.	

ROYAL HORSE ARTILLERY.

4 Batteries in Punjab.	2 Batteries in Madras.
3 do. Bengal.	2 do. Bombay.

ROYAL FIELD ARTILLERY.

8 Batteries in Punjab.	7 Batteries in Madras.
14 do. Bengal.	10 do. Bombay.

MOUNTED BATTERIES.

5 Batteries in Punjab.	1 Battery in Madras.
1 do. Bengal.	1 do. Bombay.

GARRISON ARTILLERY (HEAVY).

2 Batteries in Punjab.	8 Companies in Bengal.
1 Battery in Bengal.	3 Companies in Madras.
1 Battery in Madras.	9 Companies in Bombay.
3 Companies in Punjab.	

INFANTRY.

(12 Battalions in the Punjab.)

1st R. W. Surrey.	2nd. R. Sussex Regiment.
1st Somerset L. I.	1st Hampshire.
1st Border Regiment.	1st Dorset.
2nd Yorkshire Regiment.	2nd Oxford L. I.
1st R. Scots Fusiliers.	1st North Staffordshire.
2nd R. Inniskilling Fusiliers.	3rd Rifle Brigade.

(15 Battalions in Bengal.)

1st South Wales Borderers.	2nd South Lancashire Regt.
2nd Royal K. O. Scottish Borderers.	1st Royal Highlanders.
1st Scottish Rifles (Cameronians)	1st Northampton Regt.
2nd East Lancashire Regt.	2nd York and Lancaster.
2nd Border Regiment.	1st Royal Irish Rifles.
1st East Surrey Regiment.	2nd Connaught Rangers.
1st Duke of Cornwall's L.I.	2nd Royal Munster Fusiliers.
	2nd Argyll and Sutherland Highlanders.

(9 Battalions in Madras.)

1st Royal Warwickshire Regt.	2nd South Staffordshire.
1st Lincoln Regt.	2nd Essex.
1st East Yorkshire.	1st Middlesex.
1st Cheshire.	2nd Durham L I.
2nd West Riding.	

(11 Battalions in Bombay.)

2nd Royal Scots.	2nd Royal Irish Regt.
1st East Kent.	2nd Welsh Regiment.
1st Royal Fusiliers.	1st Royal West Kent (at Aden)
1st Norfolk.	1st Shropshire L.I.
2nd Suffolk.	1st Wiltshire Regt.
1st West Yorkshire.	

(3) In Egypt.

11th Hussars.
Royal Field Artillery (one Battery).
Royal Garrison Artillery (one Company).
2nd Royal West Kent Regt.
1st Seaforth Highlanders.
1st Cameron Highlanders.

(4) Fortresses and Coaling Stations.

(The Fortresses are Malta, Gibraltar, Bermuda, and Halifax.)

St. Helena.
Royal Garrison Artillery.—One Company.
Barbadoes.
Royal Garrison Artillery.—One Company.
2nd Battalion Leinster Regiment.
Bermuda.
Royal Garrison Artillery.—Two Companies.
Halifax (N.S.)
Royal Garrison Artillery.—Three Companies.
Ceylon.
Royal Garrison Artillery.—Two Companies.
2nd Royal Highland L I.
Hongkong.
Royal Garrison Artillery.—Three Companies.
2nd Royal Welsh Fusiliers.
Gibraltar.
Royal Garrison Artillery.—Seven Companies.
2nd Royal Fusiliers.
2nd Cameron Highlanders.
Malta.
Royal Garrison Artillery.—Nine Companies
2nd Royal Warwick Regiment.
1st Lancashire Fusiliers (in Crete).
3rd Lancashire Fusiliers.
1st Royal Sussex Regiment.
2nd Derbyshire Regiment.
2nd North Lancaster Regiment.
Jamaica.
Royal Garrison Artillery.—One Company.
Mauritius.
Royal Garrison Artillery.—Two Companies.
Straits Settlement.
Royal Garrison Artillery.—Two Companies.
1st Battalion Royal Lancaster Regiment.

(5) At Home.

CAVALRY.

1st Life Guards, 2nd Life Guards, Royal Horse Guards } Less one Squadron each with the Household Cavalry Composite Regiment for South Africa.

1st King's Dragoon Guards	8 th Hussars
2nd Dragoon Gds. (The Bays)	17th Lancers
3rd Dragoon Guards	20th Hussars
7th Dragoon Guards	21st Lancers

Also 7th Hussars.

Note.—Of these, a Brigade of three Regiments will in all probability be mobilised for service, if required.

ROYAL HORSE ARTILLERY.

M, N, and S Batteries and one Depot Battery.

ROYAL FIELD ARTILLERY.

25 Field Batteries and one Depot Battery.

ROYAL GARRISON ARTILLERY.

32 Companies and 6 Depots.

MOUNTAIN ARTILLERY.

Depot at Newport. (All the ten batteries are abroad).

INFANTRY (13 BATTALIONS).

Guards.

1st Grenadiers.	2nd Scots Guards.
2nd Grenadiers.	3rd Scots Guards.
3 d Coldstreams.	

Line Battalions.

2nd King's Liverpool Regt.	1st Royal Berkshire Regt.
2nd East Yorkshire.	1st King's Own Yorkshire L.I.
2nd Leicestershire.	3rd King's Royal Rifles.
1st Worcestershire.	4th Rifle Brigade.

In addition to the above Guards and Line Battalions at home, the following Militia Battalions have been embodied for permanent service:—

On mobilisation of the Army Corps (35 Battalions).

3rd Royal Scots.	4th Sherwood Foresters.
3rd Queen's Royal West Surrey.	3rd Loyal North Lancashire.
3rd Northumberland Fusiliers.	3rd Northamptonshire.
5th Royal Fusiliers.	3rd Royal West Kent.
3rd Devonshire.	4 th Shropshire L.I.
4th Somerset L I	9th King's Royal Rifles.
4th West Yorkshire.	3rd Durham L.I.
3rd Royal Scots Fusiliers.	3rd Highland L.I.
3rd Royal Welsh Fusiliers.	3rd Seaforth Highlanders.
4th Scottish Rifles (Cameronians).	3rd Gordon Highlanders.
3rd Royal Inniskilling Fusiliers.	3 d Cameron Highlanders.
	6th Royal Irish Rifles.
	4th Royal Irish Fusiliers.
4th East Surrey.	5th Connaught Rangers.
3rd Duke of Cornwall's L.I.	4th Argyll and Sutherland.
3rd Border.	3rd Royal Munster Fusiliers.
3rd Royal Sussex.	5th Royal Dublin Fusiliers.
3rd Welsh.	6th Rifle Brigade.
3rd Black Watch (Royal Hrs.)	

On mobilisation of reinforcements (3 Battalions).

3rd Suffolk.	3rd Essex.
4th South Staffordshire.	

On mobilisation of the 5th Division (8 Battalions).

4th Royal Lancaster.	3rd Dorsetshire.
6th Royal Warwick.	3rd South Lancashire.
3rd Yorkshire.	4th Middlesex.
6th Lancashire Fusiliers	3rd York and Lancashire.

On mobilisation of the 6th Division (8 Battalions).

3rd The Buffs (East Kent).	3rd Oxfordshire L. I.
4th Bedfordshire.	3rd Wiltshire.
3rd Royal Irish.	3rd Leinster (Royal Canadians).
4th Gloucestershire.	
3rd Duke of Wellington's (West Riding).	

And probably eight more battalions in consequence of the mobilisation of the 7th Division being carried out.

There are therefore now embodied no fewer than fifty-four militia battalions to take the place—according to our military system—of line battalions on service abroad, and seventy-four more battalions are available for embodiment if required.

TABULAR SUMMARY.

	Cavalry	R.H.A. Bat.	R.F.A. Bat.
(1) In or going to South Africa..	Reg. 13	7	33
(2) India	6	11	39
(3) Egypt	1	—	1
(4) Fortresses, &c.	—	—	—
(5) At Home.....	12	3 and Depôt	25 and Depôt
	12*	21	98§

	R.G.A Com.	Mounted Bat.	Guards & Line.	Militia Infantry Bat'ons embodied.
(1) In or going to South Africa..	6	2‡	76	—
(2) India	27	8	47	—
(3) Egypt	1	—	3	—
(4) Fortresses, &c.	33	—	18	—
(5) At Home.....	32 & 6 Depôts	only Depôt	13	54
	99	10	157	54†

* Including the Household Cavalry Composite Regiment.

† There are 74 more battalions of Militia Infantry available for embodiment if required.

‡ The bulk of one Mountain Battery (the 10th) was captured at Nicholson's Nek, October 30th.

§ Including three new Field Batteries just formed.

The foregoing statement does not include the Reserves. Of the Army Reserves, which this year should amount to 85,000, we have called in only a portion. The Militia Reserve, numbering about 32,000, is yet untouched.

THE GENERALS IN SOUTH AFRICA.

Recently there was some comment on Lord Roberts' great age for the colossal undertaking which has been placed in his hands; and we (*Times of Ceylon*) have compiled a list, mainly in the right order of seniority, which may prove of interest:—

	Age.
Field-Marshal Lord Roberts	67
General Sir Redvers Buller	60½
Lieut.-General Sir George White	64½
Lieut.-Gen. Sir F. W. E. Forestier-Walker	55½
Lieut. Gen. Sir Charles Warren	60
Lieut.-General Lord Methuen	54
Major-General Sir W. F. Butler (re-called)	61
Lieut.-General C. Tucker	61
Lieut.-General Sir Frederick Carrington	55½
Lieut.-General C. F. Clery	62
Lieut.-General Sir W. F. Gatacre	56
Lieut.-General G. U. Prior (deceased)	56
Lieut.-General G. Barton	56
Lieut.-General Lord Kitchener	49½
Lieut.-General Sir Archibald Hunter	43
Lieut.-General T. Kelly Kenny	60
Lieut.-General Sir H. M. L. Rundle	44
Lieut.-General J. D. P. French	47
Major General Sir H. E. Colvile	47½

Digitized by Google
Original from CORNELL UNIVERSITY

Major General the Hon. N. G. Lyttelton	54
Major-General A. G. Wauchope (sec.)	53½
Major-General A. FitzRoy Hart	55½
Major-General H. J. T. Hildyard (formely H. J. I.)	53½
Major-General Sir W. Penn Symons	56½
Major-General the Earl of Dundonald	47
Major-General R. S. R. Fetherstonhaugh (invalided home)	51
Major-General J. P. Brabazon	57
Major-General R. Pole-Carew	50½
Major-General J. T. Coke	58½
Major-General J. M. Babington	45½
Major General E. R. P. Woodgate	54
Major-General F. Howard	52
Major-General G. H. Marshall, R.A.	57
Major-General Hector MacDonald	47½
Asst. Adjutant-General Ian Hamilton	47
Asst. Adjutant General the Hon. G. H. Gough	47½
Colonel W. A. Yule (invalided home)	53½
Major-General J. F Brocklehurst	47½
Major-General B. B. D. Campbell	55
Major-General J. E. Boyes (formerly G. H.)	56

To the foregoing it is only right to add the following :—

Colonel R. S. S. Baden-Powell	43
Lieut. Colonel H C. O Plumer	43
Lieut.-Colonel R. G. Kekewich	45½

As an interesting comparison we give the ages of the few leaders on the other side noticed in our reference books :—

President Paul Kruger	74
General Petrus Jacobus Joubert	68½
President M. T. Steyn	42

INTERPORT FOOTBALL MATCH.

The Interport Football Match was played at Kobe on Saturday and resulted in a win for Kobe by one goal to nothing; this goal being scored by Wilkinson in the second half. The teams were :—

Yokohama.		Kobe.
F. Pollard	Goal.	S. V. dos Remedios
H. Irwine	Backs.	W. Braess
M. F. Stephens		J. R. Gillingham
J. H. Forrest	Half backs.	A. W. Allen
E. G. Fradgeley		C. H. Lightfoot
W. J. White		J. Thompson
K. van R. Smith	Forwards.	F. E. Wilkinson
J. F. Drummond		M. Gottlinger
J. E Moss		H. R. B. Hancock
E. W. Kilby		H. E. Green
H. W. Kilby		W. N. Page

Mr. J. W. Franklin of Kobe was Referee and the lines-men were Mr. E. T. Bethell and Mr. Van Doorp.

In some interesting notes on the game the *Kobe Herald* says :—

The game was a surprise from the start. There had been a general—almost universal—impression that Yokohama was a dead certainty for an easy win; that Kobe was nowhere, or that, at least, only a fluke could give the southern port any chance of the game. But right from the start it was evident that the alleged extreme disparity did not exist. As a matter of fact the opening passages clearly demonstrated the ultimate fact—that the game was to be an evenly contested fight where odds on neither of the teams could be given with assurance.

The appearance of the elevens showed no great disparity. Eight of the Yokohama eleven, we have it, are under 21, and probably eight of the Kobe eleven are over 21. But there appeared to be an average equality all round in the matter of weight,—no such difference at least as might have been assumed probable on the age basis.

Taking the game as a whole Yokohama probably did most of the pressing, and on candid judgment they probably deserved to win. But the margin between the play of the two elevens, although in favour of Yokohama, was not worth a goal, and the result ought really to have been a draw. In the first half the play was about evenly divided; in the second Kobe territory was the scene of the greater part of the play. The game was won for Kobe by a sortie—to use war phraseology—during one of the sieges of the Kobe goal. There was some doubt as to the validity of the point, and Yokohama supporters contested it with some vehemence. Only those in the immediate vicinity of the goal could determine on the point at issue—whether the ball passed inside or outside of the goal post. The goal was allowed by Mr. Franklin and this year's honours thus come to Kobe—to the upsetting of many calculations and expectations no doubt.

The play on the whole was bright but not exciting. It lacked brilliance, but it was seldom wholly dull or uninteresting and in the circumstances the exhibition was a credit to the players. There were few pretty combinations—few attempts at them. If anything the defending lines played the best football. The lack of ability to co-operate and combine militated against pretty or effective play by the forward lines. Both Braess and Gillingham, the Kobe backs, did good work, watching the trend of the play with keen eyes and tackling energetically at judicious moments. Allcock and Stephens, the Yokohama full backs, were also seen to advantage. In the Kobe half back line Lightfoot was often conspicuous; and White in the same line on the Yokohama side put in some good work. Among the Kobe forwards Hancock as centre had the most prominent place and was oftenest in evidence; and he was well supported by the others. The Yokohama forwards were swifter than their opponents—probably the fruit of greater opportunities of practice. The goal men on each side were never very greatly pressed, having few calls made on them to do brilliant work. What they had to do was done well. Each of them—Remedios and Irwine—made creditable saves twice or thrice but they were never under a consistent or persistent bombardment.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

Shanghai, Feb. 16.

Roberts telegraphs from Dekelsdrift under date 14th instant that French, with three brigades of cavalry, artillery, and mounted infantry, forced the passage of the Modder River at Klipsdrift, and occupied the hills on the northward, capturing three laagers.

Meanwhile the Gordons Brigade seized two drifts on the westward. French met with slight opposition and his casualties are small.

The Sixth Division is on the North bank of the Riet River and is moving to the support of the Cavalry.

The Seventh Division is here and moves on this afternoon.

A message from Mafeking dated the 4th inst. says that all was then well and that the garrison was again on full rations.

Colonel Plumer is actively operating in a southward direction, but his progress is hampered by the rains.

The English newspapers are gratified by the report of Roberts's successful eastward advance. They consider that it cuts the direct communication between Maggersfontein and Bloemfontein.

Shanghai, Feb. 17.

Mr. Chamberlain says that the Boer raids in Zululand are causing serious alarm and unrest among the natives. The Government of Natal has declined further responsibility for keeping peace amongst the Zulus.

The British Government has decided that if native territories are deliberately invaded they will encourage and assist the natives in every way to defend themselves.

Mr. Balfour, replying to a question with regard to the non-employment of Indian troops in South Africa, said that if the Boers adopt a course inconsistent with the tacit agreement to confine the war to the two European races the Government holds itself free to reconsider its decision.

An official statement is published that French reached Kimberley on Thursday evening.

Colonel Clements was forced to abandon Rensburg. He has arrived at Arundel, the Boers following rapidly and re-occupying their old positions in the Jarbosch Hills.

Sir Edward Monson has returned to Paris.

The House of Commons has voted the increase of the Army.

Reuter's correspondent has escaped from Ladysmith guided by a Kaffir, and has reached Chieveley. He reports that the health of the garrison is fair and that they are very resolute. A factory is making excellent horse sausages and nourishing soup.

Lord Rosebery condemns the Government's military measures as inadequate. He says that if Great Britain lost South Africa her empire would break away. Lord Lansdowne replies that the only alternative to the Government's proposals is some form of conscription. More troops are ready if required.

Shanghai, Feb. 18.

The Supplementary Army Estimates granting an additional sum of 13 millions sterling for the purposes of the War have been voted.

The British occupied Jacobsdal on the 15th instant.

French was enthusiastically welcomed at Kimberley.

Cronje, with 10,000 men, is in full retreat towards Bloemfontein.

Kelly-Kenny is fighting his rear guard, keeping it in action and harassing his retreat.

The Boers have occupied Rensberg.

A correspondent of the *Daily Telegraph*, telegraphing from Naauwpoort, says that in the fighting at Rensberg a patrol of the Inniskillings was surrounded by the enemy, but it cut its way through and escaped.

A company of the New South Wales Mounted Infantry was annihilated. Only one out of five officers returned to camp.

Two companies of the Wiltshires lost their way and were missing when our forces withdrew from Kloof Camp.

A telegram from Roberts at Jacobsdal dated the 17th inst., says that Kelly-Kenny yesterday captured 78 wagons with stores—two were laden with Mausers—and a quantity of shells and explosives, all belonging to Cronje's laager. Cronje was compelled to form a laager with his uncaptured wagons owing to the fatigued condition of his oxen, and this the British Artillery were shelling when Kitchener despatched the messenger.

Shanghai, Feb. 19.

Kelly-Kenny, reinforced by the Highland Brigade, continues the pursuit.

The British have captured over 100 wagons.

French has left Kimberley to cooperate in the pursuit.

The Guards have encamped on the Boers' former position at Maggersfontein.

Reuter's agent telegraphs from Jacobsdal that French's march was the finest ever made. The whole movement was conceived by Roberts. It consisted of different combinations, all dovetailing exactly. French led the way, followed by Tucker's division accompanied by Kitchener. This was followed by Kelly-Kenny's division close behind. Despite unforeseen difficulties, particularly connected with transport, the movement was a complete success. The Boers were outflanked and their only alternatives were retreat or starvation.

Brabant's Colonials, after 3 day's operations and sharp fighting, have expelled the rebels from the country between Penhoek and Dordrecht, capturing their wagons and stores. The enemy's last position on the north of Dordrecht was carried at the point of the bayonet.

A telegram from Chieveley, dated the 17th inst. says that the British have occupied and entrenched Hussar Hill, which is situated five miles to the north-east. They shelled the Boers on Hlangwane Hill and prevented the enemy from reinforcing it.

Shanghai, Feb. 20.

A large convoy of Boers from Colesberg was captured on the 17th instant at Riet River after tremendous shelling. Our loss was slight.

[Note.—This telegram is somewhat obscure. As received it takes this form: "Boers from Colesberg captured large convoy 17th Riet River after tremendous shelling. Our losses slight."—ED. *J.M.*]

Roberts has issued a conciliatory proclamation to the Free State Boers, telling them that Great Britain bears no ill-will to the burghers and is anxious to preserve them from evils due to the wrongful action of their Government. He warns the burghers to desist from further hostilities.

A portion of the Wiltshires have arrived at Arundel. It is believed that they lost 80 prisoners.

A despatch from Buller, dated the 19th inst., reports that he has driven the enemy across the Tugela from a strong position and taken several camps, with several wagons, ammunition, and stores, and a few prisoners.

Shanghai, Feb. 21.

The Transvaalers are sending large forces under prominent commanders into the Orange Free State.

The *Daily News* states on good authority that Cronje is hopelessly surrounded.

An Army Order invites ex-soldiers to re-enlist for one year for home service on a bounty of £12.

General Hart has occupied Colenso, and is now crossing the Tugela. The enemy are seen in full retreat. They apparently hold only one position across the railway, with a weak rearguard.

The railway is re-opened to Kimberley, where Methuen is proceeding with reinforcements.

A reconnaissance from Arundel shows the enemy to be weak. It is believed they have withdrawn to assist Cronje's retreat.

Shanghai, Feb. 22.

Newspaper despatches say that Cronje, on leaving Maggersfontein, took 5,000 men, with the heavy guns transport, and ordered the rest to escape independently.

Cronje's rear guard successfully covered the retreat all through Friday, while the bulk of his troops safely crossed the Modder River. The British troops sent to intercept him arrived too late.

The flank and rear of the rear guard were perpetually harassed and there was desperate fighting, but they afterwards joined the main body. The pursuit was continued at day-break.

The Rhodesians attacked a force at Crocodile Pools on the 12th instant, but were repulsed.

The casualties at Paardeberg were 9 officers killed, 39 wounded, and one missing.

The Fifth Division crossed the Tugela by a pontoon bridge and drove back the enemy's rear guard. The Naval guns silenced all the enemy's guns.

Lord Roberts telegraphs that Generals Knox and MacDonald are wounded.

(SPECIAL TO THE "JAPAN MAIL.")

Shanghai, February 17.

French's performance in reaching Kimberley is brilliant considering the excessive heat and blinding dust. Four officers and 53 men were prostrated by the heat.

Buller, wiring from Chieveley, reports that on the 13th outposts were engaged in a skirmish at Springfield. The Boers opened a heavy fire, and a squadron of the First Dragoons retired. The Hon. Hamilton Russell and five men were wounded, and Lieut. Pilkington and six men made prisoners.

Dundonald, with 700 cavalry, a battery of artillery, and some Welsh Fusiliers, reconnoitred the high ground which the enemy are in the habit of visiting. The Boers evacuated their positions, losing two men. The British eventually retired, the enemy opening a heavy fire, which wounded six men.

Hannay's Brigade of Mounted Infantry on the 11th marched to the Orange River near Ramah (?), and fought a slight engagement *en route*. Four men were killed and 22 wounded, while 13 are missing.

Shanghai, Feb. 19.

A Boer despatch from Colesberg, describing the driving in of British outposts, states that the British lost two Maxim guns and about 200 men. The Boer loss was thirty men.

It is officially announced that the Army increase will consist of six batteries of horse artillery and fifteen of field artillery, together with the addition of a third battalion to various infantry regiments.

The Earl of Kimberley, in the House of Lords, said he shared Lord Rosebery's views as to the dangerous situation, and referred to the pressing question of the Indian frontier, to the consequences of the eventual death of the Ameer of Afghanistan, and to the activity of the Russians.

Lord Salisbury declined to discuss Russian motives, and preferred to follow the example of our forefathers and not to be downcast. He believed the Government's proposals for the defence of the nation were adequate, and any unforeseen emergency must be met with a stout heart.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE IN TOKYO.)

Saigon, Feb. 17.

Letters and journals arriving from the Transvaal give enormous figures for the losses suffered by the British troops in the various battles, compared with the losses of the Boers.

London wires that General French, setting out from the Modder River on the 11th, with 3,000 cavalry, penetrated to Kimberley on the 15th. The details of this operation are wanting.

Saigon, Feb. 18.

General Cronje with 10,000 men is retreating upon Bloemfontein, pursued by General Kelly-Kenny.

Saigon, Feb. 19.

A telegram from Jacobsdal says that General French has quitted Kimberley to co-operate in the pursuit of the Boers.

Despatches from Naauwpoort indicate that the Boers coming from Rensberg were trying to cut the communications of General Roberts.

Saigon, Feb. 20.

Severe fighting has been in progress on the banks of the Tugela during the past three days.

General Cronje's rear guard is delivering successful combats in the retreat from the Modder River.

Marcel-Habert has appeared before the High Court of the Senate. The *seance* presents little animation.

Saigon, Feb. 21.

Buller has gained possession of several potitions of the Boers on the banks of the Tugela.

The High Court has decided that the senators elected or re-elected on the 28th January shall not take part in the discussion of the Marcel-Habert affair.

Saigon, Feb. 22.

Marshal MacMahon is dead.

In the Chamber of Deputies, during the discussion of the War Budget, General de Galliffet, Minister of War, announced that thanks to a slight modification invented by General Deloye, France will soon be in possession of a rifle superior to all those now existing.

General Buller telegraphs that on the 20th he gained possession of Colenso, evacuated by the Boers, who seem to be in full retreat. There is no news of the movements of Roberts' army.

(BY SPECIAL ARRANGEMENT WITH THE "NICHI NICHI SHIMBUN.")

Peking, Feb. 19.

The Foreign Representatives were received in audience this morning by the Emperor of China. His Majesty looked very frail and ill.

(FROM THE "SINGAPORE FREE PRESS.")

Labuan, Jan. 25.

Mr. Harrington, of the British North Borneo Constabulary, telegraphs to the effect that, with the advantage of a heavy fog, his force advanced on the 20th (Saturday) and occupied a hill commanding the three stockaded forts occupied by Mat Salleh and his rebel following.

The seven-pounder was at once brought into action, and the first shell pitched into one of the forts, bursting, and setting it on fire.

Another, directed at the fort occupied by Mat Salleh in person, caused the rebel leader to unroof it, dreading that it also might be set on fire.

A shortage in the ammunition supply is delaying the operations of the punitive expedition.

H. E. Mr. Hugh Clifford, with a further supply of ammunition, and a military police escort, has left for the front.

It is feared that Mat Salleh may succeed in making good his escape.

SHALL I COMPLAIN?

Shall I complain because the feast is o'er,
And all the banquet lights have ceased to shine?
For joy that was, and is no longer mine;
For love that came and went, and comes no more;
For hopes and dreams that left my open door;
Shall I, who hold the past in fee, repine? . .
Nay! there are those who never quaffed life's wine—
That were the unblest fate one might deplore.
To sit alone and dream, at set of sun,
When all the world is vague with coming night—
To hear old voices whisper, sweet and low,
And see dear faces steal back, one by one,
And thrill anew to each long-past delight—
Shall I complain, who still this bliss may know?

—*Sonnets by Louise Chander Moulton, in "At the Wind's Will."*

13 P Q5	Kt Kt3	27 Q B2	P B4
14 Q B2	P QB4	Resigns (i)	

ANALYSIS.

(a) A praiseworthy courage on the part of the veteran to venture upon the Evans' Gambit against the master of the Evans' Gambit.

(b) In the true spirit of *noblesse oblige*. Tchigorin not only accepted the Gambit but selected the "Normal" defence, which should turn out in favour of White in a number of variations.

(c) Not so good as the orthodox 11—P to Q 5, followed by Kt to K 2.

(d) This move would be good enough if Black were to save his Rook; but Tchigorin is the last man to miss an opportunity for a sacrifice, and certainly not such a promising one as 17.....B takes Kt. The B at K 2 should not have been displaced.

(e) An exceedingly strong move. We do not think White has a valid reply to it.

(f) If 19—P to Kt 3, then 19.....Q takes B; 20—P takes Kt, Q to Q 2, and White has no means of preventing Q to R 6.

(g) Again the only move to avert immediate mate.

(h) Better than 20—Q takes, P, because of 21—B to R 3, Q takes B; 22—P to B 4, &c.

(i) For 28.....Q to R 6 is threatened. A smart little game on the part of Tchigorin.

GAME No. 566.

The following is a game played in the London International Tournament, taken with notes from *The Field*:—

RUY LOPEZ.

White—W. Cohn. Black—E. Lasker.

WHITE.	BLACK.	WHITE.	BLACK.

23 Kt Q4	K K2	48 R K8	K B6
24 P KKt4(f)	B K4(g)	49 R KR8	P Q7
25 R R3	PxP	White resigns.	

NOTES.

(a) The 'King's Fianchetto is generally abandoned now in favour of 6—B to K 2.

(b) 9—Kt to Q 5 would have driven back the Queen.

(c) The exchange of Queens which White contemplates leaves Black with an improved position, whilst with the Queen on the board his King would be unfavourably placed. The alternative, therefore, would be 13—Q to Q 3, and to bring the Rooks into play.

(d) The improvement in Black's position is now apparent.

(e) 17—P to K B 4 might be considered here. If 17—P to K 4, then 18—P to K Kt 3, so as to keep two Pawns united. The Knight, at present being well placed, need not be moved. 17—P to Q R 4 would have weakened the Queen's side Pawns, although the move would have been useful in other respects.

(f) A compromising advance. We do not think that had Cohn been content to play quietly for a draw, he need have been apprehensive of losing the game.

(g) A fine move, the chief object being, if 25—P takes P, to play 25—R to K R sq; 26R to R 3, B to B 5; 27—R to K 2, P to Kt 5; 28—R to R 4. Q R takes P, &c.

(h) If 34—P takes P, then 35—R to B ch, &c.

(i) The Knight and the improved centre are well worth the Rook.

(j) If 45...R takes P, then R takes R, ch followed by B to B 4.

(k) 47—P to B 6; 48—R takes B, P to Q 7 wins as well.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 3RD, 1900.

DEATHS.

RUDOLF VON MANN, late brewer of the Tokyo Brewery in Hodogaya, a native of Reichenhall in Bavaria, died, in his 34th year, at his residence in Honmoku.

At 1.368. Nakamura, on February 28th, JOHN C. WERNER, aged 60 years.

SUMMARY OF NEWS.

VISCOUNT SHINAGAWA is dead.

DR. KITASATO is reported to have discovered a second Pest microbe.

THE British Navy estimates for the year show an increase of a million sterling.

DR. L. S. L TTLE has left Shanghai for Durban, it is said, to offer his services to the military authorities there.

A BLUEJACKET named Johnson, of the U.S.S. *Oregon*, ran over a coolie, while riding a bicycle in front of the Chinese Consulate on Thursday. The matter was settled by the sailor paying two *yen* as compensation.

THE surrender of Cronje and his army occurred on the anniversary of Majuba Hill.

IT is said that Russia has decided not to put the new fishery regulations for Saghalien into force for a year.

THE widow of Jose Rizal is to open a school for English at Cebu, where her present husband runs a bar.

SEVERE fighting continues near Ladysmith, General Buller having to fight for every yard of ground he wins.

CRONJE'S retreat has ended in his unconditional surrender to Lord Roberts, together with four thousand men.

WALES has won the first international Rugby match of the season, defeating England at Gloucester by 13 points to 3.

INFLUENZA, which has been very rife among the foreign community of Yokohama, is happily less severe this week.

THE Queen has telegraphed her congratulations to Lord Roberts for his bringing about the surrender of Cronje.

THERE have been several cases of incendiarism in Yokohama during the week, all in the Japanese quarters of the town.

MR. OTANI KAHEI, the well-known millionaire tea merchant of Yokohama, returned from his Occidental trip on Wednesday.

A FIRE broke out at the Nagoya Electric Light Company's works on the 27th ult. at 2 a.m The office, godowns, etc., were destroyed.

SEVERAL Chinese tailors and some Japanese *sendo* have been arrested in Yokohama during the week and charged with gambling.

THE new Austro-Hungarian Consul has arrived in Yokohama. Dr. de Flesch, who held the position for many years, left on Saturday.

IT is said that President Steyn, of the Orange Free State, has telegraphed to President Kruger, urging that immediate overtures be made for peace.

PROFESSOR CLAY MCCAULEY, who is about to leave Japan after 10 years' residence, was entertained at the Tokyo Club at a farewell dinner on Monday.

BISHOP AWDRY will conduct a service of Intercession in connexion with the war in South Africa in St. Andrew's Church, Shiba, on Sunday next.

A CONSIDERABLE sum has been collected in Tokyo and Yokohama by the Batavian Committee, for the aid of the Boers' widows, children, and wounded

PRINCE WALDEMAR of Denmark, who arrived at Yokohama last Saturday, pays an official visit to the capital next week where he will be the guest of the Emperor and Empress at the Shiba Palace.

A SPECIAL telegram to the *Singapore Free Press*, dated Labuan, February 3, reads:—Captain Harrington, Commandant of the British North Borneo Police, wires that Mat Salleh is killed and his followers are dispersed.

THE Russian Government has just signed a contract with a German house for the conversion into modern weapons of nearly a quarter of a million comparatively obsolete rifles. The rifles to be converted date from 1878, 1882, and 1889, and are of various pattern.

THE French Minister has communicated to the Press an official letter from the Minister of State for Foreign Affairs, in which the position of perpetual leases held by foreigners is placed beyond question.

BRITISH Consols were quoted as low as £98 at the end of 1899, but they have steadily advanced since, and after being at £101 1/16 on the 21st, £101 5/16 on the 23rd, and £101 9/16 on the 25th, they stood on Tuesday in London at £101 5/8.

THE *Cuco*, a new steamer of 60 tons, belonging to Messrs. Guitterez Bros., of Manila, which was built in Hongkong for the coast trade of the Philippines, was wrecked on her maiden trip, on 4th February, near San Fernando de la Union.

STATISTICS of the amount of food and drink which a nation consumes are always sufficiently alarming, but the Board of Trade *Journal* prints a statement which gives an unprecedented suggestion of immensity. It is nothing more than the record of the harvest of the sea. This amounted to no less than 8,594,000cwt. of fish merely from the English and Welsh fishing grounds, which is more than half a million hundredweight in excess of last year's yield.

MR. G D. SCOTT, Reuter's agent at Shanghai, informs the *N.-C. Daily News* that he has received the following telegram, dated Peking, the 16th instant:—"News has been received at the Legation that two members of the Burma Commission named Kiddle and Sutherland, were murdered in the bazaar at Mengka, 200 miles from Tengyue (Momein), on the Burmo Chinese frontier, on the 10th instant. Mr. G. J. L. Litton, of the British Consular Service in China, was slightly wounded on the same occasion. Details of the occurrence are still wanting."

THE champion wrestler of the world has been defeated by a Russian, and the scene at the theatre where the champion was thrown is thus graphically described by the special correspondent of the *Telegraph*:—"Flowers, handkerchiefs, hats, and even fur tippets were cast upon the stage at the feet of Pytlasinski, who stood blowing kisses and murmuring inarticulate thanks in reply to the deafening applause, which was continued until the spectators at last subsided from pure exhaustion. Meanwhile, a pathetic sight was poor Kara Ahmed, who, in bitter rage and grief at his overthrow, had refused to take his successful opponent's proffered hand, and had slunk into a corner, where he stood, bated to tears and shaking with sobs, like a huge baby."

THE death of Sir H. Meux suggests the remarkable continuity of the great London brewers. The chief of them to-day are flourishing much more than a century ago. In 1807 Meux's vat in Liquorpond-street—well named—was one of the wonders of the town. It contained 20,000 barrels of porter, valued at 30s. per barrel, and cost £10,000. Only one of the great brewing houses has failed since then, viz. Calvert's, reputed to have had more "tied" houses than any, and immortalised by Goldsmith in the words "and Calvert's black champagne." Meux's output rose from 88,000 barrels in 1793 to 132,000 barrels in 1798. Lord Tweedmouth's and other great fortunes have come from this firm, and it enabled the present Lord Aylesbury to retain the hereditary estates of the family intact.
